Rudolf Besier's comedy "Don," one of the most successful productions of the first season at the New Theatre, has now been published in book form (Duffield & Co.). It is worth the honor of type. On the whole, it reads, perhaps, even better than it acts. It is crisply, brightly, and smoothly written, and the improbability of some of its incidents is less obvious in print than in stage representation. The chief excellence of it as a dramatic composition lies in the deftness and veracity of its characterization and the shrewdness and humor of its observation. The conduct of each individual personage in the cast, with reference to the known facts of a situation common to all of them, is entirely consistent with the mental and moral attitude natural to their indicated habits, training, and experience. Thus a gloss of plausibility is thrown over occurrences which in themselves are unlikely. If the story occasionally borders upon the extravagant, it is, at all events, interesting and amusing, while it is animated by a liberal and humane philosophy.

"Smith," which was produced in the Empire Theatre on Monday evening, is an inferior, possibly an early, specimen of the work of W. S. Maugham. It is probable that its great success in London was due largely to the charm and cleverness of Marie Löhr in the title part. In spite of its assumption of modernity, the personages and the plot are alike conventional. A ruined London broker, who has become a farmer in Rhodesia, returns to England after years of prosperous labor to renew old friendships and find a wife. Disgusted by the heartless, frivolous, and demoralizing life led by his fashionable sister, her complacent husband, her reputed lover, and her feminine associates, he resolves to marry Smith, the parlor-maid, the one woman who has exhibited capacity and a sense of the primitive virtues. It is only one more exercise upon the old theme of the simple and the artificial life. The moral of it all is unobjectionable, if obvious, but the illustration of it is neither rare nor valuable. It is most essentially theatrical when it attempts to be most impressive. Like all Mr. Maugham's writings, it contains some effective satire, many entertaining lines, and some humorous situations, but there is about it more suggestion of labor and artifice than of sincere purpose. The piece is well but not brilliantly played at the Empire. John Drew, one of the most facile of comedians within the somewhat narrow limits of his own personality, is only occasionally at home in the part of the returned colonial, and Miss Mary Boland was only moderately successful as Smith. Individual mention of other players is not necessary.

Julian Edwards, the composer, died last Monday at the age of fifty-four. Before coming to this county, in 1888, Mr. Edwards was conductor of the Royal English Opera Company and produced some of his best work, notably the opera, "Victorian," which was based upon Longfellow's poem, "The Spanish Student." His other serious operas were "Elfinelia" and "Corinne." In addition, he wrote comic operas and musical comedies, a lyrical drama, cantatas, and songs, of which the best known is "When Johnny Comes Marching Home."

Art.

Aquatint Engraving. A chapter in the history of book illustration. By S. T. Prideaux. London: Duckworth & Co.

It is not the title but the sub-title which characterizes this book. Apart from a chapter on "the use of aquatint in France and the aquatint work of Goya," it is essentially a record of English books with aquatint plates published before 1830. That leaves out of consideration prints published separately, American work from the crude early efforts in the *Port-Folio* (1811) to the numerous views by John Hill and W. J. Bennett, the portraits of St. Memin, and all use of the medium by modern artists. If the history of aquatint is, as the author says, "but a small corner in the history of art," hitherto covered, at most, by a chapter or a few pages in handbooks on prints, one might wish that she had taken in the entire field; all the more as her digressions bring in not a few irrelevant facts. However, for what she has done in a little-worked field, in this first separate study of aquatint, the author deserves the thanks of all interested. If she has not furnished a complete history of the art, she has fully covered, for England, the period during which it had its greatest vogue.

Aquatint has a fascination quite its own, and is a pleasing art within its somewhat limited resources. Miss Prideaux recalls some delightful books, notably the "Microcosm of London" and Richard Ayton's voluminous "Voyage Round Great Britain." In the last-named the possibilities of delicate effect are particularly well utilized in the skies, and aquatint was used for a like purpose in several of the mezzotint plates of Turner's "Liber Studiorum," besides those mentioned by the author. Examination of these "Liber" plates makes clear the essential difference between mezzotint and aquatint as then practised. There is delicacy in the aquatint, but flat tones rather than gradations, unchanging surfaces rather than textures. A freer use of the medium in later times has overcome this to a greater or lesser extent.

Aquatint of the period illustrated by this book is virtually a means of reproducing wash-drawings. It was used as such by its inventor, Le Prince, and

served well to render architectural views and illustrations for numerous books issued in response to an evident interest in foreign lands and picturesque natural beauties. The author's reference to the many points of interest which the student of aquatint will encounter (the development of water-color painting, records of travel and adventure, architecture and topography, history of costume, sports, manners and customs, caricature) brings us to a fundamental factor in the interest in prints, in fact in all graphic art. It is impossible to get away absolutely from the subject interest. It is present, in some degree, in all prints, from block-book illustrations to the etchings of Whistler. It is particularly salient, sometimes paramount, in the work which is dealt with in the present book. The volume has a useful index.

An edition of "Thyrsis" and "The Scholar-Gipsey" is in preparation, with ten colored plates after water-colors by W. Russell Flint, of which seven are drawn directly from the scenes mentioned in the poems.

The Pennsylvania Academy of the Fine Arts and the Philadelphia Water Color Club announce an exhibition of original work in water-color, black and white, pastel, or drawing with pencil, crayon, or pen, or illustrations in whatever medium, to be held at the Academy, beginning Monday, November 14, and ending Sunday, December 18. All works intended for exhibition must he entered upon regular entry cards, which should be sent to the Academy by Saturday, October 22. Through the kindness of Charles W. Beck, jr., a prize of one hundred dollars will be awarded to the best work in the exhibition that has been reproduced in color for the purpose of publication. The jury of artists will make the award, but may withhold the prize if, in their judgment, no work is of sufficient merit. The selection of exhibits is committed to the following jury of artists, and the arrangement thereof to the hanging committee. Jury of selection, Colin Campbell Cooper, Blanche Dillaye, George Walter Dawson, Edward Dufner, Elizabeth H. Ingham, and Hermann Dudley Murphy; hanging committee, Thomas P. Anshutz, Colin Campbell Cooper, and George Walter Dawson; Academy's committee on exhibition, Clement B. Newbold, chairman.

The fourteenth annual report of the Worcester (Mass.) Art Museum gives an account of various activities in the way of teaching, popular lectures, loan exhibitions, and purchases. During the year something more than $82,000 was put into acquisitions, mostly pictures, which include The Fur Jacket, by Whistler; two very fine portraits, Mr. and Mrs. William James, by Hogarth; a *genre* piece by Brekelenkam, and canvases by Bonington, Wilkie, and A. H. Wyant. Living American painters added to the collection are Benson, Mary Cassatt, Charles W. Hawthorne, J. Francis Murphy, Dwight W. Tyron, and Willard Metcalf. The days of free admission have been increased from two to four weekly. The number of visitors in 1909-1910 was 31,115, a considerable increase above former figures. More than two thousand photographs have been purchased, and the library has been systematically built up. Under the charge of the new director, Dr. Gentner, the museum has clearly extended its usefulness.

An important discovery has been made by Commendatore Boni on the Palatine in Rome. During excavations made in the grotto known as the Lupercal, which adjoins the western side of the Palatine, there was found, in a long and narrow passage, a number of interesting votive figurines, including several terra-cotta heads of Attis. Signor Boni believes that this discovery proves that the figure of Attis found on a medallion of the elder Faustina was not a merely mythological adjunct of the "great mother" Cybele, as has been commonly supposed, but that Attis was associated with her in her temple on the Palatine, from which these figurines probably came. Besides figures of Attis, there was found a number of terra-cotta animals.

Finance.

THE VOICE OF THE STOCK MARKET.

Two incidents of the past week were of sufficient importance to financial calculations to excite some interest as to the manner in which the stock market would respond to them. One was the weekly bank statement of last Saturday; the other, last Tuesday's Vermont election, an event traditionally known as the first gun of an autumn political campaign. Three weeks ago, the surplus reserve of the New York banks reached an unusually high figure—equalled in magnitude, during the present generation, only in the years of liquidation and accumulation of idle bank resources, 1894, 1904, and 1908. It was rather generally imagined that this great reserve was acquired through drawing temporarily, to New York, of the cash which Western banks had been keeping at home to protect their own reserves.

Such a process necessarily inferred a rapid shrinkage of the New York reserve when the Western banks should need their New York balances for the autumn harvest trade. From the $55,700,000 of August 13, this surplus fell to $50,600,000 on August 20, to $49,000,000 on August 27, then, suddenly, to $31,800,000 on September 3. The $17,000,000 decrease in the surplus, last week, was in actual fact the largest decrease ever reported in the history of New York banking except for four occasions—the week in February, 1909, when the New York trust companies drew heavily on their bank credits to establish cash reserves of their own as required by the new State law; the week in November, 1907, when the panicky rush to draw out bank deposits was at its height, and the two weeks in 1894 when the Treasury was borrowing gold from New York bank reserves to protect its own reserve against legal tender notes. No such peculiar cause for a heavy shrinkage in reserves existed last week; yet two more weeks of an equally rapid decrease would have exhausted the New York surplus.

The Vermont election news is always watched by Wall Street in an exciting political year, because of the curious fact that in past elections a Republican or Democratic success in the November vote has been foreshadowed according as Vermont's Republican plurality for Governor in September ran above or below 25,000. Last Tuesday's vote resulted in a plurality, according to the next morning's figures, of barely 17,500—one of the poorest showings for the Republicans in the present generation. The stock market receded a little on the news of each of these two developments in the situation, yet on the whole, prices moved only apathetically. Wall Street's explanation was, that the prolonged and violent decline in prices, during the first seven months of 1910, had abundantly "discounted" what had happened.

As time goes on, the nature of this declining market of 1910 is likely to be more and more clearly comprehended. It cannot yet be said, however, that the philosophy of the break in prices is universally understood, and there are incidents of the day which have suggested that in certain quarters it may be wholly misunderstood. A couple of years ago, the Wall Street community made merry with a financial theory set forth to Congress by Senator La Follette. There were one hundred selected millionaires, the Senator explained, who start and stop panics, who make prosperity and adversity, and before whose machinations the laws of political economy are helpless. No one has dabbled in that particular theory since the Senator himself was laughed out of court concerning it.

But now comes an almost exactly parallel theory in as completely different a quarter as could be imagined. This time it is a railway president who, after demonstrating to his own satisfaction how impossible, on any rational theory of finance, was the fall in 1910 of the stock which outstripped all others in the speculation for the rise of 1909, returns to the purely anthropomorphic theory of finance. It was not liquidation; it was not overspeculation; it was not a glut of new securities; it was not even political apprehension. Not at all; "a score of raiders, understanding human nature, its fears and moods, play with investors, and at will make the financial refrain one of sorrow or joy. The market falls or rises at their will, and no organist more completely masters his instrument than does this lot of

raiders, working all stops of the organ of speculation."

It is not perhaps worth while to argue seriously over Mr. Stillwell's conception of economic movements, any more than over Senator La Follette's. It is only in so far as either gives voice to a popular delusion that the matter is of general interest. Each of the two explanations of the market has a certain surface plausibility which attracts the ignorant, and each may fairly enough be characterized as the nearest approach, in the complex civilization of our day, to the belief in brownies, demons, and witches that prevailed in a cruder past. The notion that any very unpleasant occurrence cannot have come about from natural causes, but must have been brought to pass by secret enemies with magic powers, was for centuries common to humanity, and it has not absolutely lost its sway, even now.

In the case of Wall Street, when one seriously considers the notion that the whole structure of financial values was pushed down by a small group of irresponsible and malicious "raiders," it must be manifest that only with magic powers could the raider achieve his purpose. The odds against him, in his labor of destruction, were stupendous; the great banks, the powerful banking houses, and the "inside financiers" were all opposed to the attempt to force down prices. How could "a score of raiders" so utterly rout and humiliate these tangible potencies of finance, without the aid of necromancy?

The answer is that they could not have done it, and that they did not do it; that the people who tried to pursue their purposes in defiance of financial law were the operators, not of 1910, but of 1909; that the long decline in Stock Exchange prices during 1910 resulted from forces within the financial situation itself—among them being a visible overstrain on credit and capital, a great excess of supply over demand in the market for new securities, and a "boom" on the stock markets of the world, last year, so premature and so greatly overdone as to invite the wholly inevitable penalty of financial blunders. But at the same time, it is the usual rule in Wall Street that a long decline of the sort not only squares the financial account for past excesses, but, in addition, "discounts" very much of whatever unfavorable incidents may be ahead of us.

COLUMBIA STUDIES IN HISTORY, ECONOMICS AND PUBLIC LAW

New Volumes Just Published

Vol. XXXVII, No. 2, LEGAL DEVELOPMENT IN COLONIAL MASSACHUSETTS, 1630-1686

By CHARLES J. HILKEY, Ph.D., Sometime University Fellow in Constitutional Law. Price, $1.25.

Vol. 37, comprising monographs Nos. 1, 2, and 3. Complete. Cloth. Price, $4.50.

Vol. XXXVIII, No. 1, THE PUBLIC DOMAIN AND DEMOCRACY, A Study of Social, Economic and Political Problems in the United States in Relation to Western Development

By ROBERT TUDOR HILL, Ph.D., Sometime University Fellow in Sociology. Price, $2.00.

Vol. XXXVIII, No. 2, ORGANISMIC THEORIES OF THE STATE, Nineteenth Century Interpretations of the State as Organism or as Person

By F. W. COKER, Ph.D., Instructor in Politics, Princeton University, Sometime Fellow in Political Philosophy. Columbia University. Price, $1.50.

Vol. 38, comprising monographs Nos. 1 and 2. Complete. Cloth. Price, $3.50.

Vol. XXXIX, No. 1, THE MAKING OF THE BALKAN STATES

By WILLIAM SMITH MURRAY, Ph.D. Price, $1.50.

LONGMANS, GREEN, & CO., New York

Lake George and Lake Champlain: The War Trail of the Mohawks and the Battleground of France and England in their Contest for the Control of North America

By W. MAX REID,
Author of "The Mohawk Valley," "The Story of Old Fort Johnson," etc.

8vo, with 90 Full-Page Illustrations.
$3.50 net.

Mr. Reid's new book is devoted to the history and the scenic beauty of a section of the country every inch of which is to him familiar ground. With its history and traditions he is deeply imbued, and to be deeply imbued with such a history and with such traditions is no insignificant acquisition. The author has seized upon the dramatic incidents that form the staple of this history and has combined them in a narrative that moves with unimpeded swiftness.

LEMCKE & BUECHNER

Established over 50 years.
30-32 West 27th St., New York

A. S. CLARK, Peekskill, N. Y., offers a catalogue of 590 Pamphlets—free.

THERE are some books that everybody should read. No, not the Bible, Shakespeare or John Woolman's Journal, this time.

THE particular book in mind is a masterly novel on the subject of the "wild oats" that men sow, and the consequences—to wives and children, the innocent victims—as well as to themselves.

THE book is aptly named "WILD OATS." Brass bands and poster type have not been needed to make the public realize its importance. The author is James Oppenheim, whose "Dr. Rast" stories you may have read. A striking foreword is contributed by Edward Bok of the *Ladies' Home Journal.*

THE price is $1.20 net; most good book stores have WILD OATS in stock; those that haven't can procure it in 24 hours.

THE publisher is B. W. HUEBSCH, 225 Fifth avenue, New York.

REMINISCENCES OF A K. C.
By THOMAS EDWARD CRISPE.
"A wealth of anecdote" (*Nation*) of famous judges, actors and literary folk of the Victorian Era.
Cloth, $3.50 *net; postpaid*, $3.66.

THE ONLY HISTORY OF THE RHYMING ART IN ENGLISH.

A STUDY OF ENGLISH RHYME

By CHARLES F. RICHARDSON, Ph.D.,
Professor of English in Dartmouth College.

With chapters on The Poetry of Earth; The Rhythmical Creation of Beauty; Alliteration; Assonance; End-Rhyme; The Shaping of English Rhyme; The Elizabethans and the Rhyme Controversy; Formal Rhyme; Romantic Rhyme; and Modern Rhyme.

Though primarily devoted to the development of rhyme in English, this volume necessarily considers the historical or collateral relations of rhyme in Latin, Provençal, Italian, French, Spanish, German, and Icelandic. Hundreds of archaic, forced, or peculiar rhymes are noted, from Latin jingles to Emerson's *draw: proprietor.* Altogether, as the only treatise entirely devoted to the subject, the volume seems to be a helpful supplement to all general works on English verse.

Five hundred copies only, crown 8vo, paper, 225 pages, printed from type (since distributed) at the University Press, Cambridge, for use in the author's classes; but for sale, price $1.25, postpaid, by

Howland's Lessons in English

By GEORGE C. HOWLAND

University of Chicago

Elementary 40 Cents **Advanced 60 Cents**

Designed to cover the work usually done in the grammar school grades.

There is a natural unfoldment of the subject.

The author shows an appreciation of the child's mental capacity at each stage of the development.

The material used in working out the course is closely related to the child's daily life and experiences.

The selections used as examples, and for illustrative purposes, are the best to be found in literature.

The knowledge gained from the lessons is not lost, but carries over and functions in the study of Literature, Composition, and in Nature study.

Write for descriptive circular.

A. C. McCLURG & CO.

NEW YORK CHICAGO SAN FRANCISCO

A list of books for supplementary reading, school libraries, and reading circles sent on application.

Interesting Paragraph from "The Sphere"

Issue of June 25, 1910: "Meanwhile some American newspaper has been chiding Mr. Archer upon too great an enthusiasm for the American magazines, and has even suggested that America is not so well off as our own country in weekly newspapers. This complaint, however, comes from Chicago, where New York is said to be less loved even than London. As a matter of fact, the New York NATION is a more thorough and more scholarly paper than any that we have in England. Compared with some of the reviews upon well-known books in the New York NATION, those in *The Spectator* are positively illiterate."

TWELVE CENTURIES OF ENGLISH POETRY AND PROSE

BY

ALPHONSO G. NEWCOMER
Leland-Stanford University

AND

ALICE E. ANDREWS
Cleveland High School, St. Paul.

A remarkably comprehensive book of selections from Bede to the present time, with the exception of the Modern Novel. Good judgment and good taste in choosing material are reflected throughout. The volume is provided with excellent apparatus for study. Notes, glossary, index to first lines and titles, also an index to authors.

760 pp. Cloth, $1.75.

SCOTT, FORESMAN AND COMPANY
378 Wabash Ave., CHICAGO. 37 East 28th St., NEW YORK.

Corneille's Le Cid

EDITED BY

JAMES D. BRUNER, Ph.D.,
President of Chowan College.

"An unusually good piece of work, and a model of the **édition classique** such as France itself could not surpass."—Prof. J. E. Spingarn.

"With his edition of the **Cid**, Prof. Bruner sets a new standard in the preparation of classical French texts for school and college use, in that he makes it his first duty to present the work as a piece of literature to be understood and appreciated by the student as such. . . . A valuable contribution to our literature on the drama."—Modern Language Notes.

A Unique Literary Competition

TWO years ago a professor in the University of Chicago wrote us, making the suggestion that he would like to use the *ATLANTIC* as a text-book in his English classes if satisfactory arrangements could be made.

We were a little doubtful as to the success of the experiment, but we arranged to receive subscriptions from his students for the period covered by his course, and awaited results with interest.

Somewhat to our surprise, most gratifying reports reached us from Chicago, and we tried the experiment of communicating with a number of professors in other institutions.

From this small beginning the *ATLANTIC* has grown to be widely used as a text-book in courses of English, until last year it was studied in 48 courses of English instruction and 1900 pupils read and discussed it every month.

We received many interesting opinions from students and instructors alike, and without exception the experiment was pronounced a success.

Not the least advantage in the eyes of many of them was an awakened interest in contemporary life and letters. Many of the students' communications commented amusingly on their discovery that the *ATLANTIC* is not a magazine edited for a limited circle of professional literary readers. One student in a Western university described his emancipation by means of the *ATLANTIC* from the habitual reading of sensational literature.

These letters suggested the idea of offering prizes for the best essay written by undergraduates on the use of the *ATLANTIC* in the class-room.

The suggestion was heartily indorsed by the instructors, and in some instances the preparation of the essays made part of the regular work of the course.

When the contest closed on May 1st essays had been submitted from 17 different institutions.

Among the contestants were a Japanese and a Russian, whose work compared favorably with that of the students who were writing in their mother-tongue.

The essays were all of surprising quality and spoke volumes for the inspiring and painstaking work done by the instructors. After careful consideration the judges awarded the prizes as follows.

FIRST PRIZE—Charles W. Hammond, Agricultural College, Fargo, North Dakota
SECOND PRIZE—Helen K. Little, Ohio State University, Columbus, Ohio
THIRD PRIZE—Myra A. Burrage, Boston University, Boston, Massachusetts

These essays are now being prepared in pamphlet form, and if any reader of the *ATLANTIC* is curious to know what the rising generation thinks of the magazine, a copy will be sent free upon application.

NEW BOOKS AND NEW EDITIONS

By ARNOLD BENNETT *(About September 25th)*

CLAYHANGER

By ARNOLD BENNETT, Author of "The Old Wives' Tale." Large 12mo. $1.50 net.

Mr. Arnold Bennett's new novel "Clayhanger" is the first of a trilogy of novels dealing with the "Five Towns." In "The Old Wives' Tale" Mr. Bennett described the old spirit of the central provinces of England. In this trilogy he will describe the breaking down of the old spirit by the new. The first novel relates the history of Edwin Clayhanger from the time of his leaving school to his marriage at about the age of thirty-five. It begins in the past and ends only when, after many trials and much suspense, the new ideals have definitely taken the place of the old. The hero is a master printer, and the son of a master printer, and for a lengthened period he lives in servitude to his father, who justifies all tyranny by the well-known plea that upon his own decease the son will "come into everything." Edwin's love affair is long and passionate, and he only succeeds in marrying Hilda Lessways after the most distressing experiences, not the least of which is the decay and death of his father and all that his father represents. In the matter of background to these personal histories, the author has tried to show, perhaps, more ambitiously than in "The Old Wives' Tale" that the sociological development of a vast community will furnish the finest romance and color that an artist can desire.

THE FLINT HEART

A Tale of Dartmoor. By EDEN PHILLPOTTS.

Illustrations by Charles Folkard. $1.50.

This whimsical story by Mr. Phillpotts promises to be one of the autumn favorites. There are many quaint pictures by C. Folkard.

From an editorial in the New York Evening Post:

"Society must sooner or later answer the question, 'What is to be done with our Meeks?'"

GEORGE MEEK, BATH CHAIR-MAN

By HIMSELF. With an Introduction by H. G. Wells. *12mo. $1.50 net.*

One of the sincere and genuine Autobiographies which appear at long intervals and command at once a place of importance by their absolute simplicity and courage. Mr. Wells' introduction is in his most brilliant manner.

From the New York Times:

"Meek faced his poor life as it was; he tells about it as he found it; setting down quite simply his infirmities, pitiful failures and humiliations along with his puny triumphs and petty consolations. Obviously Meek must be absolutely divested of all sense of humor—though he is cheerful and likes to sing."

From the Chicago Evening Post:

"One finishes the book with a great admiration for George Meek."

FIFTH EDITION

ON THE BRANCH

From the French of Pierre De Coulevain, By ALYS HOLLAND. *$1.25 net.*

"It possesses an uncommon distinction of style, a rare maturity of thought."—*Bookman.*

"So full of chastened joy, of simple faith and deep human sympathy."—*Chicago Record-Herald.*

. . . "'On the Branch' is really a brilliant novel."—*Philadelphia Press.*

FROM 115th FRENCH EDITION

THE WAY OF ALL FLESH

By SAMUEL BUTLER.

Author of "Erewhon," etc. *$1.50 net.*

Samuel Butler was "In his own department," says Mr. Bernard Shaw, "the greatest English writer of the latter half of the nineteenth century."

"In an age of novels without ideas, here is one that is packed full of them."—*N. Y. Evening Sun.*

"A study of modern English life and character, more withering, because more true and restrained, than anything penned by his famous disciple, Mr. Shaw."—*The Outlook* (London).

Autumn Books—Sturgis & Walton Company 31-33 E. 27th St. NEW YORK

PERIWINKLE

By WILLIAM FARQUHAR PAYSON, Author of "John Vytal," "Débonnaire," "Barry Gordon," etc.

A story of the rugged life-savers of Cape Cod, and their idol, Periwinkle, who in her infancy was cast up by the sea. Her love for Dick Langdon, storm-wrecked upon the same coast, is the centre of this story instinct with the freedom of winds and waves. (12mo. Illustrated by THOMAS FOGARTY. $1.35 net)

THE LADY OF SHENIPSIT

By FREDERIC P. LADD, Author of "One Fair Daughter" and "The Woman Pays."

A girl, high-bred and generous, married to a man whose shallow vulgarity she discovers too late—an intolerable situation! The way out of it is the theme of this novel, which brings together, in a story tense with passion and stirring incident, people whimsical, lovable or sinister, but always interesting. (12mo. Illustrated by GORDON GRANT. $1.25 net)

THE LADY: SIGNIFICANT PHASES OF HER HISTORY

By EMILY JAMES PUTNAM.

Studies of the lady of different times and nations, her education, duties, pleasures, and social and domestic life. Cloth, Crown 8vo. Illustrated, $2.50 net. (Ready October 12th)

HUNTING CAMPS IN WOOD AND WILDERNESS

By H. HESKETH PRICHARD, F.R.G.S. Author of "Through the Heart of Patagonia," etc. With introduction by F. C. Selous.

Big game hunting in localities mostly within easy reach of the American Sportsmen. By a sportsman known the world over. Small quarto. 100 color and other illustrations. $4.00 net. (Ready October 5th)

LEOPOLD THE SECOND, KING OF THE BELGIANS

By ANGELO S. RAPPAPORT, Ph.D. Author of "Royal Lovers and Mistresses," etc.

A biography of the late King Leopold, the man and the monarch. Cloth, Demy 8vo. Illustrated, $3.00 net. (Ready Sept. 14th)

COWBOY SONGS

Collected by JOHN A. LOMAX. Introduction by Barrett Wendell.

Breezy, devil-may-care ballads and songs, with music to 20 of them. Gathered from the lips of the cowpunchers.

Cloth 12mo. $1.50 net. (Ready October 19th)

THERE are some books that everybody should read. No, not the Bible, Shakespeare or John Woolman's Journal, this time.

THE particular book in mind is a masterly novel on the subject of the "wild oats" that men sow, and the consequences—to wives and children, the innocent victims—as well as to themselves.

THE book is aptly named "WILD OATS." Brass bands and poster type have not been needed to make the public realize its importance. The author is James Oppenheim, whose "Dr. Rast" stories you may have read. A striking foreword is contributed by Edward Bok of the *Ladies' Home Journal.*

THE price is $1.20 net; most good book stores have WILD OATS in stock; those that haven't can procure it in 24 hours.

THE publisher is B. W. HUEBSCH, 225 Fifth avenue, New York.

SEVEN GREAT STATESMEN

By ANDREW D. WHITE

Recently President and Professor of History at Cornell University

A scholarly volume of essays, historical, biographical, critical, constructive; studies of seven great men who gave their lives

In the Warfare of Humanity for Right Reason

EXTRAORDINARY PRESS COMMENTS

"It has many of the qualities which make for popularity—a strong vein of sentiment, a flexible and kindly humor, a plot directly concerned with a pair of young lovers, and a vigorous style."—*The Nation.*

"The people whom we meet—and never meet too often—in these diverting pages are not theatrical figures from an artificial stage, but real persons from real life, the life of now and here. It is in New York—its trials and struggles, its temptations and dangers, its triumphs and defeats."—*The Dial.*

"A notably fine piece of American fiction. . . . The story has dramatic force and sentiment, a spicing of humor and a buoyant optimism."—*Philadelphia Press.*

"One of the strongest American novels that has appeared in several seasons. . . . The whole story is on a far higher plane than the ordinary novel of American life. The main characters are real, but they are touched with the fire of the spirit."—*San Francisco Chronicle.*

"As an observer of cosmopolitan life, Mr. Smith is obviously an adept, and he reproduces what he has seen and heard with a keen sense of its mingled comedy and tragedy."—*Boston Transcript.*

"The power is not given to every novelist to preach a strong, wise, and helpful sermon, and, at the same time, to write an absorbing, dramatic, and sweet story. . . . 'Enchanted Ground' is a problem novel—with a solution. . . . It is a satisfying whole and a rich reward to the reader."—*New York Times.*

"No more convincing tale has recently appeared. . . . It vividly pictures the New York that appeals so strongly to young manhood."—*Newark News.*

Clever Betsy By CLARA LOUISE BURNHAM.

A new novel in Mrs. Burnham's cheerful, intimate style. *Ill. in color and black and white by Rose O'Neill. $1.25 net; postage 12 cents*

A Man's Man By IAN HAY.

"The reader will search contemporary fiction far before he meets a novel which will give him the same frank pleasure and amusement as 'A Man's Man.'"—*London Bookman.* *With frontispiece by J. Montgomery Flagg. $1.20 net; postage 10 cents*

The Homecomers By WINIFRED KIRKLAND.

Tells the surprises and adventures of four orphans who came, with Western ways and qualities, to live in the East. *Illustrated. $1.20 net; postage 11 cents*

The Meddlings of Eve By WILLIAM J. HOPKINS.

"His distinction is, we repeat, to have found a new literary field and to have peopled it with original and living characters that may not unjustly give him claim to rank with the best of our living American writers."—*Boston Transcript.* *$1.00 net; postage 9 cents*

Letters to a Salmon Fisher's Sons By A. H. CHAYTOR.

Mr. Chaytor is at once a thoroughly experienced fisherman and a lucid and entertaining writer. These letters about salmon fishing will be eagerly read by all true disciples of Isaak Walton. *Illustrated. $3.00 net; postage 15 cents*

In the Catskills By JOHN BURROUGHS.

Eight delightful essays, fully illustrated from excellent photographs by Clifton Johnson. *$1.50 net; postage 14 cents*

The Early Religion of Israel By LEWIS B. PATON

The author presents simply, frankly, and cogently the modern view of the progress of Hebrew religion from its ancient Semitic beginnings to the time of the prophets. *50 cents net; postage 5 cents*

The Methods of Attracting Birds By GILBERT H. TRAFTON.

All who like to have birds around them in the country or suburbs will be glad of this handbook, the only one of its kind adapted to American conditions. *Illustrated. $1.25 net; postage 12 cents*

The Psychology of Religious Experience By EDWARD S. AMES.

An important, original contribution to our understanding of the origin and nature of religion. *$2.50 net; postage 20 cents*

A Beginner's History of Philosophy By HERBERT E. CUSHMAN.

A clear and definite treatment of the subject of philosophy. In addition it presents the historical setting of the philosophers in such a way as to show how their philosophy was affected by the life of the times. First Part: Ancient and Mediæval. (*Now ready.*) *$1.60 net; postpaid.* Second Part: Modern. (*Ready in February.*)

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 15, 1910.

The Week.

Mr. Roosevelt's speech at Columbus on law and order was a word fitly spoken. That Ohio city has for weeks been the scene of criminal violence by strikers and of flabby efforts by the municipal authorities to protect the street-car companies and operatives in their rights and to secure to citizens peace and safety. Hence the straightforward talk of the ex-President must have done good. Mr. Roosevelt was perfectly explicit on the folly as well as the criminality of those labor leaders or unions that encourage or even wink at assaults and the use of dynamite as a means of winning a strike. He justly said that it is impossible to listen to men who wreck cars and terrorize a city. They cannot get and do not deserve a hearing for their complaints until they show that they are first of all law-abiding citizens. Even if they have a measure of justice on their side they put themselves out of the court of reason when they resort to violence. And Mr. Roosevelt was equally clear and strong on the duty of the authorities to put down rioting at all hazards. He had only scorn for a Mayor who would palter with riotous strikers, or for a police that would hesitate to use every power at command to bring them to submission. On this whole question Mr. Roosevelt has been consistently right, so far as we know.

Mr. Roosevelt's refusal to break bread with Senator Lorimer at Chicago was an obvious thing for him to do, but nevertheless was a fine act which deserves high praise. We cannot have too much of such stern holding aloof socially from men politically corrupt. And in congratulating Col. Roosevelt on the stand he took with Lorimer, we must add a word of special felicitation upon his now being in a position where he is free to make no compromise with sin. It must be a source of great relief and satisfaction to him that he no longer has to muzzle his honest instincts at the demand of party regularity or political expediency. There are men living to whom Mr. Roosevelt said indignantly of Mr. Blaine in 1884, "But he is a thief!" Yet because the party nominated Blaine, and there was no possibility of Mr. Roosevelt's being able to do good by getting office except through sticking to the party, he swallowed his righteous anger and supported Blaine. So during all the years when he sustained social as well as political relations with Platt and Quay, it must have been galling to him in the extreme to be compelled to give countenance to men whom in his heart he abhorred, simply because they had the votes and the Congressional delegations of two great States, without which his plans to bless the country could not be carried out. And when Quay died and Mr. Roosevelt sent a telegram in praise of that "friend" of his, he was doubtless burning all the time to speak fittingly of one of the most sinister political figures of the age, who had been openly accused of robbing the State Treasury, and whose trail was marked by the sulcide of bank cashiers whom he had tempted and ruined. But from all those old trammels which held Mr. Roosevelt dumb in the presence of powerful political criminals, he is to-day happily freed, and we congratulate him on the new liberty he now has to spurn a man like Lorimer—after he has been found out and shorn of power.

The four Democratic members of the Ballinger investigating committee, and Mr. Madison, the insurgent Republican member, have gone on record as sustaining the Glavis-Pinchot contentions against the Secretary of the Interior. The vote taken, in the absence of a number of the Republican members, must, of course, be regarded merely as a strategic move; it would be preposterous to propose seriously to enter the findings of the committee, after months of inquiry, in any such way. The object was to compel action on the part of the majority members, who have shown an inclination to shove the matter over until after the November elections. In the meantime the action taken by the minority has had the effect of showing that Mr. Madison, as well as the Democratic members, goes the full length of declaring that Mr. Ballinger's course was such that he "should no longer be retained" in the office of Secretary of the Interior. It is to be noted, however, that the judgments expressed in the resolutions offered by Mr. Madison, and adopted in the vote taken, are more carefully limited as regards the grounds of the conclusion than was the case with the resolutions offered by Senator Fletcher, for which Mr. Madison's were a substitute.

In a sketch of Gov. Harmon in this month's *Review of Reviews*, an interesting quotation is given from an address delivered by him at the opening of the Law School of the University of Cincinnati in 1905. Referring to the relation of lawyers to corporations, the lawyer, he said, should not refuse to represent corporations, but "he must not forget that they, unlike his ordinary clients, have or may have interests which conflict with those of the public, and that his first duty is to the public, not only because he is a citizen, but because from it he has received his commission as an officer of justice." This is sound doctrine, well expressed; few things would be more wholesome than the effective inculcation of it in the minds of the rising generation of lawyers. And so far as Mr. Harmon is concerned, the interesting thing is that his practice has squared with his preaching. The sketch referred to points out the important responsibilities that have fallen to Mr. Harmon in connection with his corporation practice, and the ability and success with which he has fulfilled them; but he has never, it is asserted—and, we believe, with truth—placed his services at the disposal of any corporation in opposition to the public interest. The more one considers both Gov. Harmon's public record and his personal traits, the more does his exceptional fitness for the leadership of the Democratic party in the next Presidential campaign impress itself.

The Democrats of Connecticut have made a notable contribution to that rehabilitating of the Democratic party of which there are beginning to be many promising signs. The mere fact of the nomination of such a man as Judge Simeon E. Baldwin for the Governorship would be significant and important,

but the unanimity and genuine enthusiasm of the convention gave to it a far greater value. Not since the demoralization of the party by the free-silver issue in 1896 has the party in Connecticut manifested anything like the spirit that was displayed at New Haven last week. And this enthusiasm was evoked not by any cheap appeal to mushroom sentiment, but by the prospect of a campaign for the election of a man of the highest intellectual and moral qualifications, a man who, if chosen Governor, will be sure to give to the State service of great and enduring value. It will be up-hill work to elect Judge Baldwin, in the face of the very large majorities which the Republicans have been recording in Connecticut in recent years, but the Democrats evidently feel that there is a good chance of accomplishing that result.

No result of the voting last week is matter for more hearty congratulation than the decisive victory of State Senator Bass as Republican candidate for Governor in the New Hampshire primaries. To talk of the contest in New Hampshire as a fight between conservatives and progressives is to give a very misleading impression of the struggle. It is true, of course, that the fight, in one aspect, formed part of the war that is going on all along the line between "insurgents" and "regulars"; but in New Hampshire, more than in perhaps any other State, the question really at issue was whether the people would support a corrupt political organization, the servant of a debasing railway corporation, or would register their verdict for an able, honest, and fearless candidate representing the cause of a vitally necessary reform. The result was a crushing defeat for the ring, the vote being about two to one in favor of Bass. And, as though to emphasize the value of the direct primary as an instrument of sound government, two men of national prominence and great political skill—Senator Gallinger and ex-Senator Chandler—though one was on the Bass side and the other against him, were defeated as candidates for delegate to the State Convention. These results cannot be dismissed without a word of sincere and hearty praise for Winston Churchill, to whose patriotic, persistent, and unselfish efforts this victory of decency, in a State the corruption of whose politics has been a byword for at least forty years, is chiefly due.

The election in Vermont shows that 10,000 Republicans who voted two years ago declined to go to the polls last week, while there were 1,000 more Democratic votes than last year. The Democratic candidate is quoted as saying that the result was due more to dissatisfaction with the Republican machine than to anger over the tariff. If that be true, conditions in Vermont are different from those in other States where insurgency and dissatisfaction with the tariff go hand in hand. Be that as it may, the small Republican majority of 17,500 indicates clearly that there is every prospect of as Democratic a year as 1890. Then, too, it was the stay-at-home Republican vote that counted. This year there is every reason to look for a similarly large stay-at-home vote in States like New York, Ohio, and Indiana, where the Republican party is fairly torn to pieces by factional fights and the sharp division of sentiment between the followers of Mr. Roosevelt and Mr. Taft. Strong Democratic candidates like Judge Baldwin in Connecticut and Woodrow Wilson in New Jersey will draw many Republican votes, but in a crisis like this there will also be many who will prefer not to vote at all.

Julius Cæsar Burrows, as a result of the primaries in Michigan, will retire from the United States Senate along with his friends and co-laborers, Aldrich and Hale. As he read the returns, he must have wished he had followed their example and retired of his own will rather than under the propulsion of the Republican voters' boot. It is particularly hard for him to contemplate the fact that he has been thrust aside in favor of "Young Mr. Townsend," as he calls him, an insurgent Representative who last spring was one of the leaders in the revolt against Cannonism. Mr. Townsend declared that Mr. Burrows was too old. Mr. Burrows retorted that he was "only seventy-three" and that there were many older men than he in the Senate. He further pointed out that as he would almost certainly succeed Aldrich as chairman of the Senate Finance Committee, Michigan would be sacrificing "her own best interests" in defeating him. But Michigan has decided she would rather sacrifice her "best interests" and have Mr. Townsend, than stand six years more of Mr. Burrows.

Less than three months ago, Mr. Sherman, returning from a standpat "convention" in Milwaukee, declared that there were no insurgents in Wisconsin. Now "the original insurgent," Robert M. La Follette, has carried his party primaries against Cook, his standpat opponent, by a vote estimated at 3 or possibly 4 to 1. From this it is evident either that the Vice-President was misled as to conditions in Wisconsin, or that Wisconsin standpatters have a habit of voting for progressive candidates. As a matter of fact, any other result so far as La Follette is concerned would have been surprising. Every other outsider who has visited the State —and the list has included Cummins and Dolliver, Clapp, Bristow, Heney, Pinchot, and Garfield—has declared that Wisconsin was as strongly progressive as Kansas. The recent primary gave proof of it. The only question seemed to be whether the Legislature would ratify the people's choice. Indications point to the selection of a majority of members pledged to carry out the primary's mandate. With the exception of the contest for Governor, in which the progressive vote was divided and into which the local option issue introduced complications, the entire progressive ticket appears to have been successful.

The tactics pursued by the Eastern railways in submitting evidence last week were, to say the least, singular. Their programme amounted to presenting gross totals and percentages of increase in wages and proposed increase in revenue through higher freights, while declaring inability or unwillingness to give the details. It was inevitable that such a course of action should have prejudiced the railways' case at the very start. Nothing could be more damaging to their contentions, in the eyes either of the Commission or of the general public, than to create the impression that the companies were hiding essential facts. At the beginning of this week's hearing there were some signs that a more rational policy is to be pursued in subsequent testimony, and we trust that the expectation will be fulfilled.

The death of Lloyd W. Bowers, the Solicitor-General, is a genuine loss to the country. A man of great natural ability, one of the leaders of his profession, he had to a remarkable degree the confidence of President Taft and the other public men who knew him. It is beyond question that he would soon have ornamented the Supreme Court. Indeed, he would probably have been appointed ere this had he not been connected with the Government side of the highly important cases now down for a rehearing. His tragically sudden death again embarrasses the Supreme Court, and the Government particularly, in the matter of the Constitutionality of the corporation tax, the rehearing of which must undoubtedly be postponed. Mr. Bowers was a corporation lawyer and a railway lawyer, in that he was for years counsel to the Chicago and Northwestern Railway, and yet, when he gave up a large salary to enter the Government service at a much smaller one, no one for a moment insinuated that his previous professional engagements prevented his performing his new duties in an unbiassed and disinterested manner. It was a timely reminder that there are corporation lawyers and corporation lawyers—those who sell themselves and those who honor their profession by cleaving to its highest standards, and refusing to become the devisers of stock juggling and of ways to circumvent the laws.

It is high time that the question be squarely faced of how compliance with the customs law on the part of returning travellers may be obtained without making every American's return to his or her native country a source of humiliation and exasperation. Collector Loeb deserves great credit for making it perfectly unmistakable that the law, under his administration, will be no respecter of persons, though he has carried his inquisition methods, in some instances, to outrageous lengths. It should be possible, however, to execute the law effectively, and at the same time to treat returning travellers in a decent and civilized manner, as is done in other countries; but, in order to accomplish this, there must be a clear recognition of the fact that there are two methods available for the prevention of violations of law, and not only one. We do not prevent counterfeiting by looking into everybody's pocketbook to see whether he has counterfeit money or by searching everybody's house to see whether he has a counterfeiting plant in it. What we do is to make the punishment very heavy when the counterfeiter, or the person who knowingly passes counterfeit money, is found.

A study in comparative mortality statistics among college students, by William Roscoe Thayer in the *Harvard Graduates' Magazine*, gives a new application to the incidence of the wages of sin. Mr. Thayer has compared the death rate among bachelors of arts in five classes with the rate among members of the same classes who, for one reason or another, left college without taking their degree. Taking five classes between 1876 and 1885, he finds that after a lapse of twenty-five years, there had died, out of a total of 927 A.B.'s, 140 men, or 15+ per cent.; whereas, out of 299 temporary members, there died 93, or 32+ per cent. Not all temporary members have necessarily been "dropped." There are excellent scholars who come to Harvard with the intention of staying only a year or two, but that makes the case of the black sheep even less hopeful. Mr. Thayer does not want to generalize too rashly, but he believes nevertheless, that "the figures examined warrant us in concluding that dropping often implies more than mere juvenile inattention or whim, or than revolt against academic restraints. It seems to indicate a predisposition to bodily, mental, or moral inefficiency, which sooner or later, and usually sooner rather than later, results in disability and death. We all know temporary members who have done noble things; but as a group, the stars in their courses are against them. The fellow who 'could stand high, if he wanted to,' should be warned that his not 'wanting to' is an unfavorable symptom." Harvard figures continue to be merciless to the idler. The pretty legend that the man who loafs in college does exceptionally well in the professional schools was recently exploded. Now comes the apparent fact that if you flunk your examinations, you not only make a mess of life, but die at an unpleasantly early age.

Although the tunnels which now connect Switzerland with Italy have greatly decreased the importance of the St. Bernard and other passes, especially during the eight months of snow, it is still deemed advisable to employ St. Bernard dogs, as in the good old times. It is no longer customary to send out the dogs alone, with baskets of food and drink, but a man always accompanies them. Usually a young dog is taken along that he may learn his duties. These dogs are not really the famous old St. Bernard breed. That originated in the fourteenth century, through a cross between a shepherd dog from Wales and a Scandinavian dog whose parents were a Great Dane and a Pyrenean mastiff. The last pure descendant of this tribe was buried under an avalanche in 1816. Fortunately, there were found subsequently, at Martigny and on the Simplon Pass, a few dogs which, by crossing with mates from Wales, yielded the modern St. Bernard dog, which is physically even stronger than his mediæval namesake, and shares most of his traits. The loss of one of these dogs, as recent cablegrams show, is regarded as a calamity.

General Juan Estrada, having fought long and valiantly in behalf of the right of the Nicaraguan people to say who shall be their President, now makes the first tentative, timid proposal of a year's postponement of the election. Presumably Gen. Estrada is actuated by the highest ideal of fairness. If the election were to take place to-day, he is well aware that, with the halo of military glory still fresh about his brow, there would not be the ghost of a chance for any other candidate. The populace would simply insist on forcing him into the Presidential chair that has been so recently and repeatedly vacated. Estrada has consequently determined to wait until his prestige declines to the common level of Nicaraguan statesmanship and then take his chances. It would be hard to find a parallel instance in all the annals of self-sacrifice. To think that the man who might be President of Nicaragua for the constitutional term of six years at a handsome constitutional salary, should be content to remain Provisional President for an indefinite number of years at any salary he can get! No doubt the fortunate Nicaraguan people will count themselves still more fortunate, after fighting a year to secure a fair election, to have the whole troublesome duty taken off their shoulders.

MAINE AND AFTER.

Democratic gains were generally expected in Monday's election in Maine, and it was thought possible that a Democratic Governor might be chosen by a narrow plurality; but the most sanguine did not look for such a tremendous overturn as the Republicans actually have suffered. They have lost the Governorship for the first time in thirty years—and even in 1880 the Democratic-Greenback fusion won only by a squeak and a "fluke," the State going Republican in the Presidential election in the following November—and that by a majority little short of 9,000. Until two years ago, the Republicans regularly elected their Governors by majorities of from 25,000 to 34,000. Even as compared with 1906 and 1908, when the majorities dropped to 8,000, Mr. Plaisted's winning this year takes on the proportions of a political revolution. Maine's vote is not large, the total being about 142,000. A gain of 17,000 on that basis is a very high percentage. Applied to New York, it would mean a Democratic majority of 150,000 or so. And the result in Maine cannot be explained, as was that in Vermont, by Republicans staying at home. The Republican vote fell off, but the Democratic went up. There was an actual change of parties by many electors. Even after due allowance is made for the effect of the liquor issue and for changes in the population in some Maine cities, the election of Plaisted by an unexpectedly large majority will be everywhere regarded as a political portent. If the Vermont barometer was set for foul Republican weather, the Maine indications are for something like hurricane conditions.

The Republican upset seems even more disastrous when we turn to the figures for Congressmen and for the Legislature. Two Republican Representatives, in districts which have been thought absolutely "safe" from time immemorial, are defeated by majorities of 2,000 and 3,000, while the other two pull out, if the final returns show that they have pulled out, by pluralities of the most meagre sort. This is sufficiently astounding, but the news that the Democrats have triumphantly carried the Legislature also, and will elect a United States Senator to succeed Senator Hale, is fairly amazing. As a dazed Republican in Washington exclaimed, when he heard of the Maine election: "If the Democrats have carried the Legislature, too, the world will come to an end."

Everywhere it is admitted that the sweeping Democratic victory in Maine is not due to "local causes." These concededly entered into the campaign, but did not determine the result. That is too large, too pervasive throughout the State, where the country districts were affected as well as the cities, to be accounted for by anything except a general cause. That cause was undoubtedly intense dissatisfaction within the Republican party. Specifically, it was dissatisfaction with the Republican tariff. High prices and the increased cost of living have made the people, even in protected Maine, restless and angry, and have led them to question the wisdom of the policy of taxing ourselves rich more sharply than ever before. The whole brunt of the fighting, at least in the Congressional districts, was against the Payne-Aldrich tariff. Democratic campaigners were even so sacrilegious as to talk of the advantages of free trade, and thereupon the Republican managers thought the Lord had delivered those Philistines into their hands. No candidate for Congress in Maine could utter the words "free trade" and live, they joyfully said. But they are wiser now. As for the Republican Representatives, Messrs. Swasey, Burleigh, and Guernsey, who had voted for the high-tariff law, they were savagely heckled by the most direct and awkward questions. On one widely circulated campaign card, such ugly queries were put to them by name as the following:

> *Why* did you vote to admit raw silk free and only place a duty of 53 per cent. on the manufactured article, at the same time placing a duty of 135 per cent. on woollen or worsted cloths valued at not more than 40 cents a pound? Was it because silk is used by the greater number of your constituents and woollen and worsted only by a few?
>
> Why did you vote to tax champagne from 54 to 66 per cent. and wearing apparel at 80 to 92 per cent.? Was it to encourage your constituents to drink champagne and to discourage them from wearing woollen clothes?
>
> Why did you vote to tax hats bringing not over $4.50 per dozen at 77 per cent. and those valued at more than $18 per dozen only 47 per cent.? In whose interest was this done, your poor or rich constituent?
>
> There must be a reason for *your vote.* Will you kindly give it to your constituents *before they vote,* September 12?

Look at the surprising figures from Maine as they will, Republicans are unable to see in them anything but a gloomy prophecy of disaster in the November elections. In short, we have today conclusive evidence that President Taft was right when he said last winter, with appalling frankness, that the signs were plain that his Administration was not popular, and that the Democrats would elect a majority of the next House of Representatives. The business world has pretty plainly settled down to that belief. All along, it has been in the air; the Maine election crystallizes it into figures which not even the blindly partisan can misread.

WHITHER IS ROOSEVELT DRIFTING?

That Mr. Roosevelt has appropriated virtually the entire Bryan baggage, with the exception of the defunct free-silver issue, has become one of the accepted commonplaces of American politics. We do not remember that the assertion has ever been seriously denied. But there is a matter of far greater importance than any mere question of originality, or priority, or plagiarism. The fact is that Mr. Roosevelt has done much more than make his own the specific purposes for which Mr. Bryan stood, many of which were wholesome and necessary. He has adopted Bryan's attitude toward the great underlying problems of the economic organization of society; has adopted that attitude and gone much farther with it than Mr. Bryan ever undertook to do. What that attitude is, it would be difficult to define; but its essence consists in a readiness to assume as a governmental function the task of remedying economic evils or anomalies, however deep may be their foundation in the inmost structure of our economic life, and however violent may be the departure from the established principles of our government which that task inevitably involves. In this direction, Roosevelt has utterly distanced Bryan; and in his Osawatomie speech he gave the clearest possible indication that what he has thus far done and said is but an earnest of what he stands ready to say and do in the future.

These things being so, it is extremely instructive to turn back in the record to the time when Mr. Bryan was making his first great fight, and when Mr. Roosevelt was making speeches against

him. On September 29, 1896, in a speech at Utica, Roosevelt thus expressed his judgment of that agitation of which—apart from the lost cause of silver—he has now himself become the foremost leader:

> Mr. Bryan is appealing more and more openly to the base malignancy and hatred of those demagogues who strive to lead laboring men to ruin, in order to wreak their vengeance on the thrifty and well-to-do. He advocates principles sufficiently silly and wicked to make them fit well in the mouth of an anarchist leader. For the government of Washington and Lincoln, for the system of orderly liberty bequeathed to us by our forefathers, he would substitute a red welter of lawlessness as fantastic and as vicious as the dream of a European communist, turning aside from the American principles of government, repudiating everything which has made the name America a symhol of hope among nations. Instead of government of the people, for the people, and hy the people, which we now have, Mr. Bryan would substitute a government of the moh.

Against Mr. Bryan and his programme many loud voices were raised in that famous campaign, but it would be difficult to find any utterance to match this for violence of denunciation and intensity of abhorrence. Yet to-day the same voice is hurling epithets and anathemas almost as consuming against everybody who fails to agree with him in the very views which he was then denouncing as abhorrent to American principles.

How far Mr. Roosevelt is prepared to go along the line of governmental domination of economic affairs was never so clearly shown as in the Osawatomie speech, and especially in this remarkable passage of it:

> We grudge no man a fortune which represents his own power and sagacity, when exercised with entire regard to the welfare of his fellows. But the fortune must be honorably ohtained and well used. It is not even enough that it should have heen gained without doing damage to the community. We should permit it to he gained only so long as the gaining represents henefit to the community. This, I know, implies a policy of a far more active governmental interference with social and economic conditions in this country than we have yet had, but I think we have got to face the fact that such an increase in governmental control is now necessary.

This opens up an endless vista of legislative and administrative interference with business affairs and personal activity, in comparison with which anything ever proposed by Bryan becomes a mere passing trifle. It is predicated on the assumption that whatever is wrong in human affairs or human relations can be mended by governmental fiat; that once we have arrived at a conclusion as to what is ideally desirable, we must grasp at the implement that lies nearest to hand and rush in with a remedy; that the complexitics and difficulties which have beset mankind since the dawn of history need never have existed but for want of a strong arm determined to enforce a square deal all round. As ready as the most extreme Socialist to grapple with the deepest problems of the economic organization, Mr. Roosevelt differs from him only in indulging a childlike confidence in the possibility of solving them by the simple process of piling upon a central government more and more duties of supervision and control, and clothing the Executive with greater and greater powers.

Whether the people of the United States will be so carried away from their moorings as to follow this half-baked Rooseveltian Socialism is the great question of the day. Such a result would be impossible but for the unparalleled personal hold that Mr. Roosevelt has established upon the people in all parts of the country; but as matters stand, no prediction based upon the past attitude of the nation toward projects of radical change and disturbance is of any practical value. Confronted in the abstract with the question raised by such a pronouncement as that which we have quoted from the Osawatomie speech, nine out of ten Americans would simply dismiss it as moonshine; but it is not presented in the abstract. It is not a theory that confronts us, but a man. Ask the average American whether he wants laws passed that shall permit people to gain money "only so long as the gaining represents benefit to the community," and to retain it only if it has been "honorably obtained and well used," and he would laugh at the question; but the same man will applaud Roosevelt to the skies when he says he is going to see to it that these things shall be done. It is to the contemplation of government—and especially the chief executive at Washington—as the omnipotent source of all good, the infallible righter of all economic wrongs, that Roosevelt is rapidly accustoming millions of our people; and the great question is whether or not the old-time American sturdiness and common sense have still sufficient vitality to throw off this pseudo-socialist virus before it has done immeasurable mischief.

THE FISHERIES DECISION.

The full meaning of the award handed down by the Hague Tribunal in the Newfoundland fisheries arbitration can be attained only by considering certain circumstances of which the court and the court's opinion seem to have taken no official cognizance. Even Washington concedes that on the face of the award Great Britain has won a substantial victory. Of the seven questions submitted for adjudication the two principal ones have been decided in her favor. Of the five minor points decided in favor of the United States, several bear conditions and limitations; so that here, too, Great Britain has not lost everything. The two points on which she won declare that Great Britain is entitled to make local fishing regulations without the consent of our government, and that the three-mile zone from which American vessels are excluded shall be measured from a line stretching across the mouth of open bays instead of following the windings of the shore line of the bay. Under the American contention it would have been possible for our fishermen to enter bays more than six miles wide and three miles deep. By the Hague award they may not enter any bay, no matter how broad and deep it may be.

Here, apparently, is a heavy setback for our fishermen, to be thus excluded from waters which at certain seasons constitute the most valuable fishing grounds. But here, too, enters the highly important fact that this American fishery over which we have been at odds with Great Britain from the very first years of our national existence, has, for the last half-century, been no fishery at all, but a branch of international trade. We have, before this, quoted the succinct statement by a Newfoundland journalist, that "the practice of fifty years has been for American vessels to visit the coast and purchase cargoes of these herrings from resident fishermen who actually caught them and sold them to the American crafts as a matter of ordinary commerce." Hence to be excluded from certain valuable coast waters or not to be excluded, makes comparatively little difference to our sturdy American fishermen for whose benefit the heavy duty on foreign fish is writ-

ten in the tariff. Within three miles from shore, or within three miles from the line of the headlands, it is the Newfoundlander who will continue to catch the fish and our own vessels that will continue to bring them into Gloucester free of duty as the product of American "labor."

It does not follow by any means that the Hague trial was a great ado about nothing. The facts we have cited concerning the nature of our Newfoundland fishery are, after all, extra-legal facts. Should a trouble-maker arise in Newfoundland, decide to disregard the practice of half-a-century, and plant himself on the letter of the law, he would have full opportunity to do so, were it not for the Hague decision. And precisely that is what the late Premier Bond did when he began his anti-American campaign in 1905. Mr. Bond said fisheries, but his primary object was not to protect Newfoundland fisheries, but to compel tariff concessions to Newfoundland by the American Government. The fisheries he used as a weapon of offence. What is regarded from the point of view of international law as the most important point in the Hague award, namely, the question of the three-mile zone in inland waters, was by no means the most important point in the view of Newfoundland's pugnacious Premier. His campaign took the form of a series of regulations dealing with the sale of bait fish to Americans, the enlistment of native crews by American vessels, registration at the Newfoundland custom-houses, and the payment of light-duties. On these points the court has found in favor of the United States, both specifically and in the decision that while Great Britain has the sovereign right to frame its fishing regulations without the consent of the United States, such regulations must not violate the provisions of the Treaty of Ghent by discriminating in favor of British subjects against Americans. Just what regulations are reasonable and unreasonable, the court has left it for a board of experts to determine.

Thus the findings of the Hague Tribunal bear chiefly on questions other than the one presumably at stake, the prosperity or failure of the American herring fishery. That industry will go on very much as it did before Premier Bond began his crusade. What the award does is to make the repetition of such a crusade impossible. With rights on both sides clearly defined, there should be no opportunity for the terms of the Treaty of Ghent being turned to uses essentially alien to the fisheries question. For us it is of value that one of the most glaring absurdities of our tariff system should be brought out into the open. For Newfoundland it is an advantage that her fishermen shall be freed from the restrictions imposed under the Bond régime on their time-honored method of earning a livelihood. For the cause of international peace it is of the highest value that a dispute whose roots run back into the eighteenth century should be disposed of, in spite of much engendered bitterness, by due judicial process.

THE PERMANENT OFFICIAL.

The statement that Mr. Alvey A. Adee, second assistant Secretary of State, on last Friday completed forty years in the Government service, brings up an aspect of the conduct of government to which we are apt to give but little attention. In the British service, the need of the permanent official, thoroughly experienced in the demands of a particular department, is completely recognized in the institution of the permanent under-secretary, whose tenure is entirely independent of the changes of Ministry and the chances of party. In our own country, since the civil service law went into operation, we have become familiar with the idea of a practical permanency of tenure in the case of the distinctly minor office-holders, but a change of Administration has, as a rule, carried with it changes of *personnel* not only in the case of members of the Cabinet and such other officers as are charged with duties and powers affecting public policy, but also of officials of a high rank generally. Yet there has never been a time—not even in the palmiest days of the spoils system—when there have not been certain officers who remained at their posts through good weather and bad, men whom neither Democrat nor Republican could disturb, because their knowledge, experience, and fidelity were indispensable to the conduct of business. This has been especially true in the State Department; but instances have been present, not only in every branch of the National Government, but also in our various State and city governments, no matter how completely given over to the uses of the boss and the ward politician. Anybody might be good enough for Comptroller or Collector or what not, and anybody might be good enough for a mechanical clerkship, but between the great chief whose name stood at the head and the crowd of routine workers, it was necessary to have one or two men who understood the business through and through, and who could be called upon to steer the way through any real difficulty. Had the spoils system not made a virtue of necessity in such cases, it would inevitably have gone to the wall much sooner than it did.

It must often seem marvellous to anyone who stops to think of the matter, how our officials, in charge of large and complex affairs new to them and foreign to the knowledge of the average man of intelligence in any walk of private life, can take hold as they do without making a mess of things. In large part this success must, indeed, be ascribed to the alertness, self-reliance, and energy that are characteristic of the typical American; but it is a mistake to imagine that these qualities can accomplish the miraculous. You can no more tackle the intricacies of diplomacy or finance or international law by mere horse sense than you can play the violin or speak French simply through the possession of the same valuable quality. A succession of men who, like Mr. Adee, have absorbed the traditions, and become experts in the methods, of international procedure is indispensable in the State Department, and such a succession of men we have, in greater or less degree, always had there; and the like is to some extent true in nearly every department of governmental work involving any complexity. Hence may arise, indeed, a certain danger of bureaucratic rigidity, of stubborn or interested adherence to bad ways when they have once become established; this has been conspicuously illustrated in the Navy Department, but it is the exception and not the rule. In such cases, there is need of a strong hand from above to break up bad practices, to pull the machine out of the rut; but that is simply one of the drawbacks which must be faced. We cannot do without the knowledge and long training of the permanent official, though we may, in some instances, have to guard against incidental evils.

As the complexities and difficulties of governmental tasks increase, there will unquestionably be a great extension of the practice of retaining permanently in the public service officers of special training and proved ability. A movement is now on foot for permanency in the important postmasterships—an office the nature of which is peculiarly independent of all changes of national policy. It is absurd that a post of this nature, in the efficient administration of which every human being in a great city is directly interested, should be filled by a new man every four years or thereabouts, simply because there is a different President at Washington. Even more important than this, however, is another instance of the need of permanent officers in connection with the postal service—namely, in the conduct of the Post Office Department itself. It is true, of course, there as elsewhere, that certain officials of whom the public never hears are retained in important posts—and at small salaries—through all the changes of politics; but something more than this is needed. There ought to be an officer distinctly recognized as permanent, paid a salary commensurate with his importance (and provided with such permanent assistants as might be necessary), whose duty it should be to look into all the greater questions of postal organization and through whom, whether directly or by the medium of the Postmaster-General, Congress and the country should be put in possession of authoritative information and opinion concerning postal matters. In that case, it might be hoped that such questions as that of a parcels post, second-class postal rates, etc., would be properly disposed of within a reasonable time.

"THE SCIENCE OF POETRY."

One is forced to believe that poetry is, after all, the mere "frolic of invention" to understand the ease with which Mr. Hudson Maxim now turns, in a huge volume just out, from his usual business of manufacturing new kinds of explosives, to settle poetry's business once and for all. His opening sentence promises even more:

> The main object of this book is to provide a practical method for literary criticism and analysis, and a standard of uniform judgment for determining the relative merits of literary productions, and, further, to supply a more practical and efficient means than we have had heretofore for the standardization of poetry, whereby any poem may be assayed and the amount of its poetic gold determined and separated from the slag and dross.

With Herbert Spencer for his chief guide and the whole universe at his elbow, Mr. Maxim reopens the old squabble as to the relative importance of poetry, and taking exception to the "fine frenzy" attributed by Shakespeare to the poet, concludes that the latter enjoys no greater inspiration than the inventor, the mechanical engineer, and the chemist at their best. Indeed, he is certain that science is greater than poetry and, as the title of his book would imply, embraces poetry. With so much granted, it is, of course, easy to conclude that "nothing Shakespeare did can for a moment compare with what Herbert Spencer did . . . ." and that "any safe and sane person of education, possessed of the requisite inventive imagination, can either write true poetry . . . or else be able to produce such good imitations of the real thing as to render it difficult to discriminate between the counterfeit and the counterfeited."

Sometimes, it appears, a safe and sane person can better the real thing, as in the following instance, in which Mr. Maxim, correcting glaring errors in Hamlet's "To be, or not to be" soliloquy, has given his own version:

> How fear doth poise us on the brink of death,
> Between contending purposes;
> When some outrageous fortune
> Steels the leaden temper of the mind,
> To seek that last asylum from distress.
> To die—to barter with oblivion
> The heart-tire and the pain for dreamless sleep,
> Were gain indeed, if that were all.

It is clear that Mr. Maxim, in his treatment of poetry, is conscious of a cosmic broadmindedness; which is suggestive, as he thinks, of Sir Philip Sidney, of Julius Cæsar Scaliger, of Aristotle himself. They chose, for instance, not to restrict poetry to verse. No more does he. And although his own definition of poetry, which he is fond of repeating, "the expression of insensuous thought in sensuous terms by artistic trope," is only Shakespeare's:

> And as imagination bodies forth
> The forms of things unknown, the poet's pen
> Turns them to shapes, and gives to airy nothing
> A local habitation, and a name—

writ prosily, it strikes him as being revolutionary, and leads him to the following elegant classification: Potentry—or language of merely impressive sound; tropetry—figurative language, and synonymous, to his mind, with poetry; literatry—literal prose statement, whether in verse or not; and, finally, the various combinations of these three terms. Of course, any safe and sane person will see at a glance that here is no strict rule of thumb. And be it said in Mr. Maxim's behalf that he himself is the first to qualify when it comes to the actual application of his principles. Indeed, it is his readiness to hedge that prevents this book from being the *ars poetica* which he apparently fancies it to be. Fate has been kinder to him than his own intention.

Mr. Maxim's real forte lies in his power to provoke thought, though often in a direction quite contrary to his. So the classification just cited is bound to induce reflections of a stimulating sort. If we admit with him, for convenience, that the genius of pure poetry is expressed by figures as being best qualified to embody the illogic which is generally admitted to be the distinction of poetry as opposed to prose, it at once becomes evident that such a touchstone would deprive poetry of some of its most moving lines. Horace used figures amply, and yet it is not difficult to recall certain of his best in which the appeal—and a great appeal at that—consists merely in the commonplace put tersely; the same is, of course, true of Pope. And what shall one say of the exquisite profundity of Macbeth's words upon hearing of his wife's death:

> She should have died hereafter;
> There would have been a time for such a word,

if not that it is pure poetry? We agree, nevertheless, with Mr. Maxim that it would be desirable, if it were possible, to know more accurately than is generally known at present what poetry at heart really is. In the great Greek period there was an efficient sensitiveness in such matters; it shows itself in the precision with which poetry was adjusted, through a great variety of outward forms, to its particular occasions. A similar modern sensitiveness would work wonders, not only with original composition, but with literary criticism. It would lead, for one thing, to what scarcely exists to-day—a right understanding of the component parts of large structures, like the epic, the poetical drama, a philosophic poem such as "In Memoriam." That is to say, it would help to solve the questions: To what extent do prosaic devices

and details enter into those types, inevitably? How far is the central idea of any one of them—admitting that it is poetic—capable of projecting itself? And what is the poetic principle by which certain utterances, in themselves wholly prosaic, are strikingly redeemed?

But to go farther, as Mr. Maxim would have us, and try to wrest the secret from every individual line, is manifestly absurd. Profitable study has, no doubt, been made of the vowel and consonant qualities of poetic works, especially of Tennyson and Milton; but to assume to grasp consciously the manifold subtleties of color, of tone, of lingering poignancy, of haunting suggestion, which reside in countless lines, is to be wiser than seven men that can render a reason.

MISCELLANEOUS GERMAN BOOKS.

The "Memoiren einer Idealistin," by Malvida von Meysenbug, chronicle the intellectual and spiritual development of an interesting personality, and at the same time set forth a graphic record of the revolutionary movement that agitated Germany towards the middle of the nineteenth century. German life in the latter half of this same century is treated in a similar way by Lily Braun in her "Memoiren einer Sozialistin" (imported by G. E. Stechert & Co.), which are written in the form of a *Roman*. The great-grandmother of Lily Braun was a German countess, with whom Jerome Bonaparte had contracted a morganatic marriage. The offspring of this union had been a prominent figure in the circle of the intellectuals at Weimar and had in her youth sat at the feet of Goethe. With this grandmother as her guardian angel the imaginative and emotional author had spent her childhood in a dream-world carefully concealed from the eyes of her mother, whose ideas of good breeding admitted of no demonstrations of feeling or flights of fancy. The girl suffered from the restraint and rebelled against a system of intrusion and interference little justified by her innocent vagaries. Surrounded by books and playmates chosen with no regard for her needs and tastes, she withdrew into herself, just as did the writer of those other memoirs, the great-hearted woman who befriended Gottfried Kinkel and Alexander Herzen in their London exile, and whose devotion to Richard Wagner and Friedrich Nietzsche is a matter of history.

Conversations between the grandmother and her friends opened to Lily Braun vistas of worlds then unknown to her: Browning, Ruskin, Morris, Darwin, Nietzsche. The old lady herself had been touched by the spirit of her time and had grown up to a comprehension of its problems. She read the proceedings in the Diet and discussed with her the questions of the day. As the girl matured into womanhood, she became more and more estranged from the other members of the family, who could not understand why she remained obdurate to the appeals of eligible suitors; but when the parents met with financial reverses, she became their chief support. Two events determined her future course in life. Her acquaintance with Moritz von Egidy, whose followers were absorbed by the Christian Socialist party of Germany, roused her interest in the social question. On the death of her grandmother, she made her literary début, with an article on the old lady's relations to Goethe, and thus found a new world and a new mission. The writings of Young Germany were of intense interest to her, but the personal idiosyncrasies of their authors, as also those of the advanced women of her country, repelled her. Through Egidy, she met Georg von Gizycki, professor at the University of Berlin, and a leader in the movement for ethical culture, and her marriage to him proved an ideal one, but was cut short by his death. The latter part of the book is so full of keen criticism of characters prominent in the Germany of the last decades that the reader leaves it with regret. For the period of the author's second marriage and her share in the socialist movement, which, in spite of the title, is barely touched upon, would have been certain of even wider appeal.

Kurt Martens, a novelist and dramatist of Germany, has written a little volume of essays and sketches on contemporary German literature, "Literatur in Deutschland" (imported by G. E. Stechert & Co.), which is full of suggestions to the general reader and which commends itself by its condensed form. He traces the rise and decline of the naturalistic school, discusses the enjoyment of poetry, the elements of style, the source of the latest literary currents, the poet as a social factor, and gives portraits of some of his most interesting colleagues, such as Count Keyserling, Thomas and Heinrich Mann, Gerhard Ouckama Knoop, Frank Wedekind, and Helene Boehlau. In the last paper he deplores the antagonism existing between the poets of Young Germany and society, and considers their hostile attitude a remnant of the old cult of genius, haughtily disregarding social conventions.

Those readers who by the title of the late Otto Julius Bierbaum's bulky volume, "Yankeedoodle-Fahrt" (imported by G. E. Stechert & Co.), were justified in expecting impressions of America or Americans are likely to be disappointed. These new contributions to the art of travelling, as the author calls them, are limited to Southern Germany, Italy, and the Orient, and our Yankeedoodle is but the name of a Mediterranean steamer. But the author's personal point of view and his whimsical humor fully compensate for this disappointment. No one familiar with Bierbaum's manner would expect from him a systematic record of any trip—be it an automobile journey through the Tyrol or a visit to the Pyramids. He always indulges in unpremeditated excursions, he has always some surprise in store for us—a habit which in his books of travel constitutes half their charm. He has an abundance of amusing anecdote, charming bits of description, and brilliant flashes of wit, which intensify the reader's regret that no more books from Bierbaum's pen are to be expected.

Erland Nordenskjöld, the son of the famous Arctic explorer, has written a book of impressions of travel in South America which he calls "Wälder: Streifzüge im südlichen Amerika" (Frankfurt a-M.: Literarische Anstalt Rütten & Loening). In a curiously simple, offhand manner he describes a trip through the mountains and the forests on the boundary of Argentina and Bolivia, and incidentally gives some vivid pictures of human life in those regions. His notes on the primeval forests, on the fauna of the country, on the natives and their relation to the Latin races that have conquered them seem merely leaves from a diary, but they are not without a rare spontaneous charm. That the Indian of South America is doomed, like his northern brother, seems clear to any one who reads the chapter on the Mataco Indians whom hunger has driven to the villages, where their physical strength is harnessed and exploited in the white man's factories. Among the quaint customs of the Matacos is the libation to Pachamama, the goddess of earth, whom those among them that have been Christianized call Santa Tierra. The author is a collector of prehistoric antiquities, and regrets that he was born too late to be the first to penetrate the realm of the Incas. In the endless Puna, where thousands of skeletons of the mastodon are laid bare as though it were a vast burial-ground of the country's fauna, he dreams of what life may have been a thousand years ago. Nevertheless, he enjoys the carnival tide which in this remote and somewhat barbarous world brings to him showers of flour and water instead of blossoms and confetti.

Max Dauthendey, who is known to students of the literature of Young Germany as a writer of verse so full of strange mannerisms as to verge on the ludicrous, offers one the opportunity to become acquainted with quite another phase of his talent in a little book of weird Oriental stories called "Asiatische Novellen" (Munich: Albert Langen). In the poetical extravaganzas of his youth,

he was a seeker for unusual effects in wordcraft, for rare pictures. In this prose volume, he is a seeker for extraordinary plots presented with an amazing directness. The setting suggests almost palpably the heavy atmosphere of the Orient, and gives us glimpses of depths of superstition, barbarous customs, and occult wisdom.

Wilhelm Bölsche's literary personality can be briefly summarized by the term "scientist-poet." For he is master of the unique art of transmuting the facts of knowledge into exquisite prose of such a fine imaginative quality as to be more closely akin to poetry than to the essay. Every new volume gives evidence of that rare gift. In the introduction to "Stunden im All" (imported by G. E. Stechert & Co.) he suggests that his essays may in a remote future become what we now call Sunday sermons; for he approaches his task with that element of inspiration and elevation which one is wont to associate with religion. It cannot be denied that the style of Bölsche sometimes arouses the suspicion that he is attenuating solid facts, yet his talks stand the test of science. He treats a great variety of subjects in this book, which begins with reflections upon the first appearance of light and life, the subject being suggested by his watching the candles of a Christmas tree. Some of the papers are of vital and timely interest, as the one on the toothless flier, the *Pteranadon*, which he calls a primeval precursor of Count Zeppelin and the most perfect flying machine in the world. In another paper, he indicates what might be the model of the fireless cooker and the incubator in the genus of fowl known as the *Talegallus lathami*. His cleverness in starting with some simple observations and working up genuine scientific interest by æsthetic means, is unique. There is nothing like the writings of Bölsche in all our nature books.

Alexander von Gleichen-Russwurm is a thoughtful student of social customs and each of his books in which he has laid down the results of his investigations is a valuable contribution to the history of modern culture. For gradually, says he in the preface to his new book, "Geselligkeit, Sitten und Gebräuche der europäischen Welt 1789-1900" (imported by Lemcke & Buechner), the spirit of historical writing has changed, and the modest little notes devoted to the customs and conventions of human society in different epochs of modern history have become of paramount interest to the modern thinker. The book takes the reader through France, Italy, Germany, England, and Russia, from the Revolution to the present time, and offers glimpses of court life, bourgeois modes of living, of the world of arts and letters.

A fascinating volume of Florentine impressions and reminiscences is the book by Isolde Kurz, called "Menschen und Bilder aus deutschem Künstlerkreis in Florenz" (Munich: Georg Müller). By way of introduction the author, who is the daughter of the novelist, Hermann Kurz, and herself enjoys a reputation as a writer of prose and verse, furnishes a portrait of the "stille Königin," the quiet queen among cities, and compares her to the Mona Lisa. The book contains personal recollections of Böcklin, of Karl Stauffer-Bern, from whose little-known poems she quotes interesting specimens, of Theodor Heyse, the uncle of Paul Heyse, whose interpretations of Æschylus and translation of Catullus rank very high; of Karl Hillebrand and Heinrich Homberger, of Ludmilla Assing and Gisela Grimm. The sculptor, Adolf Hillebrand, is the subject of a sympathetic appreciation. One paper is devoted to Carrara and other marble quarries, and there are some reminiscences of the last earthquake.

A little book entitled "Schiller im Urteil Goethes," by P. Uhle (imported by Lemcke & Buechner), is likely to be a welcome addition to the bibliography of both poets. The compiler admits his indebtedness to the larger works by G. Portig and Th. Vogel, but adds to the quotations from the letters, to the biography and the conversations of Goethe, to the testimony of Schiller himself, of Wilhelm von Humboldt, and of G. A. Körner. The selections are grouped according to the mutual relation of the two authors as friends, as poets, and as men.

A. von Ende.

SWISS NOTES.

Neuchâtel, August 30.

By the death of Léon Massol, the bacteriological laboratory at Geneva has lost its founder and director, the university a professor, and science a useful servant. His father was the famous baritone at the Paris Opera, and an intimate friend of Napoleon III. It was on his way to witness Massol's farewell appearance that the Emperor so narrowly escaped being killed by Orsini. Léon Massol began his career as a railway employee, but afterwards studied with Reverdin, the Geneva surgeon, at whose instance he made a specialty of bacteriology. After working under Pasteur at Paris, he returned to Geneva, where he established the municipal laboratory. He was famous for his originality and caustic wit, as well as for his scientific labors.

The restoration of the Cathedral of St. Pierre at Geneva is now almost completed. As a memorial of the old building, M. Camille Martin, who is both an historian and an architect, has prepared a volume descriptive of the ancient church. It is illustrated by telephotic copies of the capitals and decorative motives of the interior. The work of M. Martin, executed with intelligence and taste, is an interesting contribution to the history of mediæval architecture and iconography.

The Swiss review, *Bibliothèque Universelle*, is just beginning its one hundred and fifteenth year. This review counts among its contributors writers like Henry Bardeaux, Philippe Godet, and Philippe Monier. Considering the intellectual activity in its larger towns, particularly at the universities, Switzerland is rather poor in periodicals of this kind.

A map of the world on the scale of one millimetre to the kilometre is to be prepared under the direction of the International Geographical Congress. The idea of such a map was first definitely suggested when the congress met at Berne in 1891. Albrecht Penck, formerly of Vienna and now professor of geography at Berlin, is the author of the plan, and a special conference has lately taken place at the British Foreign Office to complete the undertaking.

In Switzerland, much attention has been given to schools for weak-minded children. According to a report made at the seventh annual conference held at Altorf in the interests of these establishments, there are now thirty schools of the kind in the Swiss Federation. Most of them are in the German-speaking cantons; and most of them have been founded and are supported by private benevolence. At present, the number of pupils in them is 1,366. In certain regions the proportion of weak-minded children is very large. Indeed, in the canton Grisons, the welfare of the community is seriously threatened by the prevalence of cretinism; and not long ago measures were proposed to discourage marriages because of the number of children who suffered from goitre and idiocy. It is not only the actually abnormal who are made the object of special care. Provision has been made in many large towns for the education of backward pupils who have hitherto been neglected simply because they were thought to be incapable of learning. For these a "primary class" has been created to remove them from the discouraging conditions met with in schools where only more proficient children were taught. Of such primary classes there are now thirty-two, conducted in as many towns; eighty-two teachers are employed, and there is an attendance of 1,708 children. The excellent result of this system is that the teachers in ordinary schools are not embarrassed by the presence of those who are mentally deficient, while the latter are greatly benefited by the special instruction that they receive. The first institution for "backward" children was founded at Bâle, in 1888. The teachers in these schools have all received a special pedagogic training.

Correspondence.

THE PROPOSED EX-PRESIDENTIAL CONFERENCE OF 1861.

To the Editor of The Nation:

Sir: Among the Van Buren papers in the Library of Congress are three appeals to him to take part in a conference of the five living ex-Presidents, whose object should be to secure an armistice with a view to composing the differences between North and South. One, dated Concord, April 16, 1861, is from ex-President Franklin Pierce; a second, dated Philadelphia, April 17, 1861, is from Benjamin Patton, who had been United States district attorney for the Western District of Pennsylvania during Jackson's second term; and a third, dated Leavenworth City, Kansas, May 14, 1861, is from Samuel D. Lecompte, who had been chief justice of the Territory of Kansas under Pierce, 1855-1857. The second and third profess to have been addressed simultaneously to all five of the ex-Presidents, and appear among the Pierce papers in the Library of Congress, though not included in the printed correspondence of James Buchanan.

Ex-President Pierce, in the letter noted above, urged Van Buren to take the initiative by calling a meeting of "the five retired Presidents of the United States, still living," at Philadelphia, at the earliest practicable date. "Might not their consultation," he asked, "if it should result in concurrence of judgment, reach the Administration and the country with some degree of power?" His idea was to "take measures to suspend active military operations, secure opportunity for further reflection in the face of present dangers, and to save the most fearful calamity which has ever impended over a nation." None but Van Buren, he thought, could with propriety summon such a meeting; and he therefore concluded with a request that Van Buren should, if the plan met with his approval, communicate with Tyler, Fillmore, and Buchanan, and notify him of the result.

Van Buren's reply to this letter, dated Lindenwald, April 20, 1861, is among the Van Buren papers; but no answer to either of the other two is extant in either collection. It bears evidence, in its penciled draft, with many interlineations in ink, all in his own hand, and in its copy, in another hand, for ready future reference, of preparation as careful as that of the State papers and political utterances of his earlier years. Between himself and Pierce, the venerable writer said, there could be no difference of feeling and opinion in regard to the extent of the danger, or to "our duty to do all in our power to arrest the present adverse course of things"; yet he had serious doubts "of the practicability of making a voluntary movement of that description, on our part, with such action in the matter as we might think allowable." He protested that the "privilege of taking the initiative to bring about such a meeting," if there were any difference, belonged of right less to himself than to "the individual . . . who was the latest incumbent of the principal office," though, as a matter of fact, they might all be regarded as on a similar footing; yet he would unhesitatingly accept an invitation, if Pierce or any other of the ex-Presidents should still think it advisable to issue one, and he would co-operate in the meeting so far as lay in his power.

A commentary upon his meaning is found in his reference, in a letter to "Mr. Ingersoll," April 27, 1861, to his avowal in the course of a "hurried interview" at Lindenwald of "the opinion . . . that we ex-Presidents, whilst we held ourselves ready to exert whatever of influence our past positions are supposed to have conferred upon us, to promote pacification, should take no important step without communicating our intention to the Administration at Washington in advance, and receiving satisfactory assurance of their acquiescence." The disposition to support the Administration, he added, was every day growing more intense throughout New York, and any step which might seem capable of embarrassing them would be met with distrust.

Patton was, of all the three advocates of mediation, the most definite in his suggestions. He proposed a meeting at Washington on May 1, or sooner, if practicable. The first object of the conferrees should be to secure a twelve months' armistice; "for this purpose they should address themselves in person, and in a body, to the government at Washington, and then, *in the same way*, to the government at Montgomery."

The conditions tentatively outlined for the truce were:

(1.) The Southern Confederacy to suspend their system for the twelve months, especially in reference to the postal and revenue laws of the United States.

(2.) A national convention to be held during that period, and at a time to be designated by your Body, and to be composed of one delegate (to be elected by the people) from each Congressional district in the thirty-four States, and two delegates-at-large from each of the said States.

(3.) That the action of the Convention shall be embodied by the shortest constitutional process, as amendments to the Constitution of the United States, and shall be accepted by all sections, East, West, North, and South, as a final and absolute settlement of all pending questions and difficulties, provided, that every measure of the Convention shall receive the sanction of two-thirds of its members individually, and that its proceedings shall embrace an abnegation of all or any power on the part of Congress or the general government to interfere in any manner with slavery in the States where it now exists, or may hereafter be lawfully established, and also a provision for the return of fugitive slaves.

Lecompte outlined no definite programme, but merely suggested that the five ex-Presidents were "the most likely men of the age to suggest a possible peaceable solution of the strange disorders of our beloved country," and enlarged upon the distressing conditions of the day and the glorious possibilities of so exalted an undertaking as he urged.

The identity of the "Mr. Ingersoll," to whom Van Buren addressed the letter of April 27, is not certain; nor does his part in the movement for mediation clearly appear. He was probably Charles Jared Ingersoll of Philadelphia, Van Buren's sometime political associate and correspondent. He visited Lindenwald in the latter part of April, after Pierce's letter, and probably Patton's, had been received, for Van Buren says, in the letter already mentioned: "I have heard from no one since you left." The subject was discussed in the "hurried interview," as appears from Van Buren's reference to his own expression of opinion in regard to the proprieties in the case, and to his promise to let Ingersoll know of any change or modification of opinion on his part. This promise, especially when taken in connection with William Kelley's statement, to be noted later, would lead one to infer that Ingersoll had the project much at heart, whether he made any independent suggestion or not. He probably knew nothing, at least before leaving Philadelphia, of Patton's ideas, since the latter said in his letter to Van Buren that none but himself and his secretary knew of his having written, and that neither the letter nor its answer was to be published.

William D. Kelley, in a letter to Salmon P. Chase—cited in Rhodes's History, III, 367—dated at Philadelphia, April 29, 1861, notes an enclosed article which "discloses a scheme by which C. J. Ingersoll *et id omne* hoped to divide the now Unanimous North"; and adds that he knows that "the hesitancy of Mr. Van Buren, who declined to unite until he should be assured that the Administration desired to be approached in that way," has alone prevented the five ex-Presidents from asking the Administration for an armistice. "As this," he says in conclusion, "was just what the originators of the scheme did not want, it may have fallen through."

The enclosure alluded to is lost from the letter as it now appears in the Library of Congress Chase collection, but it was doubtless the following item, clipped from the Philadelphia *Inquirer* of the same date:

Boston, Apr. 27 . . . A dispatch from Concord says that ex-President Pierce, in obedience to a dispatch from Mr. Ingersoll of Philadelphia, has gone to Philadelphia, and perhaps to Baltimore, on a mission of mediation between the government and the rebels.

So far as one may judge from contemporary newspapers, the project attracted very little attention at the time. Pierce's speech on April 20, the day when the answer to his letter was in preparation at Lindenwald, expressed the fervent hope that "some event, some power, may yet intervene to save us from the most dire calamity that ever impended over a nation"; but the New Hampshire *Patriot and State Gazette*, which reports the address, has not one word to indicate that the hearers had any inkling of what the speaker meant. The New York *Tribune* for April 29, 1861, also cited by Dr. Rhodes, is the only newspaper in which I have been able to find any definite mention of the scheme, even as a possibility. The writer of this editorial declares that any sort of mediation by ex-Presidents, or British minister, or anybody else, is utterly out of the question; that the only possibility of peace lies in the Southern submission to Federal authority.

The Farmer of Kinderhook had not lost the political insight of the Little Magician of Albany and Washington; for men of Kelley's and the *Tribune* editor's stamp brushed aside with contempt and indignation any arbitration plan as savoring of weakness or disloyalty; and men like Moses S. Tilden (who wrote to Van Buren on May 5 of the sense of relief which he felt at seeing the announcement that the political complications of the time were to be entrusted to the ex-Presidents for

smoothing) soon lost heart, realizing that things were rushing away from any possibility of peaceful solution.

POLITICAL MORALITY.

TO THE EDITOR OF THE NATION:

SIR: The Autobiography of Senator Platt appearing in *McClure's Magazine* presents some interesting features. Perhaps nothing is so notable as the evidence it offers throughout to the simplification of the moral code to the single article of loyalty to the boss. The machine sometimes seems to be the object of ultimate devotion, but in every critical hour it is made plain that the machine exists for the boss, not the boss for the machine. I wish to call attention to the way in which the writer is either blinded by the splendor of the boss's personality or obscures the real meaning of an act to cover the boss's defeat.

In recording the way in which Garfield defeated Conkling's effort to rob the delegates to the national Republican convention of 1880 of independence by pledging them to support the nominee whoever he might be, Senator Platt says:

> One of his first acts in the Chicago convention was to offer a resolution which had been urged by the New York delegation, and which ran like this: "Resolved, as the sense of this convention, that every member of it is bound in honor to support the nominee, whoever that nominee may be; and that no man should hold a seat here who is not ready to so agree." The roll call disclosed seven hundred and sixteen votes for the Conkling resolution and only three against. Senator Conkling then submitted this resolution: "That the delegates who have voted that they will not abide the action of the convention do not deserve and have forfeited their votes in this convention."
>
> The three negative votes on the previous resolution had been cast by West Virginia. Mr. A. W. Campbell of that State was vigorously opposed to the second resolution. Gen. James A. Garfield of Ohio, who eventually was the nominee for President, but whose name had hardly been whispered, was quite vehement in his opposition.
>
> Senator Coukling, even while Garfield was speaking against the resolution, wrote a note reading: "I congratulate you upon being the dark horse." When Gen. Garfield ceased talking, Conkling, . . . said: "Please give this to Gen. Garfield."
>
> Conkling had thus early scented defeat for Grant and victory for Garfield.

The only thing that Senator Platt would have us see in this act is Conkling's prescieuce. But the interpretation heretofore put upon the act is far more likely the true one—that is, it was intended to check Garfield, and, by facing him with a personal challenge, shoulder him to one side in the battle for and against the office-seekers' championship of Grant.

A member of the Ohio delegation told me soon after the occurrence that as soon as Garfield sat down after defending the right of the West Virginia delegates, and of every other member of the convention, to decide upon their future course according to their own consciences, a card from Conkling was passed to him. Garfield flushed crimson as he read its message. Tearing the card impatiently to bits, he threw them on the floor. A member of the Ohio delegation put his foot over the fragments and kept them together till an opportunity offered to pick them up without attracting Garfield's attention. When pieced together, the message read: "Is this the first appearance of the dark horse in this convention?"

The difference in the phrases heightens the difference in the significance of the act. It seems probable that Conkling, adroit and capable as he was, saw the impression that Garfield was making, and desired to check him, to whatever end he might be tending. His failure to check him was big with meaning. For, though Senator Platt does not record it, that speech of Garfield's was the beginning of the end of Conkling's career.

COLLEGE "LIFE."

TO THE EDITOR OF THE NATION:

SIR: Many readers of the *Nation* will remember the article entitled "A College Utopia: A Fantasy," published about a year and a half ago (December 5, 1907), which presented, as a mere dream, the possibility of a college which should "estimate the tumult and the shouting at their exact value and steadily pursue the true aims of education."

There is another institution of which we are at present in great need, namely, an institution for College Life. Every college in the country now has a certain proportion of students who consider the "Life" the most important part of their college course. Such students are constantly hampered in their most cherished hopes and ambitions by the academic requirements, by the demands of old-fashioned, unprogressive professors, who even in this enlightened age still cling to the belief that college is primarily a place for study. The annoyance to which these students are subjected can easily be imagined and cannot fail to arouse sympathy in the heart of anyone who will give the matter serious thought. There is an increasing need of an institution the avowed object of which shall be to provide college life, unhampered by anything like study, an institution which shall have a place for all of the activities now carried on within college precincts except the purely intellectual; in short, a college without a curriculum.

It was made evident that in the College Utopia a strong faculty would be an absolute essential. But in the Institution for College Life no faculty would be needed. Thus a large item would be eliminated entirely from the running expenses. Given the "plant," the institution might even become self-supporting.

It would be necessary indeed to have skilled coaches in athletics, dramatics, and sports of all kinds, but these instructors the students could be trusted to provide for themselves without assistance from the trustees.

The fact that such an institution could not give the degree of B. A. may be considered an objection, since to many people the degree still seems a thing to be desired, regardless of what leads to it. But with a little thought new degrees might be created, which should be more valuable than the B. A. as indicating with some definiteness the work which had actually been done—for instance, A. S. (Athletic Shark), S. S. (Social Star), and various others would naturally suggest themselves—or, if unreasoning tradition is so strong that the sound of a Latin degree is still sweet even to unaccustomed ears, we might have as the highest of all Sph. D. (Sphæromachiæ Doctor).

Rome, August 22.

THE SUMNER BIBLIOGRAPHY.

TO THE EDITOR OF THE NATION:

SIR: The list of the published works of Prof. W. G. Sumner, printed in the *Nation* of July 21, was assuredly welcome to many persons who have followed Professor Sumner's work, but who have been unable to keep informed as to his contributions, chiefly because they have appeared often in publications of a special nature, not likely to be seen by the general reader. Since the list is given as being complete, and will be so accepted by many, I would have you note the omission of an article which it would be a misfortune to leave unnoticed. In *Collier's Weekly* for October 27, 1904, appeared an article on Socialism by Mr. Upton Sinclair. In the same issue Professor Sumner contributed an answer at some length. This answer, characteristic in matter and manner, is specially valuable; it deals with the socialist's argument which proceeds to reason directly from a mere recital of unpleasant social conditions. Professor Sumner's rejoinder is exactly what those persons need who feel vaguely that misery and unhappiness *per se* are evidences of injustice somewhere. Anything which tends to promote clear thinking and to give a correct perspective of facts upon that phase at which most persons are frankly bewildered, deserves to be starred in your list. It is worth noting that, although *Collier's* readers were told that a reply to Professor Sumner would be given by Mr. Sinclair in a later number, one will look in vain through the subsequent issues for any trace of it.

WILLIAM F. PETER.

Seymour, Ind., August 18.

ALFRED NUTT.

TO THE EDITOR OF THE NATION:

SIR: The tragic death of Mr. Alfred Nutt, noticed in your columns for June 9, is such a profound loss to the small company of students of mediæval story that it may call for another word.

Nutt's attitude toward mediæval romance was like that of Petrarch and the men of the early Renaissance toward the almost forgotten civilization of ancient Greece. Like them, he was eager with the joy of a discoverer surrounded by unknown treasures, and hopeful with the confidence of reconstructing bit by bit a vanished world. The Greek and the Roman contributions to our culture, it seemed to Nutt, had been weighed and estimated. Even to the Hebrew, the Arabic, the Persian, and other Oriental influences sufficient attention had been called. What interested Nutt was the contributions of the ruder Western peoples of the Germanic, and above all, of the Celtic races, and the possibility of estimating what those contributions were, not only by a study of the ancient documents, but by piecing together the fragments of primitive culture and folk-lore surviving in the re-

moter districts of western Europe. In Ireland, in Scotland, in Cornwall, and in the remoter valleys of Wales, as Nutt believed, are preserved bits of folk song and story which give glimpses of the pagan culture of western Europe as it existed in the ages before the coming of the Roman legions and of the Christian church.

Nutt was, therefore, a folk-lorist and a storyologist, believing that only by comprehending the ways of modern Irish and Welsh story-telling can we understand the Celtic literature of the past. The contribution of the Celts to modern culture is a chapter of literary history which is as yet unwritten, but for which Nutt longed to lay foundations. The field is a dangerous one, and is swept by storms of bitter controversy, from which no investigator escapes. The chivalry and good nature with which Nutt bore the brunt of hostile and often ungracious criticism, as well as his unfailing interest in the human side of all things he studied, make his example a bright one to workers in the difficult field of Celtic and mediæval romance. ARTHUR C. L. BROWN.

Evanston, Ill., August 30.

"SWINGING ROUND THE CIRCLE."

TO THE EDITOR OF THE NATION:

SIR: Tbis phrase, which is in common political use and has even passed into history, is universally used to describe the famous tour of the country that President Johnson made in 1866, and is applied to other Presidential progresses. Now this phrase of Johnson's did not originally mean any such thing. He used it *when* he was on that speech-making tour and before, and used it repeatedly, so that the writer heard it from his lips after it had already become familiar in the newspapers. This is what he used to say: "I have opposed traitors in the South, and now I am swinging round the circle and fighting traitors at the North!" meaning the "radicals" in Congress and elsewhere. "Swinging round the circle" did not mean travelling about the country, but changing front.

Not very important, but true.

E. R. FRENCH.

Sheridan, Wyo., August 16.

Literature.

A CALVINIST SENATOR.

An Old-Fashioned Senator, Orville H. Platt of Connecticut. By Louis A. Coolidge. Illustrated. New York: G. P. Putnam's Sons. $3 net.

In the Senate of Connecticut, at the outbreak of the civil war, a remarkable incident occurred. A tall young Senator rose and moved that the portraits of two ex-Governors, then odious for anti-Union expressions, should be turned to the wall. The motion was carried, and the vindicator of the State's loyalty was nicknamed "Picture Platt." One may doubt whether just this sort of orderly retribution would have been demanded at such a time by anybody but a New Englander and a Calvinist.

Orville H. Platt had passed through a stern school. His family, aggressive abolitionists, had been excommunicated from the Congregational Church of Judea, Conn. Young Platt, with his father, had often accompanied runaway slaves to the next refuge north. He had seen his beloved teacher, Frederick W. Gunn, later Master of the "Gunnery," branded as an atheist and abolitionist—terms equally opprobrious. He had heard his pastor from the pulpit grossly insult—the text was Jezebel—a generous woman who had come to speak for the liberation of the slave. In extreme opposition to the pro-slavery parties, he had joined the American party, the so-called Knownothings, and finally had espoused with religious zeal the cause of the Republican party. He had worked in his father's fields and in those of the neighbors for hire; had taught school, read law, settled at the manufacturing village of Meriden, where he soon passed to the bench; interested himself in all local affairs, and was universally called "O. H." Never eloquent, he spoke with pith and brevity, had a faculty of being right, and was readily promoted to the Speakership of the State House of Representatives. What turned him to his real career as United States Senator we may only guess. Partly, no doubt, as his biographer suggests, a definite sense of vocation, partly the chance that he was in pecuniary straits. Mr. Platt's business misadventure, which left him in debt to his life's end, brought out a characteristic incident. He was an endorser of the paper of a cutlery concern managed by friends whose failure left him deeply involved. In his embarrassment there came a good-sized check from a farmer-brother in Litchfield County, with the terse but sufficient message: "Orville, use this." Almost equally sparse was the reply: "Much obliged, Simeon, but I got myself into this mess, and I shall get out of it." Much of old New England is in this episode.

The Republican caucus of 1879 was hopelessly divided between Gen. Joseph R. Hawley and Marshall Jewell. Thus the way was open to a third Senatorial candidate acceptable to both factions. Mr. Platt telegraphed the chairman of his campaign committee: "Make no combinations or bargains, and entertain no proposals for anything. Let no friend of mine disparage any other candidate." The victory was a clean one, and the new Senator prepared to go to the special session. As he was driven to the Meriden station he said to a friend: "John, I'm going to the United States Senate; you won't hear much of a fellow named Platt for some years. I'm going to listen, and learn, and I won't begin to talk until I stand for something." Thus spoke the proud humility of fifty-two laborious years.

As a matter of fact, Mr. Platt never became a talking Senator. His strong practical sense soon taught him that laws were passed not by argument, but by shrewd manipulation of the Senate in action. It was often better, he found, to relegate a bad bill to the Greek Kalends than to oppose it publicly. One could also shuffle the cards in favor of a good bill so quietly that opposition would not develop. There was a complete absence of vanity about the man. Near the end of his life he writes to a friend: "What a man does quietly is never known or appreciated. For instance: I put an amendment into a bill to-day for the opening of an Indian reservation which is likely to save the government, first and last, if the same policy is continued with reference to other matters of a similar kind, at least $50,000,000." Probably no Senator of his time followed so conscientiously the whole course of legislation. His position grew to be that of Senator for the country at large; he exercised almost a censorship over miscellaneous bills.

The qualities of thoroughness and unselfishness brought upon him the most laborious and least conspicuous committee assignments, and for a score of years he spent himself devotedly upon matters of high public concern in which little individual glory was to be won. It was he who put the Patent Office upon an independent basis. Of the cause of international copyright he made himself the champion. For years he served on the Indian Committee, standing between the red man and his despoilers in the West and his ill-guided friends in the East. On one occasion he said that every Indian reservation might tax the ingenuity of the Supreme Court. In all his Indian dealings he showed a practical and humane disposition to go through the accumulated tangle of obsolete treaties and special legislation to the real needs of the race.

For years he served on the Finance Committee, but it cannot be said that his contributions either to tariff or currency discussion ever transcended the average wisdom of his party. It is a curious fact that, though to the end he honorably set himself against the national hysteria that led to the Cuban war, he accepted its results as providential and made himself one of the most potent advocates of the new Imperialism. An unequivocal service was the passing of the Platt amendment—astutely expedited as a rider to an army bill—which, while guaranteeing the independence of Cuba, reserved to the United States oversight of the foreign relations and domestic order of the island republic.

While deploring hasty and sensational legislation against corporate and railway interests, he was fully alive to the sentiment of the country and to the need of cautious reform. This man, past

his seventy-fifth year, and for twenty-six years associated intimately with the specious advocates of unrestrained capitalism, became the unofficial emissary between President Roosevelt and the Senate, tempering the impetuosity of the one and the stolidity of the other. In fact, nothing more graced this excellent old man than his cordial admiration for a temperament so unlike his own as was that of the President. He died in his twenty-sixth year of Senatorial service, prematurely worn out by duties he was too proud to evade.

The Calvinist temperament is highly rationalistic, but only up to the point where the Divine paradoxes begin. Senator Platt was a hard-headed, clear-thinking man only when the mysteries of the Republican faith were not in question. In the protective tariff he believed with the fervor of a mystic. We doubt if he ever argued that question; he simply asserted the dogma. Some considerable knowledge of schedules he acquired, because these are contentious matters, and he liked to see business dispatched. But he has left on record the amazing statement: "I do not believe that an unnecessarily high duty exerts any influence whatever on prices"; and he bitterly opposed the belief that the tariff fosters Trusts and combinations. Sometimes his abstract devotion to protection led him into strange inconsistencies. He believed our tariff was bad for other nations; he always advocated the governing of our new Imperial possessions for their own good, and yet he talked President McKinley out of his purpose of granting, as a "plain duty," free trade to Porto Rico.

Again, on the issue of expansion, after the Cuban war, his attitude was that of a mystical enthusiast. As early as the Hawaiian imbroglio he had conceived the idea that our advance was providential, having to do with the spread of Christian civilization. To vindicate our right to govern distant possessions as we chose and without engaging to embody them in our own political system, he set himself resolutely. Here he never weighed the expediency nor counted the cost; our dignity, our duty, required the step, and those who opposed it were little better than traitors. He aided to impose upon the Philippines and Porto Rico that sort of taxation for which his ancestors revolted from England, and to Senator Hoar's fair question, "If the Republican majority admitted that government rightly exists by the consent of the governed," he responded by a sheer assumption that the annexation of the transmarine island was providential. When these religious convictions were at stake the facts counted for little. So when the Panama *coup* was under discussion, he virtually fell back upon the theory that the President could do no wrong. The persons who felt there was presumptive evidence that a dirty trick had been played upon the Republic of Colombia, the people who wanted the canal but wanted it with clean hands, he represented as sly obstructionists in behalf of the Nicaragua route. The providential necessity of the canal outweighed such trifles as facts and motives. In fact, nobody was so capable as Mr. Platt of making the Quays, Hannas, "Tom" Platts, Lodges, and Aldriches seem to be acting from the loftiest moral convictions.

We hasten to add that his limitations were of a piece with his training and his patriarchal character. Moreover, it is certain that because of his unwavering Republicanism the corrupt or merely opportunistic factions of the party would always concede more to him than to a more independent Senator. Where he shone was in conducting the vast amount of non-partisan business that generally is more or less neglected. He voted against the Chinese exclusion act, opposed the class legislation that sought to impose the eight-hour law on firms under government contract, sought to straighten out the tangle of Senate procedure, ridiculed the excessive sense of Senatorial prerogative, kept a restraining hand on such wilder anti-capitalistic bills as the Anti-Option law; in general, brought into the atmosphere of the upper house a refreshing element of sturdy morality and common sense. Under the sympathetic hands of his biographer, Louis A. Coolidge, whose tone is that of a fervent Republican, the story of Mr. Platt's career in the Senate from 1879 to 1905 has become almost a history of national legislation for that period. The record is skilfully made. We have noticed no material error except the misprint 1887 for 1897 on page 213 (the date of the Dingley law).

Senator Platt was one of the last of our patriarchal statesmen, trained chiefly by the discipline of life, representing a kind of ancient severity and virtue, men of deeds not of words, authentic products of our own unmodified Puritan institutions. He was at bottom a shy man, and really more at home in the Adirondack forest with his guides than in that Senate chamber where he was so much beloved. He was so modest that he was capable of imposing that quality vicariously upon President Roosevelt. Men of his simplicity and power of character are always rare. And of these, only an elect remnant permit one confidently to say, in the turmoil of public affairs, that they were invariably true to themselves. Of Senator Platt this could be said unqualifiedly, and he is likely to be remembered as a sort of Cato in a time more prolific of Mariuses and of Cæsars.

CURRENT FICTION.

The Power and the Glory. By Grace McGowan Cooke. New York: Doubleday, Page & Co.

Johnnie Consadine is a beautiful maid who goes down from her mountain home in "the remote fastnesses of the Unakas" to make her fortune in the valley. Fortune awaits her there, as it were, on three counts, and her trials by the way are no more than a maiden may bear. Her path in the sufficiently dismal mill-town of Cottonville is not made over-smooth for her capable feet; but she is upheld from the beginning by the extraordinary friendliness of Mr. Gray Stoddard. Though one of the mill-owning class, he is inclined toward Socialism. Quite the most original feature of the story is that this young gentleman does not turn out to be a villain, or even a weakling. He not only fails to take advantage of the poor girl's innocence, but actually marries her, openly and with rejoicing—a situation impossible in transatlantic fiction. But, of course, Johnnie is not a peasant: she is the daughter of the proud Southern mountaineer stock, and nobody's inferior in blood or mental power. She takes up the mill life for the sake of her improvident mother and a brood of brothers and sisters; and she feels herself inferior to young Stoddard only in point of mind and taste. She has a rival in the person of a lady of fashion, who has marked Stoddard for her own, and who makes matters as disagreeable as she can for Johnnie. There is also a villain, a mountain boy from Johnnie's own neighborhood. But Johnnie is not destined for defeat, and in due time achieves that power and glory which she has coveted. There is much adventure by the way, in which a motor-car plays a part. The mountain roads in Johnnie's region must be more easily negotiable than the creek bottoms which form the highway in so many parts of the Kentucky and Tennessee mountains. But the dialect is veracious, and in Johnnie's mother, childlike and shiftless, yet with elements of natural grace and charm inherited from some far-off lady-ancestress, is pictured a true mountain type.

The Way Up. By M. P. Willcocks. New York: John Lane Co.

The problem novel has its merits, as well as its defects; but it is a trifle disconcerting to have a piece of fiction recommended by a publisher as dealing with "three burning questions of the hour." The announcement reminds us a little of the four-legged lady we were once invited to behold, the poster concluding with the legend, "Twenty Pink Toes." One burning question should, it seems, be enough for the most daring novelist to tackle at a time. And

there is really only one such question of which, on the evidence in hand, we should convict Mr. Willeocks. This is the industrial question: how shall the relations of wealth and talent and labor be fairly adjusted?

The hero, Michael Strode, is a youth of good stock, who, half-way through his formal education, becomes a diseiple of Fourier, and determines to put the master's theories to practical proof. He breaks with the capitalist uncle who has been backing him up, and enters an iron foundry at the bottom. He rises quickly, and at the end of a few years is offered a partnership. In due course, he becomes owner, and eventually succeeds in founding an establishment upon the French plan. The experiment of coöperation is a complete success from the business point of view, but never really a success socially. So much for the burning question, in which the author shows an untiring and at times deadly interest. Michael's hopes, plans, speeches, arguments with friends and enemies, are retailed with painful minuteness, and at the expense of the story. For there is a story, and a very good one. It chiefly concerns Michael and two women. One of them, the wife of his youth, is a beautiful butterfly, with the means and the will for a life of pleasure. He applies her wealth to the furtherance of his philanthropic dream, with which she has no sympathy, and in his preoccupation denies her the little attentions and the social pleasures which her nature craves. But though of the butterfly type, she is not a weakling, and she has a modern conviction of her individual rights to oppose against his old-fashioned notion of wifely subservience. She withdraws her person and her wealth: the pair are not divorced, but she lives her own life—not a virtuous one. Ten years later, her selfish joys have turned to bitterness, and she takes the only way of releasing Michael that he may marry the other woman, who is a fit mate for him. The interest of the characterization is not confined to the inevitable trio. In many ways the most striking figure in the book is Michael's mother, "a Rabelais in petticoats," big-hearted, free of speech, untrammelled by the little conventions which rule the world of women.

Routledge Rides Alone. By Will Levington Comfort. Philadelphia: J. B. Lippincott Co.

Routledge was a Philadelphian, a war correspondent—no—a "word-painter of war," who wrote at times for the American press, at times for the English; following American and British arms from '94 to the year when the story opens, 1902. He was no ordinary war correspondent, be sure. "He could love India without hating England. He could be the greatest of war-scribes and despise war. He laughed at material possessions and bowed before breech-elout chivalry." He was more than half a mystic and loved to sit by a grate-fire, "murmuring the star-reaching OM." "All dimensions of knowledge were in his mind." Behind his words, "pitiably often," "shaped to meet the so-called needs of a daily paper," was "the master behind the narrator; the man who lived and moved in a wonderland that was a hopeless arcanum to the many; the man who glimpsed the temple of truth if not from within, at least from the gardens." His greatest friends were Jerry Cardinegh, "dean of the British word-painters of war," and Noreen, Jerry's daughter, an Irish pair who loved Ireland as Routledge loved Asia; they, too, were half-mystics; he finally went mad from memories of Irish sufferings, and in his madness shifted to Routledge's shoulders the blame of his own act of treachery to England, an act which, if we may believe the story, led up to the Russo-Japanese war. No small issues, it will be seen, engage the reader of this story.

If the most graphic part of the book lies on the field of battle, the most living part is in India. Routledge, frankly in sympathy with Indian mysteries, shoots a piercing lance into the Anglo-Indian system of administration, not hating materialism so mueh as scorning it. "All men, as all nations, must suffer. Europe and America are learning to suffer through their excesses; India through her privations, a cleaner, holier way." To keep him a journalist and a brother of occult brothers taxes the author's resources and yields us a rather over-fed story, stuffed with ideas—many of them very good ones—and with language of every degree of merit, pictorial, colloquial, journalistic, highfalutin; it skims on earth at times, and at others it is as if the writer had lain awake o' nights to coin the unusual phrase. He seems afraid to let any word stand alone, but must prop it up with epithet. It is an absorbing story, compounded of clever journalistic feats, gory battles, high endeavor, and cryptic thinking—an original mixture, surely—served in a swash of words.

The Devourers. By A. Vivanti Chartres. New York: G. P. Putnam's Sons.

This striking book is accompanied by a word from the publishers about its author. She is the daughter of an Italian father and a German mother, both of distinguished connection, and the wife of an English barrister. She is herself a poet of wide Italian fame, and the mother of a little daughter known in Europe as a violin-playing prodigy. This book is her first English novel, and its theme—the career of genius—would seem, from her own experience, to be a topic which she might familiarly handle. She has assuredly written a book of singular charm and penetration, greatly alive with truth and tenderness, with satire free from bitterness, with sadness free from complaining, and a deliciousness of humor in portraying the small things that lie along great pathetic ways.

She writes of the geniuses who unconsciously and inevitably devour the lives of their families. She makes her point by telling the stories of three generations, so that her novel is not of the close-knit fibre of a single life-story, but is a family history. In fact, it is a succession of events marching on in a ghastly sort of pathos, always marching, marching, never completed, one life devouring others unwittingly and being in turn devoured patiently. Yet the writer is far too much an artist and far too observant of life itself to portray unrelieved pain. Smile, laughter, ache, go continually hand in hand. With deep and equal insight the author divines the little and the great secrets of the souls, relations, manners of men, women, and children; whether of yearning mother, irresponsible Italian lover, conscientious Fräulein, or fanciful child. Mrs. Chartres is said to write with equal facility in four languages. That her English certainly is her own is shown by a few eccentric expressions such as: "A caliginous headdress," "unverisimilarly," "etiolated cheeks," for example. They are few enough, however, to have almost a charm, as of a tiny foreign aecent, suited to the unconventional course of the story, episodie, fantastic, if you will, but rare and moving.

A WOMAN IN THE PHILIPPINES.

A Woman's Impressions of the Philippines. By Mary H. Fee. With illustrations from photographs. Chicago: A. C. McClurg & Co. $1.75 net.

Eight years' intimate association as a schoolmistress with Visayans at Capiz (Panay) and Tagálogs in Manila has given the author clearer and deeper insight into the fundamental conceptions and the range of reasoning of those Malays than many an administrative official obtains. The official, because he is an officiai, mainly sees what the native chooses to exhibit; to the intelligent and sympathetic teacher, child and parent unconsciously and unaffectedly open mind and heart. The patient and competent explorer gradually penetrates that curious jungle of thought and feeling and by degrees interprets its defective, sometimes inverted, logic, and overcharged emotion. This has been so well done that these feminine "impressions" are a fair equivalent of sound masculine judgment; the book is of lasting value and also of immediate interest. As here observed, the Filipino character is par-

ticularly marked by vanity and the sensitiveness to which that is akin; and it seems unable or indisposed to go to the bottom of those principles upon which permanent success in self-government or in material progress depends. Appreciation of clear and philosophic thought is hindered by an enveloping mental fog or haziness of definition. We may add, what the writer does not allege, that at its best Oriental intellection is difficult of coördination with the Western mind.

Children and adults are docile under control, seldom requiring corrective discipline; but at the first sign of weakness they are infinitely more unruly and arrogant than those of our own race. Young and old cling to their own opinion, regardless of authority or explanation, however well texts and comments may be memorized. Pupils rarely apply lessons which are counter to tradition; examples are the high-school youth who remarked, when electricity was under discussion, "But I can see a thunder [bolt] under our house" (which is raised on posts); and the other, familiar with the physiology of the text-books, who maintained that the diver "who is brother to a snake" remains for an hour under water without artificial aid. These were students whose schedules of study satisfy the tourist that Filipino and American move with equal pace through the secondary schools. The children learn easily, in the sense of getting by rote, but are not retentive, lack power of concentration, are acutely sensitive to criticism, and respond quickly to praise, all qualities that we associate with races of arrested, or at least imperfect, development. As a people, they are eager for education, not from real discontent with their actual condition, but because stung by the self-consciousness which race-sensitiveness develops. What they are acquiring just now is the critical, not the creative, ability; although it is the creative they so sadly need. Very acutely the author describes the controlling Filipino pride of individuals and communities as of that feminine quality which "is almost wholly concerned in demanding and exacting the consideration due to its possessor's importance." "Their practice, however inconsistent with their professions, is always consistent with their pride.' Many, not all, "feel that, in accepting or rejecting [American assistance] they are demonstrating their capacity to do their own thinking, when in reality they are only asserting their right to do their own *feeling*." Diplomatically avoiding discussion of the Filipinos' aptitude for self-government, the writer shrewdly notes peculiarities of character which bear upon the question. Thus, as individuals, they have been devoid of experiences which mould political character, but as a race they are receiving an artificial impetus which increases their exaggerated self-confidence and veils their personal ineptitude. In her judgment, they have not vital convictions about liberty and self-government, for while abstractly it seems to them unfair that an alien nation should administer their public affairs, nevertheless the actual operations of that administration do not incite them to revolt. On the contrary, the alien occupation is a positive blessing at this time, although the very poor believe the form of government to be responsible for their wretched state, and that, in some way, the physical vigor of the Americans is obtained at their expense.

Besides modest discussion of grave principles, as in the challenge to attention thrown out by chapters eight and eleven, the numerous variations from our own habits at home and in public, which attract us because they are odd in our eyes, are noted and their springs exposed. Vivid description of unfamiliar scenes is interspersed with refreshing comment, not always solemn. In fact, this acute observer, whose abounding humor preserves her occasionally imperilled equilibrium, extracts all the vital interest to be found in vicious earthquakes, raving typhoons, and a cholera epidemic (where her moral courage casually appears), in funerals and weddings and merry-makings, in alarms of war and in ecclesiastical pageantry, as well as in the school-room and the trifles of domestic life. Incidentally it may be pointed out that her remarks on the Roman Church as an institution in the islands and on its probable future there are eminently sane.

We close with her judgment upon a social subject of grave importance from the American standpoint. It is that the young women "are coquettes, but they are not flirts. Their conception of marriage and of their duty to their own husbands and their children is a high and noble one," but their virginal life is full of pitfalls, due to the prevailing frankness of speech and the questionable jest forever before them. "The result of general freedom of speech, and the process of safeguarding a girl from its results, is to make a Filipino girl regard her virtue as something foreign to herself, a property to be guarded by her relatives." And in the presence of the vile moral degeneracy of even the merest lads, there seems no remedy but constant surveillance, until a dignified and chaste self-control is attained. "Happily even those who love us least . . . admit that the American idea of treating every self-respecting woman with respect is good," and where we are in evidence the standard of observable morals is constantly advancing.

The well-selected illustrations really illustrate. Unusual scenes teach through the eye, and these reproductions are good; but the most charming as a memory is the purple and gold veil shot with scarlet (to be imagined in the photograph) behind which the sun sinks in the China Sea, as sudden night falls over the Bay of Manila. Truly, "there are few lovelier spots than the Luneta" and its approach by the Malecon drive, when Marivales beyond the pulsing water pierces that flaming sky.

It is a pity that so interesting and valuable a book, which deserves an analytical index, should have none at all; and there is internal evidence that the contents placed at the heads of chapters were not prepared by the author herself.

Haverford Library Collection of Cuneiform Tablets or Documents from the Temple Archives of Telloh. Edited by George A. Barton. Part II. 36 pp., 100 plates. Philadelphia: John C. Winston Co.

To his volume of 117 documents from Telloh, published in 1905, Professor Barton has now added a second volume, of 94 texts of the same period, and of the same general character. The texts all come from the Temple archives of the ancient city of Shirpurla or Lagash, the site of long-continued excavations by the late Ernest de Sarzec, continued since the death of De Sarzec by Capt Croz. In 1894, De Sarzec unearthed an extensive archive at Telloh—the site of the ancient city—most of which was, however, stolen by the Arabs who dug there in his absence. Many of these tablets were thus scattered through dealers over the world. Haverford College obtained above 400; hundreds of them found their way to the British Museum, to Berlin, New York, and elsewhere. Some 700 were recently purchased by the Harvard Semitic Museum, while the Louvre fortunately also procured a large proportion of the find. The tablets for the most part bear an official character, representing the activity of the great central sanctuary at Shirpurla during the Ur dynasty (*c.* 2304 to 2188 B. C.). A considerable number of the texts in this, as in the former, volume are accounts of one form or the other, records of grain collected as rent, receipts, loans, and payments, lists of various kinds of material, wool for clothing, dates, oil, grain, flour, wheat, butter, cheese, goat's hair, and oxen, as well as payrolls, inventories, and bills of lading.

The scope covered is thus extensive and embraces, in fact, the entire commercial activity of ancient Babylonia. Already in the days of the Ur dynasty, and even earlier, the temples in the large centres of the Euphrates Valley had become great business establishments. They had large holdings of

land which they farmed out. They dealt in flocks of goats and sheep, they loaned money, they had storehouses for grain, and, in general, acted as commercial agents. Special officers had charge of the business affairs of the temples, which at certain periods occupied a position not unlike that of our national banks. All these various kinds of activity find an illustration in Professor Barton's collection of texts, the value of which is enhanced by his introductory study of the material. He has added a translation of six of the texts, including a revised translation of the longest of all which was published in the first volume, and of an unusually fine specimen, belonging to Dr. Gould of Ithaca. He has succeeded in clearing up some of the problems connected with the notation of numerals in the old Babylonian period, by showing conclusively that a certain combination of two signs, one for 3,600, and the other indicating a multiple of 60, furnishes the large notation of 216,000. Multiplying this again by sixty, we get 12,960,000, which Aurès regarded as the source of Plato's famous mystic number. By the occurrence of such notations in actual measurements, their practical purpose is demonstrated, and it becomes evident that the mathematical tablets from the Temple School of Nippur furnishing large notations were likewise prepared from practical motives. There being nothing "mystical," therefore, in such large numbers, it is *à priori* improbable that there should be any connection with Plato's number, which is mystical and speculative. Moreover, since Dr. Kugler, the distinguished astronomer and Assyriologist, has recently shown that Plato's number is 10,000, the whole hypothesis of Aurès falls to the ground.

Included in the tablets published by Dr. Barton are two of a peculiar bag-like shape with two holes so perforated that the tablets could be suspended by a cord. The little bits of clay contain merely an indication of amounts of flour, the date, and the seal with the name of the scribe who wrote the document. Professor Barton conjectures ingeniously that we have here the prototypes of our modern bills of lading. In this he is probably right, but whether these documents were intended to be hung about the neck of the shipper acting as agent is open to question. It is more likely that they were attached by means of cords to some other document setting forth perhaps some detailed instructions or memoranda. Our author has some valuable remarks also about the agents or messengers who were employed by the temples and by individuals. He calls attention to the fact that in a group of tablets giving provision lists more than two-thirds of the designations of occupations added to the names on this class of tablets refer to messengers and to messengers' assistants; and further proof that an elaborate messenger service existed in the old Babylonian period is furnished by the direct references in the texts that men in question came from such a city and went to such a city. This is merely one illustration of many showing how much new information regarding social and economic conditions thousands of years ago, is to be gleaned from these tablets, despite the fact that so many of them are rather monotonous in character.

The copies made by Professor Barton are admirably clear and neat. In this respect the second volume shows a marked improvement over the first, in which, from the effort to follow too closely the *ductus* of the individual scribes, it was frequently difficult to determine what characters were meant. A scholar who edits texts is expected, of course, to have interpreted what he has copied, and it is part of his work to make the task of those who are to use his texts as easy as possible. Several scholars have recently protested against the tendency in copying cuneiform texts to imitate the idiosyncrasies of individual scribes, to note all shadings and variations from the normal shape of the signs in any period. We are glad to see that Dr. Barton has avoided this pitfall in his new volume.

Acts of the Privy Council, Colonial Series, II. 1680-1720. Edited through the direction of the Lord President of the Council, by W. L. Grant, M.A., and James Munro, M.A., under the general supervision of Sir Almeric W. Fitz Roy, K.C.V.O., Clerk of the Privy Council. London: Wyman & Sons.

Calendar of State Papers, Colonial Series, America and West Indies, 1700. Preserved in the Public Record Office. Edited by Cecil Headlam, M.A. The same.

These bulky volumes are the most recent additions made by the British Government to its notable serial publications relative to colonial history. The first contains the entries in the Register of the Privy Council that concern the colonies in America; the second is a calendar of the most important documents in the Public Record Office for the year 1700, dealing with the same subject. The two series, one of which is in its second volume, the other in its thirteenth, are but parts of a common whole, and must be taken together, if one is to understand the working of the British organs of colonial control. At the same time, both throw light on colonial history and furnish a vast amount of detail regarding life and government in the colonies from Newfoundland to what is now British Guiana. The material from the Register is relatively brief, which was to have been expected from its character and which is evident from the years covered by a single volume, while that from the Public Record Office is very voluminous, probably having reached the maximum in this respect, though the fact that this is the first volume of the series to be limited to the documents of a single year is due in part to the liberal policy of the editor.

Much stress has been laid in the past upon the inefficiency of colonial management in England, particularly during the eighteenth century. How far this criticism is justified can only be determined when the actual detail of management is unfolded. Burke's famous sarcasm on the costliness and inefficiency of the Board of Trade, like his equally famous remark about "salutory neglect," is not always borne out by the facts, and the evidence which these volumes present shows that we have been too much inclined to base our historical judgments upon the comments of parliamentarians and political leaders rather than upon the facts themselves. The editors' statement in the preface of the Privy Council volume that "the lack of definition of function in agencies dealing with kindred matters was often detrimental to the efficiency of English colonial administration" is undoubtedly true, but we believe that further investigation will show that this factor has been made unnecessarily prominent. There are other causes for failure which have not been given their due weight. Both the Privy Council and the Board of Trade, during the period under review, labored faithfully and well, but their ignorance was often great, the sources of their information were exparte, their sympathy with colonial points of view was undeveloped, and their methods of doing business were crude, slow, and wasteful. The range of matters dealt with by the Council was very wide: they received petitions and appeals, financial and judicial, confirmed or disallowed colonial laws, aided in the drafting of governors' commissions and instructions, controlled appointments to colonial councils, appointed commissioners of review in boundary disputes, exercised an ultimate authority in respect of royal officials in cases of controversy with the governors, considered with care and concern the proper development of the resources of the colonies and sought to protect plantation trade, and to meet as far as possible the demands of imperial defence. The intentions of the Council were honorable and their decisions generally just, but they were obliged to depend largely on the opinions of others, either from among themselves or the law officers, the departments, and the Board of Trade, and it is not always clear how far they were justified in their confidence.

The papers calendared in the America and West Indies series formed the ma-

terial upon which the Board of Trade based its representations to the Council. The Privy Council volume contains many such representations, printed in full. Few of these documents have hitherto appeared in print, though they stand among the most valuable sources of our information regarding British policy. Whether the members of the board were always careful enough in their recommendations to the Council can only be ascertained by a thorough study of these representations in the light of the materials at their command. The materials are now before us to the close of the year 1700. In the two series, the facility is now given to trace to its uttermost source the origin of an Order in Council relating to the colonies, and to judge the wisdom of the board and the extent of the council's independent activity. Mr. Headlam is proving a much more impartial and judicious editor than was Mr. Fortesque, many of whose prefatory comments were harsh and at times grotesquely unfair. He has also broken the spell that Doyle's very inaccurate work had seemingly laid upon English students of our history and has added considerably to the number of errors already discovered there. We approve highly of his defence of Bellomont against Doyle's unjust charges, though his dependence upon Bellomont's correspondence has led him also into some erroneous beliefs, as that Gov. Cranston of Rhode Island was unworthy and incapable. In fact, Mr. Headlam shows too little evidence of having used other sources of information than those that he has calendared, and in consequence he has not paid sufficient attention to the colonists' side of disputed cases. One apparently slight, but really significant slip is made in the preface, when Blathwayt is spoken of as Secretary of War. England had no Secretary *of* War during our colonial period. It had a Secretary *at* War, and a good deal of constitutional history is bound up in the distinction.

Notes.

The University of Cambridge has taken over the control and copyright of the Encyclopædia Britannica, and will publish a new and complete edition, comprised in twenty-eight quarto volumes, about the end of the present year.

Henri Bergson's "Matter and Memory" is being translated by N. M. Paul.

"Bernard Shaw as Artist, Philosopher," by Renee M. Deacon, is issued this week by John Lane Co.; also "Landscape Gardening Studies," by Samuel Parsons, who therein gives an acount of the mile of rbododendrons presented by Mrs. Sage to Central Park.

In the hands of B. W. Huebsch are: "The Sixth Sense," by Bishop Brent; "The Black Cross Clove," a novel by James Luby, and "Democracy and the Overman," by Charles Zueblin.

Fisher Unwin is issuing in the Modern Travel Series a new impression of C. Reginald Enock's "The Andes and the Amazon: Life and Travel in Peru."

Within the next few days the American Jewish Historical Society will issue the nineteenth number of its "Publications," containing a treatment of the Jews and Masonry in the United States before 1810.

The Englisb firm of Williams & Norgate is publishing "The Truth of Religion," by Prof. R. Eucken; "Tbe Constitution and Law of the Church in the First Two Centuries," by Dr. Harnack, and "The Scientific Study of the Old Testament," by Dr. R. Kittel.

L. C. Page & Co. are shortly to publish the following books on travel: "Under the Roof of the Jungle," by Charles Livingston Bull; "Royal Palaces and Parks of France," by Francis Miltoun; "Bohemia and the Cechs," by Professor Munroe; "Brazil and Her People of To-day," by Nevin O. Winter, and "Panama and the Canal To-day," by Forbes Lindsay.

Houghton Mifflin Co. will publish on Saturday: Part i of "A Beginner's History of Philosophy," by Prof. Herbert E. Cushman; "Prose Literature for Secondary Schools," edited by Margaret Ashmun; "American and English Classics for Grammar Grades"; "Selections from the Riverside Literature Series for Seventh Grade Reading," and "Selections from the Riverside Literature Series for Eighth Grade Reading."

Among the autumn announcements of Longmans, Green, & Co. are the following: "The Spanish Journal of Elizabeth Lady Holland," edited by the Earl of Ilchester; "A Quaker Post-Bag: Being a Selection of Letters from William Penn to Sir John Rodes, of Barlbrough Hall, Derby, 1693-1742, with Some Others," selected and edited by Mrs. G. Locker-Lampson, with a preface by the Right Hon. Augustine Birrell, M.P.; "The First Duke and Duchess of Newcastle-upon-Tyne," by the author of "A Life of Sir Kenelm Digby"; "The Rose Goddess: and Other Sketches of Mystery and Romance," by Lady Russell; "The Lilac Fairy Book," edited by Andrew Lang; "Lives of the Fur Folk: The Biographies of Redpad the Fox; Fluff-button the Rabbit; Grimalkin the 'Gone Wild' Cat; Stubs the Badger," by M. D. Haviland; "Captain Ferrercourt's Widow: a Novel," by M. F. Hutchinson; "The Little Wizard of White Cloud Hill," by Mrs. F. E. Crichton; "Clara Novello's Reminiscences," with an introductory memoir by Arthur Duke Coleridge; "In Forbidden Seas: Recollections of Sea-Otter Hunting in the Kuriles," by A. J. Snow, F. R. G. S.; "The Political History of England," Vol. VI, from tbe accession of Edward VI to the death of Elizabeth (1547-1603), by A. F. Pollard, M.A., professor of English history in the University of London; "The House of Lords During the Civil War," by Prof. Charles Harding Firth; "A History of Wales from the Earliest Times to the Edwardian Conquest," by John Edward Lloyd, professor of history in the University College of North Wales, Bangor; "A Soldier's Recollections: Leaves from the Diary of a Young Confederate," by Randolph H. McKim, late first lieutenant and A. D. C., Third Brigade, Johnston's Division, Army of Northern Virginia; "Franciscan Days of Vigil: A Narrative of Personal Views and Developments," by Richard De Bary; "The Cost of a Crown: a Story of Douay and Durham, a Sacred Drama in Three Acts," by the Rev. Robert Hugh Benson; "Non-Catholic Denominations," by the Rev. Robert Hugh Benson; "At Home with God: Prie-dieu Papers on Spiritual Subjects," by the Rev. Matthew Russell, S.J.; "An Excerpt from Reliquiæ Baxterianæ; or, Mr. Richard Baxter's Narrative of the Most Memorable Passages of His Life and Times," Sir James Stephen on Richard Baxter, with a prefaee and notes on both the above by Francis John, Bishop of Chester; "Christian Progress," with other papers and addresses, by George Congreve, M.A.; "Lex in Corde (the Law in the Heart): Studies in the Psalter," by W. Emery Barnes, D.D., Fellow of Peterhouse, Hulsean professor of divinity in the University of Cambridge; and "The Development of Trinitarian Doctrine in the Nicene and Athanasian Creeds," a study in theological definition, by William Samuel Bishop, D.D., professor of dogmatic theology and metaphysics in the University of the South.

A partial list of the books to be brought out this autumn by Macmillan contains: Fiction—"The Doctor's Christmas Eve," by James Lane Allen; "Jim Hands," by Richard Washburn Child; "Love's Young Dream," by S. R. Crockett; "While Caroline Was Growing," by Josephine Daskam Bacon; "A Great Treason," a story of the War of Independence, by Mary A. M. Hoppus; "Just Folks," by Clara Laughlin; "Burning Daylight," by Jack London; "When God Laughs," by Jack London; "Mr. Ingleside," by E. V. Lucas; "The Little King," by Charles Major; "Alongshore," by Stephen Reynolds; "Princess Flower Hat," by Mabel Osgood Wright. Juvenile—"The Horseman of the Plains," by Joseph A. Altsheler; "Hero Tales of the Far North," by Jacob Riis; "Two Boys in the Tropics," by Eliza Haldeman Figyelmessy; "Hearts and Coronets," by Alice Wilson Fox; "A Children's Story," by Zona Gale; "The Slowcoach," by E. V. Lucas. Illustrated Books—"The Great White North," by Helen S. Wright; "Cuba," by I. A. Wright; "Overland to India," by Sven Hedin; "Through Khurasan and Central Asia," by A. V. Williams Jackson; "Great American Universities," by Edwin E. Slosson; "Tbe Age of Mammals," by Henry Fairfield Osborn; "The Conservation of Natural Resources in the United States," by Charles R. Van Hise, president of the University of Wisconsin; "Two Centuries of Costume in America," by Alice Morse Earle; "Green Willow and Other Japanese Fairy Stories," by Miss Grace James; Peeps at Many Lands Series, new volumes: "Ceylon," "Russia," "Denmark," "Paris," "Edinburgh," "Korea," and "Spain"; Highways and Byways Series: "Highways and Byways of the Rocky Mountains," by Clifton Johnson; "Highways and Byways in Cambridge and Ely," by Edward Conybeare; The Survey of London: "London—tbe City." "London—Nortb," "London—South," by Sir Walter Besant; "St. Petersburg," described by G. Dobson; "Pompeii," described by W. M. Mackenzie; "The Great States of South America," by C. W. Domville-Fife; "The

Charm of the Road," by J. H. Hissey; "The Motor Routes of England, Western Section," by Gordon Home; "Siena and Southern Tuscany," by Edward Hutton; "Along the Old North Trail," by Walter McClintock; "In Lotus-Land, Japan," by Herbert G. Ponting; "Persia and Its People," by Ella C. Sykes; "A Year in Japan," by Walter Tyndall. History and Biography—"The Autobiography of Goldwin Smith," edited by Arnold Haultain; "Memories and Impressions of Helena Modjeska"; "Twenty Years at Hull House," by Jane Addams; "The Ecclesiastical and Religious Correspondence of Gladstone," edited by D. C. Lathbury; "Essays," by Charles Francis Adams; "The Influence of Wealth in Imperial Rome," by William Stearns Davis; "The Letters of Richard Henry Lee," collected and edited by Dr. James C. Ballagh, associate professor of American history at Johns Hopkins University; "Lectures on the French Revolution," by the late Right Hon. Emerich Edward Dalberg, First Baron Acton, D.C.L., LL.D.; edited with an introduction by John Neville Figgis; "The Cambridge Modern History," Volume XII, "The Latest Age"; "The Memoirs of Benvenuto Cellini," translated by R. H. Cust, two volumes; "Chronicles of Pharmacy," by A. C. Wootton; "An Illustrated History of Lady Emma Hamilton," by Julia Frankau, two vols.; "Princess Helene Von Racowitza, an Autobiography," authorized translation from the German by Cecil Mar; "The Life and Letters of Alexander Macmillan," by Charles L. Graves; "The Mediæval Mind," by Henry Osborn Taylor, two vols.; "Life in the Roman World of Nero and St. Paul," by T. G. Tucker, Litt.D.; "The Sea Kings of Crete and the Prehistoric Civilization of Greece," by the Rev. James Baikie; "The Life of Benjamin Disraeli," to be published in three or four 8vo volumes, Volume I to appear at once. Politics and Economics—"The American Commonwealth," by James Bryce, new and revised edition in two vols; American Social Progress Series: "Governmental Action for Social Welfare," by Jeremiah W. Jenks, professor of political economy and politics at Cornell University; "Social Insurance; A Program for Social Reform," by Henry R. Seager, professor of political economy at Columbia University; The Citizen's Library: "Great Cities in America, Their Problems and Their Government," by Delos F. Wilcox; "Child Problems," by George B. Mangold, Ph.D.; "Wage-Earning Women," by Annie Marion MacLean, professor of sociology in Adelphi College; "The Conflict of Colour," by B. L. Putnam Weale; "The Income Tax," by Edwin R. A. Seligman. Literature and Drama—"Anathema," by Leonid Andreyev, translated by Herman Bernstein; "The Nigger," by Edward Sheldon; "Pietro of Siena," by Stephen Phillips; "Theft," by Jack London; "Italian Fantasies," by Israel Zangwill; "Poems," by Mrs. Schuyler Van Rensselaer; "A History of Classical Philology," by Harry Thurston Peck, Ph.D., LL.D.; "Golden Treasury of American Songs and Lyrics," edited by Prof. Curtis Hidden Page of Columbia University; "The Second Post," by E. V. Lucas; "Savoy Operas," second series, with illustrations by W. Russell Flint; "Works of Walter Pater," uniform edition in ten volumes.

J. M. Lear, of the State Normal School, Farmville, Va., is engaged in writing a biographical sketch of the Hon. Charles Fenton Mercer and would be glad to hear from any one who has letters written either to Mercer or by him.

Sir James Murray, editor of the Oxford English Dictionary, writes to us to say that about 1890 there was sent to him a cutting from an American journal, containing a humorous poem on the different pronunciations of depot, ending somewhat thus:

> So all the quarrel about depot
> Was but a tempest in a teapot.

This cutting has unfortunately been mislaid, and Sir James begs that any one who can will send him a copy of the poem, and the date of its appearance. He would also be glad of any early example of the phrase "tempest in a teapot" (for which the British equivalent appears to be "storm in a teacup"). Address Sir James Murray, Oxford, England.

C. N. Kendall has made a volume of selections which he entitles "Travels in History by Mark Twain" (Harper). The book is designed for "home and supplementary reading in the sixth, seventh, and eighth grades." We are not at all sure that Mark Twain should be introduced into any course of school reading, but for voluntary pleasure he is excellent, even when he writes history.

"The Health of the City," by Hollis Godfrey (Houghton Mifflin), is a scientific consideration of problems of city life, such as the quality of food, water, and ice supply, disposal of wastes, protection against infection, adequate provision of sunlight and air, the suppression of unnecessary noise, and the maintenance of cheerful and healthy living conditions. The book is the outcome of several years of study in this country and in Europe, which have evidently been well bestowed. A suggestive and inspiring feature is the account given of what European cities are doing to improve living conditions.

"The Dethronement of the City Boss," by John J. Hamilton (Funk & Wagnalls), is an enthusiastic and uncritical account of the commission plan of city government, as modified by provisions for the initiative, referendum, and recall. Mr. Hamilton exhibits a striking record of good results, but his praises are somewhat too much in the style of panegyric employed in the proprietary medicine trade, and the work is chiefly useful as a collection of data. It gives a list of sixty-seven cities which have adopted the commission plan, or, like Buffalo, have expressed by popular vote a desire to do so. An appendix gives the text of the Des Moines charter, and a text of the judicial decision upholding the charter as constitutionally valid.

In "The Russian Road to China," by Lindon Bates, jr. (Houghton Mifflin Co.), history and travel are linked together. At the beginning we are told how the Cossacks during the past five centuries blazed the way across the Urals and over the Siberian steppes to the point east of Lake Baikal where the ancient post road starts for the frontier of China. Then follows a description of life on board the Siberian express, in which are given some interesting conversations with fellow travellers, former convicts, contractors, Russian officials, and engineers. A stop was made at Irkutsk, and in a chapter devoted to incidents of the visit there is an entertaining account of the home and family of the leading banker. As it was the winter time, the journey from the railway to Urga in Mongolia was taken over a snow-covered country by sledge and tarantass, and from the description of this part of the trip one gets a most realistic impression of life in the village homes of the Russians, and the tents of the Tatars, as well as of many customs of the people. At the frontier is the unique trading city, Maimachen, "the unguarded back door to China"—unique because it is womanless. 'It is the sentence passed upon the generations of Chinese who have gone to Mongolia that no woman of their race shall pass the Wall. And so it must remain, for never a home will be founded till China, the unchanging, shall change." The narrative part ends with Urga, "the Holy City of Mongolia," the reason for which title is shown by the following incident. In a Russian droshky, preceded and followed by a body guard of horsemen, is seated "a clean-shaven, silk-robed man with puffy cheeks and tired eyes. The European watch which he carries hangs in anomalous awkwardness at the breast of his robe. Most turn their backs to him in Oriental honoring; many prostrate themselves in the snow; every horseman in the square has dismounted. . . . 'Who is it?' we ask, as the last galloper rides by. The Russian looks at us as an old Roman might, if in the Forum we had not recognized Cæsar. 'That! That's Gigin, the Living God! That's Buddha come back to earth—Gigin!' " The closing chapters are historical, in one of which there is a brief account of the recent evolution of Russia, especially as shown in the rise of the Duma. In others there are the story of the Mongol hordes from earliest time, and a sketch of some of the present conditions in China. There are forty-six illustrations, including a picture of the Buddha and a map of Asia. But there is no index, which is strange, considering the numerous references to noteworthy facts and persons in history.

Under the title of "The Cell of Self-Knowledge" (suggested by St. Catherine of Siena's *la cella del cognoscimento di noi*) Edmund G. Gardner has edited Pepwell's seven early English mystical treatises for the New Mediæval Library of Duffield & Co. The original was printed by Henry Pepwell in 1521, but contains material of a considerably earlier date. The first of the seven treatises is a translation and paraphrase of a minor work of Richard of St. Victor's of the twelfth century. This is followed by a set of devotional sayings from the life of St. Catherine, a fragment from the life of Margery Kempe, Walter Hilton's "Song of the Angels," and three other mystical letters which Mr. Gardner attributes "to an unknown writer of the second part of the fourteenth century, who 'marks a middle point between Rolle and Hilton.' " The text is largely and wisely modernized, though the editor has left enough of the old forms to preserve something of mediæval quaintness. He has, too, adopted occasional readings from earlier manuscripts in place of those of Pepwell, taking in this, perhaps, an unnecessary

liberty with his material. As for the substance of the book, with its strange sound of forgotten, or almost forgotten, emotions, we reckon it something more than quaint. To turn from our present bustling optimism to Margery Kempe's belief "that thinking, weeping, and high contemplation is the best life in earth"; or from our absorption in humanity to St. Catherine's saying that "a soul which is verily united to God perceiveth not, seeth not, nor loveth not herself, nor none other soul, nor hath no mind of no creature but only on God"—is, at least, to be shocked for a moment out of a narrow self-complaisancy, even if the reader feels nothing of Richard of St. Victor's "homeliness" between God and a man's soul. Withal there is a touch of Aristotelean moderation in most of the treatises, especially in the "Epistle of Discretion," with its careful advice to a troubled inquirer:

> For silence is not God, nor speaking is not God; fasting is not God, nor eating is not God; oneness [solitude] is not God, nor company is not God; nor yet any of all the other such two contraries. He is hid between them, and may not be found by any work of thy soul, but all only by love of thine heart.

The third and fourth volumes of Lord Broughton's "Recollections of a Long Life" (Scribner) have not the dramatic interest of their predecessors. There is nothing in them equal in interest to the earlier vivid reminiscences of Napoleon, nothing so important as the discussion of Byron's character, and of his relation to Lady Byron. Of Byron, indeed, we still see something in the third volume, which contains numerous reports and memoranda in regard to his Grecian expedition, and death; and at the end there is an appendix giving a narrative of "The Destruction of Lord Byron's Memoirs," which was written down by Hobhouse (Lord Broughton) in 1825, immediately after the event, and which represents Moore as shuffling and tricky and really forced to burn the document against his desire. The heart of the present volumes is in the years of the Reform Bill. From his first entrance in Parliament Hobhouse had concerned himself with various measures of reform, such as universal suffrage, the ballot, short Parliaments, hours of infant labor. He was for the most part allied with the Whigs, but in his aspirations went far beyond what the leaders of that party desired, and indeed could on occasion declare emphatically that he "was no Whig." Those who know the history of the Reform Bill will find much to interest them in his notes on the men and measures of those years. There is in his memoranda no considerable addition to our information in regard to the larger aspects of the movement, but the ejaculations and criticisms of the writer seem sometimes to bring us into the very midst of the contest. Thus we see Hobhouse refusing to attend the funeral of Canning, because he was unwilling to honor a man "who a little before his death said that he would, as he had always done, oppose Reform of Parliament to the last"; and, as late as February 9, 1832, we hear Lord Grey exclaiming, "D——n Reform! I wish I had never touched it"—whereat one of the stalwarts remarks: "A fine fellow, whom we are trying to make a great man of against his will (*bon gré, mal gré*)!" Hobhouse was a good hater, and he is never more vivacious than when he has an enemy to deal with. Thurlow he particularly disliked, and this is how he reports the Holland House character of that tyrant of the bench:

> Both Tierney and Lord Holland said he was the grossest impostor and greatest humbug that ever lived: no lawyer, no scholar, not a well-read man, and with no intellectual quality, but a humorous turn of mind, which he employed in browbeating and sarcasm. His large eyebrows made him look awful, and Charles Fox used to say: "To be sure, no man was ever so wise as Thurlow looks." He was, they said, a complete charlatan, and always studied effect. When at Woburn he wore a large broad-brimmed hat at breakfast, under pretext of fear of catching cold.

The great Library of Congress edition of the "Journals of the Continental Congress" (Government Printing Office) passes, with its sixteenth volume, under the editorship of Gaillard Hunt, the successor of Worthington C. Ford, the editor of the previous volumes, as chief of the manuscripts division. Happily, the change means no alteration of editorial method. The period covered by the present volume, January 1 to May 5, 1780, is rich in historical material, though the more important achievements come later in the year. Throughout the year, the shortage of supplies and money was acute. In January there was no money for clothing, notwithstanding the necessities of the troops; two months later the supply of bread was nearly exhausted; while on April 4 a committee reported an empty treasury, "and scarce any provisions in the public magazines." A renewed attempt in January to control prices, of course, failed. To add to the burden of anxiety, Luzerne, the French minister, on January 28, warned Congress that armed intervention to end the war was threatened, and that Spain would claim the exclusive right of navigating the Mississippi, and a right to acquire, in whole or in part, the territory between the river and the "proclamation line" of 1763. Nevertheless, Congress pushed on its work of national direction and military and financial reorganization. In January a court of appeals for admiralty cases was established. On the 18th of March provision was made for issuing "new tenor" bills in place of the worthless continental currency; a difficult and delicate operation, which was eventually carried to success. On the 27th of March Congress received an elaborate report on the reorganization of the Quartermaster Department, and in April appointed a committee to plan with Washington a general reconstitution of the army. Charles Lee was finally got rid of on January 10, after addressing to Congress an insulting letter, an act for which, however, he later apologized.

The annual congress of the National Society for the History of the Italian Risorgimento will be held in Venice September 25-28.

The Italian Society for the Progress of the Sciences is now arranging for its fourth annual reunion to be held in Naples October 16-22, under the presidency of the celebrated professor of chemistry, Senator Giacomo Ciamician of the University of Bologna. The primary aim of the society, which was incorporated by royal decree in 1908 and numbers in its membership all the ablest scientists of Italy, is to be found in the subject of Senator Ciamician's inaugural address, "The Co-operation of the Sciences." Foreign scientists are cordially welcomed at the meetings.

The 10th of August was the hundredth anniversary of the birth of Count Camillo Benso di Cavour, Italy's great statesman, perhaps the ablest of the makers of the Europe of to-day. As in the case of Mazzini's anniversary in 1905 and Garibaldi's anniversary in 1907, the day was decreed a national holiday and there was the usual abundant speech-making, inauguration of tablets, and illumination throughout Italy. Unfortunately the commemorative character of the day was marred by some orators, who sought to make political capital on the occasion by discovering their own pet policies in the mind of Cavour; even the prime minister Luzzati, in his speech before the king in the historic chamber of deputies in Turin, found opportunity for a fling at the Italian middle class of to-day, who have been annoying him of late by claiming adequate government protection in the agrarian strikes of the Romagna. In Turin it seemed as if the capital had returned to take up there its abode, such was the concourse of senators, deputies, and court functionaries. In Rome, on the contrary, little was done; a manifesto of the liberal societies there was prohibited because it contrasted the government of Cavour with the conduct of the present government, to the detriment of the latter. The customary quantity of commemorative articles have not been wanting; for weeks past the newspapers and reviews have been filled with them, some of which contain new documents of historical importance—notably the *Gazzetta del Popolo* of Turin. The Turin committee of the National Society for the History of the Risorgimento has commissioned Count Sforza of the Royal Archives of Turin to prepare a volume from unpublished material in the archives, which will undoubtedly be of great importance for Italian history, and the life of Cavour from 1858 to 1861. And Francesco Ruffini is, bringing out a valuable volume of essays upon the earlier years of Cavour, with about forty unpublished letters.

Dr. Fredrich Giesebrecht, professor of theology at the University of Königsberg, died about a week ago in his fifty-ninth year. He was the author of "Der Wendepunckt des Buches Hiob"; "Kommentar zum Propheten Jeremia"; "Friede für Babel und Bibel," etc.

Amand von Schweiger-Lerchenfeld, who died recently at Vienna and who was the editor of *Der Stein der Weisen*, is best known for his books on travel, which include: "Von Ozean zu Ozean," "Von der Donau zum Kaukasus," and "Im Reiche der Zyklopen."

Science.

Hardy Plants for Cottage Gardens. By Helen R. Albee. New York: Henry Holt & Co. $1.60 net.

Among School Gardens. By M. Louise Greene. New York: Charities Publication Committee. $1.25.

At this time of the year, when flower gardens are in full bloom in northern

latitudes, many an amateur wishes souvenirs of favorite beds and corners. How best to obtain them is explained in the chapter on Photography of Flowers in Helen R. Albee's book, whose advice is based on three years' experience, and who presents nearly seventy illustrations as specimens of her work. They are good of their kind, though some are rather vague, in spite of her having doubtless followed the fundamental principle that "crisp details add beauty to a flower photograph, and these demand a long exposure and a small diaphragm."

Some gardening books are for beginners, others for those who have had experience. "Hardy Plants for Cottage Gardens" contains much that will help both classes of readers. The seed catalogues say, for instance, that poppies cannot be transplanted; but the author of this book transplants anything that comes along, including poppies, and seldom loses a plant. Her secret lies in pouring water at once into the hole into which the plant has been placed, thus making the ground wet down to the very tip of the roots, which is not the case if the earth is put back first and watered afterwards. She also describes a plan of her own for starting annuals, which insures plants that are more vigorous and better able to withstand drought than those started in hot-house or cold frame, and quite as early in coming into flower. She explains why perennials should be started in May instead of, as usually advised, in August. She discovered a way of coping with hollyhock rust (washing the leaves with soapsuds) when Bordeaux mixture had failed. She found out that ferns do not object to sun. She came to the conclusion that the flaming red foliage of the Virginia creeper is more decorative than any flower. Of her many failures she tells frankly and with touches of humor, as when she tried massage and absent treatment on one crippled plant; and she does not deny that she has been guilty of a thousand floricides. An amusing chapter tells of the vices of certain plants—their rapacity, improvidence, caprice, selfishness, sloth, arrogant self-seeking, and profligacy; while another chapter relates how she dealt with her enemies, among them cutworms, insects, moles—the last, she discovered, could be driven away by dropping a moth-ball in each hole. She loves to "groom" plants, and weeding is to her "a glorious waste of time." In short, her book is one of exceptional value and interest to all who like to take care of flowers.

The number of such is likely to be increased enormously within the next decade, thanks to the school gardens which are multiplying nearly everywhere at a surprising rate. In Cleveland alone, according to the author of "Among School Gardens," there are more than 50,000 home gardens due to the influence of the school garden and the efforts of the Home Gardening Association. Cleveland and Philadelphia are in America the leaders in this movement; they have placed special curators and supervisors in high official positions, with suitable appropriations for their work—work which, in the words of W. J. Spillman, is "of national importance, . . . destined to have a profound influence on educational thought and educational method in this country." The author herself names and describes in five pages eleven advantages that follow from these gardens. She might have added as a twelfth that they breed cheerfulness; for, as one little girl said in her answer to the question why she liked to work in the school garden: "We don't mind if it rains because it makes the plants grow."

The school garden has won the children wherever it has been tried. It freshens the wearisome tasks of the schoolroom and brightens the dullest pupils. The joy of individual ownership is taught in some varieties of these schools, and much is gained by "placing responsibility on the child, without which character is not developed." But it must always be borne in mind by the teacher that "a child gets profit out of the garden in direct proportion as he puts himself into it." The government has recognized the importance of this movement by publishing a large number of bulletins on school gardens and allied topics. A list of these and other pertinent publications takes up the last 32 pages of this timely volume.

Longmans, Green & Co. announce the following books in science: "Glaucoma, an Inquiry into the Physiology and Pathology of the Intro-Ocular Pressure," by Thomson Henderson, M. D.; "Fractures and Separated Epiphyses," by Albert James Walton, M.S., F.R.C.S., L.R.C.P.; "The Principles of Gynæcology," by W. Blair Bell, B.S., M.D.; "The Essentials of Morbid Histology," by Albert S. Grunbaum, M.A., M.D.; "Dental Surgery and Pathology," by J. F. Colyer; "The Practical Design of Motor Cars," by James Gunn, lecturer on motor-car engineering at the Glasgow and West of Scotland Technical College; "Practical Photo-Micrography," by Edwin Barnard, lecturer in microscopy, King's College, London; "An Introduction to Bacteriological and Enzymo Chemistry," by Gilbert J. Fowler, D.Sc., lecturer in bacteriological chemistry in the Victoria University of Manchester; "Lectures on the Chemistry of Paints," by J. Newton Friend, Ph.D.; "Hereditary Characters and Their Modes of Transmission," by Charles Edward Walker, M.Sc.

The present existence of the beaver, or "castor," in France has a pathetic interest from the history of this animal in our own northernmost States and Canada. In the time of Julius Cæsar Paris had its "beaver meadows"; and its Beaver River—La Bièvre—has but lately been reduced to a sewer and covered over where it passes through the Gobelins quarter. Beavers were plentiful to the end of the Middle Ages, but the demands of luxury for their skins, chiefly for the hats and coats of fashionable men and women, led to their wholesale destruction. It is centuries since a beaver has been found in the valley of the Seine. In the valley of the Rhone, near Avignon, there are still a dozen or so beaver villages, but the animal has adapted himself to changed circumstances. It would be impossible for him now to cut down the young trees and build beaver dams. He has learned to burrow in the bank, and beats the mud into shape for his home with his tail, just as he used to plaster his dams. Count Potocki has set some of these overcivilized beavers free in the forests of his Polish estates, and they have resumed their building habits of three hundred years ago. It seems difficult to explain this inherited instinct, so long unexercised, by physiological nerve processes only.

New light on Mars is always welcome, when it comes from trustworthy sources. M. Antoniadi of Paris is everywhere recognized as an authority, from his long years of critical observation and rational interpretation of the things he has seen—and not seen. He reports in the last *Astronomische Nachrichten* his conclusions from inspection of the latest French and American photographs of Mars, directed toward a solution of the long-disputed question of the darkish streak that has been thought to surround the shrinking polar cap. Professor Lowell and his coterie of observers have always drawn this line unmistakable and of considerable breadth; invariably fringing the polar cap, no matter what its dimension. Also they have described it as bluish in tint. This, Professor Lowell boldly asseverates, is water, released from the ice-bound snows of the Arean arctic; and the shrinking fringe of sapphire conducts it into the radiating canals; and the radiating canals in turn scatter it in all longitudes equatorward. Among the astronomical fraternity generally there has always been grave doubt about the reality of these canals newly announced at Flagstaff with every returning apparition of Mars. There yet remain very excellent reasons for skepticism as to the existence of water on that palpably desert planet. In the first place, so trustworthy a spectroscopist as W. W. Campbell, director of the Lick Observatory, on repeated occasions and under exceptionally favorable conditions, fails to find any evidence whatever of water vapor in the atmosphere of Mars. There is evidence, too, that the surface temperature is low enough to prohibit the liquid state of water; there are not enough clouds ever seen in the act of carrying moisture poleward to supply the supposed canals by the melting of whitish polar caps, supposed to be snow and ice. Now come the photographs which M. Antoniadi has scrutinized at length, and from which he is obliged to conclude that the darkish blue fringe round the polar cap does not exist in the photographs at all. Clearly, therefore, its seeming visibility to observers at the telescope is a purely subjective phenomenon.

Prof. Paolo Mantegazza, an anthropologist and popular writer on science, died a fortnight since at Spezzia, aged sixty-four.

The death is reported from Halle, at the age of seventy-two, of Dr. Hermann Schwartze, an aurist of wide reputation. He was editor of the *Archiv für Ohrenheilkunde* and had distinguished himself also as an author on medical subjects in his field.

Drama and Music.

Cassell will soon publish Sir Herbert Tree's book, "Henry VIII and his Court," in connection with the revival of Shakespeare's "Henry VIII" at His Majesty's Theatre.

Admirers of the descriptive writings of the distinguished poet and critic, William Winter, will welcome the latest and final edition of his "Shakespeare's England," which has just been published by Moffat, Yard & Co. The essays have been so carefully revised and enriched by so much fresh material that they might almost be described as new. Moreover, the order of them has been changed, as the author's preface says, in order to make them suggestive of a practical, pleasurable line of travel. The rearrangement will enhance the value of the book to the tourist, while it in no way diminishes the potent charm of Mr. Winter's sympathetic scholarship, poetic feeling, and graceful diction. No better equipped or more interesting guide than he could be desired amid the Shakespearean memories either in Warwickshire or old London. The illustrations in which the volume abounds are admirable. It is good news to hear that supplementary companion volumes of Mr. Winter's later sketches, dealing with historic scenes and places in Scotland, Ireland, and the United States, are in course of preparation.

"Chantecler" in English—translated by Gertrude Hall (Duffield)—makes better sense than was generally to be expected. Not that the protagonist himself was untranslatably Frenchy. Nearly every one has felt, we believe, that except for his "cocorico," which, fortunately, has here been rendered by "cock-a-doodle-doo," Chantecler would fit well enough in any barnyard the world over. But the outward trappings of the play were so complete, apparently so meticulous, even—for instance, the stage directions in sonnet form—that it seemed hazardous to exploit such a *tour de force* in another language. But that this has now been done, and in a way that is likely to prove satisfactory to English and American audiences, speaks much, both for the play itself and for the translator. Miss Hall has, except in rare instances, avoided verse, which would have made an un-English hodge-podge of language often so technical, and in dealing with strictly French wit, of which there is so much in the play, has sought for American equivalents. The result is that much of the lyric intensity has disappeared and that lines have repeatedly been blunted, just as the colloquialisms of Aristophanes have often gone awry in English garb. And yet, even as it stands, the play is remarkably lyric and remarkably witty. The first is due to the fact that the central idea—Chantecler's belief in the power of his voice to rouse the day—lends itself inevitably to poetic treatment, whether in verse or in prose. We give a few examples of Miss Hall's workmanship. For Rostand's:

Toi qui sèches les pleurs des moindres graminées
Qui fais d'une fleur morte un vivant papillon,
Lorsqu'on voit, s'effeuillant comme des destinées,
  Trembler au vent des Pyrénées
  Les amandiers du Roussillon,
Je t'adore, Soleil!

the English reads, very successfully:

O thou that driest the tears of the meanest among weeds
And dost of a dead flower make a living butterfly—
  Thy miracle, wherever almond-trees
  Shower down the wind their scented shreds,
  Dead petals dancing in a living swarm—
  I worship thee, O Sun!

Perhaps the most successful of Miss Hall's renderings where she attempts verse is a song in the last act:

[The Nightingale and the Toads, *alternately*]
I sing! for Wind, that harper free,
And music bubbling from the well—
—We welter in malignity!

And fragrance floating from the lea,
Of meadow-sweet and pimpernel—
—The Toads, croak! croak! the Toads are we!—
  etc.

Each successive "all star" performance is an object lesson, illustrative of the progressive decadence of contemporaneous acting. The revival of Sardou's "Diplomacy" in the Maxine Elliott Theatre on Tuesday evening was no exception to this rule. The cast, judged by existing standards, was of uncommon excellence. Several of the individual impersonations were exceedingly good. The representation considered as a whole, however, was of second rate quality only. Often effective in critical situations, it was markedly deficient in that intelligent coöperation which can only be secured by training in a genuine stock company, in delicacy of by-play, and especially in cultivated diction and distinction of manner. "Diplomacy" is not a great play, but it is an extraordinarily deft and ingenious piece of dramatic mechanism, made by a master craftsman for the use of accomplished comedians, and it would be very difficult, if not impossible, to organize a scratch company to-day capable of doing it full justice. In any case long rehearsal and competent supervision—both lacking in the present instance—would be indispensable. But even a second rate performance of a really clever and constantly interesting drama is a rare phenomenon in this degenerate period of the stage and doubtless will command public attention. A word of special praise is due to the refined and virile Orloff of Thurlow Bergen, the vital characterization of Baron Stein by Theodore Roberts, and the sympathetic embodiment of Dora by Chrystal Herne.

The death is reported from Paris of Arthur Coquard, musical critic, and the composer of many songs, orchestral music, and pieces for separate instruments. His most notable work as a critic is his "Histoire de la musique en France," which was crowned by the Academy. He was born in 1846, and was a member of the Legion of Honor.

From Regensburg comes news of the death, at the age of seventy, of Franz Xaver Haberl, an authority on ecclesiastical music. His early training was prophetic of his later attainments, since he prepared himself for the priesthood, and at the same time to become a musician. Having gained a reputation as choirmaster at the cathedral in Passau, he soon became organist of the Santa Maria dell' Anima at Rome. Later he devoted himself to investigations in sacred music, for which he was made a doctor of theology by the University of Würzburg, and he founded at Regensburg a school of church music. Chief among his publications is a complete edition of Palestrina's works in thirty-three volumes.

Art.

Cylinders and Other Ancient Seals in the Library of J. Pierpont Morgan. By W. Hayes Ward. New York: Privately printed.

The Seal Cylinders of Western Asia. By W. Hayes Ward. 428 pages, 1,315 drawings. Washington: The Carnegie Institution. $7.

The two works recently published by Dr. Ward on seal cylinders represent the result of long labor. In fact, for the past twenty years and more, Dr. Ward has spent all the time that he could spare from his editorial labors as editor of the *Independent* on the study of the thousands of seal cylinders of all kinds and all ages scattered in the museums and private collections of this country and Europe. Mr. Morgan is, therefore, doubly fortunate in having so valuable a collection of these objects—nearly 300 cylinder seals, carefully selected—and in securing the services of Dr. Ward in the preparation of the catalogue of his collection.

The volume is far more than a mere enumeration and reproduction of the seals themselves. Dr. Ward has made a division of the subjects represented on the seals, as only he, through his long experience, could do. In addition to an introduction on the general character and the various classes of cylinders, he has added a careful description of each specimen and well-executed reproductions in a large series of plates. With Dr. Ward as our guide in a survey of Mr. Morgan's valuable collection, we can, in fact, follow the views held by the Babylonians, Assyrians, and Hittites in regard to the gods and goddesses worshipped by them, and can also trace in outline the development of the most important Babylonian and Assyrian myths.

To an even larger extent we are enabled to do this through the elaborate work on seal cylinders in general, for which the Carnegie Institution has stood sponsor. There need be no hesitation in saying that Dr. Ward's volume represents one of the most valuable contributions to science made by the Institution. It is a work of the first order, and will long hold its place as the standard book on this subject. The 1,315 drawings, made from originals or from casts, represent virtually the entire material

so far accessible. Not that Dr. Ward has reproduced every seal cylinder known, but all the types and all important variations of the types are represented. In the case of his larger work, he has preferred the reproduction by the human hand, because in so many cases the cylinders are so worn, or the engraving is so superficial, that even by the best process the necessary details could not be brought out. To be sure, in many cases even the draughtsman has failed to see all that Dr. Ward's practised eye descried, so that at times there is a discrepancy between the description of an object and its reproduction. A defect of the reproductions, which must be noticed, is the frequently inadequate manner in which the inscriptions on these cylinders have been drawn. In both works, in fact, more attention should have been given to these inscriptions, which are always interesting, and even of great importance from various points of view. Professor Price of the University of Chicago has given translations of many of them, but a number have unfortunately been left untranslated. The inscriptions, it should be added, are often very difficult both to read and to interpret, so that in many cases corrections are needed. We hope that Professor Price, well qualified by his long experience, will take up this part of the study of seal cylinders in greater detail than was possible in Dr. Ward's two volumes, and give us an exhaustive study of the subject.

Dr. Ward's introduction to the Carnegie volume is of special interest. For the first time, we now obtain a complete survey of the extensive field covered by these curious objects, which, from serving a practical purpose as the identification of an individual's signature to a document, developed into amulets. It will come as a surprise to many to learn of the various materials of which these cylinders are made—shell, marble, bone, and all kinds of stones. Dr. Ward distinguishes more than twenty shapes, and incidentally shows how the seal cylinder developed into the seal ring.

Attention should also be directed to the chapters on the representations of the Sun God, and on the two chief figures in the national epic of the Babylonians—Gilgamesh and Eabani—whose adventures were a particularly favorite design among the cylinder engravers.

In the closing chapters, the general bearings of the seal cylinders on the Babylonian culture, and on the origin of the civilizations that grew up in the Euphrates Valley, are set forth. Dr. Ward believes he has found evidence, especially in the animals represented on the seal cylinders, that this culture originated in a region to the east of the valley. The force of his argument that the non-Semitic population of Babylon, known as the Sumerians, came from a mountainous region to the east or northeast will be admitted. On the other hand, it must not be forgotten that the Babylonian culture is essentially hybrid in character, representing a blending of elements contributed by Semites and non-Semites. The coming of the Sumerians furnished a stimulus to a culture that must already have existed, though, perhaps, in faint beginnings, before these foreigners invaded the land. Dr. Ward himself emphasizes the strong influence exerted by Hittite conceptions on the art and the designs represented in the cylinders, and we now know from other sources that this Hittite influence began as early at least as 2,000 B. C.; the Assyrian Empire appears, as a matter of fact, to have been founded by a branch of the Hittites. We have, therefore, in this case another factor that must be taken into consideration in accounting for the development, and perhaps even for the rise, of the Euphratean civilization. The Amorites, coming from the north and northwestern sections of Syria, represent another factor whose importance has only lately begun to be recognized. Until we know more about these Amorites and who they were, and above all until Hittite inscriptions shall have been definitely deciphered, it is impossible to reach satisfactory conclusions as to the origin of the Babylonian-Assyrian culture. Dr. Ward's work, however, represents an important contribution also to this problem, and it is safe to predict that in the future phases of the question the material from the seal cylinders so admirably put together by him will play a considerable part.

Measures are being taken to prevent the decay of several important Roman monuments. The wild fig-trees, which were menacing the structure of the Arch of Titus in the Forum, have been removed. Portions of the preserves in the Church of S. Maria Antiqua will be moved an inch or two from the walls and a space left behind the pictures, to insure dryness. The frescoes of the House of Livia on the Palatine are receiving careful attention. That of Io Guarded by Argus, has become warped and is to be flattened out, while the others have been relieved from the coating of wax which had been applied to them.

William Holman-Hunt, the painter, who, with John Everett Millais, started the original Pre-Raphaelite Brotherhood, died last week in London, at the age of eighty-three. As a youth his fondness for drawing was discovered by his father, and he was sent to an auctioneer's office, where he made a poor clerk. Not for three or four years was he allowed to enter upon his real vocation. He tried three times at the Academy before he got in as a student, and the father, who had only timidly consented to the experiment of art, became more anxious than ever. At the Academy Hunt first met Millais, who was only fifteen, two years younger than Hunt, but who had already won the principal medal in the antique. The two soon became impressed by the purity of Pre-Raphaelite art, and the Brotherhood resulted from this conviction. The list of Holman-Hunt's paintings includes: Hark, the portrait of a child and his first picture to be exhibited at the Royal Academy; The Light of the World, at Keble College, Oxford; Christian Priests Escaping from Persecution of Druids, London Bridge, Nazareth, Egyptian Girl, St. Swithin, all in the Taylor Buildings Museum, Oxford; Shadow of Death, Fine Art Gallery, Manchester; Finding of Christ in the Temple, Valentine and Sylvia, in Fine Art Gallery, Birmingham; The Triumph of the Innocent, Fine Art Gallery, Liverpool; Isabella and the Pot of Basil; May Morning on Magdalen Tower; Holy Fire in Church of the Sepulchre, Jerusalem; The Lady of Shalott; a life-sized version of The Light of the World in St. Paul's Cathedral. In 1905 he published his "Pre-Raphaelitism and the Pre-Raphaelite Brotherhood."

A dispatch from Paris announces the death of the sculptor Emmanuel Frémiet, on Saturday. He was born in Paris on December 15, 1824, was a grand officer of the Legion of Honor and a member of the Institute of France. He is probably best known to the general public through his equestrian statue in gilded bronze of Jeanne D'Arc in the Place de Rivoli in Paris. He gained a great reputation as a modeller of animals. One of his pieces was the sensational Gorilla Carrying Off a Woman, but his finest work is the Wounded Dog Running, which is in the Luxembourg.

The death is announced of Prof. Johannes Niessen, an historical painter and for many years curator of the Städtische Museum at Cologne. He lived to the advanced age of eighty-nine. Religious pictures, portraits, and landscapes are included in his works.

Finance.

"APATHY."

When the long decline on the Stock Exchange ended, towards the close of last July, in a violent spasm of demoralization, recovery began which retraced, within a month, perhaps one-fourth of the preceding loss in prices. This upward movement was in turn succeeded by a somewhat abrupt reaction; and then the stock market seemed to go out of business. During the three or four past weeks, it has stood practically motionless. On one day, a week or two ago, total transactions on the New York Stock Exchange were the smallest of any day since the panic of 1907. Where "million-share days" were commonplace incidents, not so very far back, there has come a long succession of days in which 300,000 shares were above the average. Wall Street described the market, in its own vernacular, as "dead."

But even a "dead" market has by tradition the habit of responding with receding prices to distinctly unfavorable news, and it was therefore with a

good deal of interest that the Stock Exchange was watched at its opening last Tuesday, when the morning newspapers contained the extraordinary figures of the Maine election. It had been financial expectation and prediction that a real political upheaval in the November Congressional elections—a genuine "landslide" to the Democratic party—would excite in conservative financial circles uncertainty and perhaps misgiving, and here was the Maine election, a familiar omen of the country's November vote, giving the State to the Democratic party for the first time in thirty years, and placing in that party's hands the choice of United States Senator from Maine. It was open to any one's conjecture what the stock market would do. What it actually did, on the first day after this surprising news, was to advance with a more positive display of activity than it had shown in many days, and it continued to advance the next day.

No doubt it would be premature to assume that this is to be the continuous attitude of financial markets towards the politics of the coming autumn. Wall Street declared, this week, that markets were welcoming the prospects of a Democratic House and a Republican Senate, as a check upon hasty legislation. Perhaps this is so; perhaps not. But there is this much at least to say—that the stock market has not responded as was expected to what it had put on its calendar as unsettling news. Mr. Roosevelt would make a radical speech; the Stock Exchange would declare, in its private exchange of views, that it ought to be alarmed, that it was alarmed. But it turned out, apparently, to have been more alarmed than was the market. The Vermont election figures, with their rather emphatic indication of a general reversal of majorities in November, appear in the morning papers. Professional Wall Street asks itself, Is not this disturbing? and promptly answers that it is. But the stock market refused to be disturbed. Now comes an actual advance on the news from Maine. On the whole, then, the present experience would seem to indicate, either that the autumn's financial terrors had been overdrawn, or else that the market, with all its apathy, has developed very respectable resisting powers.

It is not alone the stock market which has failed to realize recent expectations. There has been more or less wonderment in financial circles, during several weeks, as to why the Bank of England did not advance its official discount rate, or why the New York money market did not somehow or other tighten in response to the excessively rapid fall in the surplus bank reserve September 3—as to why, in short, the long-predicted autumn stringency in money did not materialize. Some people said the stringency was slow in coming because everybody had expected it. There is something in that, no doubt, but not much more than is involved in the familiar principle that what every one fears, every one prepares for.

But of one thing we may be reasonably certain. If the financial history of 1910 to date had been what a good part of Wall Street, in December, 1909, expected it to be, we should have had all the tight money this September that anybody wanted, and all the Wall Street agitation over the news from Vermont and Maine, that the most confirmed alarmist could have expected. Subsequent developments showed on what very thin ice the conductors of the spectacular boom of 1909 were skating. The New York banks were not in a wholesome situation; their own resources, even to the eye of the Stock Exchange, were overstrained with their efforts to support the Wall Street speculation. They had invoked the aid of London, and the Bank of England had interfered, quite unmoved at the accusations of silliness and hysteria which were flung at its head from irritated Wall Street.

Nobody repeats those charges now, because every man of sense and observation has discovered, from the later history of the London company flotations and the London "rubber boom," that the stolid bank directors had their eyes open, after all. Similarly, our own interior banks were not enthusiastic about assuming Wall Street's burden, after their habit of 1906 and 1905. There were those who reproached these institutions with timidity, but the much later reports of the country's national banks to the comptroller revealed what a crushing burden of their own home obligations must have been piling then on the shoulders of our inland banks. Wall Street, in fact, was the one locality which failed to see the truth, and the fact that it so long refused to see or recognize it doubtless explains why its own particular reckoning was so violent when it came.

But speculative Wall Street eventually put its own house in order more thoroughly than either London or the West, and the sequel of that seven months' season of liquidation was the present easy money market. Any one who talks, in London or New York, of the Bank of England's singular failure to apply the lessons of last autumn, when it waited so long with a 2½ per cent. bank rate that it had to double the rate within fifteen days, when Wall Street descended on it, must have failed to recognize just what has happened since that time. One does not often see high rates in a great money market of the world with the Stock Exchange all but out of business.

There is, no doubt, the possibility of poor business this autumn, and some necessary readjustment of the finances of a few unlucky corporations. But we had a pretty startling chapter of that sort of thing in the autumn of 1903, and money was very cheap throughout the season. There is politics, and politics causes fright. But politics excited considerably more serious alarm in the autumn of 1900, and the money market hardly moved. The explanation was the same on both occasions; Wall Street speculation had descended to earth; values were on a reasonable level; speculators had no demands to make from the money market. It is a safeguarded situation of that nature for which the Stock Exchange was unconsciously preparing in last summer's prolonged decline.

Just Published.

William De Morgan's *new novel*
An Affair of Dishonor

By the author of **"Joseph Vance," "Alice-for-short,"** etc. $1.75.

"The lovers of Mr. De Morgan's stories look forward to a new novel from his pen much as, a generation ago, readers awaited the next Dickens or Thackeray or Charles Reade volume."—*The Outlook.*

Oscar Kuhns's
The Love of Books and Reading

By the author of "German and Swiss Settlements of Pennsylvania," "The Sense of the Infinite," etc. $1.00 net.

On a thread of delightful comment, interesting information and good advice, Professor Kuhns has gathered the most admirable tributes of great men to great writers and books. While appealing primarily to the individual book-lover, literary societies and teachers of English may use this book with pleasure and profit.

Charles P. Burton's
The Bob's Hill Braves

A companion story to the author's "Boys of Bob's Hill" and "The Bob's Cave Boys." Illustrated. $1.50.

In this book the author's "band" of Massachusetts youngsters spend a Summer vacation in Illinois, where they play at being Indians and hear thrilling tales of real Indians and explorers. A book of especial interest to "Boy Scouts."

Henry Holt & Co. 34 W. 33d St. NEW YORK

MR. OWEN JOHNSON'S
Lawrenceville Stories

The Varmint

"It's a wonder. . . . And the joyful pathos of the last installment choked me all up—it was so true, and generally and specifically bully."—Booth Tarkington.

12mo, 396 pages. Illustrated by Gruger. $1.50.

The Humming Bird

One of the most amusing baseball slang stories ever written. 12mo, illustrated. 50c.

The Prodigious Hickey

Originally published as "The Eternal Boy." The First Lawrenceville Story. 12mo. Illustrated. $1.50.

THE BAKER & TAYLOR CO., NEW YORK

A Bibliography of History for Schools and Libraries

With Description and Critical Annotations.

By CHARLES M. ANDREWS, Ph.D., Professor of History in the Johns Hopkins University; J. MONTGOMERY GAMBRILL, Head of the Department of History and Civics, Baltimore Polytechnic Institute, and LIDA LEE TALL, Supervisor of Grammar Schools, Baltimore County, Maryland, etc. 8vo, pp. xiv+224. $0.60 *net;* by mail, $0.70.

LONGMANS, GREEN, & CO., New York

Lake George and Lake Champlain: The War Trail of the Mohawks and the Battleground of France and England in their Contest for the Control of North America

By W. MAX REID,
Author of "The Mohawk Valley," "The Story of Old Fort Johnson," etc.

8vo, with 90 Full-Page Illustrations. **$3.50 net.**

Mr. Reid's new book is devoted to the history and the scenic beauty of a section of the country every inch of which is to him familiar ground. With its history and traditions he is deeply imbued, and to be deeply imbued with such a history and with such traditions is no insignificant acquisition. The author has seized upon the dramatic incidents that form the staple of this history and has combined them in a narrative that moves with unimpeded swiftness.

From the Scribner Autumn List

SOME VALUABLE BOOKS ALREADY OUT

THE OLD VIRGINIA GENTLEMAN AND OTHER SKETCHES

By Dr. Geo. W. Bagby—a Southern writer whose talents in his lifetime were obscured by the clouds of war and reconstruction.

In his introduction to this book *Thomas Nelson Page* says: "Next to Poe, the most original of all Virginia writers was he whose reputation in his lifetime mainly rested on humorous sketches of a mildly satirical and exceedingly original type, but who was master of a pathos rarely excelled by any author and rarely equalled by any American author. Like Poe, his work was known among his contemporaries merely by a small coterie of friends. But these adored him."

"Take Mr. Dooley, who in wisdom and comic power stands easily next to Mark Twain."
—N. Y. Evening Post.

MR. DOOLEY SAYS

By the Author of "Mr. Dooley," "In Peace and in War," etc.

Among many other things shrewd and pointed, he says in this new book: "Th' on'y thing a Congressman isn't afraid iv is th' on'y thing I'd be afraid iv, an' that is iv being a Congressman. An' th' thing he's most afraid iv is th' ladies. A comity iv ladies wud make Congress repeal th' ten commandments. Not that they'd iver ask thim to, Hinnissy. They'd make thim ten thousand if they had their way and mark thim: 'F'r men on'y.'" *$1.00 net; postpaid, $1.10*

THE FRENCH REVOLUTION

A POLITICAL HISTORY

By A. Aulard, Professor of Letters in the University of Paris

Translated from the French of the Third Edition, with a Preface, Notes, and Historical Summaries, by BERNARD MIALL. *In four volumes.* *The set, $8.00 net*

The result of twenty years' research, of a conscientious study of all the significant documentary evidence, this work of M. Aulard's should take its place as the standard history of one aspect of the Revolution and the First Republic.

FICTION

By MAURICE HEWLETT
Rest Harrow

Maurice Hewlett's "Rest Harrow" is a novel that stands independent of his other books, yet is built about those remarkable characters—Senhouse, the botanist, poet, and vagabond, the beautiful and magnetic Sanchia—so widely known through his former books, "Halfway House" and "Open Country." In fact, "Rest Harrow" completes the story that ran through these.

It is probable that no character in contemporary fiction, and few even in modern fiction, has roused such interest as the remarkable John Maxwell Senhouse, true hero of these three novels. *Illustrated. $1.50*

By GEORGE MEREDITH
Celt and Saxon

"It is more brilliant than 'The Egoist' for a corresponding distance into its bulk. Its style is more elastic than that of 'Lord Ormont and His Aminta.' In the early chapters there is two and three-line landscape painting that starts the scene out of individual imagination; no 'laboring with the drop-scene brush,' as Diana has it. Precisely in chapter four Patrick takes a swim in December weather—a paragraph to set young blood dancing. It is more real than actual midwinter swims of one's own. And the only man who could do this sort of thing is gone."—*Boston Transcript.* *$1.50*

Economic Prizes

SEVENTH YEAR

In order to arouse an interest in the study of topics relating to commerce and industry, and to stimulate those who have a college training to consider the problems of a business career, a committee composed of

Professor J. Laurence Laughlin, University of Chicago, chairman;
Professor J. B. Clark, Columbia University;
Professor Henry C. Adams, University of Michigan;
Horace White, Esq., New York City, and
Professor Edwin F. Gay, Harvard University,

has been enabled, through the generosity of Messrs. Hart, Schaffner & Marx, of Chicago, to offer in 1911 four prizes for the best studies in the economic field.

In addition to the subjects printed below, a list of available subjects proposed in past years can be had on application. Attention is expressly called to the rule that a competitor is not confined to topics proposed in the announcements of this committee; but any other subject chosen must first be approved by it.

1. The history of the rate of interest in the United States.
2. The value of protectionism to American workingmen.
3. The economic reasons for or against building a deep waterway from the Lakes to the Gulf.
4. German experience in taxing the unearned increment from land.
5. The valuation of railways.
6. An examination of government wages statistics.
7. The effects of modern immigration in the United States.
8. The value of organized speculation.

Class B includes only those who, at the time the papers are sent in, are undergraduates of any American college. Class A includes any other Americans without restriction; the possession of a degree is not required of any contestant in this class nor is any age limit set.

A First Prize of One Thousand Dollars, and
A Second Prize of Five Hundred Dollars

are offered to contestants in Class A.

A First Prize of Three Hundred Dollars, and
A Second Prize of Two Hundred Dollars

are offered to contestants in Class B. The committee reserves to itself the right to award the two prizes of $1,000 and $500 of Class A to undergraduates in Class B, if the merits of the papers demand it.

The ownership of the copyright of successful studies will vest in the donors, and it is expected that, without precluding the use of these papers as theses for higher degrees, they will cause them to be issued in some permanent form.

Competitors are advised that the studies should be thorough, expressed in good English, and although not limited as to length, they should not be needlessly expanded. They should be inscribed with an assumed name, the class in which they are presented, and accompanied by a sealed envelope giving the real name and address of the competitor. If the competitor is in CLASS B, the sealed envelope should contain the name of the institution in which he is studying. The papers should be sent on or before June 1, 1911, to

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 22, 1910.

The Week.

"Treason successful is no longer treason." That is the moral which stands out on the face of the President's letter announcing that he will not hereafter discriminate against insurgent Congressmen in the matter of patronage. They have triumphed in spite of the fact that the other fellows had the offices, and now there is nothing left to do but give them their due share. The President's statement has been described as an unblushing going over to the spoils system, and a complete break with the principles of civil-service reform. It is not so bad as that. The offices in question are those not covered by the rules, not in the classified service. These have been filled by all recent Presidents—by Cleveland as by Roosevelt—on the recommendation of Congressmen. So that President Taft is making no new departure, except in the matter of recognizing Trojan and Tyrian alike in the distribution. This must be said in fairness, but the fact remains that the President's letter is one that should never have been written. It is humiliating as a confession of failure on the lines of policy before followed, while as an effort to placate opposition it will almost certainly prove to be another failure. What Mr. Taft doubtless had in mind was the desirability of conciliating Republicans whom he had antagonized, and inducing all factions to work together for success in the coming elections. But it must be confessed that he has gone about the business with the same lack of political sagacity that has marked his dealings with the insurgents from the beginning.

If, as now appears, Gov. Hughes's speech at Syracuse last week should prove to be his last as Governor, there will attach a melancholy interest to it in addition to that awakened by its statesmanlike quality and its many earnest recommendations. As the day for Gov. Hughes's retirement approaches there must be greater and greater regrets at the loss of so sane, conservative, and wise an administrative force. Some of his last recommendations, that the State set up an annual budget that is really a budget, place its administration on a business basis, and reform its legislative procedure, are of the highest importance and must sooner or later be acted on. One does not need to be committed to the four-year Governorship plan to realize the many arguments in its favor, or those that are on the side of making the incumbent ineligible for reëlection. But on these questions, too, no one can gainsay the force with which the Governor speaks out of his now rich experience in the Capitol. Every Governor has, for instance, been overwhelmed by the thirty-day bills that have been laid upon his desk by the hundreds. For a conscientious man to go through this mass intelligently is enough to break him down physically, if not mentally. The odds are all against there being adequate consideration of what the Governor rightly describes as a heap of undigested, half-formed legislation. Fortunately, there is nothing to prevent Mr. Justice Hughes from giving valuable aid to the cause of State governmental reform, about which no one can speak with greater authority.

Congressman Ernest W. Roberts of Massachusetts, a standpatter, a Cannon man, and a cog in the Lodge machine, has blurted the truth right out in meeting. In an interview given to the Milwaukee *Journal*, he declares that "Massachusetts is seething with Republican insurgency, which threatens to turn the State over to the Democrats in November, repeating the performance in Maine." Mr. Roberts's daily mail, he complains, is full of letters demanding to know where he stands on Cannon, and "asking other pertinent questions." Hence, while ready to defend Cannon to the last ditch and never to deny him, he tearfully asserts that Cannon owes it to his Congressional friends to declare himself out of the race for the Speakership. More than that, Mr. Roberts feels that a Democratic landslide, involving a Democratic Legislature and a Democratic successor to Lodge, is not improbable. Here is treachery to the Nahant statesman in his own camp. Certainly, worn and anxious as Mr. Lodge is, this can only add to his embarrassments, for, even though few as yet hold Congressman Roberts's view, there are those who believe that a combination of Democrats and anti-Lodge Republicans is not impossible.

Results of the Illinois primaries show good and evil strangely mixed. Twenty-two of the thirty-two Lorimer Democrats with the stigma of party disloyalty and the implication of something worse upon them, won renominations. One of these was Browne, the recently acquitted minority leader against whom several indictments still stand. Shurtleff, the Republican Speaker who engineered the bipartisan conspiracy and whose defeat was urged by Gov. Deneen on the ground that he had betrayed his party, was among the Republicans successful in obtaining a renomination. More satisfactory were the results in the Republican Congressional primaries. Cannon won as it was expected he would; so did Moxley of "butterine" fame. Mann won easily, and Foss by a rather narrow margin. Yet in every district where a contest was made on progressive lines, the progressives won. Progressives, if elected, will occupy in the next Congress the seats now filled by such strong standpatters as Boutell and Lowden. There will be seven progressives in the next delegation; there is not one at present. And there is one consolation for those who looked for a greater triumph for the moral principle involved. The vote at the primaries was unusually light, and there will be another opportunity in November to pass judgment upon the men with clouded reputations.

The action of the Independent Democratic convention in Tennessee in endorsing the candidacy of Ben W. Hooper, the Republican candidate for Governor, is an interesting demonstration of the strength of a political movement with a strong moral issue involved. The independent revolt was organized for the purpose of eliminating Gov. Patterson from the Democratic leadership, as well as from the office of Governor. When he withdrew from the contest for the latter, however, the movement had acquired such impetus that there was

apparentiy no serious thought of turning back. Whether the independents distrusted his professions and his friends, or whether they were held in line by binding agreements with the Republiican leaders or by the simple logic of the situation, their decision apparentiy was that neither Patterson nor any compromise candidate named to run on his ticket wouid bring about the sort of house-cleaning in the Democratic organization which they seek. That could best be achieved by the election of a Republican whose success would be a rebuke to Patterson and ali he stands for. Should Hooper be elected, however, his choice could in no way be considered a "break in the solid South" which the Republican press already foresees. The "gentleman's agreement" with the Republicans provides for no contests on minor officers in districts already conceded to either party. There was no endorsement of the Republiican ticket as a whole or of the Republican platform. If Hooper wins, it will mean only that the Tennessee electorate has set moral considerations above partisanship.

Gov. Harmon's course during the Columbus strike has been absolutely impartiai. He has made every effort to induce both sides to come to a friendly agreement. It has been well known from the start that he favors arbitration, but to the request of hot-headed labor leaders that he should publicly denounce the attitude of the street railway managers and thus attempt to force them to arbitrate, he gave the dignified and unimpeachable answer that his sole function is to maintain law and order, and not to take sides with either party to the difficulty. A few politicians who have hoped for some chance wind to turn the current against the Governor before November, imagine that the strike situation is just what they have been looking for; but it is a safe prophecy that they are doomed to disappointment. If it is an offence to the striking unionists to employ the legal power of the State against the villains who have repeatedly assailed with dynamite, stones, and bullets car after car containing innocent men, women, and children, so much the worse for the strikers. If the particular organization involved should be guilty of such folly as to make an open fight on that basis, it is not conceivable that it could carry with it any considerable proportion of the organized labor of the State. Even on the improbable supposition that it should do so, the reaction among fair-minded Republicans of other classes would be enormous. Republican leaders unwise enough to attack the Governor on this score are likely to be called emphatically to their senses by Candidate Harding himself.

A notable event in the history of reform was foreshadowed in New York by Mr. Mitchel's reception of the delegates to the International Prison Congress. This meets in Washington from October 2 to October 8, as a result of an invitation extended in 1905 by the President of the United States in response to a resolution of Congress. Nor could Mr. Mitchel exaggerate the cordial welcome awaiting the delegates. A true source of pride for this country has been the devoted, unselfish labors of many persons in this field of penology—the name of the late Samuel J. Barrows inevitably suggests itself for one—and the real advances achieved, such as the devising and putting into effect of the courts for juvenile offenders. Not in all sections of the country, of course; in the South, for instance, the horrors of the barbarous and unenlightened chain-gang remain—they gave a white woman prisoner over one hundred lashes in Georgia just the other day. But, on the other haud, there come from the West reports of successful experiments with unguarded prison camps, and of prisoners going to jail without guards. In fact, it is hardly an exaggeration to say that this country affords to the visitors from foreign shores actual illustrations of about every kind and degree of unenlightenment or progress in the treatment of criminals.

In the main, however, the humanitarian spirit controls in the treatment of prisoners, and there is a rapidly growing civic consciousness on this and other social reforms that makes certain more telling progress in the next decade than in the last two. That the path to be followed has not yet appeared quite clearly out of the mists of ignorance, superstition, and the desire for vengeance is naturally apparent. Were everybody agreed as to just how far the policy of corrective punishment may be followed without endangering the deterrent quality of imprisonment, there would be removed a chief cause for the gathering at Washington. That the number of those who believe nearly every form of crime a kind of disease is growing is as true as the increasing of those who think that all crime would disappear if only the teachings of Socialism were to be put in force. Yet, with all the divergences of opinion, there is at every such gathering a more and more humanitarian as well as a more scientific spirit.

The Prohibition candidate for Governor of Connecticut is reported to have doubled the demand for his campaign button by hitching his "white steed" to a fire-truck, in the absence of the fire-horses from the hose-house, and driving the firemen to the blaze in little more than the customary time. Without minimizing the resourcefulness of Mr. Hohenthal, we ask what it is that instinctively causes us to associate the word "popular" with some act that, whether merely sensational or downright vulgar, is a departure from the normal course of conduct. Why should not the term suggest some action graceful rather than awkward, delicate instead of rude, quiet and not noisy? Perhaps the reason lies in the persistent confusion between what is admired and what is only wondered at, a confusion reaching back into the etymology of the word. This confusion is increased by the fact that our expression of wonder is not unlike our expression of admiration, a phenomenon of which we are all glad to take frequent advantage in the perilous passages of polite society. To a child, wonder and admiration are often enough inseparable, but he is a rash suitor who thinks them identical in men and women.

Some Western railways might take a lesson from the East. Hereabouts we find one railway establishing model farms, where neighboring private farmers can see in operation the latest devices for intensive culture. Another publishes the results of expert investigations going to show how dairy herds can be made more profitable. A third is advising its patrons about the forestation of waste lands. In the West,

however, the railway bulletins seem chiefly designed to lure readers in one region to pick up their household gods and move into another. As a rule, the farmer who has made two or three such shifts, staying in each new home only long enough to endure the settler's without enjoying the agriculturist's life, becomes a blind corporation-hater, attributing his failure always to the deceitful and oppressive carriers. Would it not pay the Western railway managers, for a while at least, to devote a little more attention to the development of the districts in which they are already doing an assured business, than to the settlement of the wilds into which they are building spurs?

The magazine publisher in politics is by no means so successful as the author in politics. New Jersey has shattered the political aspirations of two magazine publishers standing at the very tip-top of circulation and uplift. It is sad to contrast the fate of the proprietor of *Everybody's* with that of one of his best-known contributors, Mr. Charles Edward Russell, whom the Socialists have made their candidate for Governor of New York. It is even more sad to contrast the fate of Mr. Harold J. Howland, who did not secure a Congressional nomination in New Jersey, with that of the *Outlook's* Contributing Editor, who, by common agreement, can have anything he wants in the way of nominations. Both magazine gentlemen are now the richer in experience. The former has discovered the well-worn truth that the man who sways the opinions of several hundred thousand subscribers may fail very conspicuously to sway the opinions of his neighbors. Mr. Howland has discovered the somewhat more specific truth that the Roosevelt atmosphere does not necessarily mean political salvation, nor the Roosevelt O.K. command a majority of votes. Several candidates bearing the Contributing Editor's brand have lately come to grief.

In the celebration of Mexico's centennial of independence which began last Friday on an elaborate scale, Porfirio Diaz has probably attained the spectacular climax of his career. The Paris Exposition of 1867 preceded Sedan by less than three years. What would come to Mexico within the next year or two if the iron hand that has long ruled its destinies should be removed, it would be unsafe to predict. Yet in the nature of things, the hand of Porfirio Diaz must soon be relaxed by a greater power. Herein consists the weakness of a man to whom it would be idle to deny greatness in many respects. Spanish-American capacity for self-government is not so utterly proven and Spanish-American dictatorships are not so rare as to make the one-man rule in Mexico an unmitigated evil or offence in itself. The evil is that Diaz has not seen fit to use his absolute authority to educate the Mexican people toward self-government. President Diaz might well have tolerated an Opposition party without endangering his own position. As time went on, he could well have afforded to allow more breathing space in politics and the press. With many of the attributes of an enlightened ruler, he seems to have been too much contented with the policy of "after me the deluge."

The destruction of the Zeppelin VI appears to have been in no wise due to any defect of construction, but merely to carelessness on the part of a machinist who placed an open can of benzine near a motor. A spark from the latter did the mischief. But the blow to Count Zeppelin is none the less severe. Save for one airship now under construction, there survives only one other, the oldest, which belongs to the army. Months must elapse before the new one can be placed in service; and as these aircraft are presumably not insured, the financial loss from the three wrecks must be very great. Nevertheless, the experiments ought to be carried on, even though the heavier-than-air craft are at present having everything their own way. It is to be hoped that the much-vaunting Walter Wellman will really accomplish something with his dirigible in his proposed transatlantic flight; for this would stimulate the construction of similar craft in this country. If the dirigible does not soon achieve a transatlantic passage, the monoplane will—at least this is Moissant's view, after his flight from Paris to London. His opinions expressed on his arrival in the latter city are the most encouraging and apparently the best-founded that we have yet seen as to the practical future before the aeroplane.

The Australian Commonwealth is only twelve years old, yet already there is much dissatisfaction with the Constitution of 1898. Like the Constitution of the United Sates, it represented a compromise between the national principle and home rule under State governments; and it has not in all respects worked well. The result is that, behind the political parties and blent with them all, there is forming a division into a States'-right party and what may be called a unification party. That is to say, there is a tendency, in which the Labor party strongly shares, to subordinate the States to the Commonwealth in an increasing number of legislative matters. On the other hand, the representatives of the State governments and those who sympathize with them in the Federal Parliament, are contending that the metes and bounds marked out in the Constitution must be sacredly observed. It is not denied that, if the Federal power is to be heightened, as many desire, amendments of the Constitution will be necessary. The subject most in debate just now is financial. Federal revenue is to be distributed among the States, and the dispute is upon what basis this is to be done.

The sedition trials that have been under way in Bengal for many weeks show that while there has been a lull in the anarchistic methods of anti-British agitation, the nationalist movement as a whole has remained virtually unaffected by the drastic press laws recently enacted. Secret and silent resistance is a mode of campaigning to which the Hindu caste system, with its facilities for exercising social and religious pressure, peculiarly lends itself. A striking instance is found in the resignation of the well-known native lawyer, Mr. Sinha, who was recently appointed to a seat in the Viceroy's Council. This was the first time in the history of British India that a native had been admitted to the very citadel of the British power and to a share in the framing of the most intimate policies whereby the Englishman keeps his hold on India. That Mr. Sinha, after a few months in office, should have laid down the highest position that has ever fallen to a native of India under the British rule, is generally ascribed to the working of public opinion among the distinguished Hindu's countrymen.

HIDING BEHIND LINCOLN.

It was an unusual sensitiveness to criticism which Col. Roosevelt betrayed in his speech at Syracuse on Saturday. He must have heard a good deal about what the *Outlook* calls "misconstruction and misapprehension by friends," in connection with his reckless language about judges and his loose and misleading references to decisions of the courts. Hence he took occasion to assure the astonished farmers who listened to him that he had a "profound respect for the Supreme Court." Yet he asserted the right of private citizens to comment freely upon the findings of judges, and to express dissent from them—a right which nobody seriously questions. He also cited some of the strictures upon the Dred Scott decision made by Lincoln, and concluded triumphantly: "If I have erred, I err in company with Abraham Lincoln."

Mr. Roosevelt has got a good deal of comfort, at one time and another, out of these comparisons of himself with other great and good men. One of his last utterances in the White House was a timely reminder to the people that Washington had been attacked, and so had he. But it is Lincoln who now serves him at Osawatomie and Syracuse. The logic runs: Lincoln and I have both been charged with criticising the courts; Lincoln was a patriot, a saint, and a hero; therefore, I am—what I leave you to infer. This reasoning is not of the most conclusive sort conceivable. It is too easily reversible, as thus: Roosevelt and Aaron Burr were both attacked as lawless and unscrupulous politicians aiming to change our form of government; but Roosevelt was in reality an unselfish and high-minded statesman; therefore, Aaron Burr was an exemplar to all American youth.

Leaving the fantastic logic which would put Lincoln and Roosevelt in the same category, let us ask what are the facts which show the radical difference between the two men in the matter under inquiry. There is on the surface one important difference. It is that of tone and manner. In Lincoln's public discussions of the Dred Scott decision, we have the measured utterance of a lawyer accustomed to weigh his words. There is not in them a trace of that explosive and inflammatory quality which appeared in Mr. Roosevelt's Colorado speech. It is not possible to conceive of Mr. Lincoln calling the judges of the Supreme Court "fossilized." That word is a mild one for Mr. Roosevelt. He has expressed before many witnesses his contempt for certain judges in much more offensive language. Now, it is an old saying that in affairs of state it is the tone which makes the song, and it is this violent tone of Mr. Roosevelt which not only puts him at a wide remove from Lincoln but alarms his friends and makes sober men dread the effect of his attitude.

Still sharper will the divergence between Lincoln and Roosevelt appear when one turns to the speech of the former on the Dred Scott decision and contrasts it with the ex-President's outbursts. The two things are as different as the reasoned protest of a grown man and the pettish outcry of a child. Mr. Roosevelt exclaims that a certain decision which he dislikes is "against popular rights"; and that another is "against the democratic principle of government" and not in accord with the spirit of the times. It never occurred to him to ask what the law was, what the judicial precedents were, and what, then, was the duty of the court. Mr. Roosevelt is, of course, not able to approach the question as a lawyer. But Lincoln was; and it is only necessary to take a few of his sentences to show the folly of the Colonel's attempt to hide behind him.

Said Lincoln on June 27, 1857:

> Judge Douglas does not discuss the merits of the decision, and in that respect I shall follow his example, believing I could not more improve on McLean and Curtis than he could on Taney.
>
> He denounces all who question the correctness of that decision, as offering violent resistance to it. But who resists it? Who has, in spite of the decision, declared Dred Scott free, and resisted the authority of his master over him?
>
> We believe as much as Judge Douglas (perhaps more) in obedience to and respect for the judicial department of government. We think its decisions on Constitutional questions, when fully settled, should control not only the particular cases decided, but the general policy of the country, subject to be disturbed only by amendments to the Constitution, as provided in that instrument itself. More than this would be revolution.

But Lincoln then went on to point out with much care and sobriety why he thought the Dred Scott decision was "erroneous," and would be in time overruled. He explained that the alleged "historical facts" put before the court were not "really true"; and that it had not given due weight to the implications of the Declaration of Independence and the Constitution of the United States. In other words, Lincoln made a studied and deferential plea for a reargument of the case, on the ground that it could not fairly be regarded as having "established a settled doctrine for the country." Between this and the position taken by Mr. Roosevelt there is a great gulf fixed.

A REAL SCHOLAR IN POLITICS.

President Wilson's nomination for Governor of New Jersey is one of those electrifying events which make politics seem worth while. It left the Republicans absolutely stunned. They never thought it possible that the despised Democrats would select so distinguished and inspiring a leader, and were aghast as they looked over their own list of mediocrities, one of whom they finally nominated. They knew of the announced readiness of thousands of Republicans to vote for the President of Princeton. The independent voters, who swarm in northern New Jersey, are sure to go the same way almost in a body. Hence even before the Republican Convention, the frank opinion of all frank members of that party was that Wilson will sweep the State.

Certainly, if New Jersey does not rise to the great opportunity of putting such a man in the Governorship, she will get a worse name among the States than she has ever had for creating and harboring offensive corporations. For Woodrow Wilson is a man of varied and singular fitness for high office. A genuine scholar, his main studies have been in the science of government; and his teachings have been filled with the aspirations of a thorough believer in the great democratic movement of the age. From the day of the publication of his book on "Congressional Government," which showed a keen mind piercing behind political forms to realities, he has applied himself not merely to university problems, but to a close and intelligent observation and analysis of the political activities going on about him. Those Republicans who have spoken of him patronizingly as a cloistered figure, living in an ideal world and thinking in a vacuum, must have had their eyes opened by his speech accepting the nomination. It was dignified in manner and elevated in style,

but there was not a trace of academic abstractness about it. An intense political realist was speaking. President Wilson went directly to the topics about which all New Jersey is concerned, and handled them with a force and pungency that set his audience applauding enthusiastically, and that will impress the whole State with the appearance of a new force in its public life. Cumbrous and extravagant administration of the State's affairs, the need of radical reform in the methods of taxation, a real public-service commission—these were the subjects to which Mr. Wilson addressed himself with vigor and incisiveness. It is a refreshing advent of a scholar in politics who knows books but who also knows men and government.

The Republican argument against Wilson is already indicated. All that is said of his ability and high character will be admitted, but the voters will be sorrowfully asked to consider the bad men and the wicked machine that are behind his candidacy. We understand that more than one Republican who has been a part of the machine of his own party, that has commercialized the politics of New Jersey for fourteen years and been the beneficiary and tool of corporations, will be ready to take the stump and shed tears over the prospect of the Democratic organization becoming strong once more. There will also be the charge that Wilson's nomination was brought about by "special interests." Senator Kean is prepared to maintain up and down the State that no man who knows a railway president by sight, or is acquainted with a director of a corporation, is fit to be trusted. And if the "special-interests" attack shows signs of failing, ex-Senator Dryden can be asked to explain to large audiences how intense was his antagonism, and that of the party which honored him—or, at least, honored his checks—to anything like favors to corporations. New Jersey voters have many faults, but they have never been accused of being without a sense of humor; and the spectacle of Republicans arraigning Wilson for subserviency to a political machine and to special interests will be sure to provoke a guffaw from Cape May to Deckertown.

All these puny Republican weapons, President Wilson really broke and brushed aside in his speech. He had taken the nomination without a single pledge; nobody had even ventured to ask him for a pledge on any subject. He stands his own master. All that he seeks is an opportunity to serve the State to the best of his powers. In consenting to leave the work to which his manhood has been devoted, and to enter official life, he is but acting up to his own doctrines of the duty of a citizen under a republic. He has told his students that when the State calls them, it is for them to obey. The State has called him, and he obeys.

CUTTING OFF BOUNTIES AT OTTAWA.

The trials of the Canadian Premier are never-ending in these days of political insurgency in the Dominion. No sooner was Laurier again in Ottawa after his interviews with the associated grain-growers of the prairie provinces, who are clamorously insistent on an immediate lowering of tariff duties, than he was confronted with a problem in the iron and steel industry, due to the fact that bounties must come to an end in December next. Twenty-seven years ago the Dominion Government began paying bounties on pig iron. There was a bankrupt iron-manufacturing company at Londonderry, Nova Scotia; and the politicians of that province demanded that protection should be so extended as to set the furnace in blast again. The industry has since had the indirect bounty of the tariff; while $17,000,000 has gone direct from the Treasury to some half-dozen iron and steel companies in the provinces of Nova Scotia and Ontario. More than $16,250,000 has been paid out under acts of Parliament passed since 1896. For these enactments Laurier is responsible.

At last, however, the bounty law is to expire. The Government dared not renew it at the 1909-10 session of Parliament because of the vigorous protests of the granges and grain-growers' associations. The melancholy announcement that the law could not pass again was conveyed to the iron and steel men with many expressions of regret. It was indeed sad news for Sydney, Londonderry, Hamilton, and Sault Ste. Marie—all centres of the iron industry. The iron and steel men had always been working on the pleasant assumption that bounties, like high duties in the tariff, were to go on forever. They had consequently capitalized bounties, municipal bonuses, provincial and municipal tax exemptions, cheap freight rates on the Intercolonial railway, and all other miscellaneous largesse, easily making (exclusive of tariff protection) a total of twenty million dollars bestowed on the industry since the Londonderry furnace was relighted by bounties in 1883. For much less than these twenty millions it would be possible to-day to duplicate the equipment of all the primary iron and steel plants of Canada. But most of the companies are heavily over-capitalized, and the outlook for dividends will not be promising when bounties cease.

Yet the men most concerned have persuaded themselves that there is a way out; and that if they are to be disconnected from the Ottawa pipe line they can cajole the Laurier Government into starting some new and indirect rivulets. They are now pleading that the industry is "still in the gristle," still in need of more aid than is given by the tariff of 1907; and they are asking for increases in the duties in the British preferential tariff, and in the general tariff on pig iron and other iron and steel products going into Canada from England and Scotland and from the United States.

Laurier and Fielding, the Minister of Finance who represents Nova Scotia in the Cabinet, would undoubtedly like to accommodate the iron and steel men. One reason is that the industry has always been a pet with Ottawa politicians. Another reason is that the Liberal party lost more ground in Nova Scotia at the general election of 1908 than in any other province, and another general election must quickly follow the Dominion census, which will be taken in April, 1911. But to add to the duties on pig iron and steel would increase the price of the raw material of the manufacturers of farm implements at Toronto, Hamilton, and Brantford. This would hardly be possible just at the time that farmers and grain-growers in the four provinces west of the Ottawa River are perfecting an organization to send a delegation of five hundred men to Ottawa to demand that the duties on farm implements shall be materially reduced in accordance with the old pledges of Laurier and the Liberals.

The revolt in the four farming provinces would alone prevent Laurier from

complying with the new demands of the iron and steel men. But in addition to this the iron and steel men themselves have created difficulties. Two years ago the largest concern in the Dominion was glorying in the fact that it was selling rails by the ten thousand tons in India and Australia at prices that could not be met by English and Scottish rail-making companies. Within the last two years, also, no industry in Canada has been more affected by the Trust movement than the iron and steel industry. Moreover, to comply with the new demand would be another inroad on Laurier's much boasted British preference. There have been twenty or more such inroads since the preference first came into full operation in 1900—all at the instance of Canadian manufacturers. This is fully recognized both in England and Canada; and another serious curtailment of the preference at the instance of the iron and steel men would strengthen the revolt in the farming communities, where the preferential tariff of 1897 is the one item in the legislative record of the Laurier Government that has had popular approval. It will be difficult for Laurier and Fielding to shake off the iron and steel men—to tell them that $17,000,000 in direct government aid, plus protection for their products, ought to suffice to help the industry beyond the "gristle" stage. None the less, the shaking off will have to come; for never since Laurier came into office fourteen years ago was there more discontent with his Administration, or more indignation at his betrayal of Canadian Liberalism, than on the eve of the assembling of the Dominion Parliament for the session of 1910-11.

CULTURE UNDER FIRE.

The status of culture as a worthy object of effort and devotion has been subjected to vigorous and many-sided attack in recent years. This attack has come not only from enthusiastic educational reformers, but also from the preachers of humanitarian doctrines, and especially of the doctrine of social service as the only fit object of high endeavor. We have been told, in more than one quarter, that the laying up of knowledge or the developing of fine tastes and appreciations is mere selfish luxury if it is not made the basis of benefit to the community, of the achievement of some concrete outward end more or less commensurate with the time and energy that have been expended in its acquisition. Besides this, we have heard the more familiar and commonplace question whether the higher education is desirable to the individual under the tremendous stress of present-day competition in all callings. In the face of these questions, the cause of culture for its own sake has held up its head pretty well, and, indeed, within the last two or three years, it has shown signs of new strength in the reaction against the free elective system in our American college world; and President Lowell's inaugural address at Harvard a year ago was in large part a vigorous affirmation of the value of culture.

An article in the current issue of the *Popular Science Monthly* opens up the prospect of an attack on traditional ideas of education and culture along quite a different line. It is from the standpoint of physiological psychology that the desirability of such training and development as are given by the study of Latin and mathematics is to be challenged; and the challenge is to be more aggressive than any of those with which we have become familiar, not only because it is conveyed in the dogmatic tones of Science, but also because it goes farther than any other in its accusation. Culture studies like Latin and mathematics, if not followed up by use of them in after life, are, according to this view, worse than useless, they are actually injurious; they result in a permanent drain upon the whole mental organism, with consequences that may be of the most disastrous character. This is not absolutely asserted by Dr. George E. Dawson, in his article entitled "Parasitic Culture," but it is spoken of as a doctrine in a fair way of being established through the researches of experimental psychology. It is a consequence of the doctrine of the localization of functions in the brain, coupled with the general doctrines of physiology. What is asserted as at least probable, if not proved, is that the cultivation of certain mental powers not afterwards utilized results in the over-development of parts of the brain which afterwards become a drag upon the whole nervous and psychic economy; as in the case of the over-athletic young man excessive muscular development has meant the weakening of heart or lungs. Dr. Dawson says:

> What is the effect upon the girl's life of having to support an elaborate nervous mechanism for dealing with mathematical symbols and concepts which she never has occasion to use? What is the effect upon the boy's life of having to support a nervous mechanism for declining Latin nouns and adjectives, conjugating Latin verbs, and construing Latin sentences, which he never has occasion to use? May not these unused nervous organs become parasitic upon the nervous vitality, just as the unused muscles of the athlete become parasitic upon the general organic vitality? It may seem to some little less than fantastic to suggest such a result. And yet, if we believe that life is a biological unit, and that the laws controlling it are identical in nature and operation, there is no escaping this conclusion.

We shall probably be hearing a good deal of this in the near future; and we would not be understood to say that there is nothing in it. But there may well be something in it, yet nothing like so much in it as those who put it forward imagine in the enthusiasm of discovery; there is room for a world of difference here. A characteristic of this class of scientific agitation is an almost invariable absence of that essential mark of scientific thinking, the sense for quantitative distinctions. Assuming that all Dr. Dawson asserts is qualitatively true, we get not the slightest indication of the degree in which the alleged drain of the unused "cortical neurones," "association fibres," and the rest, exhausts the resources of the active organism. Unless that degree is serious, upholders of the old traditions may well rest content with the feeling that the injury thus done is of slight weight in comparison with those subtler but, as they believe, infinitely important benefits which they have always claimed for their discipline. And as though to emphasize this deficiency in the argument, that portion of it which rests not upon theoretical science, but upon familiar experience, is flagrantly vitiated by the same defect. For the experience of the overtrained athlete, which is obviously due not to the nature of his training, but to its excess, is all along set down as though it proved a case against moderate as well as excessive athletics. For overstudy or excessive concentration, the most old-fashioned of educators is not saying a word.

Nor is this the only way in which Dr. Dawson's article—although well worth reading and considering—shows that tendency to pseudo-scientific inference

which is so seldom absent when the specialist makes an incursion into the broad questions of human life. Let us take but a single example:

> Intellectual culture, not being transferable, must become parasitic and a cause of mental disorganization when it fails of application and usefulness in the life of the individual. Illustrations are to be found in the over-refinements of culture in academic communities, in the nervous instability frequently met with among educated men and women, and in the religious and social vagaries and perversions that crop out in the older and more highly cultivated centres of population.

Surely, it can but have been absorption in a preconceived conclusion that led the writer to imagine "religious and social vagaries and perversions" as belonging particularly to the "more highly cultivated centres of population", and if intellectual culture is not "transferable," and therefore "must become parasitic and a cause of mental disorganization when it fails of application and usefulness in the life of the individual," the physiological psychologists will have a hard nut to crack when it comes to explaining the splendid efficiency of the Oxford and Cambridge men who have, generation after generation, grappled with the administrative problems of the British Empire. If that be the kind of "mental disorganization" that is bred of classical and mathematical training, we cannot but feel, like Lincoln in the matter of Grant's whiskey, that many of our statesmen would be the better for some mental disorganization of the same brand.

MOVING-DAY.

One of the inalienable rights of the free American is the privilege of insuring his domestic tranquillity by leaving a domicile before it has become too familiar. An annual moving-day fits nicely into our practice of the restless life. A shorter period would not be sufficient to enable us to decide upon our next stopping-place, and a longer would give us *ennui.* It is not that we lack the home-feeling; we are at home anywhere. Indeed, it might be not unplausibly argued that an abnormal love of home drives us to seek as many homes as we can. If we do not carry our houses upon our backs, it is because we are certain of finding at nightfall suitable habitations still warm with the home-life of recently departed nomads like ourselves. A September Labor Day on which no manual labor is performed is less characteristic of us than our October moving day, unhonored and unsung, to be sure, but not without its realistic exhibits and its impressive parade. We are a nation of climbers, anxious not to miss anything; and each successive autumn brings with its brilliant leaves renewal of hopes and fancies of wonders to be ours under another roof.

To a sensitive spirit there may, indeed, be something disagreeable in this easy, automatic adoption and occupation of vacant quarters, as if house were identical with home. No doubt a new place, even the smallest of apartments, may be home from the first, or may speedily become home. There one builds for himself, without precedent or predecessor, free to plan as he will and under no necessity of conforming to lines already laid down and virtually unchangeable. But to set up Lares and Penates amid departing wreaths of alien smoke, with deserted embers sinking sullenly into silent ashes, is not only to receive inhospitable welcome at the threshold, but to render the new home a mere continuation, in some sort, of the old, and thus to preclude that individuality which, however crude or conventional, is the finest element in the home-fabric. It is not that one objects to ghosts. If only they would deign to haunt the scientific arrangements of a modern dwelling, from which, along with children, dogs, and chimneys, they have been ruthlessly banished! But stranger ghosts, spirits of the unknown dead, spooks not in one's set—who can abide these? Better no ghosts at all than those whose unfamiliar presence causes such mutual embarrassment.

This ready breaking of home ties, together with the overlapping and consequent blending, to some extent, of home-atmospheres, also plays its part in the disintegration of the family. For at each abandoned home-spot something of the home is left behind. Every family is a part of wherever it has lived. Mobility of the whole begets restlessness of the parts, and the cords of union are too delicate to stand the strain of frequent upheaval. The result is deplorable. The school and the church are vainly taxed with the attempt to perform the functions proper to the home, but neglected by it—possible to it, indeed, only as it preserves for a connected period of considerable length the character of an unbroken circle. It is both pitiable and ludicrous to listen to the thoughtful and animated discussion of the great modern pedagogic problem, How shall English be taught? A great step toward its solution will be taken when the question is re-stated: How shall the school manage to do the work of the home or how shall the latter be made—forced or induced—to perform its proper tasks? A similar re-statement is at least as necessary in the case of moral training. Abdication does not lift burdens; it only shifts them.

Considerations such as these, often only half-defined, lie at the basis of our envy of that golden mean of English society which for generations has combined progress with stability. To be born and grow up, not simply in a family but in a house rich with memories of ancestral exploits, to be surrounded from infancy to manhood, if not to old age, with walls whose echoes are mellow with time, to be unable to turn without seeing or to walk without touching objects whose intrinsic value, however great, or whose beauty, however rare, is trifling when compared with the priceless train of associations that has ennobled them with sacred emblazonry, is to receive, decently and in order, and long before college age, an education, a personality, and a character beside which our careful and exact entrance requirements are the meagre and hurried babblings of a child. We may as well recognize at once that no professional programme of education can do more than make a noise and keep up appearances while the real programme, unwritten and incapable of formulation, is slowly coming into being. When that perhaps far-off, certainly divine, event occurs, professional programmes will begin to find their use and to be successful. Meanwhile, one discovers now and then a group of Americans who have determined, grimly enough, to be so un-American as, like Napoleon, to be ancestors in lieu of having them; to give up the annual jaunt from one eating and sleeping place to another; to curb the instinct for adventure and new things; and, choosing finally for all the long future, to be content to give up novelty for growth, to substitute for the habitual mover's airy nothing a local habitation and a name.

NEWS FOR BIBLIOPHILES.

The death of Samuel L. Clemens ("Mark Twain") has served to increase the interest in first editions of his books among collectors, and a bibliography of his writings is now promised. This will be published by the Harpers this autumn. It has been compiled by Merle Johnson, a San Francisco artist now living in New York, who has been for several years bringing together and studying the books of Mark Twain. He has gone at the work in a most careful manner, and has made a number of important bibliographical discoveries.

Beginning with "Innocents Abroad," Mark Twain's books were for many years published by the American Publishing Company of Hartford, Conn., who were at the time the largest publishers of subscription books, and who had hundreds of agents in all parts of the country. Stereotype plates were made and copies printed off as the sale demanded. As the first issue was small, in some cases only a few hundred, and as later issues from the plates generally carried the same date, and were, for the most part, indistinguishable, collectors have, through want of information, been satisfied oftentimes with a later issue of several of the books. Mr. Johnson's bibliography will give the typographical points by which the correct first issues can be distinguished. He has procured, so far as the records at Washington can give them, the actual dates when copies were filed for copyright. Then, by wide searching and examination of copies on the market, he has made efforts (and with considerable success) to find copies bearing a manuscript date of purchase or presentation, inserted by a former owner, as nearly as possible to the actual copyright date. Having thus fixed the first issue he has, by examining other copies, discovered points of difference. In a few cases, though thousands of copies were printed, no distinction can be found between early and later issues other than possibly broken or injured type, but often important variations have been brought to light. Mr. Johnson's set, from which his bibliography has been prepared, and which will, in the language of the bibliographer be known as the "type" set, has been sold by him to a firm of book-sellers in this city, and, by their courtesy, and with Mr. Johnson's consent, we are able to give particulars about a few of the more important books.

Mark Twain's first book was "The Celebrated Jumping Frog of Calaveras County, and Other Sketches," published in New York in 1867. His second book, "Innocents Abroad," was published in Hartford in 1869. Of these two books Clemens wrote about the end of 1870, as follows:

> I fully expected the "Jumping Frog" to sell 50,000 copies & it only sold 4,000; & I only expected the "Innocents" to sell 3,000 copies, but it astounded me by selling 85,000 copies within sixteen months—which, I am told, is the largest sale of a four-dollar book (price is $3.50 to $5.00—$4.00 about the average) ever achieved in America in so short a time.

Now, it is not probable that the publisher was much more sanguine than the author as to the sale of the book, and it is not likely that the first printing exceeded one thousand copies; but, as the above letter shows, 85,000 were sold "within sixteen months." As these were all printed from the same plates, and, for the most part, at least, if not entirely, dated 1869, the problem has been to identify that first printing. The book was printed hastily, and in the earliest copies no page numbers are given in the Table of Contents for chapters xlvi to lx, although the proper page numbers of the earlier chapters are given. At the bottom of p. xviii also the word "Conclusion" in the summary of the contents of the chapter was omitted. These omissions were afterwards supplied, that page being reset, probably in the second printing. Besides these errors which are in the preliminary leaves, an equally important variation is found in the text. The lower portion of p. 121 is, in the earlier copies, blank, while in later copies a portrait of Napoleon III is printed in the space. This made the number of illustrations actually 235 (if our count of them is correct) instead of 234 called for on the title-page.

In "Sketches New and Old" (1875) the first edition contains at bottom of page 299 a short sketch headed "From 'Hospital Days.'" In some copies there is found an errata slip, pasted on this page: "By an error of the publishers the above sketch 'From "Hospital Days"' was inserted in this book. It should not have been, as Mark Twain is not the author of it. It will not appear in any future edition." In later editions the lower half of this page is blank.

In the first edition of "The Adventures of Tom Sawyer" (Hartford, 1876) there are sixteen preliminary pages, pp. ii, iii, x, and xiv being blank. In later issues, in order to save a half sheet of paper in each copy, the frontispiece was printed on the reverse of the half-title, and the Contents begins on the verso of the Preface, making twelve preliminary pages only in the book. The page-numbers were, however, not corrected.

Equally interesting points about "The Gilded Age," "A Tramp Abroad," "Life on the Mississippi" (1885), and "Adventures of Huckleberry Finn" (1885) will be given in Mr. Johnson's bibliography, as well as variations in several of the less important volumes.

John Camden Hotten, the English pirate, early began reprinting books and magazine articles by Mark Twain. "The Innocents Abroad" was issued by him in two parts, the first with this title, and the second with the title "The New Pilgrim's Progress." "Screamers" and "Eye-Openers" were two volumes of selections from Mark Twain's contributions to the *Galaxy*, issued in 1871 by Hotten. Several of the authorized English editions were actually the first. Thus "The Tramp Abroad" was published in two volumes by Chatto & Windus in London on December 13, 1879. The American edition, in a single volume, was not copyrighted until March 13, 1880. Both are dated 1880 on the title-page. Several Canadian editions also are of first edition value. "Old Times on the Mississippi," published in Toronto in 1876, contains the larger portion of "Life on the Mississippi," not published in book form in the United States until 1883.

Many books of humor contain one or more sketches by Mark Twain, some being often repeated. Mr. Johnson has endeavored to procure and describe all containing the first appearance of any sketch in a book.

No extended set of first editions of Mark Twain has ever been catalogued or sold at auction. The copy of "Mark Twain's Memoranda," Toronto, 1871, in the Johnson set, is the one which brought $33 at Anderson's in March, 1909. This is, we believe, the highest price so far paid for a Mark Twain item at auction, but many rarities have never come upon the auction market.

In "Extracts from Adam's Diary" (New York, 1904) the author says: "I translated a portion of this diary some years ago, and a friend of mine printed a few copies in an incomplete form, but the public never got them." So far as can now be traced "Adam's Diary" was first printed in "The Niagara Book" (Buffalo, 1893), filling pp. 93-109, and in this form it went through several editions. Was there a privately printed edition, or had the author's memory failed him when he wrote this note in 1904?

Especially during his later life, Mark Twain was often called upon to speak at annual dinners of societies and other gatherings, political or social. Many of these speeches were extemporaneous, and very few were ever published by him. Mr. Johnson has gathered newspaper reports of a large number of these speeches, and it was from his collection that the volume of Mark Twain's "Speeches," just published by the Harpers, was mainly compiled. He has also gathered, as excerpts from periodicals, a large collection of magazine articles by Mark Twain, some of which have never been collected, and a mass of newspaper anecdotes, reports of interviews, etc.

Correspondence.

THE ATTORNEY-GENERAL AND THE CABINET.

To the Editor of The Nation:

Sir: In your comment on Dr. Elroy M. Avery's seventh volume ("History of the United States and Its People," *Nation*, August 25) you call attention to his mistaken view that the attorney-general became a Cabinet associate first in 1870, the year in which the Department of Justice was organized with the attorney-general at its head. As you say, truly enough, "that officer was in practice a member of the Cabinet from the beginning." The fact was clearly recognized on April 28, 1870, when, in the course of the debate in the House of Representatives on the proposed Department of Justice, one speaker (Hon. William Lawrence of Ohio) declared that "since the establishment of the office of attorney-general the attorney-general has been a member of the Cabinet by usage just as much as any head of a department" (*Globe*, 41st Congress, 2d sess., pt. iv, 3067). There is a good deal of scattered evidence on the point. I am not aware that it has ever been briefly summarized.

The first clear record of what we term "Cabinet meetings" is given by Thomas Jefferson ("Jefferson's Writings," ed., P. L. Ford, I, 165, V, 320 ff). From this it appears that on April 11, 1791, in accordance with Washington's instructions of the previous April 4, the Secretaries of the three departments (State, Treasury, War) and Vice-President John Adams met to discuss various problems concerning the government. Washington himself at the time was absent from Philadelphia, the seat of government, and Edmund Randolph, attorney-general, was not at the meeting. On March

31, 1792, there is record of another Cabinet meeting, held this time at the President's. The three Secretaries and the attorney-general were present (*ibid*, I, 189). In 1793, a year notably full of difficult problems of administrative policy, Cabinet meetings were frequently called, and it is probable that, as a rule, Randolph, as attorney-general, attended these meetings. According to Timothy Pickering's memory, Washington once declared in Pickering's presence that he had made Randolph a member of his Cabinet "from the first" (C. W. Upham, "Life of Timothy Pickering," III, 226). In December, 1816, Monroe thus stated his view of the usual practice to William Lowndes: "The attorney-general has been always, since the adoption of our government, a member of the Executive Council, or Cabinet" (*Annals of Congress*, January 21, 1817). In 1818, while Richard Rush was in England, he was impressed by the fact that the English attorney-general was never a member of the English Cabinet: "In the complicated and daily workings of the machine of free government throughout a vast empire, I could still see room for the constant presence of the attorney-general in the Cabinet" ("Memoranda of a Residence at the Court of London," 2d ed., 1833, p. 63).

For many years after 1789 the attorneys-general were not as frequent and regular attendants at Cabinet meetings as the Secretaries. The office was below that of the Secretaries in dignity, as well as in compensation. The salary of the attorney-general was only $1,500 at the outset, and was not made equal to the salaries of the other principal officers until 1853, when all the members of the Cabinet were paid $8,000. Many of the early attorneys-general down to Caleb Cushing (1853-1857) were engaged in private practice while serving the government as Federal officers. A few of them, notably William Pinkney (1811-1814), actually lived away from the seat of government. There was a vigorous movement in Congress in 1814 to make a statutory residence requirement, which would compel the attorney-general to reside at the seat of government during the session of Congress. The increased duties of the office inevitably enforced the residence obligation, as time advanced. In 1830 Webster expressed himself as favoring private practice for an attorney-general so far as leisure allowed it. Caleb Cushing, on the other hand, took a strong position against it in 1856. I am informed on excellent authority that the attorneys-general up to very recent years have engaged to some extent in private practice. I should be interested to know whether to-day, in case the attorney-general found his salary of $12,000 inadequate and decided to take a small amount of private practice, he would be violating any custom or rule of honor in doing so.

HENRY BARRETT LEARNED.

Cornwall, Conn., September 12.

THOREAU'S KNOWLEDGE OF BIRDS.

TO THE EDITOR OF THE NATION:

SIR: The review of Thoreau's "Notes on New England Birds," in your issue for August 11, makes so many criticisms of Thoreau's ornithological abilities that I am moved to arise in his defence, even though I may seem to be putting myself in the position of the wife who permits no one but herself to find fault with her husband. For I really thought, and still think, that I said in my Preface almost all that need be said in adverse criticism of my author's ornithology, and I hoped that reviewers and other readers would devote themselves to appreciation rather than detraction! But let us take up the reviewer's charges *seriatim*. (First, however, I will mention that the statement in the second sentence that "the text of the book has been drawn from the fourteen volumes of Thoreau's Journals, and from six of his formally prepared works" is only partly correct, since, as is plainly stated in the Preface, only the Journal is drawn upon.) After saying that "the index of the present volume shows that about 140 different species of birds are treated specifically or incidentally in the text"—120 would be nearer the actual number—the reviewer goes on to remark that "probably not less than 250 species were Thoreau's neighbors or visitors during the two years he lived on the shore of Walden Pond." These figures will, I am sure, strike most ornithologists as unwarrantably large. For more than thirty years, for instance, I have been observing birds rather carefully in an inland town not many miles from Concord, and my list at present numbers 155 species. I should like very well to meet the additional 95 species that "probably were Thoreau's neighbors" during those two years, but I cannot imagine what they could have been. Of the species particularized by the reviewer as "strangely enough" unknown to Thoreau, the yellow-breasted chat and the orchard oriole are very rare in eastern Massachusetts and it is likely that neither of them ever visited Concord; the house wren, even before the advent of the English sparrow, was only locally common in eastern Massachusetts, and, according to Mr. William Brewster, was rare in Concord; the crested flycatcher, according to the same authority, is one of the rarer birds of Middlesex County; the piping plover was known to Thoreau, who found it on Cape Cod, but was not included in this volume because the references to it in his Journal were slight and of no particular significance; the night heron, though abundant on the coast, is not a particularly common bird inland; the yellow-billed cuckoo is at Concord near the northern limit of its range and doubtless much less common than the black-billed; and the Virginia rail is included in the book (on page 80); while the various shore-birds and ducks named have until within the last dozen years or so been considered as belonging exclusively to the province of the hunter and not to be observed by mere "observers."

The reviewer gives illustrations of "incompleteness" and "inaccuracy." It may be admitted that "bar" would be a better word than "spot" for the white on the nighthawk's wing, but let me point out that Thoreau was recording an *impression* of the bird as seen in flight, and was not giving a scientific description of its markings. As to the two habits of the nighthawk which apparently escaped his attention, can we be sure that he really did omit to notice them? It is hardly fair to take it for granted that Thoreau recorded in his journal *everything* he knew about birds. Again, in the scarlet tanager passage alluded to, Thoreau was not *describing* the bird, but merely contrasting it with the red-winged blackbird, and had no occasion to mention the color of its tail. The entry for March 10, 1852, which recorded hearing "for the first time" the chickadee's "phœbe note," evidently meant the first time that year, for, as appears on the preceding page, he knew that note as early as 1838. Thoreau's confusion of the hermit and olive-backed thrushes with the wood thrush is well known. It seems curious to us to-day, of course, and yet by no means unaccountable when we consider that the olive-back was entirely unknown to Nuttall and that Wilson supposed the hermit to be songless! As stated in a foot-note in the book, Thoreau knew the hermit thrush by sight and detected it occasionally during the migrations.

The reviewer also seems to think it strange that Thoreau did not know that "the Cooper's hawk and the sharp-shinned hawk, because of their industrious destruction of game birds and song birds, are not entitled to the admiration which he expresses for hawks in general." To this it may be replied that the facts in regard to the food habits of the several hawks were unknown to science till the government ornithologists reported the results of their investigations some twenty-odd years after Thoreau's death. But how little appreciation of Thoreau's attitude towards nature is shown by one who imagines that his admiration for the hawks could have had the slightest connection with their economic value!

Let it be understood that I am not complaining of your reviewer's treatment of the book itself or its editor. I owe him hearty thanks, rather, for his generous commendation of the plan and execution of the volume. This letter is simply a reply to what seem to me to be unwarrantable strictures on Thoreau's ornithology.

FRANCIS H. ALLEN.

Boston, August 26.

[The statement in the Preface concerning the source of the text is that "these notes are from Thoreau's Journal," not "only" from the Journal. Elsewhere in the Preface it is said that "the matter included in Thoreau's more formal works . . . is not inconsiderable, though it amounts to less than one-twelfth as much as that contained in the Journal. For the convenience of readers a full index of it is given in an Appendix to this volume." Hence the confusion. But it does not seem grossly unjust to estimate Thoreau's knowledge of birds from more than eleven-twelfths of all that he wrote about them. We did not say that the birds which "strangely enough" Thoreau did not mention, were *common* about the shores of Walden Pond; but none of them, we believe, is unknown in the region with which Thoreau was familiar, and each of them is described by Wilson, upon whose "Ornithology" (together with that of Nuttall) Thoreau "chiefly relied," according to Mr. Allen. We were not aware that "the various shore-birds and ducks named have until the last dozen years or so been considered as belonging to the province of

the hunter and not to be observed by mere 'observers,'" nor does Thoreau seem to have regarded this restriction, according to the contents of the first four chapters of Mr. Allen's book, whose headings are "Diving Birds," "Gulls, Terns, and Petrels," "Ducks and Geese," and "Herons and Rails." The comparison of the scarlet tanager with the red-winged blackbird (p. 325) is not the particular mention of the former bird to which we referred. On the next page Thoreau refers to the tanager as "the surprising red bird," and twice more on the same page as "the red-bird," and again (p. 327) as "bright scarlet with black wings, the scarlet appearing on the rump again between wing-tips," and yet again (pp. 328-9), "a deep scarlet, . . . in the midst of which his pure-black wings look high-colored also." And never a mention of the black tail. As to the chickadee's "phœbe note," the entry reads as follows: "March 10, 1852. Heard the phœbe note of the chickadee to-day for the first time." The reference on the preceding page, "Dated only 1838," does not seem to make it clear that he was referring definitely to the chickadee.—THE REVIEWER.]

PROFESSOR LAMBERTON.

TO THE EDITOR OF THE NATION:

SIR: On Thursday, September 8, William A. Lamberton, senior professor of Greek at the University of Pennsylvania, died at his summer home at Mount Pleasant, New Jersey. For several years he had had trouble with his heart, but the end came after a very brief illness. He was born in Philadelphia sixty-one years ago, and graduated at the University of Pennsylvania, receiving the degree of master of arts in course in 1867. The year following he was instructor in mathematics and then went to Lehigh, where he was successively instructor in mathematics, professor of Greek and Latin, and professor of Greek. In 1888 he returned to the University of Pennsylvania as professor of Greek, a position which he held up to the time of his death. During these twenty-two years Professor Lamberton had an important part in the administrative work of the university. At one time or another he was chairman of every important committee in the college, as well as dean of the college and of the Graduate School. He was especially well fitted for administrative work, where his knowledge of precedent and his great memory stood him in good stead, and it is here that the university will feel his loss most keenly. He was a great reader but published comparatively little. He was especially interested in Thucydides, bringing out editions of the sixth and seventh books (1886), and of the second and third books (1905). In 1894 his alma mater honored him with the degree of Litt.D. He was a man of keen perception, of sane judgment, a thorough scholar, and a true friend. WILLIAM N. BATES.

Philadelphia, September 16.

THE COLLEGE.

TO THE EDITOR OF THE NATION:

SIR: Professor Trent's article in the *Nation* of September 8 deserves to be widely read. It is especially timely in view of the attacks on the colleges that are now so much in fashion, and which for awhile will be the more popular as a result of the ill-considered and vicious character of some of the assaults made before the National Education Association at its recent meeting in Boston. Ill-advised people are likely to attribute to these assaults, seemingly sanctioned by the association, greater value than the character of the critics warrants. It therefore behooves the broader-minded and more conservative members to appear before the public in their true light.

The colleges, it is true, have been—passively, if not actively—responsible for the objurgations now hurled at them; and a few no doubt deserve all that is said. But these few are not, and never have been, representative. The most violent of the critics of the colleges denounce them for not doing what they were not created to do, and what they have never tried to do—give a "practical" training for the ordinary man's life work. It may be that the "American college," with its "impractical" cultural courses, has had its day, and must be supplanted by an institution more in keeping with the present American spirit. But to forget what it has done, and to denounce it for what it is not doing, is like turning upon one's mother and rending her because the milk which nourished the child no longer flows for the man.

GEORGE S. WILLS.

Baltimore, Md., September 14.

"SOUTH" OR "SOUND."

TO THE EDITOR OF THE NATION:

SIR: Your correspondent's letters on South or Sound in "Twelfth Night" call to my mind Wordsworth's poem, "Michael," published in 1800, though, of course, Wordsworth may have had Pope's emendation of the First Folio directly under his hand. The words beginning at line forty-six are as follows:

> And in his shepherd's calling he was prompt
> And watchful more than ordinary men.
> Hence had he learned the meaning of all winds,
> Of blasts of every tone: and oftentimes,
> When others heeded not, he heard the South
> Make subterraneous music, like the noise
> Of bagpipers on distant Highland hills.
> The Shepherd, at such warning, of his flock
> Bethought him, and he to himself would say
> "The winds are now devising work for me"!

GEO. G. KENNEDY.

Readville, Mass., August 23.

"HEART OF HEART."

TO THE EDITOR OF THE NATION:

SIR: The fact that I have been a reader and subscriber to the *Nation* for above a quarter of a century speaks for my appreciation of the welcome weekly. It is not often that I find a slip, but may I draw your attention to the first column in yesterday's *Nation*, when in speaking of Mr. Taft you say, "in heart of hearts"? The phrase is derived from Shakespeare ("Hamlet," act iii, scene ii):

> Give me that man
> That is not passion's slave, and I will wear him
> In my heart's core, ay, in my heart of heart,
> As I do thee.

Strange to say, I found that Bartlett's "Concordance to Shakespeare" has omitted this under "Heart." OTTO KLOTZ.

Ottawa, August 20.

Literature.

COLONIAL VIRGINIA.

Institutional History of Virginia in the Seventeenth Century: An Inquiry into the Religious, Moral, Educational, Legal, Military, and Political Condition of the People. Based on original and contemporaneous records. By Philip Alexander Bruce, LL.D. 2 vols. New York: G. P. Putnam's Sons. $6 net.

In the volumes which Mr. Bruce has written on life in Virginia in the seventeenth century we have an encouraging sign of the passing of the old-fashioned local history. Mr. Bruce is not only a local antiquarian, but also a student with an eye to the larger aspects of his subject. He is familiar with the methods of the scholar and aims to apply them in handling even the smallest details of county and parish life, and he never loses sight of the general in dealing with the particular. Until similar work has been done for all sections of the colonial area, generalizations on colonial psychology and institutions will be but tentative.

In the volumes before us Mr. Bruce includes all subjects that he could not bring into his former books on economic and social life. These subjects are religion and morals, education, legal administration, military system, and political conditions, including taxation, and all are presented with skilfulness of treatment, vividness of description, and excellence of style. Some confusion results from the absence of a chronological arrangement of the matter, and at times one wearies of the frequent repetitions as the author runs back and forth over the same field; but the text is generally interesting, the pictures presented by the minute details are always realistic, and the information with few exceptions is new and valuable. Sometimes Mr. Bruce adds unnecessarily to the length of his volumes by passages where the dim and silent shades, and the pulse of the ocean tides, get inextricably mixed with dragons and other mythical beasts. Sometimes, also, in his loyalty to his State, he allows the Virginian to overshadow the historian, and forgets that the scholar has no right to be either cavalier or roundhead; but the bias is too evident to be harmful, and the reader can generally determine the truth for himself.

The facts for his history he has drawn, in largest part, from the records of the county courts, hitherto imperfect-

ly known. Unfortunately, the great bulk of these records for the seventeenth century have been destroyed, largely through the ravages of war. Only about 130 volumes remain intact, where originally there were probably not less than 500, or even 1,000. With two exceptions, no records of the counties lying along the east bank of the James below Richmond have been preserved, and even in one of these instances they are complete only for the last few years of the period. That these official and semi-official records prove all that Mr. Bruce thinks they do, is not so clear; some of the evidence seems to be insufficient for the assumptions based thereon, while in other cases, such as the keeping of the Sabbath, it seems to show that the law was honored rather in the breach than in the observance. Certainly, among the body of the people there was no very high order of morality or religion. There was a great amount of bastardy, slander, and drunkenness, and the very frequency of the charges and the heaviness of the punishments only serve to show the prevalence of the practices. On the other hand, Virginia can take a just pride in the fact that, unlike Massachusetts and Connecticut, she never hanged a person for witchcraft. Credulity and superstition existed commonly enough among the lower classes, but flogging and ducking were the only punishments for so-called sorcery. The fact that in some instances the accused was fined for defamation bears witness to the intelligence of the colonial justices. What Mr. Bruce has abundantly proved is that, among those who made the laws and sought to enforce them, a high sense of right and justice everywhere prevailed.

The chapters devoted to education, libraries, and culture are illuminating. Mr. Bruce shows that there was plenty of education in Virginia, and that Berkeley's famous remark thanking God that there were no free schools in Virginia is false if applied to schools in general. One is inclined to wonder, however, whether Berkeley was not thinking of public schools, such as existed in the municipal towns of England. Virginia had no schools maintained at the public charge. Her children were educated in England or by private tutors and private schools in Virginia. When Berkeley made his report there were two private schools, the Symmes and the Eaton, less than a day's journey away from where he lived, and it is hard to believe that the old Governor would have deliberately lied about the matter. Mr. Bruce is very hostile to Berkeley, the Stuarts, and the Restoration generally, and uses language that is almost as intemperate as that of Berkeley himself. The old Governor was irascible, dictatorial, and a bully, but he was not a liar, and his remark may mean nothing more than that he was opposed to popular education, either through public schools or the printing press.

Mr. Bruce has a great deal to tell us about wealth, culture, and intellect, but he does not make it sufficiently clear that these characteristics were confined to the few. His tables determining the degree of illiteracy deal only with the capacity to write, and prove nothing as regards the extent of education. That one woman in three could sign her name and three men out of five could do the same does not prove that half the white population were educated or were habitual readers. Probably not a tenth of the whole had any adequate learning, and the evidence presented is conclusive that wealth, knowledge, and power were in the possession of only a hundred or two heads of families in a population of from twenty-five to fifty thousand inhabitants. Many of these planters were more highly cultured than any but the very best in New England, but it is equally clear that the generality in the North were better educated than the generality in the Southern colony.

A large part of Mr. Bruce's volumes is taken up with minute descriptions of the clergy and the parishes, the law courts, militia and defence, and the political organization. His descriptions of buildings, procedure, officials, and the habits and customs of daily life and practice are always good. His chapters on lawyers and physicians are likely to lead to some revision of opinion regarding the practice of law and medicine in the colonies in the seventeenth century, and the inventory that he gives of a law library (Spicer's) shows a collection of legal works that probably could not have been duplicated anywhere in the colonies at that time. The fact that many of Virginia's leading men were educated or trained in England and had to know English law, in order to practice in the Virginia courts, undoubtedly led to a higher development of legal knowledge in Virginia than was customary elsewhere. Mr. Bruce is justified in his high opinion of the county courts and of the justice dispensed there. Of his account of the military system and its operation only praise can be given. In fact, wherever he is dealing with institutions that do not involve his prejudices or his political views, he is at his very best. It is only when he treats of the Stuarts, of popular liberties, of the tyranny of taxation without representation, and of like shibboleths of the older historians, that he loses control of his pen and sinks both the Virginian and the historian in the rhetorician.

To write authoritatively of the larger aspects of his subject, Mr. Bruce should have made a more adequate preparation. His failure to do so is manifest, and some of his omissions seem unpardonable. In his preface he says that he has personally examined all the original documents in England; in point of fact, he has not done so, having confined his attention to a few leading collections. Toward printed authorities his attitude is even more striking. He seems to assume that for Virginia history only Virginia writers are to be trusted, and for other history any writer will do. How else can we interpret his omission of every modern authority on English constitutional history and his citation of Blackstone as his only source of information? What can we say of a writer on early colonial history who has made no use of Fitz Roy's "Acts of the Privy Council," the "Calendar of State Papers, Domestic" and "Treasury," the Reports of the Historical Manuscripts Commissions, Beer's "British Colonial Policy," Andrews's "Guide," and "British Committees, Commissions, and Councils"; who prefers Brock's "Abstract" to Miss Kingsbury's complete text of the proceedings of the Virginia Company; and who, though mentioning Osgood's "American Colonies" in his bibliography, has manifestly made no use of it in the body of the work?

The result is inevitable. The treatment of English history and of England's government of the colonies is characterized by a looseness of phrase and a want of precision that are very unfortunate in a work of such high quality and so many excellencies within its own field. For example, Mr. Bruce tells us that in 1606 the local units in England were the "Town or Tithing, composed of ten families, and the Hundred composed of ten times ten," and that the Hundred was the unit for judicial, military, and political purposes alike (II, 287-8); that "the members of Parliament in the seventeenth century were drawn only from the highest social class" (II, 435); that "In England, government by an Assembly was fully tested between 1649 and 1651, and ended in failure" (II, 263); that no import duty on liquor was imposed until after 1671 (II, 581); and that in 1832 the House of Commons became a body in which the whole population was represented (II, 632). Not one of these statements is correct. The further statement that "down to the reign of Queen Mary the imposition by the King of a new duty on imports and exports without the consent of Parliament was illegal" (II, 235), while it may be justified, according to Hallam, in reality deals with a question that is far too uncertain and complicated to be dismissed in so abrupt a manner. The control over indirect taxation in England was not determined until the seventeenth century. An occasional minor error discloses itself, as in the statement that the Puritans rejected the sacrament of baptism (I, 260), and that Charles II, who died in February, 1685, complained of the acts of an assembly sitting in Virginia the

same year (II, 328). Possibly, Mr. Bruce in the one instance was thinking of the Quakers, and in the other of Charles's successor, James.

Of all Virginia's external relations those with England were the most important. Mr. Bruce fully recognizes this fact, and frequently refers to it, devoting one entire chapter to the "English Board of Control." The subject had already been dealt with by Beer, Osgood, and Andrews in the works mentioned, the last named particularly describing the system from 1622 to 1696 in his "Colonial Self Government" and "British Committees, Commissions, and Councils." To none of these works does Mr. Bruce refer, although Beer and Andrews have drawn on sources of information in England of which Mr. Bruce is not aware. Inasmuch, therefore, as he has contented himself with such documentary evidence as he happened upon in his search for Virginia material, his account is meagre in the extreme and wanting in accuracy and precision. In the score or more of places in which he refers to the board of control, hardly any of the terms are correct for the date given. He uses "Council," "Commission," "Committee," "Board" indiscriminately, and, on one page (II, 362), uses three different terms for the Board of Trade, two of which are wrong and the third unusual. One would suppose, also, that Mr. Bruce would have thoroughly familiarized himself with the provisions of the Navigation Acts, but from two or three references to the penny-a-pound duty on tobacco (II, 588, and elsewhere) we infer that he has not connected it with the well-known "plantation duty" imposed by 25 Charles II, since he deems it a purely Virginia matter, levied as a substitute for the ten shilling colonial duty of 1660. In many other instances, as well, Mr. Bruce betrays the insufficiency of his knowledge of the connections with the mother government, and unfamiliarity with sources of information that were quite accessible to him. His work marks a splendid advance in the method of treating local history, but he has not kept abreast of the work of others in the larger field.

CURRENT FICTION.

An Affair of Dishonor. By William De Morgan. New York: Henry Holt & Co.

Alas, for the "new De Morgan book," for which an affectionate public has been so impatient! "An Affair of Dishonor" would never have won that public, and will hardly restore the enthusiasm dampened a trifle, it may be, by the cool prosing of "It Never Can Happen Again." Other "Joseph Vances" and "Alice-for-Shorts," we might have done without; there was a touch of archaism about them that gave one second thoughts. But "Somehow Good" was different: "Victorian" still, no doubt, on the surface, but essentially fresh and modern in plot and character. It seemed to open a field for the new old romancer. Then came the record of those protracted and inconclusive philanderings of a distinguished author and his aristocratic flame—put an end to in a way which surely "never can happen again." The wholesome, nice, simple-hearted middle-class people who are good enough for the foreground of the earlier tales here took a second place; and Blind Jim, lineal descendant of Christopher Vance, became a mere instrument of fate. He did not accept the rôle without a struggle, and his little daughter is the most moving of all De Morgan's child-heroines.

There is no child-heroine in "An Affair of Dishonor," no group of simple, breathing, lovable people, even in the background. It is a Restoration romance, not better than its kind—beginning with a duel, and ending with an appropriate end for the villain. The plot is simple, even meagre. A country gentleman's daughter is betrayed by a court wit and blade. He is already married; she becomes his mistress. He is challenged by the father and deliberately and unfairly kills him. He (the villain) whisks her away and conceals his deed. When she finally discovers the fact, she tries to hate him and to leave him, but can do neither. A duel with her brother has no direct result; the villain is finally got out of the way by accident, or fate; and we have no inkling as to what is to happen to the heroine after that. We do not greatly care; for this Lucinda Mauleverer, mistress, and later wife, to the wicked Sir Oliver Raydon, is not of that charming sisterhood which Mr. De Morgan has begotten—she bears, at most, a dim and ghostly resemblance to them. Her beauty, her devotion, her piteousness, do not come home to us with a pang—she is one of the romantic, pathetic Lucies of fiction, and nothing more. As for Sir Oliver, he is a straight descendant of Orlando's uncompromising brother—before the conversion. He is such an unmitigated rascal as stories are made on. Before the end, we are assured that something human has come into his character, but we do not feel it: he remains a chimæra, a bogey. The original thing is that no hero is offset against him; there is no knightly one for the fair Lucinda to meet late, but not, in the event, too late. Her black Oliver remains the one man for her.

In the background of the action is an element of the mysterious and the supernatural, such as existed in "Alice-for-Short." Sir Oliver is haunted by a dream, and killed by its apparent realization. Mesmerism plays a part in the story, under the name of witchcraft. Pathology has also its share. A man stricken blind is restored to sight by a sudden shock. Sir Oliver himself is an epileptic, and has a fit for every crisis in the action. Yet more characteristic of the author is the continual play of minor mystifications in the dialogue. Difficulties are cleared up by a piecing together of details in themselves petty. It is all very ingenious; but unfortunately one has in this instance, even more strongly than in connection with "It Never Can Happen Again," the conviction that the game is not worth the candle—for Mr. De Morgan, at least. We can but hope for a return from this invented matter and artificial style to an unabashed "Victorianism," from which, it should appear, the author is trying to escape. Better far the manner of Dickens than that of S. R. Crockett!

One Braver Thing. By Richard Dehan. New York: Duffield & Co.

In spite of certain crudities and banalities, this book is one of interest and even of distinction. Its chief merit lies in its vivid narration of the siege and relief of Ladysmith, thinly disguised as "Gueldersdorp." The account is written entirely from the English point of view, but it is difficult for a description so graphic to escape the touch of partisan bitterness. One seldom finds absolute and impartial justice save in the passionless columns of statistics, and it is by balancing the evidence of those of each side who have written it in their own blood, that we come near to the truth. There is some fine character-drawing in the book, and one familiar with the personnel of the English army in South Africa can recognize a few salient portraits. As regards the plot, one is occasionally driven to marvel at the appalling denseness of those good people in crises of the affections. Tradition, however, forbidding the course of true love to run smooth, it is out of the question that the author should permit it, though he be compelled to wrest his characters to his will by sheer force.

The Varmint. By Owen Johnson. New York: The Baker & Taylor Co.

Mr. Johnson has caught the high spirits of boy life and is able to express them in a volubility of amusing slang that would bring a blush of envy to the most high-spirited youth of his beloved Lawrenceville. His theory of style is expressed in the very modern epigram of Dennis Finnegan: "The Superiority of the Superlative over the Comparative." Dennis, when he utters this rhetorical doctrine, is coaching Dink Stover, the varmint, in the secrets of successful school conversation:

> "Try me again," said Stover, laughing. "Say, Dink, did your mamma kiss you good-by?"
>
> "Sure, Mike," said Stover instantly;

"combed my hair, dusted my hands, and told me not to talk to fresh little kids like you."

"Why, Dick, come to my arms," said Dennis delighted. "A No. 1. Mark 100 for the term. That's the trick."

"Think I'll do?"

"Sure pop. Of course, there are times when the digestion's jumping fences and you get sort of in the thunder glums. Then just answer, 'Is that the best you can do to-day?' or 'Why, you're a real funny man, aren't you?' sarcastic and sassy."

"I see!"

"But better be original."

"Of course."

"Oh, it's all a knack."

There is good fun in the book, not without manly sentiment at the end, but one wonders at times whether, to be funny, it is necessary to make a jest of class-room cheating and of swindling imitations of stock-jobbery. And after all, however hot ginger be in the mouth, there is something honorable and interesting in life, even school life, besides "seeing red" on the football field. One compares Mr. Johnson's boys with the boys of Hughes's Rugby, or, to take a modern instance, Mr. Vachell's Harrow, and asks whether the lower moral and mental tone of Lawrenceville is due to its situation in America or to its portrayer. Mr. Johnson would probably call such a question priggish.

Mad Shepherds, and Other Human Studies. By L. P. Jacks. Henry Holt & Co. $1.20 net.

Among the points of superiority which honesty must compel the patriotic observer to note in current English fiction, is the greater freedom of method employed. Almost without exception the American writer seems to think he must convert his material into something unrecognizable. He is so much afraid of being accused of photography or phonography that he strains a point to disguise beyond possible recognition his sources and his models. In a finished work of art mere material must suffer some sort of sea-change, but, in fiction certainly, there is no set rule by which that change is governed. And the unfinished or casual sketch has its own merits: it is a pleasure for the patient novel-reader to be permitted to escape now and then from the tyranny of the plot. The English are less afraid to let themselves go in this respect than we; consequently we get from them every season a number of books which are all the more refreshing because their category must remain a trifle in doubt. Glanced at superficially, the book in hand would be disposed of as a series of anecdotes about a number of real persons in a rural English community. But a proper reading shows them for studies in a worthy sense. No doubt the persons and incidents involved are real; but they are presented by means of a sympathetic imagination which lifts them above mere fact. Whether one uses the word sketch or story in connection with them is a matter of indifference.

The book, with its compound of rustic portraiture and mysticism, has something approaching the flavor of Hawker's "Footprints of Former Men in Far Cornwall." Three persons are chiefly concerned: a parson's wife, a shoemaker, and a shepherd. These three the writer celebrates as the notables among a parish of four hundred. Their graves, he says, are worthy "to be counted among the resting-places of the mighty." The parson's wife, Mrs. Abel, is, the writer confesses, "too great a subject for such humble portraiture as he can attempt," but her presence in the background, a figure strong, beautiful, and subtle, has much to do with the impressiveness of the book. It is she who, almost alone among human beings, has power over Shoemaker Hankin, atheist and ranter, and over the yet more difficult "Snarley Bob." The latter was a breeder of prize rams, a misanthrope, and a mystic. The larger part of the sketches are given to the delineation of his strange character, and, as we have intimated, the result has an effect of portraiture rather than of the mere accumulation of "human documents."

GREEK RELIGION.

Cults of the Greek States. By Lewis Richard Farnell. Vol. V. New York: Henry Frowde.

The publication of Dr. Farnell's fifth volume completes what will probably long remain the fullest and the most sane treatment of its theme. The general characteristics of the work have been considered in previous reviews in these columns. The present volume deals with the cults of Hermes, Dionysus, Hestia, Hephæstus, Ares, and the minor deities. It follows the scheme of its predecessors: the entire evidence for the history and diffusion of each cult and for the character of its ritual is collected; speculative hypotheses concerning its origin and ultimate meaning are passed in review and soberly judged; and the testimony of the monuments is studied in amply illustrated chapters dealing separately with the cult images and the more ideal representatives of artistic sculpture.

The student of literature will be chiefly interested in the considerable part of the volume that is concerned with the cult of Dionysus, "one of the most attractive in the whole investigation into the religion of Hellas." Dionysus was not originally the wine god, but a Thracian divinity of vegetation whose worship penetrated into Greece after the main order of the Olympic hierarchy had been fixed. Homer mentions him but four times. The story of Lycurgus in a late stratum of the sixth book of the Iliad does not symbolize the resistance of skeptics to the new religion, but is, like the tale of Pentheus in the "Bacchæ," a primitive passion play, in which the priest embodies the deity. The pursuit of the "nurses of Dionysus" by Lycurgus is ritualistic. The cult contained chthonian and ecstatic elements from the beginning, and took on further traits of mysticism and enthusiasm, beautifully described by Pater in his "Study of Dionysus," as the god became in the imagination of his worshippers, more specifically associated with the vine. He was received into fellowship with Apollo at Delphi as the god of poetic inspiration and to some extent of prophecy, though he had no direct part in the oracle. He entered Attica by way of Icaria and later Eleutheræ, and became the patron of tragedy. But the fundamental, older qualities persisted. The wild trieteric festivals on Mount Parnassus and elsewhere could not have symbolized the *annual* death of vegetation. Mr. Farnell offers the ingenious new suggestion that they typify the rotation of crops in two-year cycles. However this may be, they did not preclude other, annual rites designed to awaken the god of vegetation from his wintry sleep, or to celebrate the reappearance and renewal of his gifts.

The four Athenian festivals are now recognized as distinct, though Mr. Farnell thinks that the Lenæa is merely the Athenian equivalent of the rural Dionysia. These midwinter festivals could not stand in relation to the wine as such, but were a survival of rites devised to strengthen the failing spirit of vegetation. The word Lenæa is derived, not from ληνός "the wine-press," but from Λῆναι, "the wild women." The Anthesteria, on the other hand, is a celebration of the date when the new wine became drinkable. The first two days were devoted to popular revelry, and the festival, as a whole, therefore, cannot have been originally a mournful all souls' feast, as Miss Harrison fancies. But the primeval ghost-ceremony called the χύτροι, or "pots," "became attached to the Anthesteria as a mournful *finale*."

The great spring Dionysia in honor of Dionysus Eleuthereus was probably established in the sixth century, when the town of Eleutheræ came into the Athenian state, perhaps making the acceptance of its cult one of the conditions of annexation. Tragedy, which properly and originally belongs to the Lenæa, was transferred to this joyous spring festival by Peisistratus for reasons of policy and convenience. Tragedy did not originate in the dithyramb, which was not dramatic; nor can it have been at the beginning essentially satiric. The

note of wailing and lamentation must always have predominated. This would seem to make plausible the theory that tragedy originated in funeral chants and mourning for the dead. But this view fails to account for the name. It is the "goat song," or song of the "goat man," "for the obvious etymology is sometimes the true one." The rustics of modern Thrace still perform a rude passion play in which the participants wear goatskins. This survival, Mr. Farnell thinks, points back to an "old Thraco-Grecian mummers' play, in which a divine figure in a black goatskin kills another divine figure who is the fair or bright god." Originally a sad, winter rite, it could easily be transferred to spring "for convenience," and the substitution of other heroic personages for the principal figures would yield the beginnings of tragedy. Its service of purification and delivery from evil influences through mimetic song and dance, relieving pent-up passion, is the original function of *catharsis*, whose primary religious significance Aristotle's secular thought tries to define as merely medical.

We cannot here discuss the treatment of the other deities studied in this volume. The final chapter on minor cults is excellent, but all too brief. And, indeed, we could wish that in the compass of so large a work Mr. Farnell had found space to tell us more of the higher religious aspects of the Greek cults, and also of the development of the more personal and exotic religions. But it is idle to quarrel with an author's delimitation of his own subject.

The most learned scholar will sometimes slip, as Homer is said to nod. And we may conclude with two slight instances in which Mr. Farnell's erudition seems to us in fault. Speaking of the so-called stones of insolence and shamelessness in the court of the Areopagus, Mr. Farnell suggests that the idea may be that the insolence and shamelessness of the denial of the charge infected the stones. But surely it is only the stone of insolence (ὕβρις) which belongs to the defendant. The accuser took his stand upon the stone of "shamelessness," which is not shamelessness, but ruthlessness—the refusal to listen to the appeal for pity or pardon. Again, we cannot believe that in the hymn to Hermes, l. 572, there is a satiric intent, or that the meaning is that he, "even without a bribe, will give man a gift, by no means the least of gifts, the gift of release from life." That seems too modern an idea for an Homeric hymn, though, to be sure, it is found in Herodotus. The gift of honor which Hades gives is the honor bestowed upon Hermes, and ἄδοτος "though he receives no gifts," merely expresses the thought of the great line from Æschylus's "Niobe":

Of all the gods, death only loves not gifts.

Memoirs of Gustave Koerner, 1809-1896. Life-Sketches Written at the Suggestion of His Children. Edited by Thomas J. McCormack. Two volumes, xvi+628 and x+630 pp. Cedar Rapids, Iowa: The Torch Press. $10.

The great German emigration between 1820 and 1850 brought a new order of settlers to our shores, an order of patriots and thinkers fresh from the halls of German universities, and inspired with republican ideals. In the early years of the Reaction came Carl Postl (Charles Sealsfield), Carl Beck, Carl Follen, and Franz Lieber. The Revolution of 1848 sent us Carl Schurz and men of kindred spirit. The lives and times of Sealsfield, Follen, Lieber, and Schurz have become familiar to American readers through their biographies. But the middle stage of these thirty years of unrest, namely, the July revolution of 1830, with the events growing out of it, has not been hitherto so graphically presented to the American public in the biography of a great German American. This gap is now well filled by the Memoirs of Gustave Koerner.

The long lifetime of Koerner, extending from 1809 to 1896, embraced most of the stirring events of the nineteenth century. Born in the free city of Frankfurt-am-Main, three years after the battle of Jena, he witnessed, as a boy of four years, the entrance of the Allied Monarchs with their armies into Frankfurt in 1813; he entered the Musterschule at the age of seven, and later the Gymnasium, where he had as his companions Heinrich Hoffmann, the author of "Struwwelpeter," and von Leonhardi, the philosopher and interpreter of Krauss. In his school days came the Philhellenic enthusiasm of 1821, during which his father was chairman of a patriotic Greek society in Frankfurt, and his brother Fritz enlisted to join the Greek patriots. His life at the university of Jena, which he entered in 1828, was a barometer of the political feeling of the time. The new patriotic ideal of the Burschenschaft, which was active in Jena while Koerner was there at the university, enlisted his interest more than did his studies. The new ideal was highly national, whereas that of the old Landsmannschaften was provincial; the motto now was not Bavaria, Prussia, or Saxony, but a United Germany. The favorite authors of the Jena period were Börne, Heine, Alexander Everett, Shakespeare, Goethe, and Byron, with "Faust" as the student's Bible.

After he had entered the University of Munich Koerner's studies were interrupted by the famous *Emeute* of Christmas Eve, 1830, in consequence of which he was arrested and spent four months in prison in Munich. Koerner turned his steps, in 1831, to the old Ruperta Carola Heidelberg, the university of his first love, where he took his degree in jurisprudence the next year. The Burschenschaft was still active in aiding the refugee Poles who passed through after the fall of Warsaw. Revolution was in the air; in May, 1832, came the famous Hambach Festival, in which some 30,000 or 40,000 enthusiastic German Liberals participated. From the ruins of the old castle, demolished in the Peasant Wars, sprang, phœnix-like, the free spirit of the ancient Germans, and it seemed for a moment as if the great Völklerfrühling had dawned upon the slopes of the Haardt. The revolutionary propaganda went on in the Liberal newspapers, until it broke out afresh in the Frankfurt Attentat, April 3, 1833. Koerner had meanwhile begun the practice of law at Frankfurt, but his old patriotism made him one of the chief actors in the Attentat. Further stay in Frankfurt was impossible, or at least unsafe, and Koerner, finding his way to France, embarked at Havre for New York.

Then comes the new epoch of the German refugee in America—a long and deeply interesting story of the journey from New York to Albany, from Albany to Buffalo by canal-boat, around the lake to Cleveland, and from Cleveland to the Ohio by canal, thence down the Ohio to St. Louis. This region had but recently been made famous through the travels of Gottfried Duden, and many Germans had settled in St. Louis and in Belleville, Ill. Having selected Shiloh, a small place under the influence of the "Latin Farmers," Koerner prepared to practise law. Notwithstnding his Heidelberg doctorate, he attended the Transylvania University at Lexington, Ky., to prepare for admission to the bar. His first case against Capt. Snyder showed him to be a peer of his opponent, and won for him later the confidence, co-partnership, and friendship of Snyder, and thereby opened to him the political avenue through which he rose to the Supreme Bench and Lieutenant-Governorship of Illinois.

The war clouds of Secession were already gathering. In 1837 Koerner entered practical politics, gained his first lessons in American finance in the great crisis of 1839, took part in the Presidential campaign for "Tippecanoe and Tyler Too," was electoral messenger to Washington in 1841, member of the Illinois Legislature in 1842, and, having taken his seat upon the Supreme Bench, participated in the discussion of the Fugitive Slave Law, of the Mormon question, the questions arising out of the annexation of Texas and the war with Mexico, the German agitation of political reform, and the secularization of American institutions by Carl Heinzen. He was made Lieutenant-Governor in 1852, prepared the bill to prevent treason and sedition in 1861, organized a German

regiment at the outbreak of the war, succeeded Carl Schurz as Minister to Spain in 1862, was appointed on the Railroad and Warehouse Commission in 1871, took an active interest in the Tilden campaign, and celebrated the golden Jubilee of his Heidelberg doctorate in 1882.

In many respects these memoirs form a notable, if not the most notable, German American biography. They were written in hours of leisure, when the memory was free to pick up minute incidents of earlier years, and they offer a wealth of descriptive and personal details to the history of that great century of German culture which transformed American educational ideals under the touch of German spirit, and brought the German and American peoples into close cultural kinship and international accord. Apart from a few trifling inaccuracies in names of societies and a certain paucity of dates, there is little to criticise in the Memoirs. The criticism of Grant's generalship in the war and of his winking, or supposed winking, at the sale of arms to France during the Franco-German war, will be easily understood.

Mysticism in Heathendom and Christendom. By Dr. E. Lehmann. Translated by G. M. G. Hunt. London: Luzac & Co.

"If all that is mystical were mysticism, who, then, could write a book about it?" This is our author's very sensible question. And after asking it, he proceeds to write a book of 293 small pages with the prodigious title quoted above. In a general way, the greater part of the vast field indicated is covered. Thus there are chapters on primitive mysticism, Chinese mysticism, Indian, Persian, and Greek mysticism, mysticism in Greek Christianity, in the Roman Church, in Protestantism, and recent undenominational mysticism. It could hardly be expected that all these chapters would be equally good. And as it happens, the treatment of what are perhaps the two most important types of mysticism—the Indian and Roman Catholic—is particularly poor; our author's enthusiasm over Protestant evangelical theology preventing him from entering into the spirit of the Upanishads or seeing any good thing in the Catholic Church. Plato and Plotinus also suffer —"pagan speculation" being almost as severe a reproach as Roman superstition. There is no chapter on Hebrew mysticism, for the Old Testament worthies were too good and evangelical to be mystics. On the other hand, a whole chapter is devoted to "Luther's Mysticism"—apparently because Luther was *not* a mystic.

The chief value of a book of this kind should be to give the beginner a clear idea as to what mysticism is. Indeed, a book that should do that would be a decided desideratum to others than beginners, for few words in our careless language are so over-used and so misused as "mysticism." In fact, it should seem as though a conspiracy had been formed by all sorts and conditions of men, from the ward politician to Professor Münsterberg, to deprive the word of all its meaning by seeking to make it mean everything. The first few pages of Dr. Lehmann's book lead us to hope that here we are to have an antidote to this loose and indiscriminate use of the term, and that some definite and appropriate meaning is to be given it and maintained consistently throughout. But before many pages, the word acquires so many inconsistent but "essential" characteristics that almost anything may be said of it. We cannot here even enumerate the points on which such conflicting statements are made, but one or two of them must be mentioned. Thus, on page 7, it is said: "The mystic knows no personal God. Personality has limitations, therefore away with personality, both in God and in man." This assertion is many times repeated. In fact, there is perhaps only one other thing in the whole book that comes out so clearly—namely, that the "true" mystic knows a personal God and knows Him very personally. The conclusion of the book is:

> There is but one faith and it must be personal; and there is but one truth and it must be apprehended personally. This is the last word and essence of all mysticism, proclaimed throughout the ages with no uncertain sound (p. 292).

Such inconsistent statements are made, often on the same page, that it is difficult to discover whether Dr. Lehmann thinks mysticism a good thing or a bad thing. "True Christian mysticism," we are told on page 152, "is an inner life lived in Christ; it is one of the greatest things in Christianity." Yet the true characteristics of mysticism cannot grow on Christian soil (p. 106); Jesus was in no sense a mystic (p. 102); and mysticism is repeatedly identified with magic, asceticism, ecstasy, abstract thought (!), "intuition," formalism, Roman Catholic superstition, and pernicious Greek philosophy. Since the time when Luther said the last word on all the important questions of theology, "not much remains of the imaginary God and the imaginary relationship to God which has been the life of mysticism. . . . Together with *intelligence* and *ecstasy*, *asceticism* also vanishes, that last remnant of the mystical inheritance cherished by the mystics of all ages."

When the gentle reader who has hopefully read up to the last page closes the book, he is likely to feel that mysticism may indeed be a very wonderful thing, but that neither he nor Dr. Lehmann has any clear and exact notion as to what it really is.

L'Anima di Francesco Crispi. Carteggio intimo sulla politica del risorgimento italiano con proemio e note biografiche di G. Pepitone-Federico. Palermo: Ant. Trinarchi.

A decade has not yet passed since the death of Francesco Crispi, but if one may judge by the public conscience of Italy, his place in history is as securely established as that of Mazzini, who was his early master in politics, or that of Garibaldi, whose administrative right hand he was in 1860, or that of Cavour, among whose successors he alone stands out as capable of strong government. He and Zanardelli were the last of that picturesque line of Italian ministers born of the revolution and educated in conspiracy whose high patriotism was above question, but whose claims to leadership were frequently based rather on prominence in past sufferings in prison and exile than on mental superiority or preëminence in the science of government. For the purely revolutionary period Crispi's work, though important, was secondary; but for the period of national education and reconstruction that followed, his record of virile statesmanship is very different from the easy mediocrity which in Italy, as in most countries, has characterized the increasingly democratic parliaments of the last half century. His services to Italy are far, however, from having been exactly defined; the materials by which they must be judged lie largely buried in state and private archives, and notably among his own voluminous papers, for the purchase of which the Italian government has been carrying on lengthy but as yet unsuccessful negotiations. During Crispi's life a single stout volume of his collected political writings and speeches was published. At the death of parliamentary leaders it has been usual, recently, for the Italian government to print their collected speeches; but in Crispi's case no such publication has been made. Nor has any volume of his correspondence appeared until now.

Pepitone-Federico's volume is an unpretentious but important publication of 250 pages, containing nearly one hundred of Crispi's letters, all of them abundantly annotated and the greater number addressed to Baron Vincenzo Favara between the years 1861 and 1867. Favara was an old anti-Bourbon conspirator of the city of Partanna, in the province of Trapani, republican in political creed, and therefore a supporter of the Italian parliamentary Left, a close friend of Crispi, and the one to whom more than to any other the latter owed his first election as Italian Deputy, from Castelvetrano, in 1861. The letters are intimate, to a limited extent re-

lating to private interests of Favara with which Crispi was entrusted, but for the rest given up almost exclusively to politics. They belong to a period of Crispi's life, which, while not embracing that in which he attained the supreme power of the state, is yet of the first biographical importance; it is the period in which his own parliamentary character was formed, and in it he figures as the leader of the parliamentary Left, and, as vice-president of the Chamber of Deputies; the statesman is revealed here in his earlier political battles, with the characteristics and motives which were exhibited throughout his public life.

What first impresses the reader of the letters is Crispi's moderation and sound political sense. Frequently characterized as violent and revolutionary, he is seen here in the rôle of a conservative among the politicians of the Left, preaching union and concord, recommending patience, and imposing respect for law and order upon turbulent partisans who are, at times, eager for the barricades. He is a good hater, but his is a sober hatred. As a member of the Opposition, he is consistently hostile to the measures of the Governments which rapidly succeed one another. They are all "ruining" Italy. But his oft repeated remedies are patience and the ballot. In 1862, he writes: "Ministers go, and with them disappear the evils which they have caused. The country remains, and we should work, that it may strengthen itself and become powerful." And again in 1865: "I can only censure the Italian Government. It has been stupid and wanting in foresight, and the people have reason to protest. Nevertheless while we have a right to better the government, it is not politic to destroy it." He dwells particularly upon the melancholy events and deplorable conditions in Sicily, whose two most critical moments were those of the abortive campaign of Aspromonte in 1862, and of the insurrection of Palermo of 1866. He was expected to participate in the former, but waited; at its abrupt close, its promoters hoped that he would encourage riotous protest, but instead his letters contain such counsel as this: "I must write to you that it is necessary to be calm, and to prevent the least tumult from breaking out. In constitutional governments, reactions are precarious: ministries are not eternal, and with their change, their policy is altered and liberty returns in honor." If Crispi's statesmanship has led critics to term him somewhat of a Jacobin himself, it is clear that he was earnest and judicious in restraining Jacobinism in others.

He necessarily discountenances the mad attempt at revolution engineered by roughs and hot-heads in Palermo in 1866, but when the rest of Italy indulges in indiscriminate vituperation and defamation of Sicily in consequence, his voice is raised in dignified defence of his native island. He is seen as a loyal Sicilian, but is free from Sicilian sectionalism, repeatedly denouncing as absurd all thought of Sicilian autonomy. His great passion is the welfare of *united* Italy and to it he has sacrificed his Republican theories. His affirmation "The republic divides us, the monarchy unites us," became a patriotic slogan. Writing in April, 1862, he declares:

> Having accepted the monarchy, so as not to foster dualisms, and to have unity, it is just and expedient to be Royalists and good constitutionalists. And I will say to you that I shall remain such frankly, loyally, so long as the King shall be for Italy. Should he desert the national cause, should the monarchical principle fail in its mission, then I should have the right to abandon the monarchy from the same motive from which I have accepted it.

It was Crispi's moderation, his loyalty, and good sense, his immovable Mazzinian faith in the potential greatness and glorious future of Italy—these qualities abundantly illustrated in the letters—which, united with a strong will and firm political convictions, won for him wide popular respect and support throughout Italy, and enabled him in his leadership to pursue a vigorous and definite policy. These same qualities eventually carried him to the highest office in the state, in which his administration of both foreign and internal affairs was memorable. Pepitone-Federico's preface offers a fair appreciation of the letters; his notes, which give sketches of the various men referred to, are most useful, but the editor's judgments are too prejudiced and too superficial to be of historical value.

Notes.

The great Centenary Edition of Dickens, which Chapman & Hall of London have been publishing, is now to be issued in this country by Scribners. Three volumes, containing "Oliver Twist" and "Sketches by Boz," have already appeared, and other volumes will follow at the rate of three a month. In completeness of text and illustration this edition is in a way definitive.

Charles and Marie Hemstreet, who have already written several books on Old New York, now have a volume on "Nooks and Corners of Old London," which will be issued this autumn by James Pott & Co.

"A Dictionary of Oriental Quotations" and "A Dictionary of Abbreviations" are to be added to Swan Sonnenschein's books of reference series.

Late in October the Century Company will bring out a new volume by Charles H. Caffin giving "The Story of Spanish Painting." The same house is preparing a new library edition of Sloane's "Life of Napoleon Bonaparte," to be in four octavo volumes, with seventeen maps and thirty-two illustrations. The text will be increased by new matter to the extent of more than a tenth.

"Christ and His Critics," by the Rev. F. R. Montgomery Hitchcock, is in the hands of Robert Scott. Dr. Max Nordau is publishing with Rebman "The Meaning of History," which contains chapters on Society and the Individual, Eschatology, and the Psychological Roots of Religion.

"The Passing of Empires, 850—330 B. C.," or Vol. III of "The History of the Ancient Peoples of the Classic East," by Sir Gaston Maspero and edited by Professor Sayce, has been translated by M. L. McClure and is to be issued by the Society for the Propagation of Christian Knowledge, which has also, among its announcements, a work on the beliefs of the ancient Egyptians, entitled, "The Book of the Dead," by H. M. Tirard; "Messianic Interpretations, and other Studies," by Canon R. J. Knowling; "An Introduction to the History of the Assyrian Church," by Dr. W. A. Wigram, and "The American Church," by Archdeacon Dowling, with an Introduction by the Bishop of Salisbury.

Scribners have in their list of books for September: "The French Revolution: A Political History," by A. Aulard, professor of letters at the University of Paris. Translated from the French of the Third Edition, with a Preface, Notes, and Historical Summaries, by Bernard Miall; "Popular Law-Making: A Study of the History and the Tendencies of English and American Legislation," by Frederic J. Stimson, professor of comparative legislation at the Harvard Law School; "A Motley," by John Galsworthy; "Mr. Dooley Says," by the author of "Mr. Dooley in Peace and in War"; "The Old Virginia Gentleman, and Other Sketches," by Dr. George W. Bagby; "A Painter's Progress," by Will H. Low; "The Town Down the River," a book of poems, by Edwin Arlington Robinson; "The Blue Arch," by Alice Duer Miller; "Open Water," by James B. Connolly; "The Spread Eagle, and Other Stories," by Gouverneur Morris; "The Star-Gazers," by A. Carter Goodloe; "Lady Good-for-Nothing," by Sir A. T. Quiller-Couch; "The Boy's Drake," by Edwin M. Bacon; "By Reef and Trail, Bob Leaches' Adventures in Florida," by Fisher Ames, jr.; "A Cadet of the Black Star Line," by Ralph D. Paine; "Cupid's Cyclopedia," compiled for Daniel Cupid by Oliver Herford and John Cecil Clay; "Argentina," by W. H. Hirst, with an introduction by Martin Hume; "Tramps in Dark Mongolia," by John Hedley, F.R.G.S.; "Madame De Montespan and Louis XIVth," by H. Noel Williams; "The Romance of a Medici Warrior: A Study in Heredity," by Christopher Hare; "The Gun and Its Development," by W. W. Greener, new and revised edition; "The True Chatterton," by John H. Ingram; "The Dogaressas of Venice" (the wives of the Doges), by Edgcumbe Staley; "Turner's Sketches and Drawings," by A. J. Finberg; "The Story of Old Japan," by Joseph H. Longford, professor of Japanese at King's College, London; "A Voice from the Congo," by Herbert Ward; "Peter Pan," by J. M. Barrie; "The New Gadshill Dickens"; "Romantic California," by Ernest Peixotto; "The Great Pacific Coast," by C. R. Enock; "The Intimate Life of Alexander Hamilton," by Dr. A. McL. Ham-

ilton; "The French Renaissance in England," by S. Lee; "Turkey of the Ottomans"; "Original Narratives of Early American History," published under the auspices of the American Historical Association; "Mediæval Italy, from Charlemagne to Henry VII," by Prof. P. Villari; "France Under the Republic," by J. C. Bracq; "Morituri" (three one-act plays), by H. Sudermann, translated by A. Alexander; Sudermann's "Roses," translated by Mrs. T. Frank, and "The Joy of Living," translated by Edith Wharton; the Poems of Eugene Fields; "The Conflict Between Collectivism and Individualism in a Democracy," by C. W. Eliot; "What Is Art?" by J. C. Van Dyke; "Soul and Circumstance," by S. B. Stanton; "A New Shakespearean Dictionary," by R. J. Cunliffe; "A Defence of Prejudice, and Other Essays," by J. G. Hibben; "Privilege and Democracy in America," by F. C. Howe; "Rest Harrow," by Maurice Hewlett; "Tales of Men," by Edith Wharton; "The Finer Grain," by Henry James; "The Barrier," by René Bazin; "Philippa at Halcyon," by K. H. Brown; "The Married Life of the Frederic Carrolls," by J. L. Williams; "The Fugitive Freshman," by R. D. Paine; "The Silent Call," by E. M. Royle; Robert Louis Stevenson's Works (popular edition).

"The Letters of Elizabeth Cady Stanton: An Epistolary Autobiography" is under preparation by Theodore Stanton and Mrs. Stanton Blatch, who will be glad to receive copies or the originals of any of Mrs. Stanton's letters. Any communication on the subject should be addressed to Mr. Theodore Stanton, Rue Raynouard, Paris. The book will be published in the spring by Putnams.

Harry Peyton Steger of Doubleday, Page & Company is literary executor of W. S. Porter ("O. Henry"), and would be glad to have the use of any documents bearing on the writer's life or work.

A fourth volume of Macmillan's new Library Edition of The Works of Walter Pater brings to our table the "Imaginary Portraits," not the best work of Pater, unless we except from that criticism the clear beauty and fine analysis of the study of Watteau in "A Prince of Court Painters." The edition, when complete, in ten volumes, will leave nothing to be desired in the way of type and page, although the paper might be of a harder texture.

In a long series of chapters, Miss Florence MacCunn has sketched the lives of "Sir Walter Scott's Friends" (Lane). She has already to her credit what many readers have thought the most interesting brief life of Mary Queen of Scots, not to mention her study of John Knox, and the present volume shows the same skill, turned now to lighter uses, in gathering anecdotes and pointing a moral. Occasionally, it is true, she is forgetful of the probable ignorance of her audience, assuming for instance that all her readers will be familiar with the details of the great Douglas trial, and at other times jostling together the names of cousins and aunts and uncles of a family in a way to throw any but a Scots genealogist, that is to say, any but a true Scotsman, into gasping bewilderment. But these blemishes are few, and indeed the charm of the book for the most part is that it brings us into familiar friendship with a host of old Scottish ladies, Edinburgh advocates, antiquarian lairds, and great folk, whom we had got to know, but not so well as we should like, in Lockhart and other writers of memoirs. Some of the material is from printed sources, but a good deal of it Miss MacCunn has drawn from stores of unpublished correspondence. Great names occur. In the first chapter we find Mrs. Cockburn writing of Hume: "But the reason David did not know he was a Christian was a total want of fire—ethereal fire. He was phlegmatic, material, and, I daresay, will now wonder he is alive and to know (*sic*) what nonsense he wrote"; and the last chapter deals with the friendship of Scott and Wordsworth. But the lesser names, with the exception of the always delightful Lady Louisa Stuart, afford, if anything, more amusement than the greater. Scott himself appears, of course, continually. Beyond its burden of entertainment the chief merit of the book is the light it throws on the genesis of Scott's poems and novels. His was the guiding genius in their production, and without him nothing like them could have appeared, but it is true also that without this society and this atmosphere of romance and antiquarian research about him his work would have been incalculably poorer. There is some meaning in the humor of Miss Grant of Rothiemurchas, who, being for some reason splenetic on the subject of Sir Walter, used to read the Waverleys in order "to find the anecdotes and 'good things' purloined from William Clerk and Sir Adam, and to complain peevishly that there was no acknowledgment to these old friends."

The Old Testament volumes of the International Critical Commentary (Scribner) which have so far appeared (those on Genesis, Numbers, Deuteronomy, Judges, Samuel, Amos and Hosea, Psalms, Proverbs, Ecclesiastes, and Esther) illustrate a change of attitude in orthodox scholars, English and American, that has been going on for a generation. Almost all the writers of the Old Testament commentaries in the series are members of orthodox communions; they are drawn from all the leading Protestant bodies in this country and England, and, whether orthodox or not, they all agree in their general critical views. The old "apologetic" tone has disappeared; nothing is said of "inerrancy"; the method and content of inspiration are held to be determined by the facts, if historical errors and legendary and mythical narratives are recognized the conclusion of these orthodox scholars is that the Holy Spirit has chosen to employ just this vehicle to convey instruction. It is not that there is less reverence—there is only freedom from hampering theories. At the same time these volumes are marked by careful attention to the Hebrew text, and by the use of all literary and archæological aids for the explanation of the material.

Dr. John Skinner has dealt ably with the numerous perplexing questions connected with the book of Genesis. Recent publications on this book abound in theories, historical, ethnological, mythological, and to thread one's way through the maze of hypotheses and possibilities requires a cool head as well as much labor. Dr. Skinner does not pretend to have solved all the problems that arise, but he states them clearly, gives the various considerations that have been offered on one side and another, with references to authorities, and makes judicious comments on the arguments; his volume is thus an excellent summary of the views held on Genesis at the present day. His own conclusions are presented so forcibly that they must command the respect of the reader. In general he holds that Genesis is not literal history. The mythical material in chapters i—xi, he thinks, was derived from Babylonia, even though in some cases, as in the story of the dispersion at Babel, no Babylonian parallel is known. He admits the possibility of an historical kernel in the legends of the patriarchs, though this, he adds, is not proven. In regard to the persons of the patriarchs he properly makes a distinction between Abram and the others—the latter are tribal names, but Abram is doubtless a real person, though it is impossible to construct him historically; Dr. Skinner goes beyond the record and the probabilities when he regards him as representing "a decisive act of the living God in history." Among many admirable sections in the volume special mention may be made of the discussions of the cosmogonies, the site of Eden, the Cain legend, the flood, and the fourteenth chapter. Here and there, as in the comments on the temptation in the garden and on the dispersion-story (chap. xi), modern religious ideas are read into the text. Dr. Skinner upholds the division of documents into Yahwistic and Elohistic against recent objections based on the discrepant employment of divine names in the versions.

In company with the majority of recent critics Prof. Edward Lewis Curtis, who edits the volume on Chronicles, regards this book as an imaginative recasting of the material of Samuel and Kings from the point of view of the later ritualism (about 300 B. C.); he distrusts the analyses that seek historical sources outside of our canonical books, and he thinks it probable that the book of Chronicles is the work of a single author. He does not find that it adds genuine historical material. The questions involved are discussed fully and fairly. Professor Curtis having been disabled by illness and a partial loss of eyesight, some of the work of the commentary was undertaken by Dr. Madsen, who has performed the task excellently.

Up to now no Arabic text of "Ali Baba and the Forty Thieves" has been known to scholars, and it has even been suspected that none such existed and that Galland made up the story. Now, however, Prof. D. B. Macdonald of Hartford has been fortunate enough to unearth a Bodleian manuscript (noted in Ethé's catalogue, which is still unprinted), and has published it in the Journal of the Royal Asiatic Society for April of this year. It appears to be a relatively modern redaction of a genuine folk-tale, not free from colloquialisms and queer constructions, and not the manuscript from which Galland translated, though allied to it. Professor Macdonald has wisely given the text intact, only correcting a few glaring errors. It is satisfactory to have what appears to be a genuine Arabic text of this famous story, with peculiarities of vocabulary and grammar that may furnish a contribution to the history of the Arabic language.

Interesting reminiscences of Bismarck's youth and valuable records of his early development are given in Hedwig von Bismarck's "Erinnerungen aus dem Leben einer 95 jährigen," just published by Richard Mühlmann in Halle. The author was a cousin of the celebrated statesman, and both spent their childhood together at Castle Schönhausen and were very fond of each other. She speaks of herself as an extremely prosaic character, but adds that this trait did not prevent her from being as a child a favorite playmate of Otto, who was so strongly attached to her that if she had measles, whooping-cough, or any other contagious disease, he wished to catch it and share it with her. She also sought to imitate the conduct of the wild and foolhardy boy, and was told by her mother that if there was any folly of which she was ignorant she would soon learn it from Otto.

Frederick Meakin fringes the audacious when, in the preface of "Function, Feeling, and Conduct" (Putnam), he boldly confesses that ethics can never be younger than Aristotle. Such radical conservatism is a rare novelty among Harvard doctors, of whom Mr. Meakin is one. His book, however, is better than its promise. It attempts "a fresh statement of the philosophy or general basis of morals as grounded in human nature." It moves from the universe to man, in quite the Aristotelian spirit, though more openly than the Stagirite. The world is one; every effect has infinite causes, and every cause infinite effects; final causes are everywhere, and matter itself is at heart organic in some occult manner. Such considerations, with which the author is prodigal, give us our hearings in the ethical situation. There is just enough of contemporary psychology mixed in here to suggest subjectivism; as, for instance, when Mr. Meakin defines an ultimate end as one which is not consciously chosen as means to any ulterior aim. As a critic of hedonism, however, he succeeds in escaping the psychologist's pet error. Here he is at his best. Altogether lucid and convincing is his demonstration that neither feelings nor ideas can serve as the exclusive guides of human conduct; less forcible but attractive is the positive phase of the critique, namely, the contention that not only the goal, but the criterion, of life is "the completest satisfaction of our nature conceived as a composite tendency, in which each constituent has its recognized place." Such a view may, of course, be made much or little of; just how significant Mr. Meakin renders it appears in his conclusion that, after all, virtue is its own reward. "Where the virtue is complete there doubtless its compensation is without hazard or qualification complete." "The moral life is so far justified by its effect in the feeling of the moral agent that we cannot say, speaking of the ordinary social unit, that the virtuous choice is ever, from the hedonic point of view, a mistaken choice." Surely, a broad thesis, this! And one, too, which raises the suspicion that the theorist may be darkly begging the question when "speaking of the ordinary social unit." How do we define this individual, the average or normal man? Had Mr. Meakin given more thought to this and spared himself the hours spent over the oneness of the universe, his defence of the ancient doctrine about virtue would have been much stiffer.

Under the general direction of the Consiglio degli Archivi and the immediate supervision of Cav. Eugenio Casanova, director of the State Archives at Naples, a manual with the title, "L'Ordinamento delle carte degli Archivi di Stato italiani," has been prepared by order of the government. It contains a general description of the material existing in the score of state archives and of the methods of classification and arrangement employed in each. Prof. Pasquale Villari, who is president of the Consiglio, has written the preface, and explains that, although this volume was originally suggested to those preparing for the competitive examinations of candidates for employment in these special libraries, its usefulness is obvious for all having occasion to consult Italian records. With the exception of those at Naples and Palermo, the archives of state are all in northern and central Italy. The scheme excludes the provincial archives which, found only in the south and established under the French occupation, are often of great importance.

Hormuzd Rassam, the Assyriologist, died at Brighton, England, last Friday, at the age of eighty-four. He was born in northern Mesopotamia, opposite the site of Nineveh, in 1826. He joined Austin Henry Layard as assistant in his Assyrian researches in 1845, and lived with him for more than two years. When Layard returned to England Hormuzd Rassam accompanied him to complete his studies at Oxford. The trustees of the British Museum sent Rassam with Layard in a second undertaking in 1849, and Rassam was placed in charge. In 1864 he went to Abyssinia and was made a prisoner and kept in chains for nearly two years by order of King Theodore. He conducted Assyrian explorations again from 1876 to 1882, and at the time of the Turco-Russian war was sent by the British Foreign Office on a special mission to Asia Minor, Armenia, and Kurdistan to inquire into the condition of the Christian communities. He was the author of "British Mission to Theodore, King of Ahyssinia," "Ashur and the Land of Nimrod," "The Garden of Eden and Biblical Sages," and "Biblical Lands."

The Rev. Edward Warren Virgin, author and editor of religious, historical, and geological works, and a Methodist clergyman for half a century, died at his home in Dedham, Mass., last Sunday, aged seventy-four years. Mr. Virgin was a delegate to the first world's school convention at Paris. He served on the United States Christian Commission during the civil war and was at the siege of Chattanooga. He was a graduate of Wesleyan University, class of 1857.

The death is reported, in his sixty-seventh year, of Dr. Joseph Ulhrich, who was professor of Austrian public law at Prague. Of his numerous writings may be mentioned: "Lehrbuch des österreichischen Staatsrechts" and "Grundzüge des österreichischen Verwaltungsrechts."

The death is announced, at the age of eighty-four, of the Most Rev. William Dalrymple Maclagan, until last year Archbishop of York. He was joint editor of "The Church and the Age," two volumes, 1870, and published also a volume of "Pastoral Letters and Synodal Charges."

John Ernst Matzke, professor of Romanic languages in Stanford University since 1893, has just died, at the age of forty-seven. He was the author of various text books on French and Spanish.

Science.

COL. ROOSEVELT'S NEW BOOK.

African Game Trails: An Account of the African Wanderings of an American Hunter-Naturalist. By Theodore Roosevelt. New York: Charles Scribner's Sons. $4 net.

Beside the actual accomplishments of Col. Roosevelt's "great adventure," his written record of it is of secondary importance. Even to-day there are probably a million Americans who still think of the trip as one for "sport"; and many writers of letters to newspapers have said "butchery." As a matter of fact, at the time Col. Roosevelt planned his expedition, the United States National Museum at Washington, in which every loyal American citizen should feel a personal pride, was very poorly provided with specimens representing the African fauna. And now, by one great forward thrust, the African section of that museum is placed in the front rank of zoölogical collections. It is to the credit and benefit of this nation that at last we do not need to apologize to the South Kensington and Berlin museums for our national poverty in important African forms. It must be understood that scientifically the Roosevelt expedition was one of conquest rather than discovery. The measure of success in its real purpose is set forth modestly in the volume before us, but the extent of the scientific discoveries made are as yet only partly known. In due time, Mr. Heller's patient and careful studies of the specimens collected will reveal to us the exact number and character of the species now gathered for the first time by scientific hands; and there is good reason for the belief that among the 6,000 specimens many species new to science will be found. Meanwhile we know that the grand total of mammals was 164 species (not individual specimens), representing six different orders. Of hoofed and horned game, 57 species were obtained and preserved, among which are to be found 9 white rhinoceroses, 11 elephants, 11 common rhinoceroses, 17 lions, 7 cheetahs, 3 leopards, 12 warthogs, 9 giraffes, 10 buffaloes, 10 Grévy zebras, 19 common zebras, 3 giant eland, and 2 bongos. Of antelopes, gazelles, and their allies, 40 species were collected, represented by 305 specimens.

Zoölogically, the most dramatic event of the expedition was the quest for the "white" or square-mouthed rhinoceros. To many naturalists the report that Major Powell-Cotton had

found that virtually extinct animal alive in the Lado country seemed fairly incredible. In all America there were but two specimens: one skull in the American Museum, and a fine, completely mounted animal in the Carnegie Museum at Pittsburgh. In its South African home, below the Zambesi, it had for about fifteen years been extinct, save for a dozen individuals in a carefully protected area. Its discovery in the Lado Enclave, on the left bank of the Upper Nile, is almost as if our bison never had been known within historic times except in Texas and Ecuador. Like everything else attempted by that phenomenally lucky expedition, the hunt for the square-mouthed rhinoceros was crowned with an abundant measure of success. Nine specimens were taken, of which one pair goes to the American Museum, a head has been given to the National Collection of Heads and Horns in the New York Zoölogical Park, and the National Museum retains a matchless series of six specimens. Col. Roosevelt says:

> It is a curious animal, on the average distinctly larger than, and utterly different from, the ordinary African rhinoceros. The spinal processes of the dorsal vertebræ are so developed as to make a very prominent hump over the withers, while forward of this there is a still higher and more prominent fleshy hump on the neck. The huge, misshapen head differs in all respects as widely from the head of the common or so-called black rhinoceros as the head of a moose differs from that of a wapiti. . . . The muzzle is broad and square, and the upper lip without a vestige of the curved, prehensile development which makes the upper lip of a common rhino look like the hook of a turtle's beak.

The excellent photographs of living "white" rhinoceroses taken by Kermit Roosevelt, six of which are reproduced, are the most valuable pictures of the book. Altogether the illustrations of the volume are abundant and well chosen, constituting an admirable presentation of the wild men, wild beasts, and scenery observed by the great safari.

Col. Roosevelt's observations on the temper and mental traits of large African animals of many species are a source of constant entertainment. Most interesting of all, temperamentally, was the black rhinoceros, whose abounding curiosity led him to charge the hunters nearly a hundred times, but only once, to an absolute certainty, in downright anger. At long range, the eyesight of the rhinoceros is poor, and he does not in the least mind the trouble of charging up to and through a line of porters or hunters, in order to get a good near view of the strange-looking bipeds that so freely invade his domain. This curiosity renders the rhinoceros both disagreeable and dangerous; but the elephant, buffalo, and lion are dangerous because of their bad temper.

The chapter in the appendix on the real merits and demerits of the much-overworked theory of protective coloration, is of keen interest. The author is at some pains to demonstrate, once for all, that "protective coloration" as a deliberate intention on the part of nature, and as a means by which to accomplish a definite purpose, is chiefly theory. In other words, Col. Roosevelt found that, so far from being protectively colored, the greater part of the hoofed and horned game of Africa, as he saw it, is destructively colored. The color patterns of such species as the zebra, giraffe, topi, hartebeest, gnu, and many others tend to render their wearers more conspicuous to their enemies than would have been the case had they been clad in neutral gray or russet brown. Among American hunters of big game, there are few who will dispute the author's conclusions on this subject.

Rebman is bringing out Dr. Berry Hart's "Phases of Evolution and Heredity," and Dr. C. A. MacBride's "The Modern Treatment of Alcoholism and Drug Narcotism."

Prof. H. F. Newall has written for the Society for the Propagation of Christian Knowledge "The Spectroscope and Its Work," and Prof. J. H. Poynting "The Pressure of Light."

The various theories in regard to the glacial erosion of the Alpine valleys are discussed by E. de Martonne in the *Annales de Géographie* for July. In another article he hopes to show that since the beginning of the Quaternary Age this erosion has been more than one thousand metres. This is followed by a study of the "Profiles of the Rivers in France," with especial reference to developing their irrigation and power supply. There is also an extended notice of an extraordinary "Geographical Dictionary of Switzerland," just completed, in six volumes, of five thousand pages, containing 5,181 illustrations and 150 maps, together with lists up to date of post-offices, railways, tramways, steamboats, telegraph and telephone stations.

An important contribution to our knowledge of the formation of coral reefs has been made through the investigations of an island in the Indian Ocean by J. C. F. Fryer, a research student of Caius College, Cambridge, whose report to the Royal Geographical Society is published in the *Geographical Journal* for September. In the discussion which followed the reading of the paper a glowing tribute was paid to the late Prof. Alexander Agassiz, "whose loss to oceanography has been of such serious moment." It was said that he took an extraordinarily keen interest in this expedition, and wrote that Mr. Fryer had "got results of great value." Capt. J. Tilho, head of the French mission to study the difficult geographical problems presented by Lake Chad, gives an interesting account of its condition in 1908 as compared with that in 1904. Parts which were navigable then are caravan routes now, the drying up being so rapid in some parts that "large areas are covered with dead fish." There is no reason, however, to suppose that the lake is likely to disappear, he adds. Referring to the slave trade, which still exists in this region, he says that a thorough coöperation between England and France is absolutely necessary to suppress it. Among the other subjects treated is the Mongolian expedition of the Imperial Russian Geographical Society, in the course of which excavations were made in a "dead town" which yielded a large collection of books, rolls, and manuscripts in six of the languages of the Chinese empire and in an unknown tongue. Prof. E. J. Garwood of University College, London, gives strong reasons, drawn mainly from features of Alpine scenery, to believe that the erosive power of running water and air combined is greater than that of moving ice, which may be protective. This is contrary to the theory maintained by such authorities as Professors Penck and W. M. Davis of Harvard.

A good many points relative to the care of trees cannot be answered by reference to any of the numerous works on forestry. Trees in a city demand treatment which is quite different in some respects from that which is needed in a woodlot or a forest. The serious problems arising from the escape of illuminating gas from the pipes in the street, and the more perplexing inquiry regarding the placing of asphalt or other pavement over the bases of the roots, belong to the city, and not to the country, and the city street commissioner must take them into account. Again, the conflict with pests, both insect and fungal, is rather different in the city from that which goes on in the country; and it is more difficult to spray the trees. In fact, while a treatise on forestry might aid in some ways, it would fail short in many directions. It is, therefore, with pleasure that we welcome a timely work on that special phase of tree culture which concerns our shade and decorative trees. Prof. B. E. Fernow of the University of Toronto has suggested solutions to some of these problems in a handy treatise, entitled, "The Care of Trees in Lawn, Street, and Park" (Holt). There are few persons who can bring to the study of these problems a more thorough or varied training than Professor Fernow, or who have such helpful suggestions to offer. While we cannot agree with him in all of his advice as to the selection of decorative trees, we can assent heartily to all of his counsel as to the treatment of trees which have come to grief in the city. His explicit directions for the employment of insecticides and fungicides leave nothing to be desired, and he utters a word of much-needed caution against one of the worst tree pests now afflicting mankind, namely, the tree quacks of all kinds. In a future edition, Professor Fernow will correct a few infelicities of expression.

The Vienna Academy of Sciences has one of the largest, if not the largest, collection of phonographic records in the world. One of its main objects is to secure a complete collection of dialects, for which purpose expeditions are constantly sent out, the latest being to Nubia. Original work has been done in making use of the phonograph as a sort of acoustic mieroscope, sections of the records being enlarged a thousandfold. The croaking of a frog, on being thus magnified, was found to differ from the utterance of a human vowel in not

being a continuous sound, but one with minute interruptions.

Dr. Friedrich von Recklinghausen, whose death is reported from Strasburg, where he was professor of anatomy, had made many discoveries in his field, and written extensively. "Die Lymphgefässe und ihre Beziehung zum Bindgewebe" and "Handbuch der allgemeinen Pathologie des Kreislaufs der Ernährung" are well-known works.

William Harmon Niles, a professor of geology at the Massachusetts Institute of Technology, died last week in Boston at the age of seventy-two. He was born in Northampton, Mass. For many years he occupied the chairs of geology at Boston University, Wellesley College, and at the Institute of Technology. He was a member of several scientific bodies and contributed much to scientific literature. He was a graduate from the Sheffield Scientific School at Yale. He was president of the Boston Society of Natural History in 1864, was three times president of the Appalachian Mountain Club, and was president of the New England Meteorological Society for twelve years. He was a fellow of the American Academy of Arts and Sciences, of the Geological Society of America and the American Association for the Advancement of Science, and a member of the National Geographic Society, and corresponding member of the New York Academy of Sciences.

Drama and Music.

Edward Sheldon's play "The Nigger" has been printed in book form (Macmillan). A perusal of it confirms the opinions expressed after its first stage representation. It is a clever juvenile work, but too artificial, violent, and indefinite, both in spirit and aim, to have any value beyond that of melodrama.

"Decorating Clementine," the English version of "Le Bois Sacré" of Armand Caillavet and Robert de Flers, made by Gladys Unger and produced in the Lyceum Theatre on Monday evening, proved a disappointment. The original ran for many months in Paris, and was described as a wicked, potent, and witty satire on the French Department of Fine Arts. The New York piece is called a translation, and there is internal evidence that much of the dialogue has been copied literally and skilfully, but the spirit of the representation, probably, has been greatly changed. Comedy has become burlesque, and although there may have been some gain on the score of propriety, the force of the satire has been much diminished. Clementine is a successful novelist and happy wife, who has been content with profit without personal notoriety. When she hears that a rival female writer is to receive the ribbon of the Legion of Honor, she is crazed temporarily by jealousy, and in the effort to procure the honor imperils her own reputation and happiness. Fortunately, she learns her lesson in time and willingly sacrifices her newly born ambitions in order to recover her lost domestic peace. There is the making of a good comedy in all this, but at the Lyceum the acting throughout is conceived in a spirit of burlesque, which destroys all sense of definite purpose or sincerity, while it emphasizes all the inherent weaknesses of the story itself. But there is some clever individual work by G. P. Huntley, Ernest Lawford, Hattie Williams, and others, while the ridicule of the secret social and political wirepulling, which is supposed to account for the distribution of many otherwise unaccountable honors and rewards, is pungent and amusing.

A military drama entitled "The Deserters," produced in the Hudson Theatre on Tuesday night, deserves a note—not at all on its own account, being a machine-made theatrical piece of the poorest sort—but for its introduction of a new star in the person of Helen Ware, of whom a good deal is likely to be heard in the future. Her part, that of a female detective, is worthless in itself, but enables her to display an amount of varied histrionic resource which is uncommon in these days, a genuine sense of acting, a notable power of self-restraint, and a wide range of emotional expression. Her treatment of one scene, in which, amid an accumulation of harrowing circumstances, she has to confess her seemingly base betrayal of the man she would give her life to save, was remarkable for its artistic simplicity and its true eloquence of passionate feeling. There can be no doubt that she possesses natural qualifications of a high order, but she has a good deal to learn yet, especially in the matter of vocal intonation, before she can establish herself in the first rank. It is to be hoped that she will soon find a play more worthy of her abilities.

J. E. Vedrenne starts his new season in the Queen's Theatre, London, this week, with W. J. Locke's play, "The Man from the Sea." Robert Loraine, Arthur Lewis, and Nina Boucicault have important parts.

Gertrude Kingston's new London playhouse, the Little Theatre, which has been built upon the old site of Coutts's bank, in the Strand, will be opened next month with two plays, the longer an adaptation of a comedy by Aristophanes, period B. C. 411, and, as a sharp contrast, a short piece dealing with radio-telegraphy as a detector of crime, A. D. 1910.

Miss Lena Ashwell is to return to America for a season under the management of Liebler & Co. She has agreed to act the part of Judith Zaraine, in a play of that name, by C. M. S. McLellan, author of "Leah Kleschna." She will come to the United States in November, and "Judith Zaraine" will have its first New York hearing in Christmas week.

Ellen Terry will sail from Liverpool on October 19 on the Oceanic, arriving in New York on October 26. On this, her ninth tour of this country since 1883, when she came for the first time with Sir Henry Irving, she will give a series of Shakespearean entertainments, or acted discourses, in the Hudson Theatre, beginning November 3. The titles and the scope of these discourses have been considerably changed by Miss Terry since the first announcement of her farewell visit was made. As now planned they are as follows: "The Heroines of Shakespeare—Triumphant," "The Heroines of Shakespeare—Pathetic," "The Letters of Shakespeare," and "The Children of Shakespeare." After the New York engagement, Miss Terry will make a short tour of the larger cities. Her addresses will be accompanied by illustrative acting, and she will wear Elizabethan costume.

It is plain that in his recent production of "Henry VIII" at His Majesty's Theatre, in London, Sir Herbert Tree has allowed no consideration to interfere with the demands of spectacle. He has provided, it is true, an excellent cast, but the text has been treated ruthlessly in order to save time for the stage show. In itself, of course, the play is invertebrate, more akin to chronicle than to drama, while there are grave doubts concerning the authorship. At all events, it is not especially sacred as a Shakespearean masterpiece. Nevertheless it contains much noble verse, many vital characterizations, and some magnificent situations, and there was a time—in the days of Macready and Phelps, not to speak of the Kembles—when these qualifications, with the addition of fine acting, were deemed sufficiently attractive without the extra bait of kaleidoscopic splendors. It was Charles Kean who first taught how feeble playing might derive reinforcement from the bravery of its scenic surroundings, and his illustrious example has had disastrous consequences. But beyond all question Sir Herbert has composed a superb panorama.

The London critics are very severe—and apparently with good reason—upon Rudolph Besier's adaptation of Pierre Berton's "La Rencontre," which he calls "The Crisis." This is one of those pieces which, manifestly built around a scandalous situation, make an immense pretence of proposing deep moral enigmas. Why a man of Mr. Besier's ability and accomplishment should waste his time in adapting such unhealthy rubbish as this is not apparent. Not even the acting of Evelyn Millard as the self-sacrificing Camille could save the piece from general condemnation. He deserves some commendation, however, for not following the French original all the way through. M. Berton provides a happy ending in which the guilty wife goes off with her lover, leaving her husband to Camille.

Dr. Wilhelm Henzen, who died recently at Leipzig at the age of sixty, though a musician of note, was best known as a dramatist. For many years he was actively connected with the Stadttheater at Leipzig, and his numerous plays, written over the name of Fritz von Sakken, achieved in Germany considerable success.

"The Romance of the Fiddle" is a history of the instrument from earliest times, by E. van der Straeten, which is to be brought out by Rebman.

The "American Musical Directory," compiled and published in New York by Louis Blumenberg, affords a bird's-eye view of musical activity throughout this country and Canada, which is surprising as well as gratifying. It gives the names of musical societies, instrumental as well as vocal, in the cities and towns of all the States, arranged alphabetically, with the names and addresses of the directors, presidents, and other officials, and is therefore invaluable, particularly to singers and players who desire to make engagements for tours. The vocal societies still far outnumber the instrumental, chamber music clubs being particularly scarce; but symphony orchestras and bands abound, and, as regards the

sexes, one finds in scanning these lists that men play a more active part in musical life than one would imagine from the insignificant number of them in the average concert audience.

Oscar Hammerstein has begun his season of comic opera at the Manhattan Opera House Tuesday night with an elaborate production of Louis Ganne's "Hans, the Flute Player," which was first heard at Monte Carlo, and is now having a run in Paris. The title part is sung by George Chadal, a leading baritone of the Opéra Comique in Paris, for whom the part was originally written, but who was engaged at the time and could not sing it. Miss Sophie Brandt, well known here, returns to sing the part of Lisbeth, the Burgomaster's daughter. Frank Doane, Frank Pollock, George W. Callahan, Alice Gentle, Olive Ulrich, and Blanche Lipton are other members of the company. Jacques Coini, stage manager of the grand opera season last year, is in charge of the production, and the orchestra, chorus, and ballet are those seen last winter. The scenery includes many novel spectacular features.

Myron W. Whitney, one of the most popular singers in the country twenty years ago, died on Monday at Sandwich, Mass. He was born at Ashby, Mass., September 5, 1836. He did not commence the study of music until he was twenty years of age, but made such rapid progress that two years afterward he sang the bass solos in a performance of the "Messiah" at the Tremont Temple in Boston. After singing in oratorios and concerts for ten years with success, he went to Italy and studied with Luigi Vanuccini, director of the Royal Pergola Theatre in Florence. After completing his Italian course he went to London and made a special study of oratorio with Randegger. His great triumphs in this country were made at the concerts and festivals of the Handel and Haydn Society of Boston, the New York Oratorio Society, the Cincinnati Festivals of '73, '75, '78, and '80, the Harmonic Festival at Cincinnati in '74, the Harmonic and Männerchor Festival of '75, and the Sängerfest of '80 in the same city, and the recent New York Festival.

Art.

CROWE AND CAVALCASELLE.

A History of Painting in Italy. By J. A. Crowe and G. B. Cavalcaselle, edited, by Langton Douglas. Six volumes illustrated. Vol. I, Early Christian Art; Vol. II, Giotto and the Giottesques, Vol. III, The Sienese, Umbrian, and North Italian Schools. New York: Charles Scribner's Sons; London: John Murray. $6 net each.

A New History of Painting in Italy. From the II to XVI Century. By the same authors. Edited by Edward Hutton. Three volumes, with 300 illustrations. New York: E. P. Dutton & Co.; London. J. M. Dent & Co. $5 net each.

The expiry of copyright on this famous book has brought about two new editions, one a complete revision, by Langton Douglas, under the care of the original publisher, John Murray, the other a literal reprint of the original edition with additional annotation by Edward Hutton. For years the old "C & C" was only to be had second-hand and at a high price, now students have the embarrassment of choosing between two editions of this indispensable work. One's prepossessions naturally go to the authorized revision, in spite of the fact that the original three volumes will have begotten six. It is, as the editor declares, virtually a new work. The editor himself is a well-known connoisseur whose specialty is the Sienese school, while the editor of the three-volume reprint, a scholarly writer on Italian matters generally, makes no pretension to expertness. On the side of the reprint evident advantages are the small bulk and price and the larger number of illustrations obtained by grouping small prints on the plates. Before carrying the comparison further the general issue, How should a classic work in erudition be edited? is worth our attention. In the present case, we have illustrated the extremes of doctrine and practice. Mr. Hutton asserts that the chief merit of an editor is "to have no opinions" and merely registers briefly in footnotes whatever may serve to correct or explain the original text which is printed *literatim.* These new notes are plainly indicated by square brackets. They digest intelligently the relevant literature of the past forty-five years. Mr. Douglas, on the contrary, constantly passes upon disputed points, interpolates the original text freely—for a part of the text this work had been done by Sir Joseph Crowe himself—marks his notes with an asterisk, and as we have seen has added as much matter as there was originally. One editor believes that as much as possible this sort of a scholar's classic should be let alone; the other that it should be thoroughly overhauled in the interest of usefulness. Mr. Hutton carefully tidies up about a monument, the palings of which have fallen into disrepair; Mr. Douglas effects a scientific restoration after the manner of Viollet-le-Duc. We hold emphatically that the conservative way is right. The other course may be judged by its fruits in the case, say, of "Warton's History of English Poetry," which has been three times refurbished in a century and a quarter. In each revision it has lost something of its integrity as a classic of eighteenth century criticism and research; in each improvement, it has been more difficult to read and more confusing to consult. In fact, this disastrous process of accretion, which may also be excellently studied in the annotators of Vasari, is insidious. The first revision may have a specious look of usefulness, the second is distressing, the third appalling. It is only impersonal works, bibliographies and the like, that can safely be revamped in this manner. Moreover the editor who is really capable of bringing "C & C" to date is wasting his time and ours. His true course is to write a new history. For a thoroughly renovated edition of "C & C" there may have been sound business reasons. All scholarly considerations, however, not to mention those of sentiment, make for the other course. Unless there were a marked superiority of editorial efficiency involved a student would naturally prefer the convenient reprint of this famous work to an apparently overswollen revision.

As a matter of fact, if editorial comparisons were to be made, Mr. Hutton would come off very well. To one who believes in specialism, it is a positive chagrin to find that the impartial man of letters has done his work so much better than the expert. The advantage of Mr. Douglas's voluminous addenda is frequently very slight, he lacks all sense of proportion, his omissions are of an ominous sort. From every bibliographical point of view, Mr. Hutton's notes are more complete and trustworthy than Mr. Douglas's. It was a profound misfortune for Mr. Douglas to lose by death his associate, the late Arthur Strong. His taste was central, and his judgment would doubtless have restrained the aberrations of the versatile junior editor. Mr. Douglas's course has been an erratic one. His predilection is for a provincial school, the Sienese. About his only contribution to central Tuscan problems, aside from an excellent study of Fra Angelico, is a bit of journalistic paradox in which he attempted to reduce Cimabue to the status of a patriotic myth. It is disconcerting to find this vagary elaborately exploited in the first volume. Naturally Mr. Douglas should have recorded his opinion, however bad, but respect for his predecessors would have dictated a businesslike statement of utmost brevity. His failure to give credit to the studies of contemporary critics is fairly disconcerting. Only in the case of Italian contributions can one count reasonably upon his vigilance. And as one reads on, the lamentable conviction grows that Mr. Douglas's silences are not capricious, but purposeful. He has constantly used other men's results, while studiously avoiding acknowledgment. A more painful discovery is that he has used the biographical notices of his authors, a great gentleman and a great scholar, as the vehicle of innuendo against professional rivals. A trickle of such imputation runs disgustfully though the notes of these three volumes. No one will suspect the *Nation* of wishing to limit the scope or vehemence of legitimate controversy, but we are forced in simple duty to our readers to say that an editor who could soil a classic with his private animosities evinces a mental and moral perversion that is simply inexplicable and inspires fundamental misgivings as to his competence. The

issue is quite as much one of utility as of professional ethics. By deliberately suppressing scores of discussions, which are duly epitomized by Mr. Hutton, Mr. Douglas has by so much impaired the scholarly value of his revision.

In order to make the comparison between the editions concrete, let us take the life of the Fabriano master Allegretto Nuzi, concerning whom considerable information has accrued since the original edition. To this artist the Murray-Scribner revision gives five pages, the Dent-Dutton reprint four. To the credit of Mr. Douglas is to be set one picture otherwise unregistered, the correction of the date of another, an account of changes in the Sacristy of S. Domenico at Fabriano, and a somewhat explicit statement of Allegretto's Sienese affinities. This relationship is so obvious that Crowe and Cavalcaselle merely treated it in general earlier in the chapter. Mr. Douglas omits, while Mr. Hutton records, Suida's and Perkins's discussions of Allegretto's Florentine relations, Mr. Perkins's service in locating an altar-piece at Apiro, and the interesting opinions by Perkins, Sirén, Venturi, and Hermanin on the enigmatical frescoes in the Chapel of St. Nicholas, at Tolentino. For the student it is certainly more important to be put on the track of this discussion than it is to learn that Mr. Douglas recognized a fragment by Allegretto in the shop of a Roman dealer, or that one of the Fornari pictures, is possibly misdated by a year. In short, there is no substantial contribution to our knowledge of the master justifying the additional page of matter in the authorized revision. The case is typical. General readers and the average student will sensibly prefer the reprint in three volumes; specialists cannot ignore the revision in six, but since it must be supplemented both by Venturi's History and Mr. Hutton's edition, the bulkier edition must be regarded as a sort of necessary evil, and its use will be accompanied by constant disappointment and tribulation. In the remaining three volumes Mr. Douglas will touch matters in which he is more versed, but also in which the giving of due credit to fellow critics is more important. He will therefore have an opportunity to recede from that policy of slur and suppression which disfigures and cripples his three volumes already at hand.

While Mr. Hutton's editorial task has been admirably conceived, the proof-reading of his notes is faulty, and his bibliographical broom has not swept quite clean. German sources are too often taken at second hand. In the case of such authors as Baldovinetti and Botticini the latest literature has not been consulted. Dr. Bode's important studies of Verrocchio are not cited. The whole treatment of Verrocchio's school is defective. Muntz's and Müller-Walde's opinions as to the Baptism should have been given. The document which accredits the Madonna of Pistoia to Verrocchio is ignored; also the views of those critics who accept it as authoritative. Nearly all the students of Leonardo da Vinci, Horne and Gronau among others, have made relevant comments on the Verrocchian pictures, but no trace of this appears in the footnotes. The charming Annunciation by Piero Pollaiuolo in the Berlin Museum is omitted. Such are some penalties of haste in a complicated and most exacting task. One is led to fear that generally the files of such important series as the Prussian *Jahrbücher* and the *Zeitschrift für Bildende Kunst* have not been systematically consulted. This gingerly attitude towards northern critics characterizes both Mr. Hutton and Mr. Douglas. Mr. Hutton's list of Lorenzo Monaco's works, for example, might have been greatly enlarged if he had really used the important monograph by Sirén, which is casually cited. It may possibly, like certain of Venturi's volumes, have come when the printing was far advanced. Venturi adds to both these editions of "C. & C." an important discussion of the Cavallinesque frescoes in Sta. Maria Donna Regina, Naples. In fact, the rehabilitation of the early Roman school is likely to continue apace. Since Venturi's History very interesting frescoes of vaguely Cavallinesque type have been discovered at Amalfi. Such addenda could be made indefinitely. In all broader regards the three-volume reprint is satisfactory and should win favor.

It is pleasant to turn from these tedious but necessary considerations and recall that gallant brotherly pair who wrote the History. Both hardened in peril, but of opposite temperaments, Crowe and Cavalcaselle were the Artagnan and Aramis of art history. Brought up in the ateliers of Paris, Joseph Archer Crowe soon turned from the practice to the criticism of painting. Adversity overtook him, and journalism tided him over as it has so many ready talents. Whether taking notes in the holy calm of some frescoed chapel or writing dispatches at Inkermann or Solferino, Crowe was equally at home. He was one of those efficient cosmopolitan English gentlemen who are predestined to live distinguished and die knights. Crowe could have been anything, Giovanni Battista Cavalcaselle only what he was, a passionate and indefatigable student of the art of his fatherland. True, he had been a revolutionary agitator in his native Lombardy, a political prisoner, and but for the opportune outbreak of the revolt of 1848 at Piacenza would have faced an Austrian firing squad. When his property was confiscated after Austria resumed control, in pitiful need he reached Paris, where Crowe, whom he had met in 1847, succored him and brought him to London. Yet Cavalcaselle was primarily the savant, combining in a remarkable degree the plodding and perceptive qualities, while Crowe remained essentially a superior journalist with the executive quality and the discursive intellectual curiosity that in its higher ranges the profession implies. Cavalcaselle was a student of profound and specialized acquirements, Crowe a versatile and sympathetic critic. Both had begun as painters, and a keen interest in technic was a bond that united aspects of art otherwise diverse. Of the chance meeting in a Westphalian post-chaise and of those few hours in the Berlin gallery that initiated the friendship of a lifetime, Sir Joseph Crowe later told charmingly in his autobiography. From him, too, we know of those months of privation the pair endured together in their shared lodging in Silver Street, London, Cavalcaselle working at the bothersome details of Crowe's first undertaking, now done in partnership, "The Early Flemish Painters," while Crowe threw off the text amid the interruptions of war correspondence and domestic journalism. The last day of 1856 the book appeared, and a New Year dawned with better prospects for our Artagnan and Aramis.

No mountainous task of mere writing appalled the seasoned journalist, and soon the partners were preparing their most famous work, "A New History of Painting in Italy," the first volume of which appeared from the house of Murray, in 1864. It included the painters of central Italy, Raphael being reserved for a later elaborate biography in two volumes (1883, 1885). With amazing speed, for this time the authors were following unbeaten tracks, the "History of Painting in Northern Italy," the first volume of which bears the date 1871, was completed. Again the greatest artist of the region, Titian, was honored by a bulky biography (1877). Such was the life-work of the partnership. It is possibly the most remarkable instance of literary collaboration on record. More scholarly readers soon divined that the views and the rhetoric were usually Crowe's and the facts Cavalcaselle's. Both as criticism and as a compendium the work was remarkable; but, on the whole, the value of the discovered pictures and the new attributions far outweighed that of the new points of view. Accordingly, it has become the fashion to take Crowe rather lightly, and impute all the good in the book to his Italian associate. This is something less than fair. It is true that without Cavalcaselle Crowe would surely have written no history of permanent value, but it is equally true that, without the encouragement of Crowe and his substantial aid, Cavalcaselle would probably have accumulated prodigiously and produced next to nothing.

Let us recall that his revision of the still incomplete Italian edition of the "New History" took more time than the writing of the original work. The fact sets in proper relief the executive merits of the less learned partner. Let us recall, too, that it is very doubtful if such a work could have succeeded, or even existed, in any country but an England already half-Ruskinized, and that Crowe's injection of a certain journalistic vivacity into the scholarly texture of the book gained for it paradoxically something like popularity.

As for the "New History," it opened an epoch. It was the first time that a substantial portion of the history of painting had been treated with the thoroughness that Tiraboschi devoted to Italian literature, or the French Benedictines to French literature. Through French, German, and Italian translations the "New History" became a cosmopolitan institution. It was easy to jibe at certain peculiarities of "C. & C."—in fact, its pedantries and vivacities were equally condemned—the work set a standard and raised the history of art out of dilettanteism to the level of a science. If the merit of this was largely Cavalcaselle's the moving cause was Crowe.

After a generation of eager research and criticism it is easy to see the defects of the "New History." The taste of Crowe was by no means impeccable. Giotto he treated by simple dilution of Vasari. The finer qualities of such bizarre geniuses as Pollaiuolo and Botticelli quite escaped him. Ghirlandaio, who at bottom was merely a weakened reincarnation of Masaccio, he could regard as the culminating point of the Florentine renaissance. Cavalcaselle habitually evinced an undue distrust of Vasari, and in several cases documents have confirmed statements of the Aretine which were branded as fictions. In the broader matter of development it was unfortunate to treat the early work of Leonardo, so pregnant of influence, merely incidentally and with uncertain touch. In general the treatment of the fifteenth century was, if an enormous advance over previous work, tentative and unsatisfactory. It was in the treatment of the great mural painters of the fourteenth century that the authors built their enduring monument, or to be more accurate, Cavalcaselle built his.

He must have had simply the finest visual memory ever granted to mortal man. To-day the student of so-called Giottesque painting may whisk about Italy in trains and motor 'buses. One can now see Giotto in the morning at the Basilica of St. Francis at Assisi, correct the impression at Sta. Croce, Florence, in the afternoon, and complete the survey in the Arena Chapel, Padua, the next morning. Or, short of such touristic feats, one may sit quietly in his study and compare minutely admirable photographs of all these frescoes. Cavalcaselle travelled slowly the powdery roads of Italy in carriage or on foot; in comparing master with master he had little aid to memory except those swift and profusely annotated sketches of which he made thousands. Then think of the inherent difficulty of his task. To the average intelligent traveller these level-browed, earnest folk that people the Giottesque compositions look precisely alike. Most persons, even though somewhat experienced, and of good natural taste, would hesitate before the elementary discrimination whether a wall-painting is Florentine or Sienese. Moreover, tradition had for centuries worked havoc with the facts. There are probably fifty chapels in Italy where the sacristan still murmurs the name of Giotto. Generally speaking important mural painting had been ascribed either to Giotto or to the nearest great master of repute. It was a question of ascertaining the few cases in which tradition or documents had actually given us the work of a master, and then of proceeding cautiously outwards in the train of subtle stylistic identities. This exceedingly delicate task Cavalcaselle achieved faithfully; in fact, where he found complete disorder he left an order so generally well established that most subsequent criticism has merely followed up his leads. The chapters on the Giottesque painters and their Sienese contemporaries remain to show what can be achieved against all odds by simple intelligent, affectionate intentness. Other men have studied these works with equal fidelity. No one has looked at them with that concentrated vision which implies possession so masterfully as that modest scholar Giovanni Cavalcaselle, and no one, we think, ever will again. As we admire the stately monument which through patient pilgrimages and vigils he built up for himself, piece by piece, let us not forget that, but for the efficient friendliness of his English co-worker, we should seek that monument in vain.

Among the finely illustrated books on the autumn list of Scribners are "The Art of Northern Italy," by C. Ricci; "Art in Great Britain and Ireland," by Sir Walter Armstrong; "Pictures in Color," by Harrison Fisher, and "Girls," by Henry Hutt.

A committee of specialists appointed two years ago by the Italian government reports that, although the stability of the leaning tower of Pisa is in no wise in danger, means must be used to remove all uncertainty. This tower does not rest on the broad and massive foundations which tradition claims, but upon a hollow ring, corresponding exactly to the cylindrical superstructure, which has a depth of not more than three metres and an inner diameter of seven and a half metres, or the width of the interior of the tower. References to the construction and history of this tower, which dates from 1174, are scanty, and are well presented in a July issue of the *Marzocco*. The commission holds that its deviation from the plumb may not be due to a gradual, progressive giving way of the soil, but to exceptional, independent causes, although the contrary opinion finds many able supporters. Some investigations made in 1829 by Edward Cresy and G. L. Taylor, representatives of an unidentified English society, are regarded as probably the most reliable basis for comparison with actual conditions. Their measurements are known in Italy only at second hand, through a pamphlet, "Fabbriche principali di Pisa," published in 1831 by Ranieri Grassi. Other measurements were published in 1859 by a French nobleman, Fleury de Rohault, but are regarded as less trustworthy, and at intervals within the last ten years by a Brooklyn architect, W. H. Goodyear (the *American Architect*, October, 1909, and "The Architectural Exhibition at the Brooklyn Museum," p. 168). Grassi is said to have attributed the leaning to the "virtuosity of the architects," just as Mr. Goodyear takes issue with Vasari's statement that the tower's inclination was accidental, and asserts that the builders used delicate horizontal curves and slight departures from the vertical to counteract distortions of perspective. If the English measures are reported correctly, the deviation from the plumb increased thirteen centimetres between 1829 and 1859, and seven centimetres in the last fifty years, or from 86.5 mm. in 1829 to 92 mm. in 1910, that is, about 5.5 mm. for every metre of height. Contributory causes are found in the earthquake at Pisa in 1834, the most violent ever known there; in excavations made in 1835 to uncover some of the lower columns of the tower, and in drainage basins which were built in 1839. The fact, however, remains true that at least three other Pisan towers also lean, a strong argument for the effects of the character of the subsoil. The planes of the stairs of the lower stories of the campanile incline with the tower. The level of the ground on which it stands is lower than that of the neighboring monuments, the soil is composed of sand and clay, and is full of springs, which, if closed, open new ways, even through the foundations. As early as 1573, a cement was used to prevent this filtration, an operation which covered a part of the lower story for over two hundred years. But if Antonio Veneziano's fresco in the Campo Santo, which was painted in 1384, and showed the campanile in about its present condition, gives some debatable basis for the argument of artistic intention, there is also Vasari's comment that the architects had primitive ideas of drainage, and did not know how properly to build the foundations, sinking piles over the area. The tower was constructed in three periods, with long intervals between, and it is probably true that then, as now, a subterranean current of water, tending northeast, slowly wore away the soil and caused the original sinking on the southern side, when the building had reached a certain height.

Prof. Adolf Cozza met his death recently at Rome by falling from a scaffold in the International Agricultural Institute, where he was painting the frescoes on the ceiling. He is remembered for his history of the port of Ostia, but chiefly for his work in connection with archæology.

Finance.

LOOKING AHEAD.

When financial markets are genuinely perplexed about their own condition they seek, with more humility than usual, the diagnosis of high financial experts, and sometimes learn something of real value. They have vicariously buttonholed, so to speak, all American financiers lately returned from Europe; but the result has been, on this occasion, a series of more than usually Delphic deliverances.

President McCrea of the Pennsylvania pointed out that "business is just marking time," and that he did not "look for any great change until several things are out of the way." But the Stock Exchange had already recorded its own opinion to that effect at least. George Gould reassuringly observed that "the present inertia and dulness, from whatever cause it may arise, cannot continue forever"—which everybody knew before. Even Chairman Gary of the Steel Corporation, usually ready to let the public know his independent judgment, last week vouchsafed only the assurance that "there is no trouble in the business world, and there will be no trouble whatever in America, unless it is caused by political influences, changes, or unrest."

But that "unless" was just what Wall Street wished to see disposed of. When to these replies are added such disappointingly ambiguous remarks as James J. Hill's comment that the need of the situation is "conservation of common sense"—which might be a fling at Congress, or at Wall Street, or at the people at large—and the Illinois Central vice-president's assurance that a boom would instantly return "if the demagogues could be squelched," bewilderment as to what really is to happen becomes reasonably complete.

It is barely possible that the reserve or ambiguity of these prophecies arises from the fact that the prophets themselves are in the dark. This has been a curious year, in which high financial oracles have found a new explanation almost every month, as to why things happened as they did; and the stock market which, at the end of August, seemed to give the conundrum up, was perhaps the embodiment of the expert state of mind. Wall Street, the stock market, and the rest of us could also prophesy what might happen if there should be no political unrest this autumn, or if Roosevelt should stop making speeches, or if every one should be sensible as Wall Street and the Stock Exchange understand the word. But people are trying to discover what will happen, supposing (as every one supposes) that things will in these respects go on pretty much as they have done before. This is a question on which the oracles do not as yet appear to have thrown much light.

In all the comparison and reminiscence evoked by the rather remarkable twelvemonth past, there have been two analogies which occurred to the observant mind—the story of 1895 (with its sequel in 1896) and the story of 1903. In a general way, it has been conceded by the financial community that our case resembled that of 1895 and 1896 in that a premature after-panic expansion, in trade, in commodities, and on the Stock Exchange, broke down when it was realized that the country had not yet fully recovered from the financial depression of a very few months before. It resembled the case of 1903, in that an enthusiastic boom among promoters, stock speculators, and operators in commodity markets passed into a stage of severe readjustment and compulsory liquidation when it was found that the whole community's capital resources were tied up.

The total inertia of the present month's markets—this in the face of a familiar tradition, that September is the month when security and money markets are expected to show their true colors, under the influence of autumn conditions—makes it somewhat interesting to inquire what occurred in the corresponding month of the other two years in question. As a matter of fact, September of 1896, of 1903, and of 1910, affords a singular contrast. In September, 1896, we were within two months of a highly critical election—a fact which may seem to suggest the present year. Every one professed uncertainty and misgivings; the Stock Exchange in particular was in a constant shiver of apprehension. Yet what happened in that month of 1896 was a demonstration of great strength in financial markets, with a rise of 9 or 10 points in many stocks, on great activity.

September, 1903, had an oddly different history. August of that year, like August of the present year, had been a month of decided recovery on the Stock Exchange—10 to 12 points in many shares—and, although the iron market continued to decline, Wall Street at least had begun to hope that the worst was over. It was not; September brought a budget of most disquieting news regarding the industrial situation which had been watched so anxiously at intervals, all summer. The price of iron broke with great violence; the $100,000,000 Consolidated Lake Superior Company went down; it became quietly known that the Steel Corporation's earnings had been cut down 12 per cent., and that its quarterly dividend would have to be reduced; prices on the Stock Exchange broke 10 and 15 per cent., and by early October the financial demoralization of the hour had brought about the bank suspensions at Baltimore and Pittsburgh.

It would be difficult—thus far at any rate in the present September—to draw analogies with the corresponding month in either 1896 or 1903. The country has an exciting election on its hands, as it had in 1896; it has a perplexing and disturbing industrial situation, as it had in 1903; and it has reflected both phases of the situation by exactly such a prolonged mid-summer break in stocks as occurred in each of the two years. Yet it resembles neither in the market's altogether apathetic behavior at the autumn's opening.

Here is an opportunity for the ingenious and imaginative mind to draw conclusions. There will be those who prefer to rest their judgment on the presumption that our industrial situation is so much better than in September, 1903, that we could not reasonably repeat that year's stock market demoralization, and on the further supposition that the political skies have not yet cleared up as they had by September, 1896, so that prices cannot logically rise as they then did. This balancing of opinion might explain a market which does nothing. But there would still remain a portion of the community who would stubbornly insist that the market has been refusing to move this month because it really could not guess, any more than the eminent financiers just cited, how the financial situation was itself most likely to turn out.

Ready This Week.

ENGLISH LITERATURE DURING THE LIFETIME OF SHAKESPEARE

By **Felix E. Schelling,** Professor in the University of Pennsylvania. 8vo, 425 pp.+3' pp. bibliography+26 pp. indcx ; $2.50 net, by mail $2.70.

A history of Elizabethan literature in which the dominating power of Shakespeare is shown. The book takes a large view of the period by its recognition of a succession of literary movements, developments, and varieties in poetry, drama, and prose.

ONCE

By **John Matter.** $1.20 net, by mail $1.30.

A story of boy and girl life in a middle western small town a generation ago, which should serve as a sign-post for grown-ups on the way to pleasant recollections.

Published Last Week.

AN AFFAIR OF DISHONOR

By **William De Morgan,** author of "Joseph Vance," "Alice-for-short," etc. $1.75.

"A better story than any of the others, so far as sustained interest is concerned. It may easily become the most popular, for it is pure story throughout."—*Chicago Record-Herald.*

Henry Holt & Co. 34 W. 33d St. NEW YORK

Lake George and Lake Champlain: The War Trail of the Mohawks and the Battle-ground of France and England in their Contest for the Control of North America

By W. MAX REID,
Author of "The Mohawk Valley," "The Story of Old Fort Johnson," etc.

8vo, with 90 Full-Page Illustrations. **$3.50 net.**

Mr. Reid's new book is devoted to the history and the scenic beauty of a section of the country every inch of which is to him familiar ground. With its history and traditions he is deeply imbued, and to be deeply imbued with such a history and with such traditions is no insignificant acquisition. The author has seized upon the dramatic incidents that form the staple of this history and has combined them in a narrative that moves with unimpeded swiftness.

With Stevenson in Samoa
By H. J. MOORS

The author of this remarkable volume is an American merchant and planter who still lives in Samoa, and who had the singular good fortune of being the "guide, philosopher and friend" of Stevenson during his eventful life in the South Seas. The record of their friendship is singularly attractive and of great value. The illustrations from photographs, letters, etc., present a collection of Stevenson pictures that may be said to be unequaled.

Profusely illustrated, with photogravure frontispiece. $1.20 net; postage, 12 cents.

SMALL, MAYNARD & COMPANY

SCRIBNER

Cascorra, The First Cuban Siege *General Frederick Funston* describes his first experiences with the Cuban Insurgent troops under fire. These articles are a remarkable and fascinating contribution to the literature of adventure.

An Impression of the King's Funeral by Madame Waddington. The author, who was for years a friend of the late King Edward, had very special opportunities of witnessing all the ceremonies attending the funeral.

A charming and most interesting contribution to American literary history is the *Correspondence of Washington Irving and John Howard Payne,* edited by Thatcher T. Payne Luquer. The first letters, written mostly by Irving from London and Paris to his friend Payne, show how generous, thoughtful, and helpful Irving was in aiding Payne in his work.

The Real African by Herbert Ward, one of Stanley's Lieutenants. Impressions of the Congo black people by one who has lived among them and learned to like them. Illustrated with a very remarkable series of sculptures by the author.

On the Trail of the Lonesome Pine by John Fox, Jr. A visit by the author to the scenes of one of his most delightful stories.

Who Follow the Flag.—A Poem—*by Henry van Dyke.*

$3.00 a year; 25 cents a number

CHARLES SCRIBNER'S SONS, NEW YORK

Interesting Paragraph from "The Sphere"

Issue of June 25, 1910: "Meanwhile some American newspaper has been chiding Mr. Archer upon too great an enthusiasm for the American magazines, and has even suggested that America is not so well off as our own country in weekly newspapers. This complaint, however, comes from Chicago, where New York is said to be less loved even than London. As a matter of fact, the New York NATION is a more thorough and more scholarly paper than any that we have in England. Compared with some of the reviews upon well-known books in the New York NATION, those in *The Spectator* are positively illiterate."

The spirit of romance which is in us all has just sent to press again that "bonny Scotch romance"

When Love Calls Men to Arms

By STEPHEN CHALMERS

Author of "The Vanishing Smuggler"

Illustrated by Howard Chandler Christy. $1.50

The critics themselves have responded with undisguised delight:

CINCINNATI ENQUIRER: "A stirring romance, which reminds one now and then of Scott and again of Stevenson. It carries one on with a rush from the summer evening when we see young Rorie Maclean (of the clan Campbell) a roaring young 'Hielan' laddie of eight, carrying home the milk pails and stopping to peep from between the trees at 'La Trinidad,' a storm-tossed galleon of the Invincible Armada, as she drifts, burning, up the Clyde, till we see him, seventeen years later, seeking to escape the fury of the Macdonald. It is to the vivid pictures of those wild days when might was the only right recognized, when treachery was almost certain to be met half way by treachery, that the book owes its power. The escape of Rorie and Mariposa from the Bute stronghold of the Macdonalds, and the pursuit to Glasgow in which the Lord of the Kyles is foiled only by the wit of Master Bordeaux (a friend, by the way, as he often assures us, of 'Will Shaxper' and Ben Jonson) is as thrilling an episode as we remember in fiction."

PHILADELPHIA LEDGER: "Heroic adventures of bygone days are no longer common, and it is a pleasing change from the society or socialistic trend of modern fiction to turn with Stephen Chalmers, the new romantic author, to the swashbuckling days of Scotland. A story that is altogether good."

LOS ANGELES TIMES: "A 'corking' good story of love and adventure worth reading if only for its splendid diverting power. The book is full of color and excitement, and has about it much of the spirit of youth."

KEITH'S MAGAZINE: "The humor of the book is irresistible. The Scotch lawyer who in the midst of the most serious and dangerous incidents asks the disputants, 'Will ye no take snuff?' is extremely funny."

NEW YORK TIMES SATURDAY REVIEW OF BOOKS: "The redoubtable Mr. Macmurtrie is a canny, snuff-taking Glasgow gentleman of the green bag, whose environment suggests the author of 'Waverley,' but whose character is depicted with all the individualism of the creator of John Silver."

PORTLAND OREGONIAN: "The story stands very high in point of interest and literary excellence. It suggests the spirit of Robert Louis Stevenson."

BOSTON TRANSCRIPT: "Somebody has aptly said that 'youth is but a violence and a blindness.' Nobody will doubt the force of this aphorism after reading this story. What an heroic title! We look for the lightning blows of passion—headlong, impulsive and emotional deeds of love and war—and we are not disappointed. The charm of the story is not only in its electrically-charged episodes, but also in the delightfully foreign flavor to love's appeal as shown in the wooing of three centuries ago."

Mr. Chalmers, who in this book has truly seemed to "arrive" as a romancer, is himself a Scotchman, though now resident in America. He has had an adventurous life during his still youthful years. The work on which he is now engaged promises to strengthen still further the impression that is being made by "When Love Calls Men to Arms."

You can buy the book at any bookstore

SHAKESPEARE'S ENGLAND

By WILLIAM WINTER

Rewritten, amplified, and superbly illustrated, this book is essentially new. It is destined to be one of the most popular of this year's gift books.

"These volumes about England," wrote Thomas Bailey Aldrich, "are the loveliest things that have been done in this kind."

"Here is England in a drop of honey," wrote George William Curtis.

"Pleasant to take and read anywhere," wrote Oliver Wendell Holmes.

With many illustrations. Large 8vo. $3.00 net; by mail, $3.30

THE STORY OF CHANTECLER

A CRITICAL ANALYSIS OF ROSTAND'S PLAY.

By MARCO F. LIBERMA

Professor of Romance Languages in Cincinnati University.

A brilliant, sympathetic, graphic account of the play, its conception, writing and first performances, together with a description of the story and a critical analysis of it as a work of dramatic and literary art, as well as a stage performance. It is highly informing about every essential detail, and will prove the best possible preparation for anyone intending to either see or read the play itself.

Illustrated. 75 cents net. By mail, 82 cents.

THE HOUSE OF BONDAGE

BY

REGINALD WRIGHT KAUFFMAN

John D. Rockefeller, Jr., Foreman of New York's "White Slave Grand Jury," writes of this book:

"I have read 'The House of Bondage' with much interest. The story is inexpressibly sad, but sadder still is the knowledge that it is true to life—true not only in the exceptional case but in hundreds and doubtless thousands of cases.

"The author has handled a difficult subject with the utmost of delicacy consistent with perfect frankness. While telling his story fearlessly, he does so without sensationalism."

"I believe that the conditions with which the book deals must be generally known before they will be improved and that the publicity thus given them will be of great value."

PARENTHOOD AND RACE CULTURE

By C. W. SALEEBY

"It is the first standard outline of eugenics; and it is of more consequence to the future good of mankind that its behests be followed than is the choice of a form of government, unless it be of a government that shall enforce his views."

—*Hartford Courant.*

8vo. $2.50 net.

THE INFINITE PRESENCE

By GEORGE M. GOULD

CONTENTS

I. The Infinite Presence.
II. Biologic Basis of Ethics and Religion.
III. Maternal Love in Organic Evolution.
IV. Immortality.
V. Back to the Old Ways.

The course and the potentiality of living beings he finds in the living cell, and it is endowed with attributes both human and divine. Each problem is clearly and concisely outlined, the arguments which will reconcile faith and religious feelings with the new science are logically stated, and are substantiated by evidence of mature thought and scholarly research.

$1.50 net. By mail, $1.65.

SCIENTIFIC CHRISTIANITY

By GERALD LEIGHTON, M.D., F.R.S.

Its first purpose is to prove the worth of the religious and moral life by the law of evolution as applied to biology. The reason for its writing is that men and women today, especially those who have studied science, have become impatient with the Church, and, confusing Christ with the Church, are tending to become skeptical of Christ and to doubt His value as a religious guide.

Having shown that the example of Christ is a thing quite separate from the Church, the object of the writer is to demonstrate scientifically that it is possible through the working of the law of evolution to so live, by copying the example set by Christ, as to live ourselves the Greatest Life.

One Hundred Universities and Colleges

ALREADY USE

ENGLISH POEMS

By Walter C. Bronson, Litt.D.

Professor of English Literature, Brown University.

This series gives in four volumes, a convenient, scholarly, and inexpensive collection of representative English poetry.

Each book is a unit, and can be used apart from the others.

The selections, so far as possible, are complete poems.

Each volume has nearly 100 pages of notes, including brief textual comment and numerous quotations illustrating the methods of each poet, his place in literature, his theory of poetry, his literary relationships, his influence in his own generation.

Each volume has complete bibliographies, glossaries, and indices of authors, titles, and first lines.

Vol. I. Old English and Middle English Periods.
Vol. II. The Elizabethan Age and the Puritan Period.
Vol. III. The Restoration and the Eighteenth Century.
Vol. IV. The Nineteenth Century.

Each volume $1.15 postpaid.

Elementary Analysis

By PERCEY F. SMITH, Professor of Mathematics, and WILLIAM ANTHONY GRANVILLE, Ph.D., Instructor in Mathematics, in the Sheffield Scientific School of Yale University.

Price $1.50.

This volume presents a course of seventy lessons in mathematics beyond trigonometry. It meets the needs of those students in natural and experimental science for whom a thorough understanding of coördinates, function, graph, rate, and summation is indispensable, but to whom the portions of mathematics which are formally difficult are less important.

GINN AND COMPANY

THE RECONSTRUCTION OF THE ENGLISH CHURCH

By R. G. USHER, Ph.D.

Assistant Professor of History, Washington University, St. Louis.

"To American scholarship now belongs the credit of producing a writer who has studied this problem at first-hand, and who has such a real appreciation of the gifts required for a balanced historical narrative that the events and characters of this crucial period in the Church stand out before the reader clear and unmistakable. Professor Usher's two volumes are more than a record of an untiring and intelligent industry in the investigation of his sources. . . . The narrative of all this period is full, accurate, and picturesque."—*The Churchman.*

8vo, gilt top, rough-cut edges, 2 volumes, in a box, $6.00 net.

THE SOUTHERN SOUTH

By ALBERT BUSHNELL HART, Ph.D., LL.D.

Professor of History at Harvard University.

"The author's motto may well have been: Nothing to extenuate, to set down naught in malice. He has no false sentiment about the negroes, their conditions, possibilities, deficiencies, virtues. Neither, on the other hand, is he partial nor partisan in his judgments of the Southern whites. Professor Hart apparently believes that there is a spirit of generosity and intelligence among the upbuilders of the commonwealth, the educators, professional classes, plantation owners, capitalists of the South. He says rightly that violence solves no problems. Thus, in the last analysis, patience is the great virtue reformers must bring to the problem."—*Louisville Courier-Journal.*

12mo, cloth, $1.50 net.

THE AMERICAN HOPE

By WILLIAM MORSE COLE

Assistant Professor of Accounting in Harvard University.

An attempt to look below and beyond the unfavorable symptoms of American life, and see whether in the chaos anything is at work that may be utilized to improve the situation. Its purpose is thus to show what may be the rational point of view toward American conditions. "The book is a thoroughly readable one from beginning to end, and it is not too high praise to say that it is a rare one."—*Boston Transcript.*

8vo, cloth, gilt top, rough-cut edges, $1.50 net.

SOME FALL ANNOUNCEMENTS

EDUCATIONAL PROBLEMS

By G. STANLEY HALL, Ph.D., LL.D.

President of Clark University, author of "Adolescence," etc.

These volumes contain the ripened results of twenty-five years of teaching education as an academic subject. The matter treated is brought up to date, and comprises not only the chief topics of present interest in education but attempts to strike out in the lines of various reforms that seem now impending.

2 volumes, 8vo, gilt top, rough cut edges, in a box, $7.50 net.

RAILWAY RATES AND TRAFFIC

By EMORY R. JOHNSON *Professor of Transportation and Commerce, Author of "American Railway Transportation," etc.*

and GROVER G. HUEBNER *Instructor in Transportation and Commerce, University of Pennsylvania.*

This volume is written primarily to meet the demand of railway officials for authentic information regarding traffic services and rate systems. It is the result of years of study. It is written in a concise and clear style, and is a manual that will be of daily assistance to railway officials, and will be useful to government officers, university students, and all writers upon transportation questions. Large 12mo, cloth, 2 volumes, $5.00 net.

RAILROAD ADMINISTRATION

By RAY MORRIS

The idea in this book is to tie together the study of the various branches of railroad operation as the General Manager of a road has to tie them together, to help broaden the young specialist by giving him an idea of the relation of his specialty to the entire program, and to give the non-technical man a general idea of how the general problems in administration are gotten at.

13 charts in the text, and 11 folders inserted, large 12mo, cloth, $2.00 net.

REMINISCENCES OF ROSA BONHEUR

By THEODORE STANTON

This book consists of the intimate letters written by members of the great animal painter's family to her, those of her close friends, and her own replies thereto, together with the opinions and recollections expressed by those friends concerning the artist and her work. Compiled, as it is, from sources of information hitherto inaccessible, it is, perhaps, the most intimate picture of Rosa Bonheur's character yet given to the public.

Illustrated with 24 pages of half-tone reproductions of paintings, etc., and with many sketches in the text.

8vo, cloth, $3.00 net.

STUDIES IN SPIRITISM

By DR. AMY E. TANNER

Of Clark University.

Dr. G. Stanley Hall writes: "I know nothing in the field that has appeared in recent times that at all ably and adequately represents the negative side with reference to the spiritualistic-telepathic hypothesis, which I think is very strongly favored by our studies of Mrs. Piper."

With an introduction by Dr. G. Stanley Hall. Large 12mo, cloth, $2.50 net.

Longmans, Green, & Co., New York

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 29, 1910.

The Week.

Mr. Taft's renewed pledge that he will veto any River and Harbor bill hereafter if drawn in the old-fashioned log-rolling style is most welcome. If he really ends that mischievous "pork-barrel" style of internal development of the nation he will merit the hearty praise of his countrymen; for, we believe, one veto will end it forever. Next to conservation of our resources comes in order of merit their orderly and economical development and the business-like erection of public buildings and works necessary to the carrying on of the public business. No President ever had a greater chance to make memorable reforms than Mr. Taft; certainly, no one can assert that his predecessors have left him nothing to do. To take the postmasters out of politics and make service in the post offices a life-career for American citizens as it is abroad; to extend the civil service; to take the consular and diplomatic service entirely out of politics; to end some of the pension abuses—if Mr. Taft will but devote himself to constructive work of that kind he may yet win the affections of the American people to the degree his friends desire for him.

One the eve of the Republican Convention the *World* of New York printed the facts as to the tremendous bills for Mr. Roosevelt's travelling expenses incurred by the Pennsylvania Railroad during his Presidency. They amount, according to this report, to no less than $100,000 for transportation, Pullman cars, food, wines, and cigars for himself and his travelling companions. For this the company received not a cent from Mr. Roosevelt or from the Government. For weeks past it has been known that the Pennsylvania Railroad would be challenged for its failure to enforce payment of these bills, as soon as Mr. McCrea returned from Europe. He arrived last week, and a stockholder has now written to him asking if there is any reason why this debt of $100,000 should not be collected. On the face of it, it is a gross injustice to the stockholders that such costly services should be given free of charge even to the President of the United States. It is a difficult question the Pennsylvania Railroad is compelled to answer. Ought it, from any point of view, to give favors to a man in the highest office when that man is in a position to do it very great harm? As for ourselves, we sincerely hope that the day will come when there will be a President in the White House who will attend to his business and travel little. When he travels, we trust such a man as we have in mind will be enough of a Jeffersonian to travel in a Pullman car, or at most in a private car attached to a regular train, without any uniformed attendants, save on occasions of state, and quite free from newspaper correspondents to exalt and advertise him wherever he moves.

Tuesday's final and crushing defeat of the Old Guard at the Saratoga Republican Convention was merely the climax of a series of blunders committed by men whose boast it has been that they were the greatest political experts living. Their strategy this year began with a trick and ended in a rout. The thing which they most chuckled over as a supreme proof of their astuteness—the voting down of Roosevelt in the State Committee—is now seen to have been an act of sublime folly. It at once forced an issue which they had not the strength to fight through. If they had been wise enough to let Mr. Roosevelt's name go through the Committee without a contest, they might have been able quietly to rally their followers and to control the Convention; instead of that they had made their attack gratuitously and ostentatiously. And as a crowning evidence of their masterly tactics they put up "Abe" Gruber, with his Bowery eloquence, to make their final appeal! Gruber vs. Roosevelt—this was the high-water mark of political adroitness! No wonder that it was a Waterloo for the Old Guard.

Presently, what may come to be called the "Rhode Island experiment" may challenge the general attention. The death of "Boss" Brayton at Providence has given the electors of that State an opportunity to make an essay in self-government. So accustomed had they become to his domination that even in his broken old age his control was not questioned. His death takes from the political stage the last of the old-time "bosses" of the type of Buckley and Ruef in San Francisco, "Ed" Butler in St. Louis, McLaughlin in Brooklyn, Quay in Pennsylvania, and Croker and Platt in New York. None of these went about the routine of their business so directly, so simply and without pretence, as the purposeful and resolute old blind man who for so many years ruled Rhode Island as an absolute autocrat. There was never any secret about his power or its sources. While the Legislature was in session, he went to the State House each day and personally told it what it might and what it might not do. As the Governor had no veto, Brayton exercised the functions of both Governor and Legislature. He debauched the rural voters, and made Rhode Island's shame and corruption a by-word. He was merely amused at the sporadic denunciations of his rule not followed by any efforts to overthrow him. There was no "insurgent" spirit among Rhode Island Republicans, while he lived and Aldrich was in the Senate. What will the people of the State do when bereft of both their rulers?

Republican progressives in Illinois are planning changes in the rules of the House at Springfield to prevent the smothering of bills in committee, by providing that the bills not reported in a certain time may be brought directly before the House. They also propose to limit the number of employees of the House by a rule that no janitors can go on the pay-rolls except by resolution. Other States might well take similar action. There is also the custom, which is observed in Maryland at least, of increasing the legal pay of legislative employees by a series of bills rushed through at the end of the session granting special compensation to the various grades of scrubwomen, janitors, doorkeepers, etc., not forgetting so high-placed an officer as the reading clerk, for "extra services." It is probable that many far greater reforms will have become the accepted order long before these insidiously petty irregularities have succumbed.

The "greatest sensation" in the history of the Cincinnati police department is said to be impending as a result of charges of the exaction of "tribute" in return for protection to saloons in the lowest districts. The Director of Public Safety, Mr. Small, at once began a personal investigation, which is said to have resulted in a mass of evidence confirming the charges. James Mulligan, owner of a small saloon and hotel, furnished the most direct testimony, naming Inspector Casey as personally receiving money from him for a period of five years. At first the money was paid irregularly, but finally Mulligan was informed that Casey wanted a stipulated sum weekly. Unable to pay the amount named, Mulligan replied that he would give what he could spare. As a result, he says, "I kept open every night in the five years I paid Casey money. Before that, I was arrested repeatedly. If any one doesn't believe what I say, look over the police court docket." The inspector denies the charges, and George B. Cox, the Republican boss, declares that the organization will not cover up anything. Meanwhile, two rules have been added to the regulations of the police department, one providing that the Mayor or the police director may at any time instruct the chief of police to bring charges when the occasion seems to warrant it, and the other, that either of the two officials may transfer policemen at will.

Last Sunday's decision of the four leading organizations of railway employees to back up the campaign of the railways for higher rates is, no doubt, important, but the weight to be attached to it is uncertain. These railway unions do not and cannot profess to have gone into the question with the minute analysis of economists, or even of the lawyers employed by shippers who are stoutly contesting the proposed advances and asking the Interstate Commerce Commission not to allow them. The employees appear to go blandly upon the theory that whatever is good for the railways will be good for them. So far as their action implies a readiness to coöperate with their employers, it is welcome. If they have in mind to ask higher wages for themselves after the increased rates for transportation are in force, their move is clearly tactical. But, in any event, they do not speak as experts in the matter of the proper charge for carrying freight and passengers. That has to be decided by other tribunals, and upon evidence which is statistical and financial, rather than emotional.

The invariable desire for more pensions has again marked the annual gathering of the Grand Army of the Republic at Atlantic City. Not satisfied with the general service pension for cowards, bummers, and brave men alike, there was voiced a demand for a dollar-a-day pension. This was too much, however, for the Pension Committee, which is reported to have declared it to be wholly without reason. As a compromise, however, there is a plan to urge a much larger pension for veterans seventy-five years of age or over than they are now receiving. Again, there is a plan to let down the bars in regard to soldiers' widows. The present wise provision of law that no woman who was married after 1890 shall receive aid is to be changed to read that any widow who was married to her husband three years before his death shall go on the pension-roll. But this would open the doors wide to some of the worst pension abuses the country has heretofore seen. The marrying off of senile veterans of the Revolutionary and Mexican wars, and of the Civil War as well, to young women was a regular business at one time, the object being to assure a life's pension to the woman. The present law ended that; it should never be touched. The annual spectacle of the rapidly thinning hosts of the men who wore the blue uniform is pathetic enough. It ought not to be made more so by further demands on what is and has been the most generous country on earth to its old soldiers.

Automobile owners everywhere will read with interest the news that a certain company which manufactures automobile parts and accessories has made net profits of 300 per cent. a year for the last three years. They have known that the rubber tires they are compelled to buy show an enormous profit, and they feel sure that cars which now sell for $4,500 or $5,000 and cost the makers only $1,800 when they leave the factory, could be retailed for $3,000 to the advantage of purchaser and seller, if the big agents' profits were cut down and less money spent on costly buildings. Gradually there will be a readjustment in the automobile world, which has had a tremendous inflation similar to that which went on among bicycle-makers when the bicycle craze was at its height. Low-priced cars are certain of a steady market, for the automobile has come to stay; but the higher-priced cars have not quite so plain sailing before them, if one may judge by certain signs of the times. Already, for instance, tops and other appurtenances are being given without extra charge, thus reducing the price of the car by perhaps $200. When still further reductions are made, the trade will profit by it and reach a normal permanent basis.

The annual sophomore-freshman clashes have begun with the usual amount of excitement, determination, and bruises. To the uncollegiate outsider, these performances at times seem somewhat inharmonious with the advertised atmosphere of the institutions at which they flourish, so that now and then an ignorant policeman gets himself into trouble by interfering with what looks to his unsophisticated eyes like a fight. But the phenomenon is only a strange phase of college loyalty, plus its natural corollary, class spirit. Here is a band of barbarians with the audacity to invade our sacred campus and our classic halls, even to aspire to be in a fleeting twelvemonth what in the same time we ourselves have become. Shall the door automatically swing open—especially now that we are in, and more especially that we got in only at the price of various humiliations which can be conveniently avenged only upon the new-comers? And so individual and class spirit blends with love for alma mater in a beautiful ideal that exists nowhere else about the quadrangle, except, of course, upon the gridiron.

One of the results of the "Osborne Judgment" by the House of Lords, holding that trades unions could not use their funds to pay members of Parliament, has been to revive the agitation for the payment of salaries to all members of Parliament, out of the Exchequer. Curiously but characteristically, this proposal is favored by several of the true-blue Conservative newspapers. Although they have long denounced the payment of members of the House of

Commons as a sure step toward its degradation, and a menace to the state, they now see in it a clever electioneering move, and are urging their party leaders to be first in the field with an endorsement of the plan. Both the *Observer* and the *Morning Post* have taken this line, and the Tory *Standard* goes even further, declaring that "the solution lies in the payment of members of Parliament out of public funds, and—within reasonable and restricted limits—the payment of their election expenses also. The member's stipend should be no larger than would compensate a superior artisan for abandoning his employment and enable him to discharge his public duties in comfort."

The meat question in Germany has become a grave political issue. It is not merely that the prices are so high as to be prohibitive for the poorer classes, or that the present emergency is temporarily acute. There is an actual dearth of meat. The high prices were bad enough in 1905 and 1906, when there were debates in the Reichstag and many legislative bodies, and protests and resolutions from all over the country. On the 30th of November, 1905, the then Prussian Minister of Agriculture, Herr von Podbielski, actually declared that the high prices were "merely a passing phenomenon"; but where there was then discomfort, there is to-day a real crisis. What angers the Liberal press in Germany is that much of the resultant suffering is quite unnecessary. By means of laws drawn by and passed by the Agrarians, all sorts of unreasonable restrictions upon importations, and too severe quarantine regulations, imports of cattle from the Argentine Republic, and from Denmark, Holland, and France, are virtually prohibited. The Government could help at once by lowering the duties and the freight rates on cattle, and by being less rigorous about the exclusion of cattle for medical reasons, while still protecting the country from animals suffering from tuberculosis. But it does nothing, because it is controlled by the Agrarians and the protectionists. Quite recently the city fathers of Berlin and Frankfort-on-the-Main have protested officially to the Government; the large cities are suffering the most.

General Botha's decision to remain at the head of the Government of the South African Union, despite his defeat in the elections to the Parliament, is what might have been expected of that doughty leader of the Nationalist party. He was beaten in the constituency of Pretoria East by Sir Percy Fitz Patrick, but can easily find another seat. Four members of his Cabinet were returned unopposed; and while the Nationalist majority in the Parliament will not be so great as was expected, it will be fully adequate to carrying on the Government. The recent electoral campaign followed pretty closely the old lines of political division in South Africa. The Nationalists still represent most strongly the Dutch element, though the Unionists have drawn away to themselves many Dutch votes, particularly among the commercial and industrial classes. The Boer farmer, however, has stood firmly by the Boer Premier. Dr. Jameson is singled out as the predestined leader of the Opposition, having won for himself a high place in public confidence since his return to public life ten years ago. Next to Gen. Botha, he is said to be to-day the South African statesman "most widely trusted by South Africans of either race." This is a surprising achievement after the intense bitterness engendered by the Jameson Raid. But it is equally surprising to read the high praise which the London *Times* gives to Gen. Botha, along with Dr. Jameson, concluding that "South African politics is safe in the hands of two such men." Surely time does bring its revenges.

The little flurry about the Turkish loan of $30,000,000 recalls to the European stage the shadowy figure of "the balance of power." That once familiar actor has not been often seen in recent years. The events of 1870 and succeeding years caused a complete derangement of all the old ideas about the proper "equilibrium" of Europe. Then came new adjustments and alliances, to play off one against the other—the Triple Alliance against the Dual, and so on. But that "balance," too, got badly upset by the blow to the prestige of Russia in the Japanese war, and later by the success of England in coming to a good understanding with France, and afterwards Russia, besides establishing herself securely in Spain and practically detaching Italy from the *Dreikaiserbund*. Germany, however, has recently, with Austria, been strengthening herself in the Near East; and a diplomatic and international question of great importance has been whether Turkey, under her new régime, would cast in her lot with the Central European Powers. Having to pay for ships and military material, mostly bought from Germans, she went to her old borrowing markets, Paris and London. But her proposals have been rejected in both places, and rejected, it is pretty well understood, on account of government pressure. If Turkey is to side with Austria and Germany, those countries, not France or England, must supply her the money. They could easily do it, one would suppose, considering the object; and if they do, we shall again see diplomacy concerning itself actively with "the balance of power in Europe."

After languishing for two years, the project of an English university at Hongkong seems about to be realized. The minimum sum regarded as necessary, £100,000, has been virtually raised, and the promoters now appeal to the British public to add enough to make the institution worthy of its title. Just at this point, however, a plan is announced for another university in China, under mission auspices. Among the 400,000,000 of Chinese even two universities would hardly be too many, but a supporter of the Hongkong idea is at some pains to point out in the London *Times* the advantages of this scheme. Its location in a British colony, he thinks, will promote continuity of policy, besides assuring exemption from Chinese official interference, especially in the department of medicine. A second point of difference lies in the fact that the proposed Han-kau University adopts Chinese, the Hongkong University, English, as the medium of instruction. But the crucial point, in the opinion of the *Times* correspondent, is the hope of affiliating the Hongkong University with some British university, for the purpose of giving weight to its degrees with the Chinese. This, the writer argues, the degrees of a purely Chinese university could not have, even though its standard was identical with that of Europe, or, he is kind enough to add, America. Both universities have for their main object the developing of a moral discipline strong enough to withstand the prevailing corruption.

DEAR MARIA AND THEODORE.

Mrs. Bellamy Storer's return to her controversy with Mr. Roosevelt in 1906 is marked by the publication in the Springfield *Republican* of fresh documents. Into the subsidiary questions we will not here go. We will not ask whether President Roosevelt's treatment of Mr. and Mrs. Storer was such as his deep personal obligations to them made either generous or honorable. We will say nothing of the propriety of the President of the United States meddling in Vatican politics, and seeking to influence the choice of a Cardinal of the Catholic Church. We wish rather to focus attention upon the comparison of Mr. Roosevelt's deliberate and written assertions with the contemporary and also written evidence supplied by the hitherto unpublished letters of Archbishop Ireland. It is easy to challenge the veracity of a newspaper, it is easy for some men to accuse a woman of untruthfulness, but a Catholic prelate is not to be so lightly disposed of.

In order to make the issue sharp and clear, we shall print what Mr. Roosevelt wrote and what Archbishop Ireland wrote, side by side. Mr. and Mrs. Storer had asserted that President Roosevelt had given Mr. Storer verbal authority to use his good offices at the Vatican in behalf of Archbishop Ireland's elevation to the Cardinalate. Of this President Roosevelt, in his public letter to Secretary Root, December 2, 1906, made the flattest possible denial. The parallel follows:

THEODORE ROOSEVELT.	JOHN IRELAND.
As for Mr. Storer's assertion that I authorized him to make such a statement as he says he was authorized to make to the Pope, it is untrue. I gave him no such authorization.	The President also told me that he had commissioned Mr. Storer to speak for him *viva voce* at the Vatican. He seemed rather proud of having done so. The President said to me: "Mr. Storer has told you what I said to him about you, archbishop?" "Well," I replied, "I do not remember." "About his going to Rome?" the President then asked. I said "No." "Well," he said, "I told him I would not write a letter to the Pope, asking for honors for you; but I said that he could go to Rome and say—*viva voce*—to the Pope, how much I wish you to be cardinal, and how grateful I personally would be to him for giving you that honor." I am most clear in my memory as to every word. . . .

At the time of Mr. Storer's intercession at the Vatican, some wind of the affair got into the dispatches. We subjoin what President Roosevelt wrote and what Archbishop Ireland wrote about that matter:

ROOSEVELT TO MR. STORER.	IRELAND TO MR. STORER.
The mere fact of the report in the newspapers about your calling at the Vatican has had a very unfortunate effect. . . . Think of the effect if your letter were made public.	Your two letters were read and burnt. . . . However, you need have no anxiety whatsoever about the whole affair which was the chief subject matter of those letters. . . . The President had no occasion to feel ruffled in the least, but you know his impulsiveness. When I saw him he of his own accord told me of his writing to you, and asked me how publicity was given to the matter. . . . I said the Scripps-McRae agency had merely made a guess (as to Mr. Storer's coming to Rome), and that the few unfavorable comments that followed amounted really to nothing. . . . He calmed down completely; remarked that he had every confidence in you, and hoped that the outcome of your mission would be what all desired. . . .

To complete this confrontation of witnesses, we add a parallel on another subject. In his letter to Secretary Root, President Roosevelt referred to the expectation of the Storers that he would send them to the Embassy at London or Paris. His own account and the Archbishop's account follow:

ROOSEVELT.	IRELAND.
Sho [Mrs. Storer] wrote me on October 17 suggesting the embassies at London and Paris. . . . There is a certain element of the comic in their attempt thus to get me to remove Mr. Choate or Mr. Porter.	I have had two most pleasant meetings with the President at the White House. He is decidedly your friend, and resolved to give you the best there is. "Even," said he, "if Berlin comes first, and Bellamy wished it for a little while, pending Choate's retention of London, I would give it to him and change him shortly afterward to London. Let him trust me." . . . He promised me that the next ambassador to Paris would be Mr. Storer, and furthermore expressed the belief that Gen. Porter would soon retire.

We merely remark that this is a fearful showing for a man who has recently been so free with his epithets of "liar" and "peculiar baseness" and "mendacious journalism." Any journalist who should be caught in the coils of such peculiarly deadly parallels would feel like hanging himself. He would certainly go out of business—or be put out. And this leads us to ask the immediate and serious attention of the *Outlook* to the plight of its Contributing Editor. It was credulous enough to say that Mr. Roosevelt had never asked for any office, except that of lieutenant-colonel of the Rough Riders. When it reads his pleading letter to Bellamy Storer, written in 1896, asking his help with President McKinley in securing the office of Assistant Secretary of the Navy, it will get needed instruction. But that is a trifle compared with this new and terrible impeachment of Mr. Roosevelt's veracity. Mr. Roosevelt himself declines to have "any further controversy with Mrs. Storer." He speaks of the letters published four years ago as making "a record against which no recollections of verbal conversations can stand." Hence, he says, "the question of veracity cannot be raised." But this is to dodge the issue as now made by Mrs. Storer. She publishes *new* letters by Archbishop Ireland, absolutely confirming what she had before asserted on her own word, and absolutely destructive of Mr. Roosevelt's public statement when he was President. For a man so directly impeached merely to say now that he will not "reopen" the case, is in reality a confession that he is unable to meet the damaging charges.

VOX POPULI.

There is a strain of sadness, almost of bitterness, in the comments of the Chicago "Progressives" on the disappointing results of the recent primaries in that city and in Illinois. Such high-minded men—*pace* the *Inter Ocean*—as the leaders of the Legislative Voters'

League, while keeping within the bounds of respect due to the Sovereign Voice, are unable to keep out of their comment that note of pained surprise with which we greet the imperfect manifestations of the training we have so carefully given to an apparently impressionable child. The issues seemed clear-cut. Other States had spoken with emphasis upon such as were common to them. And yet the Lorimer bi-partisan machine was merely jostled. It is incidents like this that lead to our contradictory estimate and dictum upon the finality of the public judgment. To-day we are ready to subscribe to the motto of Vox Populi Vox Dei. To-morrow, in our wrath, we shall write it Diaboli. While complete analysis and understanding of popular opinion are impossible, they are also unnecessary. The trouble is not so much our inability to comprehend the phenomenon, puzzling as its operations often are, as it is our half-views of it when we are laboring under blinding disappointment and despair over its faulty working.

In the first place, we all recognize that there are matters for the masses and matters for the experts. We know, when we stop to think, that there is a large field of human interest open to us all which only a few really enter into and possess. Art and science are realms which we penetrate in varying degree, and certainly there is no obligation resting upon us to explore completely or not at all. Yet, partly because of the easy humor of it, partly because of the serious need, critics more or less competent make it one of their regular tasks to point anew to popular shortcomings of taste, of knowledge, and of judgment in these matters. They do it, moreover, with an air of half-amused, half-bored hopelessness that suggests and is meant to suggest the worthlessness of popular notions about anything. Now, it is well to insist that art and science must be approached seriously, and that one cannot precipitate himself into the midst of their oceanic vastness. It may also be true that the general opinion, if there is any, in these matters will always be negligible, except as an item in the history of culture. But all this proves absolutely nothing regarding the worth of the public judgment in other fields.

But, however it may be in things intellectual, it is not lack of ability that disheartens one in the public's handling of affairs more suited to it. Its critics do not weep over its native political incapacity; they scold it for its indifference, its tardiness, its careless and criminal stupidity. One day the great beast is afire with a well-directed energy that removes mountains. The next it is sunk in lifeless torpor. It is necessary for the impatient observer to hold fast to two considerations if he would rightly understand the prodigy. One is that the public consciousness is not simply a weighing-machine. It is, on the contrary, a huge personality, an immense bundle of nerves, responsive in varying degree to a multitude of influences, and, in our present state of psychological knowledge, to be prophesied about only with the greatest presumption. It is suspicious of professions of disinterestedness in its behalf, and an enthusiastic worshipper of a long succession of heroes. It is subject to moods, has its political fads and fashions, and is, altogether, anything but a sober, steady, mechanical shopkeeper. Nevertheless, its heart is in the right place, a balance-wheel that controls, with whatever imperfections of adjustment, its short-sightedness, its impulsiveness, and its inertia.

A consideration equally important is that the fallibility of the popular judgment is not utterly condemnatory of it. In our endless seeking for a sign we have, naturally enough, elevated the voice of the people into the place of an oracle. Some one must speak the final word, and how can it be final unless it is correct? Such a test applied generally would destroy confidence in the value of all authority. Our longing for the absolute, essential as it is to progress, must not be allowed to tempt us to depreciate the worth of the relative and the finite that is within our grasp. The voice of the people is neither the voice of God nor the utterance of Belial—it is simply the cry of man. Sometimes it is muffled by weakness, sometimes rendered inarticulate by artificial barriers, raised sometimes in misapprehension and sometimes clearly for wrong. But always it is the cry of imperfect, struggling, divine-human man, and, like him, the most puzzling, the most irritating, and the most hopeful phenomenon on the planet.

COURAGE IN ATTACK.

A current periodical gives a stirring account of the way in which a certain progressive minister succeeded in filling his church by denouncing the criminally rich. It was apparently a good "stroke of business," as business is commonly defined, and from that point of view is not to be criticised. The striking thing about the article is, however, that instead of commending the minister for his shrewdness, the author praises him for his superlative courage. It certainly is not the highest form of courage for a minister to do the thing which everybody knows will fill his church and increase his income, or for an editor to fill his paper with what he thinks the people desire and will pay for.

If some minister, or publicist, or ex-President really wishes to display a high type of courage, he has a splendid opportunity. Let him begin denouncing the criminally poor. There is not the slightest doubt that there are more criminally poor men than criminally rich men. One does not have to go very far to find men who are poor through wasted opportunities, through dissipated energies, through all sorts of irrational and immoral conduct. It is, of course, certain that such a preacher of righteousness as this would be misinterpreted and maliciously misquoted. He would, for example, be charged with saying that poor men are criminals; but it is the common fate of all men of courage to be thus misquoted. Besides, has any one ever hesitated to denounce the criminally rich, even though he was regularly understood to mean that the rich were criminals? Doubtless there are many who hesitate on that account, but, from the nature of the case, we do not hear much about or from them.

If it is too severe a test of courage to ask our preachers of righteousness to talk once in a while to the criminally poor, we certainly can ask them to be a little more specific in their charges. The socialist goes so far as to assert that all private property in the means of production is wrong, and all wealth derived from these sources is criminal wealth. He, at least, has the merit of being definite in his statements, though not so rational as might be desired. The single taxer is even more definite, and considerably less irrational, when he points out that private property in land is wrong and that wealth derived from

that source is criminal wealth. It does take a certain amount of courage to make either of these definite attacks, because they hit real individuals.

Every one, in a general way, disapproves of the criminally rich, because no one believes himself to belong to that class. But when you assert that every receiver of ground rent belongs to that class, you are certain to hit a considerable number of real individuals, and they are certain to hit back. You may be wrong in making such an assertion and deserve all the pummelling you will get, but you will at least have shown some genuine courage. Or you may be making a great fool of yourself, as the socialist certainly does, but you will have the satisfaction of having hit somebody, though this satisfaction is lessened by the fact that those whom you hit will not take you very seriously. It would serve a much better purpose if our preachers of righteousness, instead of indulging in general attacks upon a class which has no self-conscious existence, would point out to us with some degree of particularity just what methods of acquiring wealth are moral and what are immoral or criminal. Then every man would know just where he stands, and whether he is in the possession of criminal wealth or not. Incidentally, this searching of hearts would give a new impetus to the study of economics, an impetus which is much needed, both within and without socialistic circles.

"DOMESTIC" ARCHITECTURE.

We readily admit that a man should be the architect of his own fortune; but that he should also be the architect of the house which is the external sign or symbol of that fortune, will bear debating. There are no laws save those of intelligence and honesty governing the making of one's way in the world. In architecture, as in all the arts, it is different. Here is a field of activity and expression which is governed by an elaborate system of special laws inherent in the very nature of the materials employed, and imposing themselves despotically upon the individual. In short, the very qualities that make one a good business man or financier, tend to make him a bad architect. Yet there seems to be something in the blood of the average American which convinces him that he is a born builder. The Athenian cobbler in the days of Socrates had no deeper conviction of his aptitude for the affairs of government.

The results of this attitude toward the business of house-building everywhere confront us. Our cities and country districts are crowded with houses and villas that reflect, in endless and bizarre confusion, the capricious ignorance and fantastic bad taste of their owners. Something of all this must, it is true, be attributed to the professional architects who mingle styles or invent manners of their own, in the excessive search for originality. One has, however, but to reflect upon the position held by the average architect in this country, to realize how little, after all, his responsibility amounts to, compared with that of his employer. For the former is, too often, a mere instrument in the hands of the latter. Who does not recall Silas Lapham and the miserable life he leads the young architect he employs to build his Beacon Street house? Unfortunately, we have not yet passed the Silas Lapham stage in our civilization. The architect must still consent to see his carefully constructed plans ruthlessly changed to allow for the excrescence of a porte cochère or a sleeping balcony that was not originally considered in the scheme, and that must now be added without reference to their fitness. What we want is a house for comfort, not for looks; and the American householder feels a certain glow of satisfaction whenever he can air this ancient axiom of his ineptitude.

Artist though he be, and a Beaux-Arts man into the bargain, the architect must bow to the business exigencies of his situation. His lot is hard, and the alternative with which he is confronted is humiliating to his self-respect. Either he must reject a commission when he finds that his ideas do not coincide with those of his prospective employer, or he must consent to violate the dictates of his artistic conscience. Nor does the evil end here. For if, in pursuing the latter course, he could conceal his identity, and consider his job purely in the light of a piece of hack-work, it would not be so bad. But this he cannot do. The writer may publish his novel under another name, and the painter may refuse to sign his picture. But the architect works in complete publicity, and is known by the building which he erects and which, rightly or wrongly, is taken as the expression of his personal taste. Thus a bad house or two built under duress may seriously compromise his artistic career. The minority of wealthy patrons with sound taste will pass him by. Nor can he expect his employer to shoulder the responsibility. As soon as he has discovered the extent of his own mistake, he will blame everything upon the architect with a perfectly easy conscience, since he will have paid that functionary, and, therefore, remains under no more obligation to him than to the stone-mason or the carpenter.

On the other hand, let the house be the architect's own conception in every detail, let it be successful and admired; then the proud owner will modestly admit that So-and-So is a clever young chap, who was able to supervise the work with considerable taste and intelligence, but that, of course, the whole idea of the thing was his own. On a par with this is the ordinary method of choosing an architect. One always selects his clergyman, his doctor, his banker, on the basis of recognized ability. He does not have his appendix removed by X because he was a classmate, or deposit his funds with Y because they live in the same street. But this is precisely the order of reasons that determine many in their choice of some one to build the house in which they are to live. It is some consolation to reflect that such arrangements not infrequently break friendships.

It is no wonder, in view of the existing situation, that so much of the domestic architecture in this country, however well adapted to domestic convenience, is, from an artistic point of view, beneath contempt; and that many a small city, pretty hill-town, or seaside resort is ruined as an abode of taste. To put the responsibility for this state of affairs squarely upon the individual is impossible. "What," cries the successful business man, "shall I not be allowed to build the kind of house I like, since I made the money to build it with, and since I own the land on which it is to stand? Besides, you are mistaken. I have employed the best architect in the country—a fine fellow, I knew him at college—to carry out my ideas." My ideas! Perhaps you have happened to see him reconstructing the blue-prints with a pencil, or, surrounded by his whole family, engaged in lay-

ing out the plan of each floor on the lawn with tennis tapes, so as to determine whether the kitchen will coördinate with the dining-room through the butler's pantry, or whether Mary Jane's bathroom will be large enough to accommodate a six-foot tub. If not, in either case merely bulge out the tape to indicate a bay-window, or an ell, or move a partition, obliterating a window, and you will have solved the problem. But if the individual is not to be reached, public opinion has not yet arrived at a point where it can impose restrictions and assume authority to pass upon all plans before the builders are permitted to proceed. Perhaps in democratic America we shall never come to it, and shall have to wait until each individual is imbued with a sense of his own responsibility, and until a little diffidence and a dawning self-criticism begin to undermine the foundations of his shallow self-complacency. There are signs here and there that a humbler state of mind is slowly gaining ground. So many who built in the transition stage of their rise are obliged to live sadly, forever after, in the shadow of their magnificent failures or sordid little mistakes, that the country, as a whole, has benefited somewhat by their shame and penitence. Still, it will doubtless be long before any profound impression is made upon the boundless optimism of those who are ready to build in haste and repent at leisure.

LITERATURE AND THE WEEK-END.

The continued existence of readers who "prefer the real and living work of the great writers to the literature that perisheth" may well challenge our respectful attention. They have been discovered by a lucky Englishman who tells about them in the September *Book Monthly*. One is hardly taken by surprise to hear that among them are not many wise, not many learned, not many counted great in this world, but rather men and women who, deprived by the exacting daily routine of their work of the energy to read in the evening, "build themselves in literature a shadowy isle of bliss" in the week-end gap between toil and toil. The serious aspect of the discovery is one that concerns publishers rather than the rest of us, but perhaps we may be pardoned for suggesting some considerations that may possibly be of assistance to our over-worked literary speculators, and that, at least, can do no harm.

In the first place, we do not feel at all sure that our own week-end readers are of the class identified abroad. Indeed, we are quite certain that they are not. American publishers, therefore, have a totally different problem before them from the one that confronts their British brethren. All that the latter need do is to ascertain the best-sellers upon which the copyright has expired and which are now issued in expensive library sets for purposes merely of decoration or presentation, and put them into cheap form. But for American week-enders this would not do at all. However it may be in the outworn system of education still admired in the old country, over here we finish with the classics and governesses and marbles and short dresses together. As we become men and women, we demand the hereditary right of reading what is suited to men and women instead of what a hundred preceding generations have thought was suited. And in this spirit of independence, none, we are sure, are more firmly set than our week-enders.

The most valuable hint which we can give our American publishers in reference to reaching this unconventional class of readers, now for the first time in the entire history of literature distinctly marked off and analyzed, is to consider the nature of the week-end itself. Tell me how you spend your week-end, and I will tell you what you are, is as true as if it had been solemnly uttered by some ancient sage to his wondering disciples. It is when one is at play that he reveals his real self. His work may or may not be of his choosing; his play is his own. Now, the American week-ender has never shown any marked predilection for spending his bit of leisure seriously. What he seems to want is simply some way of keeping his mind too busy to think. And while he may use his brief holidays in rushing over the roads in a motor-car or through the water in a motor-boat or in the excesses of a house-party in what his host calls the country, still we think that he will not fail to warm up to reading of the right kind. Just what that is, we cannot presume to say. We can, however, as we gladly do, give the opinion of what we take to be an authority in matters of this nature. We quote from the advertisement of one of our literary publications which we judge to be especially adapted to satisfy the literary cravings of the typical week-ender: "Every month we must find from fifteen to twenty of the greatest stories written. For any masterpiece in fiction we will outbid all others. We want thrilling stories. We want heart-touching stories. We want adventure stories. Every month we must fill 192 pages with such masterly stories and pictures." A few magazines like this, a package of books on the same order, and, we dare to believe, all but our most voracious book-devourers might be fairly satisfied once every seven days.

At the same time one's mind reverts to those other week-end readers in their prosaic English cottages. For them the breathing-space means no change of scene, no relief from the grinding restrictions of their humble lot. The whole extent of their recreation is a walk through highly-cultivated fields and a pilgrimage through the familiar pages of some thick volume. Here they lose themselves and the consciousness of their lowly condition in the gorgeous pageantry of the Elizabethan revels at Kenilworth, the varied doings at Castlewood, the curious mysteries of the Interpreter's House, the quaint simplicity of Wakefield, the stirring words of Latimer at Oxford, the capricious occurrences in the wood of Arden or in that near Athens, the assembly, one memorable night, in the Tabard, or, finally, in that last, tense moment on the swollen Floss. How poor they are! What is a week-end to them? And yet it was just for them that Stratford gave her greatest, that Caxton cut his magic wand, that Avon made quiet music, and Camelot and Colchis and Mandalay were built in the near or the long ago. Let them have their harmless outings in these out-of-the-way paths. Few will disturb them in their enjoyment of what may easily come to be, to their untravelled experience, the richest portion of the great world.

ITALIAN FICTION AND OTHER BOOKS.

Florence, September 16.

Few recent Italian novels have been so much discussed as Enrico Corradini's "La Patria lontana" (Milan: Treves). It is unquestionably a remarkable book; but the interest it has aroused is perhaps more due to its political ideas than to its qualities as a work of fiction. The

leading note is Italian nationalism, and the book appears at a moment when nationalism in Italy is in everybody's thoughts, and when a reaction against the socialistic and international cosmopolitanism of the past few years is in full swing. The story is of Pietro Buondelmonti, a young Italian writer of strong nationalist views, who after failing to convert the Italian crowds from socialism goes to Brazil to keep alive the feelings of Italian patriotism among the emigrants. Interwoven with the account of his propaganda is the story of a love intrigue neither very elevating nor very interesting. Most of the characters, however, are well drawn, and the Brazilian *milieu* and the tropical atmosphere are admirably suggested. We should have preferred a more detailed picture of the life of the Italian emigrant in Brazil. We have, to be sure, occasional glimpses of it, vivid and genuine, and Signor Corradini has published some good newspaper articles on the subject; but he has missed his opportunity of presenting a finished picture. An interesting episode is the conversion of Giacomo Rummo, an Italian socialist journalist, of bourgeois origin, as indeed are nearly all the socialist leaders in Italy, who has been imbued with a theoretical but genuine enthusiasm for what he believes to be the elevation of the working classes, but is really nothing more than a propaganda of class hatred and social violence. He hates and despises Buondelmonti for his principles, but when he finds his adversary lying at death's door, wounded by the husband of the woman he (Buondelmonti) loves, he becomes his devoted nurse, and the patient's influence, as he gradually recovers, wins over the ardent demagogue. The story ends with the declaration of war between Italy and a neighboring empire, and the enlisting of volunteers among the Italian emigrants, including Rummo, to go and fight the enemy. The book is by no means without faults, especially as regards technique; but it breathes throughout a sense of strong patriotism. The style is curious, almost Biblical at times, at others rough and unpolished, but always simple and direct.

With Italy's immense variety of local types, dialects, and customs, one would expect the provincial novel to flourish, and several authors have indeed won fame by describing scenes and characters of some particular district. Of these Grazia Deledda is one of the best known, and she now brings forth a new tale of Sardinian life, "Il nostro Padrone" (Milan: Treves). The story is not cheerful; it tells of two ill-assorted couples in the little town of Nuoro, in one of which the husband is a time-expired convict who had been condemned for murdering a brutal stepfather, and has become a religious mystic, and the wife is a pretty, light-hearted girl, much his junior, whom he had been driven to marry by her virago mother. She had early fallen in love with Bruno, the Tuscan woodman, who had married Marielene, the discarded mistress of a rich lumber merchant, because she had money. The affection remains purely Platonic, and ends with the death of Bruno. The idea of the book is that everything depends on Providence (*Il nostro Padrone* is the Deity), and that, whatever we may do or wish to do, we are in his hands to be fashioned as he wills. But by adopting this theory the author feels entitled to disregard the necessity for any logical sequence of events, and the story drags on, the incidents succeeding each other without any obvious connection. Everything is gloomy and uncomfortable, and we see nothing of the usually attractive and joyous side of Sardinian life. On the whole, it is a dull book, and were it not for the picturesque scenery which is described with feeling, and the *milieu* which to most readers is novel, we doubt if it would achieve much success.

Very different and far superior is Luigi Siciliani's Calabrian story "Giovanni Francica" (Milan: Quintieri), a wonderfully vivid picture of life in that interesting country. There is no plot at all, but we really live among the people in a small Calabrian town, where we see and feel the traditions of an age-long civilization, side by side with more recent developments and the fermenting of new ideas among a primitive but highly gifted people. The author does not spare his compatriots; he displays their faults and weaknesses, their ignorance, imperfect moral sense and irresponsibility, and their lack of public spirit; but he also shows how these defects are due to centuries of misgovernment, above all to the Spanish-Bourbon domination, and he believes that the many sterling qualities of the people will come to the surface again under improved conditions. Incidentally, we see the demoralizing effects of emigration among the rural classes, in the weakening of family ties and domestic affections, which has been so striking a characteristic of South Italian society. The hero, who is the author's mouthpiece on the problem of regenerating southern Italy, is a student and a practical man at the same time, and, while awake to the difficulties of his task, is filled with an inborn love for his native province and a determination to devote his life to its regeneration. The local types are all cleverly drawn—the semi-feudal magnates, the small proprietors, the ladies with their old-fashioned views and scanty education, but admirable domestic qualities, the officials, the politicians, the peasantry. It is a book that any one who wishes to know something of life in Calabria should read, but it is marred by a certain want of taste, and several incidents of a very unsavory character might well have been omitted.

Another "provincial" novel is Virginia Guicciardi Fieschi's "Da opposte rive" (Modena: Formiggini), which takes us to central Italy, and more particularly to the province of Reggio, where the struggle between Socialism and Clericalism, or rather Christian Democracy, is the predominant note. The tone of the book is not polemical, but conciliatory, and both socialists and Catholics are exhibited in the best light. The manners and customs, scenery, and religious processions of the country are described, as well as the socialist meetings and the work of the various political organizations.

A new novelist of whom more will, I believe, be heard is Paola Stafenda. Her first attempt, "La diritta via" (Milan: Baldini & Castoldi), is a story of fashionable life in Florence, interwoven with discussions of the social question and with psychological problems. A young woman brought up among aristocratic surroundings, but of thoroughly sound feelings, Grazia Frascara, falls in love with a clever and honest, but insolent, young Southerner, who cannot find the energy to put his talents to good use, and who, although not indifferent to her, does not propose, because he does not think himself rich enough. Many others desire to marry Grazia, but she ends by bestowing her affections on the blind socialist, Giorgio Amedei, out of pity for his affliction, rather than love. He is poor and in wretched health, and although Grazia is not wholly in sympathy with his views and his circle, she adapts herself to the situation and makes his last hours happy. After his death, she retires to Fiesole, where she turns her villa into a convalescent home for the poor. There her former admirer, no longer indolent, but plunged in the vortex of local politics, comes and proposes to her; but it is too late, and Grazia refuses him, although there is a suggestion that later she may change her mind. The style is not polished and will not commend itself to purists, especially on account of the large number of foreign expressions. But Paola Stafenda's merit is her great simplicity and unaffectedness and the general tone of straightforward honesty which pervades her story.

Among new books of general literature Mario Borsa's "Il giornalismo inglese" (Milan: Treves) will prove of interest to many readers besides journalists. The author, who for twelve years has been the London correspondent of the Milan *Secolo*, gives a lucid account of the British press in all its aspects. We see how a London daily is made up, who are its makers, how its news is obtained, and what its character is. The author dwells at some length on the great importance which English editors attach to mate-

rial accuracy and to the proper arrangement of the various items of their papers, and his tribute to the obscure, anonymous sub-editor is certainly well deserved. He is much impressed with the gentlemanly tone of most of the English papers and the courtesy and good feeling which exists among journalists, even if of opposing parties. The weekly, provincial, and colonial press are also described, and the book deals with many other matters besides journalism, expanding at times into a general essay on English manners and customs, both social and political; Signor Borsa is almost invariably accurate, readable, and not without a keen sense of humor

Another journalistic essay is Vico Mantegazza's "Agli Stati Uniti" (Milan: Treves), a volume of impressions of America. It is a collection of somewhat disconnected articles, of hardly more than ephemeral value, on such subjects as the wealth and lavishness of the upper classes, the railway system, the administration of justice, Imperialism, the South, the agricultural possibilities of Texas, etc. L. V.

REFORM AT OXFORD.

London, September 17.

Whatever the faults of the University of Oxford, no one can justly accuse her of stagnation. You may say that her zeal has sometimes been reactionary, as in the case of the ecclesiastical revival known especially as "the Oxford movement," but if she has moved backward, at any rate she has moved. And in the main her tendency has been progressive.

Just now another reforming agitation is coming to a head. One of the chief agitators is the chancellor of the university, Lord Curzon of Kedleston. His predecessors in that office were little more than figureheads. They represented the university with dignity on state occasions, and were content to leave the administrative side of academic affairs to the men on the spot. But the present chancellor is what Mr. Barrie would call a "magerful" person. On laying down the responsibility of governing nearly 300,000,000 of his Majesty's subjects in the East, he found a new field for his active spirit in his election to the Oxford chancellorship. No doubt many Tory members of convocation preferred him to Lord Rosebery through supposing that, as a Conservative in politics, he would do nothing to interfere with the *status quo*. By this time they must have found out their mistake.

About sixteen months ago the new chancellor issued, under the title of "Principles and Methods of University Reform," a memorandum which proposed several sweeping changes. His proposals have since undergone a thorough investigation by the Hebdomadal Council, the supreme governing body of the university, which has now published its own recommendations in a volume of a hundred pages. An introduction by Lord Curzon commends it to the other administrative bodies of Oxford as "a positive and coherent plan of action" representing "a conscientious attempt to satisfy the principal existing needs of the university." It will depend on the reception given to this scheme, whether the next stage in reform will be completed by the spontaneous action of Oxford herself, or whether the outside pressure of a royal commission will once more be needed.

The main object of the recent proposals is to accelerate the liberalizing process which has made such a notable advance during the last half-century. One necessary means to this end is the modification of the present administrative machinery. In certain notorious instances a crowd of country parsons and country squires, entirely out of touch with modern educational conditions, has outvoted in convocation the men whose daily experience of work at Oxford has made them alive to the need of readjustments. There is now proposed a reconstitution of the governing bodies of the university which will increase the power of the actual teaching staff, and will secure that, in the case of its practically unanimous concurrence in favor of any new statute, the mass of Oxford men who have long since "gone down" shall have no authority to interfere.

Of more general interest is the desire of the reformers to widen the constituency from which Oxford draws her students. In one sense Oxford and Cambridge are the most democratic institutions in England. There are no places in the world,—not even Kansas or Nebraska—where distinctions of rank and wealth count for less. In the miscellaneous comment on the establishment of the Rhodes scholarships there was nothing more amusing than the fear expressed in some quarters lest the "aristocratic spirit" of Oxford should corrupt the democracy of young Americans. Alike in the lecture-room, in the examination "schools," at the Union, on the river, and in the social life of his college, an undergraduate is measured according to his own qualities, whether he be "duke's son" or "cook's son." One of the charms of Oxford is the free intermingling of men of a great variety of antecedents, to say nothing of "race, color, and previous condition of servitude." At the same time there is an inevitable limitation.

Estimates vary greatly as to the cost of a university course, for one man's necessity is another man's luxury. But no one, however skilled in the art of doing without, would be well advised to enter Oxford unless he can afford to spend at least $300 a year if he is a non-collegiate student, or twice that sum if he lives in college. Scholarships and exhibitions open the way for a considerable number of impecunious lads of ability, especially among the sons of ill-paid professional men. But the door is shut against boys of the same type who are below the scholarship standard, and also against boys from the working classes, except the fortunate few whom County Council scholarships have kept at school until they have reached the academic age. On this difficult question of financial adjustment the Council has not yet given a clear lead. It has done well to reject Lord Curzon's plan for the establishment of a special Working Men's College, or College for Poor Men. Such an institution might be a college in Oxford, but it would not be an Oxford college. Another suggestion is that the present minimum cost of living in college might be reduced if the financial independence of the colleges were limited by the control of a board representing the entire university. This, however, would mean such a constitutional revolution that it scarcely deserves present consideration.

The situation in this respect would be eased if another proposal of the reforms were adopted, and a larger proportion of scholarships were allotted to non-classical subjects. This would give a better chance to clever boys from the less expensive schools of the more modern type. Closely associated with this is a proposal which is one of the most remarkable of all, as coming from a body like the Hebdomadal Council; namely, that Greek shall be made an optional instead of a compulsory subject at "Responsions." Any intelligent discussion of the pros and cons of so startling a change would require so much space that one must content oneself with a bare mention of its inclusion in the new scheme. Something is said, too, of the institution of a special commercial curriculum, with the object of attracting young men who are intended for a business career.

On the whole, the scheme of the Council has evidently been drafted with a singular freedom from narrowness and prejudice. Even a Royal Commission could hardly deal with the problem in a more public-spirited temper. While these proposals are under advisement, there are certain considerations which some friends of Oxford, not by any means obscurantists, will wish to emphasize. In the first place, no centralizing process must be permitted, however laudable its object, which will impair the vitality of the college system. The value of the present system of government at the older English universities—comparable, as is well known, to the combination of Federal and State government in America—is perhaps most highly appreciated by those who, know-

ing Oxford or Cambridge, have had experience of the working of other systems elsewhere. Further, nothing must be done that will seriously alter the character of the contribution Oxford has traditionally made to the national life. To regard a university as a shop for the sale of universal knowledge, is bad educational science as well as bad etymology.

The application to Oxford of the department-store theory of the functions of a university would nowadays be the less excusable, inasmuch as the institution of the newer English universities has made admirable provision for both training and research in technical subjects. It would be the height of folly for Oxford to attempt to rob Leeds of its students of leather industries or Birmingham of its students of the chemistry of brewing. One may doubt even whether in an attempt to prepare directly for the daily tasks of the "city man" she will quite be turning her resources and opportunities to the most profitable account. In her eagerness to disclaim Matthew Arnold's description as the "home of lost causes and forsaken beliefs," Oxford must beware lest she forfeit her title to the boast that she has never given herself to the Philistines. "Steeped in sentiment" she may still lie, and yet continue to mould, as she has done for generations, the minds and characters of the men on whom England has depended for leadership in affairs of church and state alike.

At this moment, many of the most influential men in both Houses of Parliament, in the permanent civil service both at home and in India, and in journalism, are men who bear the stamp of Oxford, and especially of the training they received in her honors course of Litteræ Humaniores—a course that is by no means confined to the interpretation of classical texts, but includes fruitful studies in history, philosophy, and literature.

The familiar statement that Oxford trains the governing classes of England is sometimes misunderstood to mean simply that she controls the adolescent years of the scions of the big houses. It really means far more. Among her alumni are not only the Cecils, the Greys, the Curzons, and the Brodricks, but the Morleys, the Bryces, the Asquiths, the Milners—men who "come up" from undistinguished homes and unfashionable schools and are fitted by her discipline to play a great part on a larger stage.

The "scrapping" of the old apparatus is not without peril when the possible surrender of such a treasure as the traditional Oxford *ethos* is involved. The new lamps may tempt the eye with the brighter sheen of their metal, but some of the old lamps have not yet been excelled for the steadiness and clearness of their flame. H. W. H.

Correspondence.

MR. ROOSEVELT AND SWEET REASONABLENESS.

To the Editor of The Nation:

Sir: I wish to call your attention to what appears to me to be the unfortunate spirit which the *Nation* has recently displayed in dealing with certain speeches of Mr. Roosevelt, notably in an editorial last week, entitled "Whither is Roosevelt Drifting?" There are many men in this country upon whom the spectacle presented by our present social and economic conditions has produced and continues to produce a profound impression. This country is in name, at least, a democracy "dedicated" in Lincoln's phrase to the belief that all men are created free and equal. What such institutions mean has been beautifully expressed by Mr. Lowes Dickinson in his "Justice and Liberty." Human institutions, he says, make or mar the fate of man:

> For they are the channels to carry the sacred fire when it springs, to foster or smother, to husband or to waste it, to lead it to a million exits, lambent and bright and gay, or to choke and obstruct it, or let it idly escape, to waste its heat and light where none can profit. And human institutions, all through history, have thwarted rather than aided the conjuncture of genius with chance. From the beginning the mass of men have shared the fate of brutes. They have been slaves and serfs, as now they are wage-laborers. Whatever fire may have slept in their souls, it has found no channel of hope, of opportunity or of ambition, to guide it to the place where it may serve. Not only the caprice of nature, but also the stupidity or iniquity of man has intercepted the currents, the shock of whose meeting is an idea. From before the dawn of history the faculties of the human race have been stunted and thwarted and repressed by the customs and laws under which they have lived. That heavenly visitant, the "chance," has knocked in vain at gates bolted and barred by poverty, servility, and fear. Human institutions have sealed the reservoir of the human spirit. Only here and there a jet escaping from an unguarded aperture has hinted at the huge force impotently pent within.

Whether or not the ideal of such a democracy has any chance to be realized or is a mere vision to be regarded as beautiful but hopelessly impossible, depends upon what our attitude of mind toward that ideal is or can be made to be. If no appreciable body of men care for such an ideal, or can in the future be made to care for it, it cannot be realized. Whatever is done or said or written to make men desire it with all their hearts and with all their souls helps by so much to bring it about. No one who contemplates the grinding toil, which amounts to virtual slavery, of the millions of our wage-earners to-day, and sees how utterly our institutions have failed to realize this ideal, can doubt that there is no work comparable in importance to the work of changing all this. To make this change, it is quite as important that the "ancestral blindness" of the so-called upper classes should be lifted from their eyes as that the so-called lower classes should be restrained from employing hasty and ill-considered and disastrous panaceas. If half the people in this country who have more wealth than is good for them could be induced to believe, heart and soul, in the worth of our ideal democracy, what practical results toward that end could we not reach? The problem is how to make them see it. It is the rich who need conversion quite as much as the poor.

Now I find fault with your article because it is more concerned with showing inconsistencies in Mr. Roosevelt's previous statements (an easy but a useless feat, for, thank Heaven, we all grow) than with a serious and broad-minded discussion of the vast extension of governmental functions which Mr. Roosevelt says he thinks is necessary. It is not a very impressive argument, it seems to me, to say that the "average American" would pooh pooh Mr. Roosevelt's notions if presented in the abstract, even if such an argument were now true or likely to remain true, which may well be doubted. May not the fact that Mr. Roosevelt's hold on the "people" is so strong, be itself significant to prove that the Rooseveltian views are really and vitally and not apparently entertained by the "average American"? Perhaps—who knows?—it may be the *Zeitgeist* again at work quite as much on the "average American" as upon Mr. Roosevelt himself. And if that is so, would it not be more—let me say, effective, if your editorials should proceed to explain by some method more nearly approaching sweet and convincing reasonableness why Mr. Roosevelt's proposals to broaden the functions of the central government and so to approach the ideal which we all cherish are so preposterous and likely to do such "immeasurable mischief"?

The attitude which I criticise is well described by Mr. Lowes Dickinson's professor, when he says:

> Well, it seems to me—I don't know whether I exaggerate—that all the possessing classes, financiers, capitalists, manufacturers, lawyers, professional men, in political issues are singularly uninstructed and unimaginative; that they are as blind to the great equity as they are tenacious of the little, as unintelligent of the whole movement and onward sweep of society as they are intelligent of those little ripples on its surface, wars and crises, out of which they make their gains and losses. And seeing, in that immense phenomenon called Socialism, which is as much the essence of our age as Liberalism was of the last, nothing but the greed of the poor, the folly of sentimentalists, or the wickedness of adventurers; camping on their possession, like Fafner on the hoard, in reliance on that enchanted ring, established law and fact; they may indeed, by sheer obstruction, provoke a revolution, in the sense of disturbance, disaster, and ruin for them and for all society.

I am not a Socialist. I do not approve altogether of Mr. Roosevelt's views. I do not think he lays enough stress upon the necessity that men should make themselves honest rather than that they should be prevented by law from being dishonest. And many of his remarks about the wealthy can hardly be thought to show a sweet reasonableness. But these are his personal limitations. It is because I think he is a practical man who sees the cruel muddle of a society in which so many of us are hopelessly wallowing, and cares about it, that I admire him. I gravely doubt the wisdom of trying at the present time to realize by the extension of Federal powers the ideal of the Osawatomie speech—sound as that ideal certainly is. But its impossibility of attainment is quite as much due to the narrow and unfair attitude of mind in which many men who could give powerful aid approach this whole subject, as to any other cause. That attitude of mind, it seems to me, is just exactly what your

editorial article is adapted to foster, and it is because I hate to see it spread, especially through your agency, that I regret the tone of your article.

FRANKLIN T. HAMMOND.

Boston, September 19.

THE RIGHT TO PROPERTY.

TO THE EDITOR OF THE NATION:

SIR: In your issue of September 15 you speak of permitting people to gain money only so long as the gaining is a benefit to the community, and to retain it only if honorably obtained and well used, as moonshine. You infer that nine out of ten Americans do not believe in such a limitation to the acquisition and retention of wealth. Is it not possible that the mad rush for money is the cause of our national unrest? What will our country come to unless a halt is called? Where can we get a better principle to govern our gains than that which you censure?

H. C. CALDWELL.

Ridgeland, Wis., September 17.

IDIOM VS. GRAMMAR.

TO THE EDITOR OF THE NATION:

SIR: M. Ferdinand Brunot of the University of Paris, in his comprehensive "Histoire de la Langue Française," gives an interesting history of *c'est moi* and similar locutions (Vol. II, 154), which, up to the publication of Ramus's grammar in 1572, were condemned by the grammarians. Ramus himself in the first edition (1562) was content to follow tradition. Of this work Brunot remarks:

C'est ainsi que Ramus condamne, après Meigret [1550], les tours *c'est moi, c'est nous*, pour *ce suis-je, ce sommes nous*.

In commenting on the edition of this grammar issued ten years later Brunot remarks:

Parmi les secondes [corrections notables], on peut remarquer un changement complet de doctrine au sujet des tours *c'est moi, c'est toi*, que Ramus, entraîné d'abord par Meigret, avait commencé par condamner.

It is interesting to note the ground on which Ramus justifies his change of doctrine:

Selon le jugement de Platon, Aristote, Varron, Ciceron, le peuple est souverain seigneur de sa langue. . . . Lescolle de ceeste doctrine n'est point es auditoires des professeurs Hebreus, Grecs et Latins en luniversité de Paris comment pensent ces beaux etymologiseurs, elle est au Louvre, au Palais, aux Halles, en Greue, à la place Maubert.

And he adds:

Et si quelque grammarien vouloit despouiller nostre langue de tels ornemens, *Est-ce moy? Est-ce toy? C'est moy, C'est toy*, ce seroit comme desgainer lespee luy tout seul à l'encontre de toute la France.

"The allusion to the master whom he abandons," says Brunot, "is evident."

An exact parallel to the history of this change of construction in French is seen also in Danish. Professor Jespersen ("Progress in Language") says:

But even where there is no inducement of that kind to use *me*, this form will occur after *it is* by the same linguistic process that has led in Danish to the exclusive use of *det er mig*, where some centuries ago the regular expression would have been *det er jeg*.

That a similar change is now taking place in our own language must be evident to all who read with an observant eye. Professor Sweet of Oxford, an acknowledged authority, says in his "Primer of Spoken English," representing the speech of the educated class of London and around:

The nominative *I* is only used in immediate agreement with a verb; when used absolutely *me* is substituted for it by the formal analogy of *he, we, she*, which are used absolutely as well as independently: *it's he, it's me; who's there? me.*

It may be said in passing that in a later work ("New English Grammar") he explains the objective forms as due to position after the verb. "It is only the influence of ignorant grammarians," he says, "that prevents such phrases as *It is me* from being acknowledged in the grammars." Alford ("Queen's English," 1889) says:

It is me is an expression which every one uses. Grammarians (of the smaller order) protest; schoolmasters (of the lower kind) prohibit and chastise; but English men, women, and children go on saying it.

Grammarians of the higher type simply record the usage—which is all the grammarian can do—as a fact of language: "Objective forms used as [predicate] nominatives" is Maetzner's way of putting it.

That this usage is extending among cultivated speakers and writers is plainly evident. President Roosevelt, in his Asheville, N. C., speech (see Smith's "Studies in English Syntax"), said: "The government is us, you and I; we are the government." Now imagine the Colonel of the Rough Riders saying "the government is we"! It is too weak, even for the man who is not like Frederick the Great *supra grammaticam*. So, too, Dr. Lyman Abbott, who is not a rough rider, writes in the *Outlook* (April 30): "She looked out through the eyes, but the eyes were not her; she spoke through the lips, but the lips were not her." Translated into "grammatical" English, it would read: "She looked out through the eyes, but the eyes were not she; she spoke through the lips, but the lips were not she." It is presumed Dr. Abbott knew what he was doing when he wrote what he did.

Some months ago I published in the *Nation* (February 24) a brief defence of the harmless idiom (*it's me*), citing examples of its use from Emerson, Tennyson, Browning, Shelley, Byron, and Thackeray. Newspaper critics, far and wide, took up the cudgel. One critic maintained that Emerson in the line,

So like the soul of me! What if 'twere me?

and Shelley in the line,

Be thou, spirit fierce, my spirit! Be thou *me*, impetuous one!

were simply guilty of a solecism, of a violation of the laws of language. He failed to say who makes the laws of language. The prevailing idea seemed to be that our speech came down from heaven, amid the thunders of Sinai, as it were, ready-made, a fixed and perfect form, and that it behooved all good men to guard its purity. Another critic saw in it an ethical question and feared that a schoolboy who began by breaking the rules of the diagram might go on from bad to worse and end by committing the crime of whistling in the presence of an elderly gentleman or keeping his seat when a lady entered the room. In general, the protests reminded me of a "Protest against Darwinism" I read more than a quarter of a century ago, beginning thus: "The Bible says, as everybody knows, and as Mr. Darwin ought to know, that——" In short, the diagrammarian's attitude of mind towards the facts of language is that of the theologian rather than that of the scientist, who believes with Josh Billings that it isn't ignorance that does the most harm; it's knowing so much that isn't so.

In a recent number of the *Nation* (April 7) the writer of an article entitled "Confessions of a Professor" remarks:

Readers in university communities, East and West, will find themselves testifying to his representativeness by exclaiming, "That's our college through and through," "That's I" or "me," according to their grammatical faith.

Now it is certain no Englishman of the educated class would say, "That's I." There is here, however, a class of people to whom the school grammar is authority, in whose eyes "That's me" is a diagrammatical sin, the class of the half-educated who with an air of superiority say of-ten, a-pron, i-ron, fore-head, heav-en, pret-ty, and invariably give the dev-il more than his due.

Usually, *it is I, it is she*, etc., are by all odds preferable, and to know when to use the one form and when the other is a mark of a high degree of literary culture. A living language is all the time undergoing change, and the makers of usage are not the makers of text-books. This is the lesson of philology, well known to all whose opinions count in matters linguistic. It is as true to-day as when Montaigne wrote it: "Those that will combat use and custom by the strict rules of grammar do but jest."

EDWARD A. ALLEN.

Columbia, Mo., September 20.

POETICAL PHYSIOGNOMY.

TO THE EDITOR OF THE NATION:

SIR: In a recently published essay Prof. William C. Wilkinson takes the poets to task for neglecting the human nose.

The poet has ever been ready to sing the praises of his loved one's eyes; he has not been overmodest in his efforts to describe the glory of her silken tresses; he has dwelt lovingly on her ruby lips, and he has put forth his best efforts in glorifying her swanlike neck. He has even paid tribute to her feet that, like little mice, peep in and out beneath her petticoat; and has not overlooked her ear; but he has, according to Professor Wilkinson overlooked her nose.

Nor has the poet, the essayist assures us, been negligent concerning the maiden's nose alone. He has ignored the manly proboscis, also. Why is this? Professor Wilkinson attempts to explain why the nose ought to figure in poetry. In his touching tribute to the nose he says:

Sweet scents are as poetical as sweet sights or sweet sounds. Fragrance is as much at home with the poet, as is music, or the beauty of the eye. The nose is as good a mark as any feature on the face of high blood. The nose, in fact, is the very elect feature of all for the expression of aristocratic emotions. Do we not turn up our noses, pray, when we wish to gesticulate our disdain? The nose is as supercilious as the eyebrows, for all that we derive our adjective "supercilious" from the proud Roman name for that latter feature.

We shall not attempt here to build up

BURLINGAME PUBLIC LIB.

a defence for the poet, but we insist that the case, generally speaking, is not as bad as it has been made out. The manly nose has not been altogether neglected by the poets. Has Professor Wilkinson forgotten that good old poem by Holmes, in which we are told that

> He had a Roman nose
> And his cheek was like a rose
> In the snow?

And, furthermore, that

> Now his nose is thin
> And it rests upon his chin
> Like a staff?

If Professor Wilkinson will look carefully, he may find that other poets have paid tribute to the nose. In fact, we are haunted even now by the lines of one of our modern poets, who candidly declares:

> I kissed her near the woodshed
> And also 'neath the nose.

Literature.

BANCROFT AND THE CHURCH.

The Reconstruction of the English Church. By Roland G. Usher. Two volumes, ix, 423; vi, 426. New York: D. Appleton & Co. $6 net.

The title of this book will probably convey to but few people a correct idea of the limits of the subject with which it deals. It is virtually a history of the Church of England during the last twenty years of the reign of Elizabeth and more particularly during the first seven of that of James, into which is woven a biography of Richard Bancroft, who, as High Commissioner, Bishop of London, and Archbishop of Canterbury successively, was mainly responsible for the final definition of the position of the Anglican establishment in that period, and for the various contemporaneous improvements in the government and internal administration thereof. Bancroft's figure, in fact, is made to stand out so prominently through the entire work, and so many episodes in his life (*e. g.*, his embassy to Embden in 1600) irrelevant to an ecclesiastical history are introduced, that one wonders sometimes whether Dr. Usher did not start out to write a biography of this cleric, and afterwards change over to a larger field. Many readers, moreover, will doubtless question his wisdom in confining "the Reconstruction of the English Church" within the years 1583 and 1610, and demand either that he should begin his story earlier and carry it later, or else that he should change his title. We do not wish to press the point, though we fancy that biographers of Whitgift and of Laud, if not of Abbot, will be tempted to do so, as will possibly some of the ecclesiastical historians of the period of the Restoration.

The work falls naturally into three main divisions, or "books," entitled respectively "Preparation for Reconstruction"; "Reconstruction"; and "The Vindication of Reconstruction." The first contains a careful survey of the internal condition of the English church at the time of the appointment of Bancroft to the Bishopric of London (1597), and a thorough analysis of its past relations with Catholics and Puritans. Two excellent chapters describe the efforts of Bancroft during the last six years of the reign of Elizabeth to split the English Catholics into two parties—Jesuits and Seculars—so as to emancipate the latter from the control of the former, and make unified Catholic action against the English church impossible. The first book closes with discussions of the chaotic and nebulous condition in which the administrative constitution of the Elizabethan church had, almost purposely, been left, of the condition of the English clergy, and of the attitude of the people toward the church at the time of the accession of King James.

The kernel of the work is to be found in book ii, "Reconstruction," which covers the years 1604 and 1605 (Bancroft became Archbishop of Canterbury in 1604), and more especially in the chapters on the Canons of 1604, which followed as a result of the Hampton Court conference. These canons are described (Vol. I, pp. 401-2) as marking "an epoch in the history of the English church comparable with the divorce of Catherine of Aragon, with the passage of the Elizabethan Act of Supremacy, and with the reform of the ecclesiastical courts under William IV and Victoria. They placed the church in a new position, and although many of their provisions are now obsolete, many have been modified by process of time, by statute, or by episcopal regulation, the constitution of the church is to-day practically as Bancroft left it." They were:

> the sum of the administrative experience and wisdom of the Elizabethan Church with not a little of the heritage of the pre-reformation episcopate. Bancroft's was the mind which selected from the confused bundle of past experience the precepts which were really golden. . . . The expulsion of the Puritans from the Church, and the refusal of their doctrinal and disciplinary demands has been ratified a hundred times during the last three centuries in the hearts of the great majority of Englishmen. Bancroft's administrative regulations for the parish and diocesan officials and for the ecclesiastical courts, were found adequate for most purposes until the nineteenth century. He was instrumental in preserving intact the liturgy of Cranmer, and the Thirty-Nine Articles, and played no small part in the preparation of that masterpiece of literature and scholarship, the King James Version of the Bible.

Whether or not Dr. Usher's estimate of the paramount importance of these canons in the development of the English church, will be generally accepted, it would be hazardous to prophesy. Certainly he makes out a strong case. But, after all, were not the Canons of 1604 merely one of a long series of readjustments to existing conditions, particularly noteworthy, indeed, because evolved contemporaneously with great changes, and exceptionally successful, no doubt, because the product of a mind which, with a rare grasp of present necessities, coupled a deep comprehension of English conservatism and aversion to gratuitous innovations?

The third book, "The Vindication of Reconstruction," has considerably less unity than its predecessors, chiefly, doubtless, because of the variety of topics that came up for consideration during the last five years of Bancroft's archiepiscopate. The Catholic problem once more sprang into prominence owing to the Gunpowder Plot and the imposition of the Oath of Allegiance. These events, joined with the continued efforts of the archbishop to foster strife between Jesuits and Seculars, resulted in enormous gains to the Establishment from the ranks of the more moderate Catholics; and the presence in the church of an increasing number of quasi-converts from Romanism exercised a perceptible effect on its theological beliefs, and paved the way for "that alliance of Catholic and Episcopalian . . . which was so conspicuous a factor in the civil war." Internal administrative improvements, efforts to augment ecclesiastical livings (which had fallen so low since the middle of the fifteenth century, owing chiefly to agrarian and economic changes, that their inadequacy had become perhaps the most vital problem of reconstruction), the establishment of bishops in Scotland, the attacks on the High Commission, and the struggles with the common law which Bancroft's championing of the cause of the ecclesiastical courts had served to arouse, are the other chief topics which are taken up. The last chapter summarizes briefly the "Results of Reconstruction": it does not claim for Bancroft as large a share of glory and accomplishment as some of the earlier pages might have led us to expect, and thus leaves an excellent final impression of moderation and restraint. There are several valuable appendices, of which the most important contain a list of the precedents for the Canons of 1604, and other ecclesiastical orders and instruments of Bancroft's time, and a hitherto unpublished account of the Hampton Court Conference, which in some respects surpasses that with which Gardiner has familiarized us. A critical bibliography and index complete the work.

The merits of Dr. Usher's book are great and obvious. It is based on laborious and thorough research in all available sources, both manuscript and

print; it brings to light much new material, and utilizes much old material in new ways; it is, so far as we can judge, absolutely impartial—the sameness of the verdicts on all points at issue between the Puritans and the Establishment being especially noteworthy. It is unquestionably one of the most important contributions to English ecclesiastical history which modern scholarship has produced. The author has taken nothing for granted, and accepts no statements of previous writers without verification: indeed, he is almost too prone to act upon the dictum of one of the most distinguished teachers in this country, that the first thing the historical student of to-day must learn is "to doubt." Sometimes the conclusions which he maintains in opposition to older verdicts are not sufficiently well proved to carry conviction; and those persons (and they are many) who are naturally predisposed to think that the iconoclast must necessarily be right, should be warned to subject Dr. Usher to the same scrutiny to which he has subjected his predecessors. His map showing the distribution of Catholic laymen (Vol. I, p. 135), for instance, can never be regarded as indicating more than the impressions concerning that topic of one well versed in the history of the period: any serious student of the reign of Elizabeth might make one equally well worthy of credence. Nor is the quotation from Rivers (Vol. I, p. 178) sufficient ground for attributing the authorship of Harsnet's "Egregious Popish Impostures" to Bancroft, unless more evidence can be produced to corroborate it. And some of Dr. Usher's generalizations (which are too numerous to refer to in detail) can be challenged even more readily than his specific statements.

The book is much too long, and its excessive length is to be almost solely attributed to its redundancy. Instances of this fault appear on almost every page: some statements of fact are repeated half a dozen times in the course of the book, and frequently the same idea is twice conveyed in a single clause, as, *e. g.*, "The kirk north of the Tweed" (Vol. II, p. 154). The whole story could have been adequately told in a single volume. Even worse than this is the author's irritating habit of constantly hammering in the fact that his topic is difficult, that he has worked hard at it, that he is trying to give both sides their due, etc.; this obtrusive self-consciousness is most unfortunate, and it is sincerely to be hoped that Dr. Usher will learn that his many merits will speak for themselves. His style is at times excellent; often he relieves the tedium of administrative history with a touch of humor or a well-selected quotation. On other occasions he is very slovenly, as in the following (Vol. I, p. 281): "He knew . . . that the clergy was poverty-stricken to the last degree, and that therefore, where they were not ignorant, were pluralists and non-resident"; and sometimes positively incorrect, as "the amelioration of ecclesiastical incomes, and the consequent improvement in the character and learning of the clergy, was really effected," etc. (Vol. II, p. 269). Minor inaccuracies in the text are few; unfortunately, it is impossible to say the same for the index, which, though well analyzed, is also somewhat inadequate.

We have dealt much in criticism, the more so because we feel that Dr. Usher is a scholar of such promise that he is amply able to bear it. He has labored diligently and effectively in this field for the past eight years, and had already achieved some distinction as an authority upon it, before the present book saw the light. Those who are familiar with his earlier writings will gladly recognize that he has grown enormously, both in grace and in learning since he began. We look confidently for still further improvement in his future work.

CURRENT FICTION.

Rest Harrow. By Maurice Hewlett. New York: Charles Scribner's Sons.

At the close of this chapter of the Senhouse-Sanchia romance, we are well content to take leave of that eccentric pair for good and all. Our patience with them has worn rather thin: a sickly flavor has thrust itself more and more unmistakably through the insistent piquancy of their relation. The famous episode of young Sanchia in the puddle is enlarged upon, harped upon, to the point of nausea. We are not permitted to lose for a moment the vision of that supreme proof of feminine magnanimity. One of the oddest passages in the present instalment of the tale is that in which Senhouse and his disciple and fellow-adorer, Glyde, chant responsively the glories of that memorable scene: "She was in white—white as a cloud," intones Senhouse, "——and in a wood. Her hair reflected gold of the sun. She pinned her skirts about her waist, and put her bare foot into a pool of black water. She sank in it to the knee. She did not falter; her eyes were steady upon what she did." "She could never falter in her purpose," the other celebrant takes up the strain. "She bared herself to the thighs. She went into the pool thigh-deep." Before we have done with the small exploit, we fairly begin to suspect that there must have been something odd about it. Even godlike innocence may be too much protested. So, as time passes, we find it increasingly difficult to join heartily in Senhouse's rhapsodical worship, with its symbols and its rites. There is a time for that mood in which the youthful lover adores his mistress as a superhuman being, and, as it were, wallows in the sense of his own unworthiness. But that time is short in normal cases. When Senhouse permits his life (his inner life, at least) to be ruled by such a mood for a matter of ten years, the situation becomes mawkish. He has, in short, the species of asceticism which is based upon a refinement of sensuality. If he were more healthy-minded, he would not make so much of Sanchia's mystical purity. And (Mr. Hewlett's protestations to the contrary), if he were less self-conscious, he would take care to be less extraordinary in habit and dress. Self-consciousness, for that matter, is the source of Mr. Hewlett's own weakness—as well as of his vogue. For the rest, a morbid sensitiveness to the current taste is evident in so small a matter as his choice of physical types. The day of the big blond hero is eclipsed for the nonce: we are all for the lean and swarthy. Two other persons in this narrative share these bodily traits with Senhouse—Glyde, the young gardener-poet, whose rôle might be labelled that of the sub-hero, and Prince Morosine, designing Pole and secondary villain. As if by way of recompense, the most wholesome and delightful person in the story, Mr. William Chevenix, is rosy and blue-eyed; but then, nobody is in danger of falling in love with him.

The Cradle of a Poet. By Elizabeth Godfrey. New York: John Lane Co.

Some of our readers will recall a book by this writer published two or three years ago—"The Winding Road," a story whose distinction lay in its feminine sensitiveness and earnestness. The present tale is by no means thrilling. The progress of the narrative is hampered by many pages of description plainly indulged in for its own sake, and of dialogue which is less the speech of human beings than the assigned utterances of puppets in the hands of a self-conscious showman. But the people are better than their talk. The author seems to have felt more than she could convey; it is clear, at all events, that she has not invented them in cold blood. Noel Harmon is that poet-hero who appeals so strongly to the minor novelists of this material age. He is the son of a quarryman in the old English village of "Stonedge." For generations the Harmons have been Freemen of the Company of Marblers—one of the few really surviving guilds in England. The father of Noel is himself a man of imagination, and has had his own dreams of poetic achievement in youth; but has denied himself the necessary training in order to be true to his inherited trust, the prosperity of the ancestral quarries. To Noel, more by fate than the father's will, come education and travel and the experience need-

ed to strengthen him for his great task. In the end, his powers are confirmed by a return to the life of his fathers, and by reunion with the maiden who in boyhood he had loved and lost. For her part, she is that priestess of the new art of dancing who is now so frequently figuring in the novel of the hour. Harmon's rediscovery of her as a famous American dancer, with the minute description of her feats behind the footlights, is already a familiar device in our fiction. But, as we have suggested, the attraction of the book lies in the sweetness and simplicity of its mood—such a mood as has made the stories of Mrs. De la Pasture refreshing to ears wearied with the petulance of the ultra-modern novel.

The Rod of Justice. By Alice and Claude Askew. New York: Brentano's.

The authors of "The Shulamite" have here reverted to the field which they formerly found so profitable, but their present venture shows a pitiable paucity of invention, only emphasized by the violence of expression with which a vain attempt has been made to galvanize some very dry bones. The story is one of those which are supposed to thrill the reader by exhibiting the Primal Passions at close range; if this be well done, the thrill is actual enough, but "The Rod of Justice" is one of the lamentably many instances where one is only wearied by the shriekings of a coarse hysteria. The plot is of the tritest, and the South African setting has not sufficient novelty to hold the interest alone. The characters are well-worn marionettes, whose strings become quite arbitrarily and needlessly tangled, and whose adventures and misadventures are recounted with a wealth of physical detail that fails to disguise the painted wood despite its insistence on the too, too solid flesh. Of the making of books there is no end, but is the supply not already great enough without swelling it by such a pathetic waste of time and paper as this, which is too bad even to be funny?

Half in Earnest. By Muriel Hine. New York: John Lane Co.

Reaction is the law of life, and the pendulum of public opinion has swung from the gospel of extreme individualism to that of social service. Miss Hine holds a strong and interesting brief for the modern point of view in this book, the keynote of which is struck in a preliminary quotation from Marcus Aurelius: "That which is not for the interest of the whole swarm is not for the interest of the single bee." The plot of the story is neither new nor expertly handled—lovely woman stoops to folly and finds too late that men betray, and the artificial complications of the present instance are all too obviously introduced to garnish the old, old tragedy. The real interest of the book—and it is a very real interest—lies in the conflict of character and will between the two protagonists. The man is an egoist, who admits no law as valid save his own impulses and expediencies. The woman voluntarily sacrifices her conscience to what she regards as the higher claims of love, to find that the altar was only that of desire, and she has stooped to baseness, not risen to superhuman heights. She gives the practical fruit of her experience in her words of farewell when she realizes at last that he will not share with her the consequences of their defiance of the Law:

"Nothing can make dishonor good or find a new name for sin. . . . I do not blame you. I still believe you are honest in your professedly 'modern' beliefs. It is I who have fallen away voluntarily from the old clean views of love and honor. . . . Even if in time you should modify your views, I would never be a drag upon your life knowing that to lay but a finger upon your freedom would be to break the last bond between us. . . . For Love is not your god. Love involves sacrifice, responsibility, and, as the years roll on, the test of fidelity. The shrine you worship at is Freedom. That is your god—the figure of Liberty. . . . I give you with both hands, in memory of all our love together, what is still dearer to you—freedom."

Arms and the Maid. By Rafael Sabatini. New York: G. P. Putnam's Sons.

The 'sblood period still holds the affections of the romancer, and presumably of a considerable audience. Anthony Wilding, hero of the present tale, is one of your pale, smiling, reckless, and imperturbable gentlemen. He is a wild dog, but unexceptionable: a gambler and ruffler and rake according to the mode. He has embarked upon the ill-fated political ship of the aspiring Duke of Monmouth, and might, we gather, have brought it safe to port if he had been allowed a hand on the tiller. But the Duke fell among evil counsellors, and his enterprise came to a bad end, and Wilding, if he had not trod his path under the ægis of romance, would have died several deaths. Mad Anthony is, of course, destined for other ends, more specially to become the husband in fact, as he has long been in title, of—never mind the lady's name. There is an abundance of incident and still more of dialogue in a story which we are fain to admit, with whatever accent of faint praise, to be good of its kind. Credit is due to the incidents for their simple impossibility when preposterousness is the order, and to the dialogue for its freedom from that salt of modern slang wherewith the ordinary historical romance is salted.

PROFESSOR MAITLAND.

Frederick William Maitland, Downing Professor of the Laws of England. A biographical sketch. By H. A. L. Fisher. New York: G. P. Putnam's Sons. $1.55 net.

Fisher's welcome memoir of Professor Maitland raises an interesting question: Why is it that every man who cares for the law and the history of England feels that Maitland, though his invaluable labors were cut short by premature death, will always occupy a high, even a unique, position in the English world of letters? The answer to this inquiry in the most general terms is, broadly speaking, that Maitland both formed an original and true conception of the relation between English law and the development of the English people, and was also endowed with the rare qualities needed for forcing this conception or idea upon the attention of English readers. Each of these statements needs justification.

Every man who claims a high rank among historians does so by virtue of having grasped more firmly than his predecessors some aspect of a nation's development. The discovery of unknown facts is, of course, a matter of immense value, but the power to add to historical knowledge is a very different thing from the display of historical genius. The best and most trustworthy of moralists falls very far short of the attainment of the highest historical fame. A real historian is the man who elucidates bygone events, and drives home new and true ideas as to the way in which one ought to regard the whole or some portion of a nation's progress. Take as illustrations of what is here meant two writers of well earned eminence, but of widely differing genius, Alexis de Tocqueville and Bishop Stubbs. Tocqueville never, to the end of his life, acquired anything like the erudition which is possessed by many German professors. But in his work on the "Ancien Régime" of France—a far more remarkable book than his "Democracy in America"—he not only revealed facts unknown to or unnoticed by other writers, but placed them in an entirely new light. Some of his conclusions are open to just criticism or censure; nevertheless, he revolutionized the discussion of the whole subject with which he deals. A possibly too severe critic of this distinguished French author has said that Tocqueville began to think long before he began to learn. It might not, perhaps, be unfair to say of Stubbs that he began to learn somewhat too long before he began to think. Historical investigation certainly with him preceded historical speculation; the keener insight into events, the larger view of life he acquired later. But this view, once obtained, he never ceased to enforce. He makes the reader see on every page that the vices and the virtues of particular

men had a direct effect on the course of English constitutional progress.

No man entertained or expressed a more profound admiration for Stubbs than did Maitland, yet Maitland, just because he was a thinker of marked originality, developed an idea to which the learned Bishop of Oxford naturally enough had not given adequate attention, and which, more oddly, was hardly understood at all by so distinguished and so preëminently English an historian as Freeman. This idea is that the growth of law formed an important feature in the history of all civilized countries, but that it formed the essential characteristic of the history of England. English law is the most original creation of the English intellect and will be the most lasting monument of England's greatness. It is, also, as Professor Vinogradoff first revealed to Maitland, the portion of English history whereof the records are most complete, and have been the least studied. No doubt the conception of the inseparable connection between the legal ideas and the general history of England was gradually dawning upon the world before it arrested or engrossed the attention of Maitland. Yet it somehow or other had never been fully developed. His originality consisted in seizing hold of, and giving expression to, the best and newest thought of the time. Although his labors were cut short, he established once and forever that English law lies at the basis of English politics, and at the centre of the development of the English constitution.

For giving expression to the legal aspect of English history Maitland was equipped with every possible qualification. He was born with that passion for research which is a characteristic rather of the present age, and no labor daunted him. As if by instinct, he knew how to wring from the most crabbed manuscripts their real secrets. When he turned to writing history, his friends were astonished at the rapidity with which he made himself at home in the period of his particular study. His historical insight was equalled by his mastery of legal principles. The lawyer in whose chambers Maitland read for the bar pronounced him, when merely a student, "a consummate lawyer," and said that "his opinions, had he suddenly been made a judge, would have been an honor to the bench." One feels, as one reads the account of his genius, as if one had been introduced to a youth who united Eldon's profound mastery of law with Gibbon's subtle and wide knowledge of history. In Maitland we observe for once the union of talents which it is generally felt can hardly co-exist—the logic of law and the spirit of historical investigation. These were needed to reveal to Englishmen the inseparable connection between the law and the welfare of the English people.

But Maitland possessed at least one further talent which is essential to the great historian. He had the keenest insight into human nature. In his picture of the Elizabethan age are expressions which elucidate and summarize the character of the Queen and her statesmen. Some persons may have regretted that much of the last year of Maitland's life was spent in writing the biography of one of the most remarkable of his friends. The regret, if natural, was absolutely unfounded. The time bestowed upon biographical study was not long enough to have enabled Maitland to carry materially further his work of legal or historical research. The days given by him to a labor of love were not in the least thrown away. They gave to modern Englishmen a portrait of Leslie Stephen, the most honest, the best, and assuredly the best loved of English critics and thinkers. These hours of biographical labor conclusively proved that Maitland, among his many qualifications for elucidating a neglected aspect of English history, possessed to perfection that gift of personal portraiture without which no man can become a truly great historian.

Questioned Documents: A Study and Analysis of Questioned Documents with an outline of methods by which the facts may be discovered and shown. By Albert S. Osborn, with an Introduction by Prof. John H. Wigmore. Rochester, N. Y.: Lawyers' Coöperative Publishing Co. Pp. xxiv+501. $5.25.

This book is by far the most valuable contribution to the subject which has appeared in English. The effort throughout is to state as clearly and simply as possible the specific problems which face an investigator of a forgery and the methods which can be used to expose and demonstrate it. Celebrated cases and mysteries are simply used as illustrations and not for the purpose of advertisement. Any work in a legal field which bears an introduction by Professor Wigmore, author of the most scientific law book of recent times, must command respect, and this work is highly praised by Professor Wigmore in his Introduction. The chief value of the book must be for the lawyer, and yet there are many chapters which are interesting to a layman.

Any one who reads this book attentively will be convinced that the handwriting expert cannot now be omitted from any trial involving questions in regard to genuineness of documents. At the same time, no one can read the book without obtaining sufficient knowledge of what can and cannot be done by a handwriting expert to enable him to detect the pretender and charlatan. The most valuable result of this publication ought to be the improvement in the standard of the handwriting expert.

It cannot be too often asserted that the handwriting expert differs from other experts in one important respect. In the case of the handwriting expert the tribunal has before it the very material upon which his opinion is given, so that the opinion may be tested by the reasons which the expert is able to advance, whereas other experts testify not merely to their opinions, but to the facts also upon which they base them. For example, the chemical expert who has examined the stomach contents to determine whether there has been poisoning, destroys the organs in the very process of making his experiments, and his testimony must include the facts which he observed, as well as his conclusions. On the other hand, in the case of a questioned document, the document is there before the court, and the expert merely calls attention to various things which would not be observed by those who have had no experience in the matter, and upon these things he bases his conclusion. To take a specific illustration, a case which has frequently come into the courts is one where a person has obtained the signature of another and written above the signature a receipt or a note, or something of the sort, and the question to be determined is whether the note is genuine or not. In this case the signature, of course, is genuine, but if it can be shown that the writing which appears above it was written after the signature, it is a fair inference that the document was forged. In most of these cases some of the lines of the signature cross lines in the other writing. By examining these lines under a microscope it is often possible to determine which of them was written first. Experiment shows that where one line crosses another the ink from the line last written will flow over the other line in such a way as to give a characteristic appearance. When this is once called to your attention you do not miss or forget its significance, and after having examined a line under a microscope you can afterwards determine without the aid of a microscope whether it was written before or after another one. An idea of the spirit of the book may be obtained from the paragraph discussing this question. The author observes:

> As with nearly all the specific questions discussed on preceding pages, it seems necessary to say plainly that while it is true that the problem treated in this chapter can sometimes be definitely solved, it is also important to remember that under some circumstances it is impossible for anyone to tell which of two crossed lines was last made, and in every such inquiry the evidence upon which a positive opinion is based should be clear enough so that with proper assistance and instruments even an unskilled observer can see for himself. A few easy tests will expose the assumption of one who claims to be

able to determine under any and all conditions which of two lines was last made. When one claims to see in a disputed document what, with the best assistance, judge, jury, or opposing counsel cannot see, it is safest to assume that that thing does not exist.

It is of these matters that the book treats. The methods advocated are scientific in this, that they require the observation of a great many details in the admittedly authentic work of the supposed author of a questioned document, and a comparison of these details with similar observations of the questioned document. When the divergencies are so great that they cannot be otherwise accounted for, the forgery is insisted on as a fair inference. At the same time, as the author himself says:

> Forgeries vary in perfection all the way from the clumsy effort which anyone can see is spurious, up to the finished work of the adept which no one can detect. The perfect forgery would naturally be successful, and might not even be suspected, but experience shows that the work of the forger is not usually well done and in many cases is very clumsy indeed.

Though by far the larger part of the book is devoted to questions of handwriting, other topics, such as the age of documents, ink, paper, and typewriting, are not neglected. Perhaps the most original chapter is that on typewriting. The author has devised a number of instruments for determining whether two pieces of typewriting were written on the same or different machines, and whether, if on the same machine, at the same time or different times. To-day it is possible, perhaps, to determine these questions with more certainty than similar questions in regard to handwriting.

Mr. Osborn's style has none of the graces of literature, but is in general clear and simple, although there are occasional passages where the sentences are awkwardly involved. There are a number of excellent illustrations that help to elucidate the text.

Lord Glenesk and the "Morning Post." By Reginald Lucas. New York: John Lane Co. $6 net.

This is a combined biography and history of a newspaper, in which each part suffers somewhat from the blending. We neither get as much as we should like to know about the editor, nor is the development of a feeble and struggling journal into a powerful organ of the press given us as clearly in its progressive steps as we could wish. And the author's numerous but brief excursions into contemporary history and politics further detract from the unity and movement of his book. Yet there is much of interest in the material he has brought together. Son of that Peter Borthwick who first made the *Morning Post* a serious competitor of the London *Times*, and who broke himself down with overwork and financial worry, Algernon Borthwick began his career as Paris correspondent, in which capacity he rendered service often brilliant and always painstaking. Succeeding to both editorship and proprietorship of the newspaper, he made of it a stout supporter of Tory policies. Indeed, he was more Tory than the Tories, since he clung to the doctrine of protection even after they had abandoned it, and naturally felt that the Golden Age was being led back by Joseph Chamberlain, although he died before getting even a sight of the promised land. Created Sir Algernon and afterwards Lord Glenesk for party services and for distinction in journalism, the editor of the *Morning Post* played an honorable part in his profession, was a useful member of either House of Parliament, the friend and confidant of Palmerston and Salisbury and later statesmen; but his writings quoted in this volume—mostly letters and diaries—do not show him to have been a man of commanding intellect or even of unusual political acumen.

The Islands of Titicaca and Koati. By Adolph F. Bandelier. New York: The Hispanic Society. $5 net.

For ten years, ever since Professor and Mrs. Bandelier spent so many months excavating and investigating on the shores and islands of Lake Titicaca, we have looked forward with the keenest interest to the time when the results of their researches might be read. It has been a long while to wait, but the outcome, as was to be expected, fully justifies our hopes. Mr. Bandelier's latest volume maintains the high standard of scholarship which he set for himself in his earlier works.

It is eminently fitting that the dean of American archæologists should be the first to publish a scientifically accurate account of the central shrine of the leading civilization in South America. Few subjects have been more widely talked about and more misunderstood than that of the Incas. No one else knows the native races of North and South America so intimately as does Mr. Bandelier, whose scientific researches have embraced in a remarkable degree both the mass of evidence in the early chronicles and the actual facts to be gained only from close and long-continued intercourse with the Indians of the present generation. Prescott, who is responsible for the interest which most Americans take in the Incas, was obliged to rely entirely on the written reports of others, of Spaniards who cared as little for exact facts as do the Turks, and of authors like Garcilasso de la Vega, who sought to surround the Inca Empire with a glamour that should command the respect and admiration of sixteenth-century Europe. E. G. Squier, whose excellent book on Peru still ranks high and deserves to be better known, gives an attractive picture of the remains of Inca civilization as he saw them, but his view was colored with romance and he was not familiar with the best contemporary evidence. His plates, also, are frequently misleading, and give the impression of greater height, more beauty, and considerably more rectangularity than actually exist. He was over-fond of bestowing high-sounding names upon the various ruins. In a word, his imagination was not controlled by long actual residence among American Indians.

It is precisely in these points that Professor Bandelier excels. Even his photographic reproductions have the very atmosphere of the plateau, where, as he truly says, "Nature is mostly cheerless. . . . Dismal monotony reigns all around. . . . The climate is as monotonous as the landscape, . . . cold, moist, and abounding in threatening phenomena, dangerous to man directly or indirectly." His drawings, also, are exact in angle and detail. They may not be so clear to the uninitiated as the more diagrammatic plans of Squier, but they tell the story much more accurately. And Mr. Bandelier has made himself thoroughly conversant with all written evidence of any value.

The mass of facts he has collected is all the more noteworthy because of the frightful obstacles which, as Sir Martin Conway found to his cost, the plateau presents to scientific investigation. Notwithstanding climate, nature, and man, all of which "conspire to impede, annoy, and obstruct," Mr. Bandelier succeeded in overcoming the inborn hostility of the Aymará Indians, persuaded a "Medicine Man" to reveal many of his secrets, and even managed to witness remarkably interesting ceremonies of invocation, sacrifice, and witchcraft.

There is little romance about the Aymarás. "Cupidity, low cunning, and savage cruelty" are the marks of their character. On occasion they are still cannibals. Furthermore, as Mr. Bandelier points out, "these traits are not, as sentimentalists would have it, a result of ill treatment by the Spaniards, but *peculiar to the stock*, and were yet more pronounced in the beginning of the colonial period than at the present time." Another important and revolutionary conclusion is that the Indian population "has not diminished since the early times of Spanish colonization, but has rather increased." This "shows how unjustified is the hue and cry about the extermination of the natives of Peru by the Spaniards." (How this would have delighted the late Professor Bourne!) Many travellers have observed the large number of unused terraces or *andines*, and have supposed that they proved the

existence of a former dense population. Mr. Bandelier finds they are due to a "time-honored system of rotation observed by the Indians."

We cannot even indicate the many other results of this study. Mention, however, must be made of the well-known and often depicted "Fountain of the Inca," first drawn by Squier and copied by many later writers, which now turns out to be "simply an arrangement for draining the declivity in its rear. Were it not for this drain the soil would turn into mire and eventually be washed away." It should also be noted that Mr. Bandelier has been obliged to discredit the sumptuously illustrated volume of Ch. Wiener on Peru and Bolivia. Henceforth all unsubstantiated statements of Wiener's must be accepted with suspicion.

The only fault which the present reviewer has to find is in the printer's arrangement of the notes and plates. The former are placed at the end of each chapter. Such a practice might be justified in a pseudo-scientific work, a majority of whose readers would be dismayed by masses of footnotes; but in a standard anthropological monograph of this character the case is different, especially as the notes are replete with interest. The eighty-five plates, too, are not inserted near the passages which they illustrate, but are scattered through the volume after the fashion of artistic bookmakers generally, although, with the maps, they are absolutely essential to a clear understanding of the text.

It hardly needs to be added that there is a careful and exhaustive bibliography. It is most devoutly to be hoped that Mr. Bandelier will be able to publish the results of his other South American studies.

Notes.

Volumes V and VI of "The Cambridge History of English Literature," the publication of which has been somewhat delayed, are now promised by Putnams for October. They deal with the Elizabethan and Jacobean drama.

Holt & Co. have ready for publication in October an illustrated edition of "The Last of the Mohicans." This will be followed by similar editions of "Two Years Before the Mast," "Treasure Island," and "Tom Brown's School Days."

"The Autobiography of Thomas Collier Platt" will be brought out this season by B. W. Dodge & Co.

Wessels & Bissell Co. announces the following books for this autumn: "Oxford and Cambridge," by Hanslip Fletcher; "Sir Walter Scott Studied in Eight Novels," by the Hon. A. S. G. Canning; and "People of Position," by S. P. Hyatt.

Among the new editions of old books listed for autumn publication by Macmillan are: "The Loves of Pelleas and Etarre," "Friendship Village," and "Friendship Village Love Stories," by Zona Gale; "A Wanderer in London," "A Wanderer in Holland," and "A Wanderer in Paris," by E. V. Lucas; "The Letters of Elizabeth Barrett Browning"; "The Book of Christmas," with an introduction by H. W. Mabie; "The Book of Friendship," introduction by S. M. Crothers; "The Story of the Year," by G. D. Hammond; "Silas Marner"; Juliana Horatio Ewing's "We and the World"; "The Water-Babies," by C. Kingsley, and "The Hunting of the Snark," by Lewis Carroll. Among the new publications are the Peoples of Many Lands Series: "The People of Egypt," painted by Lance Thackeray; "The People of Holland," painted by Nico Yungman; "The People of India," painted by M. Menpes; Home Life in Many Lands Series: "Home Life in Spain," by Samuel Bensusan; "Home Life in America," by Katherine Busbey; "Home Life in Holland," by D. S. Meldrum; and "Home Life in Japan." Religious and philosophical: "The Gospel According to St. Matthew," by A. T. Robertson; "Dogmatism and Evolution," by T. and G. A. de Laguna; "The Building of the Church," by C. E. Jefferson; "The World a Spiritual System," by J. Snowden; "Building a Working Faith," by N. D. Hillis; "Unitarian Thought," by E. Emerton; "Missions and Modern Thought," by W. O. Carver; "The Basal Beliefs of Christianity," by J. Snowden; and a revised edition of "History of New Testament Times in Palestine," by S. Mathews.

Mrs. Gaskell's "Cranford" is one of the first of the holiday publications this autumn, and it will remain, if simple neatness is the test, one of the best. It contains a photogravure frontispiece of the author, and for the rest the attraction is due to type and paper. It is printed at the Riverside Press for Houghton Mifflin Company.

The excellent reprint of Beaumont and Fletcher, edited by A. R. Waller for the Cambridge English Classics (Putnam), has reached the eighth volume, leaving only two more to complete the edition. The present volume contains five plays: "The Woman's Prize," "The Island Princess," "The Noble Gentleman," "The Coronation," "The Coxcomb." For those who are not troubled by the old spelling and punctuation, no better text could be desired.

The Rt. Hon. G. W. E. Russell, youngest son of the sixth son of the sixth Duke of Bedford, has enough of the right blood in his veins to write of Whiggery and its men as only one on the inside can write of that great but now ruined institution. "I have always maintained," he says in his "Sketches and Snapshots," just published by Duffield & Co., "I have always maintained, that Whiggery, rightly understood, is not a political creed, but a social caste. The Whig, like the poet, is born, not made. It is as difficult to become a Whig as to become a Jew. Macaulay was probably the only man who, being born outside the privileged enclosure, ever penetrated to its heart and assimilated its spirit." And what a picture our still living Whig gives of Devonshire House, the very centre of the "Sacred Circle of the Great-Grandmotherhood," when "Poodle Byng" was young and visited its halls: "The Duchess was usually stitching in one corner of the room, and Charles Fox snoring in another." There are no more entertaining chapters in Mr. Russell's book than that on "Freddy Leveson," and others of the same kind, in which these mysteries of Whiggery are unfolded. But all the chapters, short or long, whether bits of biography or reviews of books, are full of pleasant anecdotes, although the humor is never so broad as in his "Collections and Recollections." Occasionally these reminiscences really add to our comprehension of a character, as in the statement that Purcell in his "Life of Cardinal Manning" suppressed one of Manning's "Hindrances to the Spread of the Catholic Church in England," the Jesuits, but printed the section privately and showed it, among others, to Mr. Russell. There is no more affectionate sketch in the book than that commemorative of the death of Matthew Arnold, from which we quote this closing paragraph:

> In 1868, Matthew Arnold lost his eldest son, a schoolboy at Harrow. It was the present writer's privilege to be with the bereaved father on the morning after his boy's death, and the author with whom he was consoling himself was Marcus Aurelius. Readers of the "Essays in Criticism" will remember the beautiful panegyric on that great Seeker after God, and will, perhaps, feel that, in describing him, the friend whom we have lost half-unconsciously described himself—"We see him wise, just, self-governed, tender, thankful, blameless, yet with all this agitated, stretching out his arms for something beyond—*tendentemque manus ripæ ulterioris amore.*"

Such samples may give a notion of a book of much quiet and agreeable entertainment.

"Along the Trail of the Friendly Years," by the Rev. Dr. William E. Hatcher (Fleming H. Revell), is the record of a Baptist clergyman whose memories go back to war times. Incidents of the pulpit, of revivalism, of negro believers, of astonishing conversions, make up what we may call the professional part of the book. Dr. Hatcher's service was chiefly rendered at Richmond, Petersburg, and Baltimore, and his recollections furnish, with oddities and humors, a few incidents of historical import. There is a vivid account of the final retreat of Lee's army, and of the anarchy that supervened at Richmond. We liked, too, the character study of "The Incomparable Jeff," a poor white mountaineer, who got and held religion with Franciscan fervor and simplicity. The book contains much superfluous matter for the average reader, but its tone is hearty, and good gleanings are afforded. The motto of the work is perhaps the following observation made apropos of Dr. Hatcher finding himself more or less a foreigner in Baltimore: "A Virginian is a stark fool to everybody else except to Virginians. Other people may feel as they please, but only a Virginian knows how a Virginian feels."

"Britain Across the Seas. Africa" (London: National Society's Depository), by Sir Harry Johnston, is intended mainly for the use of the young men who in the future will aid in framing the policy of the British Empire, and from this point of view it is an admirable text-book. For the writer is one who has taken an active, and, in some instances, a prominent part in the upbuilding of the empire in each of the great divisions of the African continent. With the knowledge derived from the study of the records of early days, and from personal observations, he describes as few others could the different peoples, their peculiarities of appearance, customs, and lan-

guages, such of their early history as is known and their relations with the white man, trader, missionary, and official. And his aim is to do this truthfully, and not to hide the mistakes, the blunders, the faults, and, in some cases, mostly in the distant past, the cruel actions of his countrymen. Grateful and willing testimony also is borne to the excellence of much of the colonial work of the French and Germans, and, to a certain extent, of the Belgians and Portuguese. After a brief sketch of the physical characteristics of the continent and its early history he tells at some length —half the volume is devoted to this subject —the story of the various events, including many wars, which have led up to the present unification of South Africa. The west coast history is next taken up, and it is interesting to note that the inducement which brought the first English adventurer to this part of Africa was the search for pepper. The closing chapters contain a too brief account of the manner in which the Egyptian Sudan and parts of East Africa came under British rule.

"Sikhim and Bhutan, Twenty-one Years on the North-east Frontier, 1887-1908," by J. Claude White, C.I.E. (Longmans, Green & Company), has a twofold value. It contains much information in regard to some obscure Himalayan countries, their physical characteristics, the peculiarities and history of the heterogeneous people. It is also practical illustration on a small scale of the upbuilding of the present Indian Empire. Mr. White was the first representative of the British raj sent to reside in Sikhim, and his first duty was to learn to know the natives so as to be able to deal with them wisely. In the first five of his twenty years of service he visited every corner, even the most remote, of the country, and became acquainted with every head man. To open up a region in which there were no roads, only a few bad and difficult tracks, was his next duty. Before he left it was possible to ride from one end of Sikhim to the other, and a carriage road had been built from a railway terminus sixty-four miles to the capital. Then new industries were introduced, such as apple-growing, cloth-weaving, carpet manufacture, and a development of the mineral wealth began. His devotion to the interests of the people had its reward, for when the time of retirement on account of age drew nigh, the Maharaja and his wife went to Calcutta and begged the Viceroy, unsuccessfully, to lengthen his term of service. The people of every village, passed on the homeward journey, came out to kiss his feet and weep over him. With Bhutan his relations were different. He only visited the country three times, twice as representative of the British government to present the insignia of a Knight Commander of the Indian Empire to a leading chief for services rendered at the time of the Lhasa mission, and later in the same capacity to assist at his installation as Maharaja. He gives a detailed account of these expeditions, as well as a brief sketch of the history and foreign relations of the country; and it is to be hoped that his warning of the danger that China may take possession of it will be heeded in time. His recreation seems to have been mountain climbing and exploration, on which he gained much geographical knowledge of importance. Occasionally he justly criticises the Indian government for its lack of interest in frontier countries, but he is hardly justified in the assertion that, while an insuperable barrier has been raised against Englishmen who may desire to travel in Tibet, "foreigners, whom they are powerless to keep out, are given every possible assistance and help." Yet he manages to give some very attractive descriptions, especially of the wonderful beauty and variety of the flowers, of these "two most delightful countries," and this assertion is fully borne out by the forty-one admirable pictures, mostly of scenery, which illustrate his text. There is also an excellent map.

Prof. W. R. Liefmann's "Kartelle und Trusts" (Stuttgart: E. H. Moritz) is a second and enlarged edition of the volume published by him under the same title in 1905. The little book is an excellent survey of the movement in Germany, and has summary chapters on other countries also. After the methodical fashion of the Germans, the author examines successively the effects of the Kartelle on manufacturers, middlemen, laborers, buyers of materials, ultimate consumers, and proceeds finally to questions of legislation. In all this there is a bit too much of the trees, and too little of the forest. The essential question as to combinations is whether competitive conditions in industry have been replaced by monopoly (qualified or unqualified), and around this the discussion should centre. The German Kartell is a very different thing from the American Trust, but none the less presents the same fundamental problem. It is an iron-clad pool, enforced during the agreed term by the courts; for, under Continental law, such contracts "in restraint of trade" are not *per se* void. Professor Liefmann believes the Kartell does not really lead to monopoly prices; the attempt to secure these always brings back a revival of "independent" competition. Yet he says the profits of producers are substantially increased, and the market quotations of their securities notably raised; which, it should seem, indicates that after all there is some accretion of gain through at least a quasi-monopoly. Our American Trusts also seem to him not to have secured monopoly prices. Their real evils he finds chiefly in stock-jobbing and financial manipulation. "Dumping" seems to him unobjectionable, on similar grounds. It causes no higher prices, or at least no prices unduly high, within the country; and why object to the foreigner's getting the dumped article cheap, if we at home still get it at a "fair" price? The argument seems to us not conclusive. It holds only for sporadic dumping, not for sustained and systematic selling at lower prices in foreign competitive markets. The German Kartelle, it is fair to say, in the main have done their dumping hitherto sporadically. For all the general optimistic trend of his analysis, Professor Liefmann still advocates public supervision and control, through a proposed Imperial Kartell-Amt which is to supervise and regulate the combinations. He thus reaches in the end much the same recommendations for legislation as sober thinkers have come to in this country.

A Latin concordance to the *De Imitatione Christi* of Thomas à Kempis has been carefully prepared by Rayner Storr and published by the Oxford University Press. The text of Hirsche is followed with a very few exceptions. The context is quoted liberally for the more important words; with entire sentences or long clauses before him, the reader can study the meanings of a word with ease. The quotations rarely run over a line; in most of the cases where they do, they might readily have been shortened. The editor might also have gained space by combining in one quotation two or more adjacent occurrences of a word. For certain words of secondary importance only numerical references are given. Here, by an unfortunate device, a Roman numeral stands for the number of a book, a number above a short mark for a chapter, and a number below for a line; a page of *omnis* thus done looks like an unpleasant example in compound fractions. Certain other minor words—there is no fixed principle—are not quoted at all. An unnecessary and unavailing conscientiousness is shown in the marking of vowel quantities in the head-words; for who knows that Thomas à Kempis followed classical usage, for instance, in the varying quantity of *pro* in compounds? But whatever its eccentricities, any concordance is a boon, and we are grateful for what is offered here.

Dr. Albert Hale's "Practical Guide to Latin America" (Small, Maynard) may prove to be of some use to the inexperienced commercial traveller (if there be any such) on his first visit to the southern republics. Even he, however, will be annoyed by its many shortcomings and inaccuracies. Fortunately there are in existence excellent guides to Mexico and the West Indies, although there is none as yet to South America. Dr. Hale has only served to call attention to the need. His arrangement is haphazard, his information with regard to railways and hotels is neither specific nor practical, while his errors, both typographical and otherwise, are legion. The dry season in the Peruvian Andes does *not* "correspond to our winter months," but just the reverse. The distance from Corumbá to Puerto Suarez is not "eighty-one miles," but only twelve. And from Puerto Suarez to Santa Cruz is not "eight hundred miles," but a little above 400. The average time for the trip from Panama to Valparaiso is not "twelve to fourteen days," but twenty-one to twenty-five days, etc. Such phrases as "extensive railroad system radiates into the interior," and "there is a trunk line from north to south on the highlands," are misleading and out of place in a "practical guide," although they may be tolerated in the literature of the "boosting" propaganda now being distributed by the Pan American Bureau, of which Dr. Hale is a "special compiler." Railway taxes, hotel rates, boat tariffs, and clear directions for reaching any given point are conspicuous by their absence. Those persons who have neither school-geography nor gazetteer at hand or accessible will find in this book popular paragraphs concerning the principal towns and cities. Business men, however, will find the Exporter's Encyclopedia far more useful and reliable; and intending travellers will still find Prof. W. R. Shepherd's excellent article on "Travel Conditions in South America," published in the *Bulletin*

of the American Republics for May, 1908, the best and most "practical" aid. There is no map.

Among the humors of the new rhetoric should be included the second edition of "Short Themes: A Freshman Manual for the First Semester," by A.H. Nason of New York University (published by the author). Objurgation, cajolery, sarcasm,—every whip, prick, and spur available are employed to worry the reluctant student into literary production. Alternately the author pleads, scolds, wheedles—he is pragmatic, facetious, aneedotal, familiar, oracular in turn. Above all, he is full of occasions and instances from "real" life, the raw material of "literature—and college themes," as he puts it. His story of "Bucks Ticket Office" is a veritable gem of illustrative exposition. Nor has he disquieted himself wholly in vain, if the specimen "themes" scattered through the text are the work of his own pupils, as is to be supposed. In fact, it would be hard to imagine anything more effective for its purpose than the first part of his volume on the Practice of Composition—dead, indeed, would be the soul that failed to respond to its eloquent solicitations.

"The First Grammar of the Language Spoken by the Bontoe Igorot" is the work of Dr. Carl Wilhelm Seidenadel (The Open Court Publishing Co.). His material he got from a group of Igorot who were at Chicago in 1906 and 1907. With these Philippine people he spent six or eight months, and he appears to have exercised care and patience in taking down words and phrases from their lips; he also revised his collection with the help of a native who spoke English. The grammatical material is arranged according to modern philological principles; the rules and usages are given clearly and are illustrated by an abundance of examples. Igorot is a Malay-Polynesian tongue, and the author has wisely avoided following the rules of Malay grammar; he seems to have gathered his rules wholly from Igorot usage as he understood it. While it would be too much to expect a complete or perfectly accurate description of the language from such opportunities as he had, his volume is a conscientious and intelligent study, and will further the investigation of Philippine dialects. He has added an English-Igorot vocabulary and a small body of texts—modern narratives, mythological material, folk-stories, and songs.

Leonard P. Ayres, who is the associate director of the department of child hygiene of the Russell Sage Foundation, gives us in a volume, entitled, "Open-Air Schools" (Doubleday, Page & Co.) a knowledge of what has been accomplished up to the present time with this new type of school. Beginning with a description of the first schools of the kind in Germany, the author describes the experiments made in several English cities, and in those cities of the United States in which the work has been begun. Full details are given as to cost, equipment, and results, as far as such information is available. The book is profusely illustrated with photographs. The wide interest which has attached to the establishment of these out-of-door schools, and especially in connection with the anti-tuberculosis campaign in this country, makes this a very timely book.

In the *National Geographic Magazine* for September will be found some information as to the present conditions of Liberia taken from the report of the recent commission to that country. The other noteworthy contents are the account of some experiences in Asia Minor by E. Huntington, the curious customs of the Chinese by Dr. K. F. Junor, and the value of phosphorus, our greatest plant food, by G. E. Mitchell. The illustrations, especially those of the great Mexican volcanoes, are of unusual interest.

The August Index to the London *Times*, an octavo pamphlet of 144 pages, is an invaluable source of information on current subjects and events. So broad is the field of the paper that everything of general interest in history, politics, literature, science, and religion happening in any part of the world is recorded in its pages and finds a place in the monthly index. The subject treated at greatest length in this number is aeronautics, nearly four pages being given to it, while half a page is devoted to Col. Roosevelt's month's work. Such an index to one or more of our leading journals would prove most useful to writers and students, and we trust that the example of the *Times* may be imitated in this country.

The Rev. Louis Lambert, editor-in-chief of the *Freeman's Journal* of New York city, and author of "Notes on Ingersoll," "Tactics of Infidels," "Thesaurus Biblicus," "Christian Science Before the Bar of Reason," and a few other volumes, died last Sunday at the age of seventy-five.

James Lyman Whitney, who died in Cambridge last Sunday in his seventy-fifth year, had been connected with the Boston Public Library for more than forty years, and had been its head librarian from 1899 to 1903. As chief of the catalogue department, he edited the Ticknor Catalogue of Spanish Literature and many other documents.

From Edinburgh comes the report of the death, in his seventy-second year, of J. Campbell Irons, an eminent lawyer. Among his publications are "Leith and its Antiquities," "Manual of Police Law and Practice," "Manual of the Licensing Laws," and "Manual of the Dean of Guild Law and Practice."

Louis Boussenard, the French author of romances, has died at the age of sixty-three. One of his books has been translated into English under the title of "The Crusoes of Guiana; or, The White Tiger."

Science.

Fossil Plants. By A. C. Seward F.R.S. Vol. II. New York: G. P. Putnam's Sons. $5 net.

He would have been regarded as a rash prophet, twenty years ago, who should have dared to predict that, within two decades, the whole field of plant-relationships would be resurveyed by palæontologists. At that time there were many ardent students of fossil plants who did their best to unravel the tangles presented by the scanty vestiges of plant remains in certain localities. There was a vast amount of earnest work and of honest conjecture, but the testimony of the fossilized plants was regarded by general botanists as hardly worthy of a place on the records of the court, and hence most of the conjectural evidence was ruled out. But by the introduction of new methods of investigation the whole subject assumed a different aspect, and while some of the former guesses were seen to be pretty near the truth, a few of the old results had hit the truth exactly. Of course, a great deal was found to be worthless, and it was promptly laid aside. The most interesting feature of this application of new methods was the ready acceptance of the new results by persons throughout the entire field. And thus it has come to pass that not only has there been a complete reconstruction of the former imaginative pictures of early plant life, but there has gone hand in hand with this a radical readjustment of ideas in many fields where fossil plants were previously thought to have no place or influence.

A large part of this extraordinary development of vegetable palæontology is due to a few active English students, who have been untiring in their application of the new methods. In our own country there are a few who are devoting much time and energy to the subject, and all of them are obtaining good results. The field is so large and the results so striking that many other laborers are called for. To all such investigators the work by Professor Seward is simply indispensable; but it is very interesting, also, to the general reader who desires to discern the bonds which fasten all plants together in a genetic unity. It is in this work that one sees how easily erasible are many of the old lines which we fondly used to draw to separate one group from another. Many of these artificial barriers have given way never to be reëstablished. How they have been removed, and why they ought never to have had a place in science, can be well seen by a study of Professor Seward's treatise.

A third, and concluding, volume is promised by the author. This is said to be very nearly ready.

Macmillan has the following titles on his autumn list: "Electric Motors," by H. M. Hobart; "The Grammar of Science," by Karl Pearson; "Milk and Its Products," by H. H. Wing; "Text-Book of Operative Surgery," by T. Kocher; "The Practice of Midwifery," by A. L. Galabin and G. Blacker; "Veterinary Studies for Agricultural Students," by M. H. Reynolds; "A System of Medicine and Gynæcology," in twelve volumes, by many writers; "Dry Farming," by J. A. Widtsoe; "Rural Hygiene," by H. N. Ogden; "The Physiology of Plant Production," by B. M. Duggar; "Diseases of Economic Plants," by F. L. Stevens; "Laboratory Exercises in Farm Management," by G. F. Warren, and "Poultry Laboratory Guide," by H. R. Lewis.

"Theoretical Mechanics" (Ginn), by Percey F. Smith and William R. Longley, is a new volume of the mathematical series, edited by Professor Smith of Yale. The treatment requires a knowledge of calculus, and is adapted to students of engineering. The most noticeable thing in the book is the arrangement of its material. In order to continue without a break the students' practice in solving problems in the integral calculus, moments of mass and inertia are treated first, and then the more natural subject of kinematics of a point. The plan hardly seems wise, for what is gained in analytical efficiency is lost in the logical development of the science of mechanics, which is, after all, the subject in hand. Nor should too much consideration be given to the student who is incapable of remembering the formulæ of calculus for a few months without constant practice. Otherwise the book is useful enough.

Drama.

Louis N. Parker is at work upon the play on the subject of Benjamin Disraeli, in which George Arliss is to appear. Except as a minor figure in "The Last of the Dandies," this extraordinary and in many ways picturesque personage has not been seized upon for stage purposes. There will be general curiosity to see what phase of his character or what part of his career Parker, the pageant master, will select for illustration.

Among the new English plays announced are a dramatization of "The Garden of Allah," by its author, Robert Hichens; "Gentlemen of the Press," by H. M. Richardson, a Manchester journalist, to be produced by Miss Horniman's company at Manchester, and "The Casting Out of Michael Whelan," a drama of bush life by R. J. Ray, to be produced at the Abbey Theatre, Dublin.

Sir Charles Wyndham and Mary Moore are once again acting in "The Case of Rebellious Susan" at the London Criterion. The former threatens to beat the record of the late Charles Mathews as a septuagenarian juvenile.

Dr. Martin publishes an interesting paper in the new issue of the "Surrey Archæological Collections" on the site of the Old Globe Playhouse of Shakespeare. It is apparently intended to be a vindication of the action of the Shakespeare Reading Society of London in placing last year a commemorative bronze upon the wall of Messrs. Barclay & Perkins's brewery, Southwark, approximately marking the spot where it is believed the "Old Globe" stood. Dr. Martin sets forth all the evidence he has been able to collect both for and against his theory. He divides this into three classes, viz.: (1) Documents of a legal, semi-legal, or business character; (2) printed and oral accounts which, purporting to describe the position of the Globe Playhouse, were not in general of a legal, semi-legal, or business character; and (3) sixteenth and seventeenth-century map-views and plans of London and Southwark. In all this he goes over old ground, but he has a postscript dealing with information given him while the paper was in the press. It relates to a discovery made in 1891 which is said not to have been published. When one of the cellars of the brewery was being lowered, a semi-circular staging of wood about forty feet long by thirty feet wide was discovered at a depth of about four or five feet from the ground level. It was not the support of a vat, says the brewery clerk of the works, and it had nothing to do with brewing operations. Dr. Martin suggests that this was the stage of the Old Globe Theatre.

Percy Mackaye's new skit, for it can scarcely be called a play, which has just been produced in the Comedy Theatre, proved somewhat of a disappointment. As a bit of literary satire, ridiculing some of the least intellectual of modern social theories, such as free love, anarchical individualism, etc., it is often excellent fooling, but it is so extravagant in plot, so lawless in form and so inconclusive in its logic that its violently comic situations and sparkling dialogue fail to atone for its dramatic incoherence. A young married couple, whose shallow wits have been addled by the pestiferous vaporings of the advanced drama, suddenly descend upon the home of a village parson and his wife—the brother of the one and the sister of the other—and straightway proclaim themselves free lovers, pour contempt upon the slavish indecency of the marriage bond, and announce their intention of preaching in the neighborhood the new gospel of spiritual and social emancipation. The parson's wife, Mildred, a woman compact of common sense and humor, pretends to be converted to their views, and by ministering to the vanity of her brother-in-law easily convinces him that she is his true affinity. She feigns to be overwhelmed by his masterful character, hails him as the superman of his own ravings, and announces herself as the reincarnation of the heroine of the rhapsodical tragedy he is composing. Meanwhile her romantic sister is consumed by frantic jealousy in contemplating this practical application of the free love doctrines of which she had been the enthusiastic advocate. After assuming for a moment the complexion of mock tragedy, the piece degenerates into a wild burlesque of Ibsen's "Rosmersholm." Declaring that her husband (throughout her accomplice) has committed suicide in despair over her loss, Mildred challenges her dupe to plunge with her into an imaginary mill race, the result being that the pretended free lovers are left to flounder in a filthy swamp, from which they finally emerge, much disfigured and humiliated, but pretty well cured of their hallucinations. Underneath all this grotesque nonsense it might be easy to discover a vein of wholesome symbolism, but it is doubtful whether the value of the discovery would repay the labor of the search. It is satisfactory to find Mr. Mackaye on the side of social sanity, but he has presented the fallacies he is dealing with in such bald and absurd fashion that they excite no dramatic or other interest. It is like tilting at windmills. Regarded simply as burlesque, of somewhat crude invention but superior literary quality, it is frequently amusing, though sorely in need of compression. It suffered much through the inadequacy of its general interpretation. Henrietta Crosman was the only one of the performers possessing the requisite skill, the combined lightness and firmness of touch, to handle successfully matters so fragile and so fantastic. Her embodiment of the shrewd and humorous parson's wife was admirable, exhibiting all the resourcefulness and tact of the thoroughly trained actress.

'The Little Damozel," by Monckton Hoffe, which has just been received with great favor at the Comedy Theatre here, was very successful also in London, where it profited, doubtless, by the popularity of Charles Hawtrey. It is an artificial and badly made piece, full of cheap and specious sentimentality and obvious, though often effective, situation, but the dialogue is bright, natural, and comparatively fresh, and most of the action is conducted in the atmosphere of that submerged theatrical Bohemia which, if non-existent in fact, has, nevertheless, a potent attraction for the crowd. The general nature of it may be indicated by the fact that the hero is a scamp who marries the villain's cast-off mistress for a price, is cast off, in his turn, by the wife, whom, of course, he has learned to love, and finally makes his peace by threatening to commit suicide. In spite of its trickiness, the piece is interesting, has some effective scenes, and exhibits flashes of humor and pathos. Moreover, it is admirably acted, especially by Cyril Keightley—a comedian with an agreeable address and manner, and finished artistic method—George Graham, Frank Lacy, and Henry Vogel.

Music.

Music in the Church. By Peter Christian Lutkin. Milwaukee: The Young Churchman Co. $1 net.

The late Charles Reuben Hale, Bishop of Cairo, Ill., bequeathed some of his estate for the establishment, endowment, publication, and due circulation of courses of lectures, to be delivered annually, forever, to be called the Hale Lectures, the subject of these lectures and publications being liturgies, church hymns, and church music, the history of eastern and national churches, and contemporaneous church history. Dr. Lutkin, whose volume includes the Hale Lectures for 1908-9, is dean of the school of music at the Northwestern University in Evanston, Ill. He holds that education is needed for congregations, organists, choirmasters, theological students, and, he fears, for the ministers, too, ere the music in our churches can be made what it should be; and his book not only proves this assertion but contains many hints as to how the needed education may best be provided. The table of contents includes hymn tunes, congregational singing, the organ, the organist, and choirmaster, the vested male choir, and the development of music in the Anglican church. While the book addresses itself primarily to those concerned in the making of church music, the general reader is also kept in mind, all technicalities and discussions that would interest only the professional musician having been excluded.

The author relates that one of the foremost of American composers, when invited to contribute to the hymnal of a

leading denomination, declined with thanks, excusing himself on the ground that he would rather write a sonata than a hymn tune. The simplest is the most difficult to make interesting, and while it is true that, as Prof. Waldo S. Pratt remarks, some recent tune music is as beautifully articulated as the finest sonnets or the most exquisite miniatures, nevertheless the inspiration and workmanship of hymn tune writing in the time of Luther or Bach far excel the best efforts of to-day; which is deplorable, for, as Dr. Lutkin remarks, the tune is "the only means by which the people as a whole can be swayed by a single emotion or uplifted by a common impulse." We have progressed in so far as in the best modern examples there is a closer association of words and music; but the general level is much lower. Musicians who uphold high standards when judging the works of others perpetrate the most commonplace hymn tunes, and upstarts cater to the love of sensationalism by adopting a formula for a tune, consisting of "a jingling rhythm recurring with deadly regularity, a melody gayly moving along the line of least resistance, and a few 'barber shop' chords to help out the climax, which will be greatly heightened if some of the sopranos sustain a high tone in the refrain—for there must be a refrain!" The best of the modern American and English tunes, together with the plain song melodies and early German chorals and English hymns, are classified in the first of the six lectures included in this volume, which thus serves as an invaluable guide to those who do not trust their own taste and judgment in making selections.

As regards the hymn singing of a congregation, Dr. Lutkin considers it almost an unfailing barometer of its spiritual condition. "Good hymn singing is a sure indication of a wide-awake and energetic parish, one where the people turn out and join sincerely in the service." Yet this powerful agency for the promotion of genuine religious feeling is not systematically cultivated. The proportion of persons who cannot "carry a tune" is, perhaps, no larger than that of the color-blind, and the sensible suggestion is made that if congregations could be persuaded to attend an occasional rehearsal, wonders might be accomplished—provided there is a competent choirmaster. Such choirmasters, to be sure, are not overabundant; usually the choirmaster is also the organist, who, while he may have learned how to play his instrument, trusts to his native wit for the voice training. The complaint is also made that too many of our organists use their positions to exploit their cleverness, considering the church as primarily a place to give recitals in; but we feel sure that in this respect our players have plenty of rivals in foreign countries. Organists, after all, are human, and inasmuch as nobody listens to the opening and closing voluntaries, and set organ numbers during the service are becoming more and more the exception, they must have their chance somewhere, even though it be in those "blizzards of sound" against which the Rev. Howard Duffield has fulminated.

Liszt's "Dante" symphony is to be performed the coming season by the Boston Symphony Orchestra. Other notable works in the repertory will be Mahler's second symphony, Debussy's "Iberia" and "Rondes de Printemps" (first time in America), and Henry Hadley's "Culprit Fay," one of that American's numerous prize-winners. Special attention is to be paid to the English composer, Fritz Delius. His orchestral nocturne, "Paris," when played in Boston last season, created a desire to hear more of this man's music; this will be gratified by the performance of four of his pieces, all novelties: "In a Summer Garden," "Dance Rhapsody," "Brigg Fair," and "Appalachia," a set of variations for orchestra and chorus on a Mississippi slave song. Another English composer, Granville Bantock, will be represented by "Three Dramatic Dances."

The Kneisel Quartet opens the twenty-sixth season of its existence and the nineteenth season in New York in November next, announcing its regular series of concerts of chamber music to be given on Tuesday evenings, November 15, December 13, January 17, February 7, March 14, and April 4, at Mendelssohn Hall, with the assistance of Charles Anthony, George Barrere, Carlo Buonamici, Courtlandt Palmer, Arthur Whiting, and others. Among the works to be played, which include a number of first performances, are:

Quartet in G major, op. 18, No. 2; quartet in F major, op. 59, No. 1; quartet in C sharp minor, op. 131; septet for violin, viola, violoncello, doublebass, clarinet, fagot, and horn, op. 20, by Beethoven.

Quintet in C major, for two violins, viola, and two violoncellos, by Schubert.

Quartet in A minor, op. 51, No. 2; quartet in A major for pianoforte, violin, viola, and violoncello, op. 26; quintet in F major for two violins, two violas, and violoncello, op. 88, by Brahms.

Quartet in D major, by Cherubini.

Quartet in G major, op. 106, by Dvorák.

Quartet in E flat major (first time), by Max Reger.

Quartet in C minor, op. 6 (first time), by Frederick A. Stock.

Quartet in F major, op. 7 (first time), by Sergei Taneiew.

Suite Basque for flute, two violins, viola, and 'cello (first time), by Charles Bordes.

Sonata in D major for violoncello and harpsichord, by Bach.

Quintet in E flat major, for pianoforte, two violins, viola, and violoncello, op. 44, by Schumann.

Quartet in A major for pianoforte, violin, viola, and violoncello (manuscript, first time), by Rubin Goldmark.

Modern French music will be a feature of the thirty-second season of the New York Symphony Society, which begins October 28 at the New Theatre. The programmes will include symphonies by Henri Rabaud, Paul Dukas, Ernest Chausson, and a new suite by Debussy, called "Iberia." The soloists engaged include Felix Berber, a violinist; Louise Homer, Sarah Anderson, Florence Hinkle, Josef Hofmann, Sigismund Stojowski, Francis MacMillen, Henry Hadley, and Horatio Connell.

Maud Powell, queen of living violinists, will open her season on September 29 as one of the soloists of the Worcester Festival, the others being Yolanda Mérö, Nina Dimitrieff, Margaret Keyes, Florence Hinkle, Berrick von Norden, George Hamlin, Herbert Witherspoon, Frederick Weld. At this festival English music will be represented by Granville Bantock's "Omar Khâyyâm," to which a whole evening (September 29) will be devoted. Another evening (September 28) will be given to Berlioz's "Damnation of Faust." In addition to these, there are to be three miscellaneous concerts, on September 29 and 30 (afternoon) and 30 (evening). Maud Powell, after this festival, starts on her seventh consecutive tour of this country.

Henry Hadley has been reëngaged as conductor of the symphony orchestra on which Seattle prides itself almost as much as on its rapid growth. Mr. Hadley is undoubtedly one of the best and most ambitious of American musicians, and there is no reason why, under his capable direction, the Seattle Symphony Orchestra should not do for the cities of the Pacific Coast what the Boston Orchestra has done for those of the Atlantic Coast. Among the soloists engaged for the Seattle season are Gadski, Josef Hofmann, Gogorza Kocian.

John Cheshire, the harpist, died at his home in New York city last Monday. Before coming to this country, thirty years ago, he had studied under the famous John Balsir Chatterton of the Royal Academy of Music in London, at which institution he also taught for a number of years, besides playing with the best-known English orchestras at Covent Garden. He was recognized as the foremost player of his day; he also composed several notable pieces, among them being the harp music for Sullivan's "The Light of the World" and a concerto for the harp, but recently completed. At the time of his death he was seventy-three years of age.

Art.

Chinese Pottery of the Han Dynasty. Publication of the East Asiatic Committee of the American Museum of Natural History. The Jacob H. Schiff Chinese Expedition. By Berthold Laufer. Leiden: E. J. Brill, Ltd., printers and publishers.

Description of Chinese Pottery and Porcelain: Being a translation of the T'ao Shuo. With introduction, notes, and bibliography. By Stephen W. Bushell, Oxford: At the Clarendon Press.

The story of Chinese pottery, heretofore less explicit than that of porcelain, is coming to light. Dr. Laufer's book summarizes the results of a three years' investigation conducted in China under an endowment provided by Mr. Schiff. As hardly any Chinese glazed pottery antedates the Han dynasty, and as the Korean and Japanese potters derived their craft from China, the work is essentially a monograph of the beginnings of the fictile art in the Far East. It is certainly a timely contribution. The

richness of the recent discoveries at Hsi an fu and elsewhere in the Shensi province has interested many collectors of Chinese antiquities. Dr. Laufer's book, though devoted only to pottery, and that of a few collections, will be helpful to whoever undertakes to describe any of the objects taken from graves of northern China and reputed to be of the Han era. The alert Japanese art dealers are bringing so many of these things to the United States that the present literal accuracy of Dr. Laufer's statements concerning the rarity of art of the Han dynasty in Occidental collections might seem to be questioned.

Whether or not all Dr. Laufer's theories prove acceptable to archæologists, they are based on a good attempt to collect existing data and to interpret individual objects in the collections of the American Museum of Natural History and other galleries in terms of the great culture movements. To the general reader the most interesting chapters are those in which the relationship between early Chinese and Siberian art is traced. Other investigators have been on this trail—which naturally is broad and well marked, for to influences from the north and east Hsi an fu, situated a month's journey inland from the present Chinese capital, lay easily open. The sculptures and pottery of the sand-buried cities of Turkistan have long appeared to invite comparison with works of early Chinese art on the one side, just as, in another direction, they suggest analogies with archaic Greek art. Dr. Laufer is conservative as regards the derivation of the technical processes of the Han potters from those of any other nation, urging that "This entire pottery forms a well defined group which in its character as pottery bears no resemblance to any other known groups of ancient pottery in Asia, nor to that of Siberia or of Turkistan." Some of the ornamental motives, however, he finds to bear such a striking and direct resemblance to motives common in old Scytho-Siberian art, "that a connection between the two must be presupposed *a priori*." In support of this thesis much literary and archæological evidence is adduced, tending to prove that the ancient Turks had a rather high civilization, and that during the Han dynasty interchange of works of art between them and the Chinese must have been frequent.

An interesting and seemingly convincing explanation of the "hill censers" is offered by Dr. Laufer. These are cylindrical pottery jars with covers which invariably represent a mountain or group of mountain peaks, often with attached flora and fauna, rising from the waves. They stand, according to this investigator, for the Isles of the Blest—Peng lai, Fang chang, and Ying chou—first mentioned in literature about 210 B. C. as the abode of the immortals. This conception, it is well established, influenced history, as when the Han Emperor Wu, who had vainly tried to see the blessed isles from the seashore, returned to his capital and at his palace, about twenty miles north of Hsi an fu, constructed a lake with imitations of the insular elysium. The hill jars, Dr. Laufer believes, were put into graves for the purpose of conferring immortality on the deceased.

Each of the forms of useful objects imitated in the mortuary pottery of the Han period, such as grist mills and granary urns, cooking ranges and other kitchen utensils, draw-wells, stables, and sheepfolds—has the double interest of throwing light on the development of the potter's technique about the beginning of the Christian era and of supplying data for describing the daily life of the ancient Chinese. The derivation of objects of present-day use from the former types is entertainingly shown. A chapter on Han roofing tiles contains data that supplement Prof. Edward S. Morse's admirable monograph on the tiles of ancient nations.

Dr. Bushell's high competence as a writer on Chinese ceramics was established during the years in which he was physician to the British embassy at Peking. His translation of the T'ao Shuo, or "Description of Pottery," in six books, by Chu Yen, the first Oriental scholar to write a connected account of the development of pottery and porcelain, was made for private use prior to 1891. An independent suggestion that this classic work ought to be available to European and American collectors was made some time ago to Dr. Bushell by the late William M. Laffan of New York. The resultant book, consisting of a translation of the original, which was first published in 1774, with four prefaces by as many Chinese scholars and with introduction and commentary by Dr. Bushell himself, gives the student or collector a good chance to find out what the Chinese know about the history of their own fictile industries. The original author, a learned man, a poetaster as well as antiquarian, was appointed in 1767 by the governor of the province of Kiangsi to write this book. For seven years he lived at Ching-te Chen, the celebrated site of the Imperial potteries where, besides familiarizing himself with the traditions and technical processes of the factories, he diligently gathered quotations concerning pottery from earlier authors. The high opinion in which the work was held by some of Chu Yen's contemporaries is illustrated in a statement in the fourth preface, written by Huang Hsi-fan in 1787:

> The learned author has carefully examined the modern processes of manufacture, and made wide researches into old works, so that there is not a single name nor a single vessel that he has omitted. . . . Comparing this with the Ko ku and the other books, it stands in the proportion of a thousand basketsful of rice to one grain.

Such a work, now for the first time available in English, will be invaluable to museum curators and connoisseurs. Incidentally, it is of no little interest to the curious-minded general reader.

Autumn books on art from Macmillan include "Guide to Italian Painting," by B. Berenson; "Irish Ecclesiastical Architecture," by A. C. Champneys; "English Mediæval Architecture," by E. S. Prior; "The Art of the Romans," by H. B. Walters; "A Book of Porcelain," by W. Gibb; "Dinanderie," by J. Travenor-Perry; "Douglas Jerrold and Punch," by Walter Jerrold; and "French Portrait Engravers," by T. H. Thomas.

Finance.

EXPORTS AND IMPORTS.

In August, according to the Government's report of a few days ago, this country's foreign trade again resulted in an excess of merchandise imports over exports. This is the eighth monthly excess of the kind in the period beginning with June of 1909; prior to which date there had been no such monthly surplus of imports since June, 1897. What attracted even more attention was the fact that, in the footing of exports and imports for all the eight completed months of the year to date, there was also an excess of importations; it is fifteen years since the reports for an equal period have shown any such result.

The essential fact about this phenomenon is that it is abnormal, in view of the past generation's experience. It has been brought about partly by restriction of certain exports, but chiefly by the unprecedented imports of the period, which for the eight months in question rose $107,000,000 over the same months in 1909, and $53,000,000 over the previous maximum, that of the eight months ending with August, 1907. During the eleven years prior to 1909 excess of merchandise exports for the period never fell below $183,000,000, and four times ran beyond $350,000,000.

Large importations are certainly not in themselves an unfavorable economic sign; they may mean nothing but growing wealth and prosperity. It is only when their abnormal magnitude appears to reflect economic tendencies which are not wholesome in themselves that experienced students of such problems look askance at them. In the present case such tendencies were rather plainly manifest in this country. Extravagance of living and artificial enhancement of prices by speculative use of credit had been among the conspicuous phenomena in this country for a year or more. At the beginning of the pres-

ent year, the London *Economist's* monthly average of English commodity prices stood more than 8 per cent. below the highest level of the period, reached in the spring of 1907; at the same date this year the Bradstreet average of American commodity prices was actually above the highest monthly figure of the decade.

Comparisons in such calculations cannot be exact; but in this special case, the presumption that our own prices had been pushed to a height where we were out of normal touch with the outside world, was very strong. Among the conspicuous increases in our importations for the year to date have been rubber, the enormous imports of which reflected the "automobile craze"; precious stones, which certainly might mean extravagance; and iron and steel, which strongly suggested that American prices were at an artificial level when compared with those of other producing nations.

It is entirely true that, although it is fifteen years since any such series of monthly "import surpluses" has occurred in our foreign trade, there have been long periods in the country's history when an excess of imports was the rule and not the exception. It may be interesting to inquire just when and how that condition of things occurred. From 1844 to 1873, inclusive, there were only two exceptions to such a yearly import surplus. The import excess for the year got above $100,000,000 in 1864 and 1869, and in 1872, after a generation in which we regularly bought from foreign nations more than we sold to them, the annual excess reached the towering figure of $187,000,000. But with the panic of 1873, it ended. Never but once since that notable economic date has the country imported, during a calendar year, more merchandise than it has sent abroad.

This succession of rather distinct eras in our foreign trade was not mere accident. It is reasonable to suppose that the habitual excess of merchandise imports during the twenty years after 1844 —as in the earlier years for which less satisfactory statistics are available— arose from the fact that the country was young and poor, but growing rapidly; that it needed foreign capital in greater amount than it could pay for by export of American commodities, and that it needed this foreign capital in the form of merchandise.

These requirements continued during the decade from 1864 to 1874. They would probably, of themselves, have prolonged the annual excess of imports over exports, but their effect on the import trade was greatly emphasized by the abnormal imports of war material, and by the utter derangement of prices caused by depreciation of the currency. In 1871 and 1872, still another influence took a hand: an era of reckless extravagance was in full swing, and there is every reason to believe that, even after allowing for the premiums on gold, American prices for commodities were higher than prices of the same commodities in Europe. It is certain, at any rate, that the merchandise imports of 1870 were the largest on record; that in 1871 they increased $112,000,000, or 26 per cent., and that in 1872 they further expanded $82,000,000, or 14 per cent. By this time, the whole position of things was unnatural, and it all had a hand in the general collapse of 1873.

The Senate investigation of 1892 (on the basis of the 1860 average for par) made the average American gold price of all articles 121¾ for the five years ending in 1874, and 103¾ for the five ensuing years. What happened, largely as a consequence of these lower prices, was an enormous forward leap in the export trade, along with a fall in imports from their abnormal volume of the five or six preceding years. By 1878, with the help of an abundant harvest, the annual excess of exports rose to $305,000,000. Not until the near approach of 1890 and 1893 was the process again reversed, and it is certain that even at that time, although prices were not high as compared with the decade before and the decade after, they were too high in America for our markets to keep normally in touch with the rest of the world. In 1890, in 1892, in 1893, and in 1895, monthly "import excesses" occurred in connection with a highly disturbed position in our home and international finances.

What followed, after the middle of 1897, was a period of economy in home production and of aggressive forward movement into foreign markets, happily supplemented by a series of abundant American harvests in the face of foreign shortage. The years of enormous "export surpluses," lasting from 1898 up to 1909, ensued.

It is these chapters in our history, and not any intrinsic evil in a country's excess of imports over exports, which have converged economic interest on the story of the past fourteen months. Different people will draw different conclusions from the changed condition of our foreign trade, during this period. The case of England is occasionally cited, in which annual merchandise imports exceed exports by as much as $700,000,000. But students of the problem are well aware that this English "import excess" is a sign of the simple trading profit on that country's enormous shipping trade; of the profits from freight and passengers consigned by English steamers, and of the annual remittances of interest against English investments in foreign countries. The United States has neither trading fleet, nor ocean liners, nor foreign investments, in such number and magnitude as to create any parallel condition. And in so far as our own experience in the "import excess" period prior to 1873 was a result of the country's relative poverty, and of its urgent need for European capital to keep the wheels of American industry moving, the most that can be said is, that the description hardly fits the present day.

PERIWINKLE

By WILLIAM FARQUHAR PAYSON, Author of "John Vytal," "Débonnaire," "Barry Gordon," etc.

A story of the rugged life-savers of Cape Cod, and their idol, Periwinkle, who in her infancy was cast up by the sea. Her love for Dick Langdon, storm-wrecked upon the same coast, is the centre of this story instinct with the freedom of winds and waves. (12mo. Illustrated by THOMAS FOGARTY. $1.25 net)

THE LADY OF SHENIPSIT

By FREDERIC P. LADD, Author of "One Fair Daughter" and "The Woman Pays."

A girl, high-bred and generous, married to a man whose shallow vulgarity she discovers too late—an intolerable situation! The way out of it is the theme of this novel, which brings together, in a story tense with passion and stirring incident, people whimsical, lovable or sinister, but always interesting. (12mo. Illustrated by GORDON GRANT. $1.25 net)

THE LADY: SIGNIFICANT PHASES OF HER HISTORY

By EMILY JAMES PUTNAM.

Studies of the lady of different times and nations, her education, duties, pleasures, and social and domestic life.

Cloth, Crown 8vo. Illustrated, $2.50 net. (Ready October 12th)

HUNTING CAMPS IN WOOD AND WILDERNESS

By H. HESKETH PRICHARD, F.R.G.S. Author of "Through the Heart of Patagonia," etc. With introduction by F. C. Selous.

Big game hunting in localities mostly within easy reach of the American Sportsmen. By a sportsman known the world over. Small quarto. 100 color and other illustrations. $4.00 net. (Ready October 5th)

LEOPOLD THE SECOND, KING OF THE BELGIANS

By ANGELO S. RAPPAPORT, Ph.D. Author of "Royal Lovers and Mistresses," etc.

A biography of the late King Leopold, the man and the monarch. Cloth, Demy 8vo. Illustrated, $3.00 net.

(Ready Sept. 14th)

COWBOY SONGS

Collected by JOHN A. LOMAX. Introduction by Barrett Wendell.

Breezy, devil-may-care ballads and songs, with music to 20 of them. Gathered from the lips of the cowpunchers.

Cloth 12mo. $1.50 net. (Ready October 19th)

THIRD EDITION IN PRESS

A BOOK OF CHARMING ESSAYS IN WHICH ARE PICTURED SOME OF THE LASTING PLEASURES OF LIFE

The Durable Satisfactions of Life

By CHARLES W. ELIOT

12mo, Cloth, 198 pages. $1.00 net; by mail, $1.10

"The book is one of wonderfully sane and sweet philosophy, a book that ought to be read by every man or woman who is discontented, unhappy, rebellious against the limitations of life. It is eminently practical, and its sturdy, simple reasoning, bent on finding the treasures of the daily, dusty, common life, will be wholesome medicine for those who have come to put too much stress upon the relation of material possessions to happiness."—*N. Y. Times.*

NEW AUTUMN PUBLICATIONS

JOAN OF ARC

By GRACE JAMES. With 12 Illustrations. Demy 8vo. $3.50 net.

This book deals primarily with the career of Joan of Arc, whose life was such a tragedy that it cannot be contemplated without wonder and pity. The tragedy was twofold, being a question both of character and of circumstance; and an attempt has been made to deal with it from these two points of view. A study of "The Maid's" mysterious and elusive personality has been supplemented by some account of the France of her day, of the religious, political, and social elements that made her world, and of the institutions that were powerful to determine her fate.

SAMUEL ROGERS AND HIS CIRCLE

By R. ELLIS ROBERTS. With 16 Illustrations. Demy 8vo. $3.50 net.

The object of this book is twofold. First, Mr. Ellis Roberts endeavors to give a readable account of the long life of Samuel Rogers, banker, poet, connoisseur, and wit; and to show how he was affected by the literary and political tendencies of the Romantic Revival. Secondly, in a series of critical chapters, an attempt is made to describe the work of those whose friendship meant most to Rogers. While it is hoped no really significant person has been omitted, the author has preferred to lay stress on a few outstanding characters, rather than overload the book with catalogues of names. Byron, Fox, Sydney Smith, are the subject of separate chapters; while Maturin (the creator of Melmoth), Luttrell, Moore, Grattan, and Macaulay—to name widely-differing acquaintances of Rogers—find their place in the book.

THE TOWER OF LONDON

By RICHARD DAVEY, Author of "The Pageant of London," and "The Nine Days' Queen." With a Frontispiece in color by John Fulleylove, R. I. 12 other Illustrations and a Plan. Demy 8vo. $3.00 net.

"The Tower of London," by Richard Davey, may be described as a sort of supplement to this author's popular "Pageant of London." Space prevented him from doing as complete justice to the history of the Tower of London as he wished, and he was obliged to dismiss its wonderful story in a few vivid word pictures of the tragic and dramatic events of which it was the scene. In the present work, these episodes of pathos and tragedy are dealt with in detail, in the author's well-known graphic and picturesque manner. He has as usual sought his information from little-known state papers, and contemporary documents and memoirs, and has thereby been able to add some valuable facts to the enormous aggregation already published by earlier writers on the same subject. The great events, such as the imprisonment of illustrious personages like Bishop Fisher, Sir Thomas More, Anne Boleyn, Katharine Howard, and Jane Grey, are given as fully as possible. The prisoners of the seventeenth and eighteenth centuries also receive their due share of attention, while the state of the Tower during the Civil War, the suicide of the Earl of Essex, the romantic evasion of Lord Nithsdale, the execution of Lord Derwentwater, etc., are related in as full and graphic a manner as possible. To the innumerable readers of the "Pageant of London," this book will offer a fresh field of interest and amusement, and will be found quite as lively and entertaining a narrative as its popular predecessor in the field of historical investigation.

QUIET DAYS IN SPAIN

By C. BOGUE LUFFMAN. Price $2.00 net.

"Spain remains the great unrevealed store of the South—a part of Europe, a link with Asia, an offshoot of Africa, she leads us from people to people, from clime to clime."

There are plenty of books about Spanish churches, Spanish pictures and Spanish history, but few which get near the daily life of the people and show us Spanish customs and characters as they are to-day. Mr. Luffman has braved the conspicuous lack of physical comfort which is characteristic of the country and given his readers a very intimate and delightful view of modern Spanish life.

Distinguished Tributes

John Brown: A Biography Fifty Years After

By OSWALD GARRISON VILLARD

Thomas Wentworth Higginson

"It may be safely said that there now remain very few of the personal friends of John Brown of Osawatomie who will not be surprised and deeply impressed by Mr. Oswald Garrison Villard's large and mature memoir of him. It is, as the author calls it, 'A Biography Fifty Years After,' and I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

John T. Morse, *Editor of American Statesmen Series.*

"The story has the movement of a Greek tragedy, with its simple beginning, then its creation of the sense of personal nearness, then its vague foreboding of terrible disaster, and finally its grand and fatal close. Perhaps in thus dramatically fashioning his volume Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

Fully illustrated with portraits, and other illustrations. With copious notes and bibliography.

$5.00 *net;* postage 26 cents.

An American Citizen: The Life of William H. Baldwin, Jr.

By JOHN GRAHAM BROOKS

George Haven Putnam

"Baldwin was a great citizen. I wish very much that a copy of the book might find place in every town library and in every Sunday-school library in the country. The narrative is a sermon, a morality, a romance, and a drama in one."

John H. Gray

"I thank you personally for the great service you have done Americans, and especially those just entering upon active life, by embodying in so attractive form all that is capable of being put into writing in this admirable and inspiring life."

Dr. Samuel M. Crothers

"What a sense of exhilaration comes as the story is told. I am sure that this book will do much in moulding the characters and directing the ambitions of young men going into business life."

S. C. Mitchell

"I have never followed a career which was more quickening in all that makes for the true greatness of America. His life as told in this volume cannot fail to be an inspiration to the youth of our country."

With portraits. $1.50 *net;* postage 11 cents.

OTHER BOOKS OF SPECIAL INTEREST

The Qualities of Men

By Joseph Jastrow

A study of character and of the problems of temperament, intelligence, efficiency, stupidity, and the relations of one person to another. The volume is offered as a guide, philosophical and friendly, to thoughtful readers, who cherish an understanding of the social and intellectual tendencies in which they live. $1.00 *net;* postage 10 cents.

Primitive Psychotherapy and Quackery

By Robert M. Lawrence, M.D.

A collection of curious, interesting and sometimes very amusing facts and incidents showing how in all ages men have used and misused the influence of mind over body for healing purposes, through amulets, talismans, phylacteries, royal touch, relics, etc. $2.00 *net;* postage 16 cents.

How to Judge a Book

By Edwin L. Shuman

This book, by one of the leading literary editors of this country, does for the reader what Brander Matthews's "Study of the Drama" does for the playgoer. It is hard to imagine a better volume for anybody, whether old or young, professional or amateur, who wishes to read with discrimination. $1.25 *net;* postage 11 cents.

John Winterbourne's Family

By ALICE BROWN

"A delightful and unusual story. . . . well worth reading. . . . The manner in which the hero's male solitude is invaded and set right is amusing and eccentric enough to have been devised by the late Frank Stockton." —*New York Sun.*

$1.35 *net;* postage 13 cents.

IMPORTANT PUBLICATIONS OF

D. APPLETON & COMPANY

29-35 West 32nd Street, New York City.

RACE DISTINCTIONS IN AMERICAN LAW

By GILBERT T. STEPHENSON, A.M., LL.B. (Harvard)

Member North Carolina Bar.

This publication is the result of a careful study of much important legal data bearing upon race distinction. A thorough examination has been made of all the constitutions, statutes, and court reports of the various States and Territories between 1865 and the present time. Such subjects as Jim Crow Legislation, Separation of Schools, Theatres, Restaurants, and Hotels, the Suffrage Distinctions, Civil Rights, and all similar topics have been thoroughly discussed with many references to authorities. 12mo, cloth, $1.50 net.

THE BIG GAME OF AFRICA

By RICHARD TJÄDER

Illustrated with 32 pages of photographs taken by the author. This book differs from other books describing hunting for big game in Africa, inasmuch as it has a scientific basis and deals very fully with all of the requirements for such an expedition. A unique feature is a chapter treating of the contributions to museums resulting from these explorations. *Ready Oct. 21.* 8vo, decorated cloth cover, $3.00 net.

STUDIES IN SPIRITISM

By Dr. AMY E. TANNER

Dr. G. Stanley Hall writes: "I know nothing in the field that has appeared in recent times that at all ably and adequately represents the negative side with reference to the spiritualistic-telepathic hypothesis, which I think is very strongly favored by our studies of Mrs. Piper."

With an introduction by Dr. G. Stanley Hall. Large 12mo, cloth, $2.50 net.

THE STORY OF SUGAR

By G. T. SURFACE

Instructor in Yale University.

No commodity of commerce has had a more varied, interesting, and significant history than sugar. This volume is intended to convey accurate and valuable information on the industry in the different periods and stages of its development. The beet-sugar industry receives special consideration from the standpoint of future prospects, since this must be regarded as an infant industry in the light of its rapid growth during the past two decades.

Small 12mo, cloth, fully illustrated, $1.00 net.

FLORENCE NIGHTINGALE

By LAURA E. RICHARDS

While the name of "The Angel of the Crimea" is a household word the precise nature and scope of her work, and the difficulties and discouragement under which it was accomplished, are unknown to many children of the present generation. All this is here beautifully and completely related by a famous writer whose own father was in part responsible for confirming Miss Nightingale in her determination to devote her life to nursing. Illustrated. 12mo, cloth, $1.25 net.

A BOOK of THE CHRIST CHILD

By ELEANOR H. BROADUS

A group of legends of the Christ Child, written not to give religious instruction, but to present picturesque stories. The legends are recorded mainly in the Apocrypha, in mediæval saints' lives, in art, and in popular tradition. The writer has kept the outline of the stories, but has treated the details with freedom. The stories are not long and are written in a simple, direct style, each preceded by a short selection from an appropriate poem.

Illustrated by 16 copies in tints of paintings by old masters, colored border on pages. Square 8vo. Decorated cloth cover with inlay in colors, $1.75 net.

LEWIS CARROLL

By BELLE MOSES

Author of "Louisa May Alcott."

This is a very charming biography of the man who wrote "Alice in Wonderland." There is more here than has ever elsewhere appeared of the younger days of Lewis Carroll, while Miss Moses's imaginative sympathy has made a most enthusiastic history of the better-known period of the career of the author of "Alice in Wonderland." Nowhere else will young or old find a more delightful account of a more interesting character. A rare portrait of Lewis Carroll as a young man as Frontispiece. Small 12mo, cloth, $1.25 net.

OVER THE NONSENSE ROAD

By LUCILE GULLIVER

This book contains a number of stories of a fantastic nature for children. They tell about the adventures of various little merry animals—The Gay Baboon, The Courtly Peeshoo, The Witching Wah, The Jolly Bruang, etc.—at sea, in the woods, in an imaginative country and under various circumstances. There are five groups of these stories, each dealing with different animals and different in plot and scene.

Sq. 8vo, decorated cover, 8 tinted half-tones, $1.50 net.

Important New Macmillan Books

NOTABLE NEW BOOKS ON POLITICS AND PUBLIC AFFAIRS

The Conservation of Natural Resources in the United States
By CHARLES RICHARD VAN HISE, President of the University of Wisconsin.
A comprehensive statement of the national resources in minerals, waters, forests, and soils, indispensable to the reader who wishes to understand the current discussions of proposed legislation for conservation.

About 200 illus., cloth, 8vo

Just Folks (Fiction)
By CLARA E. LAUGHLIN. *Cloth, 12mo*

Published by **THE MACMILLAN COMPANY** 64-66 Fifth Ave., N. Y.

The Nation.

NEW YORK, THURSDAY, OCTOBER 6, 1910.

The Week.

It is a long time since there has been an item of news about the Federal civil service so important as that which is now given out concerning the Post Office Department. Not only is President Taft to put into the classified list, by executive order, between 7,000 and 8,000 assistant postmasters, whose appointment has thus far remained a matter of patronage, but he will recommend legislation by Congress putting all second and third-class postmasters into the competitive class. This will leave to the patronage system only the comparatively small number of first-class postmasterships, and a portion of the fourth-class postmasterships, and will thus mark a notable advance toward the final extinction of the spoils system in its chief remaining stronghold, the Post Office Department. But the most interesting thing about the announcement is the statement that both these reforms have been adoped by the President upon the special recommendation of Postmaster-General Hitchcock, who has been led to make them as part of his earnest effort to bring the Post Office Department up to a self-supporting basis. It is not so very long since civil service reformers were sneered at as dreamers and doctrinaires, who knew nothing about practical affairs. But here we have the man who was appointed Postmaster-General as the result of his successful management of Mr. Taft's campaign—a man who is nothing if not a politician and a practical man—carrying the civil-service system beyond the farthest point it had yet reached, so as to enable him to make the two ends meet in carrying on the postal business.

Mrs. Storer's new attack upon the veracity of Mr. Roosevelt was duly telegraphed to the London *Times*. Its American correspondent afterward cabled the surprising fact that, while many American newspapers suppressed the matter, not one had come to the defence of Col. Roosevelt. Special wonder is caused by the *Outlook's* failure even to mention the controversy. Here is one of its own employees directly charged with untruthfulness, and the documentary evidence to back it up is furnished, yet we get nothing but silence from the *Outlook*. This must be at the special request of Mr. Roosevelt, as the editors, left to themselves, could hardly have let alone such a question of public morals. They might, at least, one would think, have printed some little consolatory extract from the Bible—as, for example, that passage where Abimelech called hastily to his armor-bearer, and said: "Draw thy sword and slay me, that men say not of me, A woman slew him."

Mr. John Hays Hammond was right enough in declaring that the difference within the Republican ranks on the tariff is "a difference of opinion, and not of party principle." The principle avowed by regulars and insurgents in the matter of protection is, indeed, much the same; but it does not occur to Mr. Hammond to inquire how it comes that a mere "difference of opinion, and not of party principle," should result in such violent animosity, such heated indignation, such revolutionary explosions, as the insurgent movement has manifested. The answer to this question would, indeed, not be pleasant to contemplate. The insurgents are so hot, because, in their opinion, they, the regulars, or stand-patters, under cover of a principle—the principle of safeguarding American wages—have persistently clung to pernicious practices which have no relation whatsoever to that principle; and because the protective system as actually maintained is based on false pretences and is a cover for outrageous spoliation of the masses of the people by great capitalistic interests. Indeed, the insurgent Republican attitude carries, on its face, a far more serious indictment of the Republican party than does the Democratic. A Democrat may believe that protection is robbery and yet admit that in the eye of a straight Republican it is no such thing; while the insurgent Republican declares that protection is all right in itself, but that the masters of his own party's policy have turned it into an instrument of oppression and fraud.

All accounts agree that Woodrow Wilson is making an excellent impression as a campaigner. It is no surprise to those acquainted with him that he should have success with his audiences. His powers as a speaker have been long tested. Not all his friends were confident, however, that he could go before miscellaneous political gatherings and impress himself as he evidently has been doing in New Jersey. Personality counts for a vast deal in such matters, and Dr. Wilson's frank bearing, his good humor, his readiness and his pungency would greatly help any orator in carrying the thing off. But in addition he has put high seriousness into his speeches, and yet has been able to clothe his political thinking in such direct and clear language as to win and delight his hearers. All told, this university president turning his hand to active politics has shown how easy is the mastery of the mere forms of political campaigning, provided one has the ideas and the sincerity and the fervor to make his advocacy tell.

The insurgents of Iowa and Kansas are aghast at the performances of Roosevelt in New York. They had taken him to their bosoms in the rampant West, but now feel that they have only been warming a viper. The Des Moines *News*, which is the personal organ of Senator Cummins, comments with the utmost bitterness upon the course of the New York Republican Convention, under the domination of Col. Roosevelt. The platform's sweeping endorsement of Taft and of the Payne-Aldrich tariff, and its entire omission of "progressive" doctrine, are described as "a staggering blow to the insurgent cause." Says the *News* truculently: "Roosevelt, bringing with him Taft, Ballinger, Wickersham, Root, J. P. Morgan, Tawney, Lurton, Hitchcock, and all the motley crew of plutocrats, the Hessians of privilege, cannot enlist in the army of insurgency." This is very sad, but it all rests upon a strange misunderstanding of Roosevelt. In the first place, he is not the man to "enlist" in any army, whether of insurgents or regulars. It is his mission to command them both. That is a part of his all-embracing comprehensiveness, which is the second thing that we should have supposed the Western insurgents would have grasped

before now. Having put himself at their head on his Western tour, what more natural than that he should return to put himself also at the head of the Administration supporters in the East? This is only a proof of his many-sidedness. As for the New York platform, so offensive to the West, Mr. Roosevelt could privately explain it to Senator Cummins as merely the temporary shift of a "practical" man bent on carrying his immediate point.

The most bitter enemy of labor organizations would hate to believe them directly responsible for the awful crime of blowing up the building of the Los Angeles *Times*. That the terrible destruction, with the loss of a score of lives, was due to an explosion of dynamite from the outside, appears to be conclusively established. Murderous assault by bombs was also planned at the same time, it is evident, against individuals in the city. But, although the *Times* itself had long been a non-union office, and had taken a strong position against the tyrannies of labor organizations, we are very reluctant to believe that the deed received anything like official sanction from the labor leaders. The work may have been that of some miscreant who acted on his own notion. But granting this, we cannot emphasize too strongly the duty which this frightful assassination places upon the men responsible for labor organizations. It is for them not only to disavow and denounce the crime, as they are doing, but to bend every energy to catch the criminal and make an example of him. But further than this, the appalling tragedy at Los Angeles should bite it into the minds of labor leaders that they cannot afford even to dally with talk about violence, or getting what they imagine to be their rights by force.

A contribution to the explanation of the higher cost of living has been made by the Census Bureau. Great increases in the growth of cities are reported from every section of the country. This does not mean merely that great numbers of people have flocked to the urban zone from the suburban zone, but a wide expansion of the urban zone itself. The great advance in traction facilities has enabled communities to spread over the surrounding country, providing individual homes rather than herding newcomers in already congested centres. This increase in the size of cities, territorially as well as numerically, has been the means of wiping out thousands of acres of productive land that were used as market gardens, and the men who worked them have either become toilers in the city or are taking life easy on the money paid for their farms. This has pushed the growing of market supplies farther into the country and into the hands of men new to the business. A decade ago thousands of farmers loaded their wagons at night and drove to New York with produce raised on ground now occupied by mile after mile of homes. In New Jersey hundreds of farms have been given up to the real estate men, and lie unworked while waiting for the tide of settlement to reach them. It is plain from a study of the census returns that the demand for food products has been pushing the supply harder and harder.

The article on salesgirls in the October *McClure's* is the first of a series by Mrs. Clark and Miss Wyatt on working women in New York. This series promises to be subversive of some of the stock ideas of the ultimate consumer. He knows little of the elaborate processes involved in providing him with the thousand and one articles which make up daily life, beyond the bad manners or inattention of the clerk who waits on him. It is time that he should take a look at the question from the saleswoman's side of the counter. Wages too small to admit of decent living, and fitful chances of promotion, added to nine hours of standing a day, may excuse poor service. From the fifty histories collected among stores of different grades, the authors have given the details in the lives of six of these self-supporting women whose wages range from $4 to $12 a week. The pitiful struggle of those more poorly paid to make both ends meet during health and activity leaves the reader to wonder just what becomes of them in case of illness or when they are laid off during the slack season.

Some unconscious ironies are revealed in the six stories which the authors have selected as typical. Four of the women manage to get along on their salaries by virtue of the charitable homes in which they live. Also, the benefit system very often works on lines too similar to the commercial insurance companies. The employee receives her benefit only if she is ill or injured while still in the employ of the store. If she leaves or is discharged, she sacrifices to the management the amount she has already paid in. Such questions as hours of employment too long for health and seasonal overwork at Christmas time can be wholly regulated only by law, and the Consumers' League is continually working for proper legislation. The difficulty of wages the girls may help to settle by organizing, while only a changed attitude on the part of the purchasing public can obviate certain others. For instance, it is useless for the law to demand stools behind the counters if the public will not buy from a seated clerk. And those who object to having the stores open till midnight during the week before Christmas will have a formidable opposition with which to contend just so long as an easy-going public is willing to leave Christmas shopping until the last minute.

The horrible outcome of the Vanderbilt Cup race makes it clear that our roads do not lend themselves to so dangerous and terrible a sport. For the benefits to be gained there is little to be said. It is thrilling and dramatic to see a car flash by at the rate of seventy miles an hour, with its crew in deadly peril of their lives, but the thrill lasts only an instant and it is doubtful if it is adequate compensation. More interesting is the assemblage of cars and people and the excitement of staying up all night and racing back to town the next morning. But the price is too high. If there are those who feel they must still race, let them compete on tracks.

A statement issued from the Standard Oil office intimates that the company is preparing for a war of prices in its foreign field, in view of the recent immense increase, present or prospective, in oil production by foreign companies. To people who watched the singular outburst of share speculation in London, last February, this announcement will at once call to mind the "oil boom" on which much of that speculation converged. One heard chiefly, in those piping days on London's Stock Exchange, of the "rubber mania," and rubber

shares, new and old, undoubtedly kept the centre of the stage. But the oil shares held their own; while new issues of rubber company stock, in the first half of 1910, footed up $83,000,000, as against only $4,500,000 in the first half of 1909, new issues of oil-company shares rose in the similar period from $6,500,000 to $42,500,000. Just as the rubber boom was started by an extraordinary increase in shipments of that commodity to America for the motor-car trade, so the oil boom pivoted on a sudden order for 50,000 tons of fuel oil from the Scotch refiners for the British navy. The oil craze, like the rubber mania, ran its course, and prices for the shares got down by midsummer 25 to 40 per cent. below the February price. But meantime, thanks to the British public's eagerness to place its capital at the service of the new producing enterprises, they are equipped for competition.

This phase of the trade situation the Standard Oil Company recognizes without mincing words. Its circular points out that "the level of prices for refined oil to-day in the United States is lower than at any time during recent years"; that "as a direct result of these prices, the consumption of refined oil in this country is increasing," and that the purpose of the cutting of prices in the foreign field is "to increase the world's consumption." There are several interesting aspects of the formal inauguration of such a policy. It may attract attention on London's Stock Exchange, where it could hardly be much more palatable to the "Oil Department" than the recent sudden shrinkage of orders from American tire-manufacturers was to the rubber-share specialists. But what is likely to attract the most attention is the frank recognition, by the Standard Oil, of an old-fashioned principle of trade which we have lately been assured was obsolete. No secret appears to be made of the fact that lower prices will stimulate demand from consumers, nor is any qualification applied to the theory that the way to meet aggressive foreign competition is to meet it. Since the formation of our enormous Trusts in other lines of industry—a matter, principally, of the ten past years—we have heard much of the new idea that reduction of prices brings no fresh business, and that trade supply and demand need have no influence on market quotations. The heresy of the Standard Oil, as regards this industrial philosophy, is the more noteworthy in that it not only repudiates the notion as applied to the foreign field, but plainly intimates that supply and demand are playing their usual rôle at home.

Under the heading, "A Severe Indictment," the *Educational Review* reprints from the San Francisco *Argonaut* a statement concerning the qualities of our college-bred young men which it would be difficult to match in the anti-college utterances of recent years, numerous and sweeping as these have been. "In recruiting its service," says the *Argonaut*, speaking of its own experience, "trial has again and again been made of the college-bred youth, but never with any approach to success. We have never yet been able to find a college-bred youth, without a long subsequent practical drill, who could write clean English, or who could even write a hand which the printer could read. Not one of those from Frank Pixley down, whose work in the *Argonaut* has been an element in its character and influence, has been a man of college breeding. This remark applies to other publications of the country representative of journalism in its higher rank. It is only a few months ago that there was assembled at a dinner table in the Century Club at New York a little group representing the very highest forces in American journalism—including the editor of *Harper's Weekly*, the then editor of the *Century*, and others of equal note—when, through a chance inquiry, it developed that only one present was a college-bred man." And more to the same effect. But the trouble with this sort of general denunciation is that it obviously overshoots the mark. The element of truth in the *Argonaut's* complaint would be much more forcibly brought home if presented with more balance. The fact is that neither in our colleges nor in our high schools do we insist upon habits of thorough and exact mastery of intellectual tasks as does the German *Gymnasium* or the English public school—with results that are evident in many ways, though not justifying a view so gloomy as that of the *Argonaut*.

It is a rare compliment to our all too little recognized linguistic attainments that the French have just done us. M. Damour, recent dispatches from Paris announce, formerly vice-consul at New Orleans, is on his way to these shores on "an official mission to encourage the teaching of French in American schools, especially in those of Louisiana." The gallant Frenchman, we take it, has conversed in his own tongue with some of our countrymen. He has then made inquiries, and been informed, to his great surprise, that their command of the language was unusual for Americans, the great mass of whom do not get to college or even high school, where alone the language is taught. Encouraged by the progress his informants have shown after only three or four years of French in the high school and four more in college, he naturally has become enthusiastic when he has thought of what they might do if they began six or eight years earlier. We wish him all success in his mission of encouraging the teaching of French in American schools, and merely beg to suggest the addition of the words "and colleges."

There is at least one country where "catchwords" in politics are under the ban. The Imperial Chancellor of Germany has been explaining his plan of campaign for the election of a new Reichstag next year, and the semi-official organ of the Government, the *Norddeutscher Zeitung*, in setting forth the programme of Bethmann-Hollweg, states that "we can give the assurance that in the highest responsible quarter catchwords are not being sought." What is being sought is, apparently, a catch-all. For in the announced strategy of the Chancellor, as respects the next political battle, we have one of those beautifully vague statements which defy analysis, and almost defy attack, but which are designed to attract the support of all shades of opinion. Listen to this: "The Imperial Chancellor considers it his principal task so to conduct the affairs of the Empire that everything which is necessary for the prosperity of its industrial and commercial life and for its military protection may be assured to it, and that its continued intellectual development may be safeguarded." Does it not remind you of the finest Republican definition of the blessings of protection? Such sonorous phrases are not, indeed, catchwords, but they are intended to be catch-votes.

THE NEW YORK CAMPAIGN.

Mr. Stimson's nomination at Saratoga for Governor was a shrewd and strong move. From their list of eligibles, the Republicans of New York State could not have chosen a more promising candidate. For Mr. Stimson is not only a man who has displayed unusual ability, with a capacity for hard work, but one whose public activity as Federal prosecutor makes him peculiarly available at the present juncture. It was his skilful weaving of the web of evidence about Morse which sent that unscrupulous rich man to jail, and his prosecutions of the Sugar Trust for stealing and of railways for rebating were equally successful, and equally impressed the popular mind. We do not know whether Mr. Stimson is a good campaigner or would, in any case, boast of his achievements, but Mr. Roosevelt is ready to do the campaigning and the boasting for him.

As an opponent to Mr. Stimson the Democrats at Rochester have found in John A. Dix a happy solution of the problem which confronted them. It was essential that their nominee should not be a Tammany man and should not be a cringer before Hearst. Mr. Dix is neither. He bears an historic name of which he has never done anything to dim the lustre. His reputation is that of a man honorable in business and clean and courageous in politics. He was too stanch a Democrat to support Hearst in 1906, when by money and fraud that adventurer secured the Democratic nomination. As State Chairman this year, Mr. Dix has been working hard and fruitfully to bring back the party to its old standards and to tone up its management. This was done without the least thought of self-seeking, and he long resisted the demand at Rochester that he should become the candidate for Governor, yielding only when assured that his nomination could best unite the party and meet the peculiar needs of the hour. He is not an orator of the impetuous kind, but is a man of positive character and convictions, and would certainly, if elected, give the State a conscientiously business-like and clean administration.

As for the platform adopted at Rochester, it is superior to that of the Republicans in precision and in vigor. It is both progressive and aggressive. In matters concerning the State alone, it crosses swords most effectively with the Republicans. But the plank which will most attract attention and which is of greatest strategic value in this campaign, is the one openly challenging and directly attacking the New Nationalism of Theodore Roosevelt. To have shirked this matter would have been not only recreant but foolish. Roosevelt is to be the head and front of the Republican campaign in this State. He made his party ticket; he is to put forth great exertions to elect it. It is a sure political instinct, then, which prompted the Democratic leaders to point their guns straight at him. To be sure, not a word is said about this doctrine in the Saratoga platform. Not even a faint hint of the purpose to promote such a doctrine is contained in it. Such suppression, however, can only be regarded as an admission of the impolicy of attempting to force that issue at the present time upon the voters of this State, not as any ground for imagining that the danger which it portends has passed, or that it is not imminent. The doctrine so deliberately and so emphatically propounded in the Osawatomie speech is but the latest and most extreme expression of a spirit and tendency which Mr. Roosevelt has always embodied. The limits of its manifestation by him have been simply such as have been set by his opportunities, or his estimate of those opportunities. In preparing his Osawatomie speech, he felt that the time was propitious for that extreme deliverance; since then he has judged it expedient to relegate to the rear the doctrine of suppression of State functions and unlimited exaltation of executive power centralized in the President at Washington. But with that doctrine Mr. Roosevelt is indissolubly bound up; and no result of the success of his campaign in New York would be more certain than that it would immeasurably increase his power not only to advance his personal ambitions, but to promote the "New Nationalism" and all that that term, in his hands, would imply.

On the second of the two great issues, on the other hand, it is not necessary to go behind the platform itself. The Saratoga Convention puts itself squarely behind the Payne-Aldrich tariff act. It knows nothing of Mr. Roosevelt's recently discovered moral issue in the tariff, or in the recent revision of the tariff. By no sign or hint does it indicate that special interests, with an illegitimate and sinister hold on the party, dictated any feature of the tariff as it stood before the revision or as it stands now. Notorious as it is that not even the crudest attempt was made to conform with the promise of the Republican platform, the Saratoga platform has the effrontery to talk about "still more accurately" determining in the future the difference in cost of production at home and abroad. What was done in the last Republican campaign in the way of tariff-reform promises was accurately characterized by Judge Parker in his speech. "The promise of a revision of the tariff," he said, "by a special session of Congress, to be called immediately after the inauguration of the next President, was intended to hold the tariff-reduction Republicans in line, while the trick in the phraseology was to be made clear to the tariff beneficiaries." And it was because the trick thus devised was carried out according to programme that we have seen the great insurgent movement which has split the Republican party in twain. It was only after the trick had been executed that the big men of the regular Republican organization realized that the honest tariff-reduction Republicans were sufficient in numbers and importance to be reckoned with after election as well as before. President Taft's Winona speech, following on his laudation of Aldrich at Boston, was the signal for the breaking out of a storm of which the strength and volume have been made continually more manifest from that day to this. And yet the Saratoga Convention calmly goes on record as standing pat upon the Payne-Aldrich tariff and inviting its endorsement by the voters of the State of New York. Truly, the Democrats have a straight and easy path marked out for them.

"BACON IS SHAKE-SPEARE."

The Baconian incubus is always with us—ever violent, but at some times more violent than at others. Only last year there was a mighty summoning of strength, with rumors that the author of the tome had submitted his ciphers to the department of mathematics in a large Eastern university and had been assured that the laws of chance could never explain them. The public breathed more freely when it learned that the

department was in reality that of education, and when ingenious jokers begau to discover Bacon's *bona-fide* signature in "The Light of Asia," Gray's "Elegy," a Tibetan grammar, and even on the cover of a bill of fare in a German restaurant. Indeed, Bacon was everywhere, and there was an uncomfortable feeling that he might be found writ plainly even in one's most private documents. Such anachronisms, it is true, could scarcely be offset by the fact that Bacon, according to his own statement, took all knowledge for his province. It seemed then as though the death-blow to this fallacy had been administered—but only for a moment. Lovers of the under dog—and it is surprising how cheaply one can become the under dog—received romantic hurt from such trifling refutation as that just cited, and waited resolutely foi another prophet. He has now arrived in the person of Sir Edwin Durning-Lawrence, Bart, B.A., LL.B., etc., and from the title of his book, "Bacon is Shake-speare," to the end the reader is left in doubt concerning nelther his message nor his truculence.

The old ground is covered, to the effect that contemporary evidence exists of Bacon's powers, both as poet and dramatist, and of Shakespeare's total ignorance of such matters. Like the rest of his cult, the author attempts the twofold task of writing Bacon up and Shakespeare down. As the spokesman of his country, he proclaims:

> England is now declining any longer to dishonor and defame the greatest genius of all time by continuing to identify him witb the mean, drunken, ignorant, and absolutely unlettered rustic of Stratford, who never in his life wrote so much as his own name, and in all probability was totally unable to read one single line of print.

It would be unnecessary to reckon with such extravagance if it were not certain that this book will be read widely. For the author professes to hobnob with leading Shakespearean scholars and shows what might be taken for impressive learning; it is clear, too, that he has a large Baconian library. We may glance at his crucial test. The well-known tribute to Shakespeare in the first folio, assigned to Ben Jonson, contains, if rightly manipulated, 287 letters. This is a magic number; be patient yet a little. In "Love's Labour's Lost" the clown, we had supposed, was merely talking big when he said "honorificabilitudinitatibus," especlally as the word had been used a century or so before. Not so; Bacon is breathing his heart-secret, for the letters may be arranged into the bad Latin and bad hexameter

> Hi lu|di F|Baco|nis na|ti tui|ti orbi,
> These plays F. Bacon's offspring are preserved for tbe world.

More is coming. The initial letters of the words and the terminals, if put into numerals corresponding to their positions in the alphabet, foot up to 136, which is the number of the page in the first folio upon which the whole word occurs! The similar numerical equivalent of all the letters in the word amounts to 287! Of course, the real test of this evidence is the still more startling thought that such a discovery should have been made exactly 287 years after the first folio appeared.

The growth of Baconian literature will, we fear, never cease until legitimate scholars are willing to take the matter seriously. It does little good to show up the true meaning of any cipher, because any one who is committed to the cipher habit can easily find new combinations when old ones are refuted. What is needed is a careful comparison of Bacon's ideas and even of his style with Shakespeare's, for Elizabethan prose was in large measure poetic. For one thing, is it quite possible that one whose conception of friendship was strictly utilitarian and who insisted that the greatest men in the world never feil in love could have treated those qualities even in a fiction with what surely looks like instinctive idealism? Or the question might be fought out on the issue of humor alone. If there could be found in Bacon's known works even one really good joke, not quoted—for he attempts to be funny at times, and surely has quite as much occasion for humor as Montaigne—his claim to the plays would be greatly helped.

But, after all, to meet the Baconian problem seriously, Shakespearean criticism itself must assume a different form. Despite all that has been written on Shakespeare, ideas concerning him are still hit or miss, and largely because scholarly attention has been focussed on the formal, mechanical side. When one may read the statement in authoritative books that Marlowe, for instance, might, if he had lived, have been a formidable rival of Shakespeare, it is clear that critlcism has not progressed very far. Even at the outset, there was in Shakespeare's poems and plays alike, a quality which Marlowe never possessed—an imagination which insinuates itself into the manifold bearings of individual moments. The richly varied Richard II placed beside Marlowe's monotonous Edward II furnishes a point of departure for Shakespearean criticism which might well be used. Such a study, if sanely pursued, would serve to identify Shakespeare to such a degree, we believe, that even a Baconian here and there might give heed.

THE REIGN OF THE ELEMENTAL.

When Mr. Bryce, in his revision of the "American Commonwealth," comes to the chapter on "The Position of Women," he will find himself compelled to ponder the change that the years have wrought in the "fondness for sentiment, especially moral and domestic sentiment, which is often observed as characterizing American taste in literature." These words may have been true once, and may yet be true again, but can any constant reader of our contemporary literature uphold them as descriptive of its present phase? Is it sentiment that is displayed in the most conspicuous places on the book-stalls? Is it the gentle ripple of domestic felicity that is emblazoned in red ink on the covers of our most successful magazines? There may have been a time when we were threatened with the feminization of our culture, but that time, happily for any man who has red blood in his veins, is past. We are done with delicate touching of the outer layers of life. What we are all for now is the vital, the genuine, the wholesome, the unafraid. We want—and get—stories and articles about big-hearted men, men who have a tang, men who are always standing with one fist in the air in their hatred of sham, their devotion to justice, their scorn of a lie. We have gloriously emerged from the twilight zone of polite phrases and courteous dealing, and stand with a new bravery, trustful of no one, suspicious of everything that isn't as open as we insist every sewer ought to be, and ready to meet, "manfashion," everybody and everything.

It was time, indeed, that the change came. We were rapidly treading the way of all nations that had lost their virility. We had lost the splendid daring of our ozone-breathing forefathers.

We had lost the taste for the pathological, if we had ever advanced far enough to acquire it. It was the uncrowned poet-laureate of England that first roused us to what we were missing in the real world of masculine men and masculine deeds. From him we caught a liking for the untamed, the crude, the savage. He taught us where alone we might find the unspoiled, the undegenerate. This prepared us for a clearer call of the wild, a return to the time when man was only a little lower than the animals. To-day, it would be a brute indeed that could outdo us in robustness of temper, in freedom from squeamishness, in absorption in the elemental. The primary virtues of truth and frankness are preached in every advertisement. The brotherhood of man is assiduously fostered by magazine-editors. The federation of the world for the conservation of the primitive graces is near.

But while Kipling and Jack London must be credited with a large share in the movement of humanity towards freshness and pungency, mere letters could not have brought the revolution full. It required a more direct method, a still less restrained style, a yet further remove from the softness and convention and hesitation that had followed in the wake of good-breeding, falsely so-called, to lift us to the plane where our hatreds should outweigh our loves, our denunciations exceed our approvals, our enthusiasms overpeer our appreciations, and our outspokenness blunt our discrimination. It was Thomas F. Lawson who, in the words of an admirer, was "cheerfully willing to let literature 'go hang' for braver things," and marked out the path to the purely elemental. He was the first of the present generation to do anything "man-fashion." Before his lurid advent, people in their benightedness did what they had to do in mere gentleman-fashion or woman-fashion or child-fashion—absurd cowardly temporizings, all of them. But red-blooded human beings and all animals conduct their relations "man-fashion," and we are on the right track at last.

We have mastered a new vocabulary, in which plain-speaking and hard-hitting, without cant and without adulteration, "strike vibrantly and aggressively the note of the new Americanism," which is intensely human and intensely graphic. No person has anything to conceal from any other person. Nobody any longer lowers his voice, because tumult and shouting are provocative of larger apparent results, and, besides, low voices have "gone out." We have lifted the lid and smashed the glass that were keeping us from complete self-revelation to every passer-by.

We would not underrate the positive good in this stripping off of the clothes of civilization, but we do protest that civilization is more than a glove to be removed and turned wrong-side out at will. There is a time for gloves and a time to go without gloves, but with clothes it is vastly different. Outside of the halls of art and the hospitals, clothes have too long been considered a decent and necessary part, not simply of the body but of the whole man, to be left off now. It is a return to the elemental with a vengeance when personality can throw off the delicate draperies that its own sensitiveness has woven for it, and, with a bravery utterly beyond the reach of the physical person, count it a compliment to have it said of it that it is naked and that it is not ashamed.

WINSLOW HOMER.

The late Winslow Homer, one of the strongest marine painters of all time, was already a popular figure fifty years ago. As an illustrator of the civil war he was counted with the best, and he followed up that success with a series of admirable genre studies of negro life. A self-trained man, he was emphatically one of ourselves; his pictures needed no recondite eulogy or interpretation. He saw American themes with American eyes. That he was not contented with this easy and honorable path may be judged by the fact that in his forties he abandoned illustration, settled on a remote crag in Maine, and gave himself to the study of the life of fishermen and the moods of the northern sea.

After more than fifteen years of his seclusion, men began to suspect that a great painter had arisen. The hand of this veteran constantly gained power, his invention instinctively attained classic form. The last twenty years of his life were distinguished by a series of paintings in which was grasped, as never before in the history of art, the sheer energy of the ocean, its thunderous unforgetting onslaught against the raw edges of a continent. He treated with force and sympathy many aspects of fisher life. The weather-beaten head of a sailor shouting through night and storm, "All's well!" is representative of this side of his genius. But he is most himself in those pictures which, without conventional human interest, catch the ravening waves gnawing at the rocks, dragging the seaweed into the crevices, or exploding in clamorous geysers. It was the awful energy of such a scene that attracted him. For him the spindrift was not merely a filmy and decorative incident, but an acrid volley that cut the exposed face. Waves were not for him mere undulating forms, but active and potentially destructive masses of water, with formidable impetus and weight; and although his sense of bulk and texture was fine and accurate, he chose to emphasize in his latest work less the specific forms of rock and wave than the shock of their collision. It is this dynamic sense that gives him a peculiar eminence among the artists of his time, and this dæmonic quality in the work must condone some lack of the finest color sense and occasional crudity of execution. His subjects did not comport with that small preciousness of workmanship which was so highly prized by his contemporaries, and he willingly sacrificed epidermal charm to dynamic effect.

Yet charm and dexterity he possessed in a high degree. Only it is little in sight in his later and standard work. For many years, he made water-color studies of all conceivable subjects. There is an extraordinary series of fish leaping under the sting of the hook, there are sketches that contain the cerulean sea and sky of Bermuda and Nassau, and entrap the very sunlight of those blessed isles. Here, unlike his oil paintings, which are a bit labored, all is spontaneity and gusto. These minor sketches are miracles of execution. In them are balanced combinations of apparently incompatible colors. Work, in the sense of repeated effort, is absent; the effect depends upon some incredible simplification, both of the vision and of the creative act. Here such lightning executants as Besnard and Brangwyn are challenged in their old field. In fact, for real analogues to this joyous side of Winslow Homer's activity one must go to the wonder-working painters of Japan.

It is strange and perhaps regrettable that he never fully established a good understanding between the sketcher and the deliberate picture-maker. His larger paintings had much to gain from the slightest studies. It is possible that he suffered the inevitable penalty of devout nature worship in a certain specialization and narrowing of his gift. His theme was the eternal conflict of sea and land. May he not have feared to depict the tragedy in other than sombre colors? In any case, the suavity that accompanies the apparent brusqueness of his watercolor sketches is generally lacking in his larger marines, and his work presents a dual aspect. In an admirable simplicity, energy, and fidelity to dynamic truth, we find the unifying principle of a stalwart and purposeful manhood and an enduring lifework.

It was a resolute sense of ends that gave Winslow Homer his immense superiority over most of his contemporaries in painting. The hesitant, day-dreaming, essentially dilettante mood of many modern artists was alien to his spirit. Nobody tried harder than he, but nobody would have been more scornful of conventionally romantic notions about the unattainable and the tragedy of the artistic temperament. To the end, which came in his retreat by his dearly loved ocean, he was progressing. One life was too short for the complete unfolding of so great a gift.

For twenty years past, honors have been showered upon Winslow Homer. The other day a sympathetic British critic, estimating the American exhibition at Berlin, rightly found in Winslow Homer's paintings the authentic and valuable American note. Yet we doubt if he is esteemed according to his merits, and when his portfolios are searched there may be surprises analogous to the sensation created by Ruskin when he explored the waste papers of the recluse Turner.

VICTORIAN LITERATURE.

(The Philosophy of Change.)

I.

To write a history of English literature from 1837 to 1901, in all its manifold ramifications from political economy to fiction, is a task to make any but the stoutest heart quail, and, whatever else may be said of Professor Walker's volume, it bears evidence of industrious reading and patient understanding.* Like most works of its kind, it suffers somewhat from uncertainty of aim, being neither quite encyclopædic in completeness of detail nor sufficiently arbitrary in selection to deal effectively with ideas. But its arrangement by subjects and its inclusion of so much that is commonly rejected from literary history offer this great compensation that we are enabled to see the interworking of the various intellectual currents: Darwin and Tennyson, Malthus and Matthew Arnold, Spencer and Newman, thus appear as fellow-laborers, moulding and expressing that subtle, evasive thing we call the spirit of the age. Evasive in a way that spirit is, as the inner forces of life must always be, yet there is one date and one book so preëminent that no one can go astray in seeking the centre of Victorian thought. At the close of the reign—Professor Walker recalls the incident that every one will remember—a London daily paper asked its readers to send in lists of the ten books, English or foreign, which in their judgment were the greatest and most influential of the century past. The lists varied widely, save in one respect: in every list stood Darwin's publication of 1859, "The Origin of Species."

One is not inclined to take these plebiscites very seriously, yet this was really an extraordinary event. Probably not half the persons who named "The Origin of Species" had ever seriously read it, yet they all felt in some vague way that this book had struck the keynote of the century. In Darwin's hypothesis, though they may not have comprehended its full bearing, they thought the mind of man had found at last that for which it had long been seeking—the perfect scientific formula: it looked to them as if a new and everlasting basis for truth had been laid. Descartes had reduced the physical world to a mechanical system, and Newton had formulated its mathematical laws. But Descartes had, theoretically at least, separated the sphere of the human spirit from his system, and to bring the living world, exclusive of man, within its control he had denied to animals all reason and emotion and treated them as mere machines; while Newton in his laws merely ignored the whole organic creation. This extra-scientific field Darwin finally reclaimed, and, by the elimination of teleological and other foreign elements and by the authority of his vast patience, raised evolution to the side of gravitation. As an equivalent of the mechanical law of motion in the inanimate world he gave precise expression to the absolute law of change in the animate, thus uniting inorganic and organic (including all that is man) in one universal scheme of science. The new law left no place for a power existing outside of nature and controlling the world as a lower order of existence, nor did it recognize a higher and a lower principle working within nature itself, but in the mere blind force of variation, in the very unruliness to design or government, found the source of order and development. Chance itself was thus rendered calculable, and science reigned supreme through "all this changing world of changeless law." No wonder that men were a little dazed by the marvellous simplicity and finality of this formula, and were ready to exclaim, with a new meaning to the words:

> Let the great world spin for ever down the ringing grooves of change.

II.

All this may seem rather remote from Victorian literature, but in fact it is, as the anecdote related by Professor Walker indicates, the very heart of the matter. Science has been, admittedly, the dominating intellectual force of the age, and the point of contact of science with literature is just this law of change. For it must not be forgotten that law, as it is understood in science, is a formulation of motion in the organic and of change in the inorganic realms as a power sufficient without any added principle of control to work out the ends of creation as we see them amplified in orderly recurrence and progress. Modern science and romanticism sprang up together, and have grown side by side. In one respect they have embraced diverse, even hostile, temperaments—on this side the man who deals with facts and tends to a hard materialism or a dry intellectualism, on the other the man of sentiment who dreams and loses himself in futile revery. Yet it is a notorious, if paradoxical, fact that the effect of science on art and literature has been to reinforce a romantic impressionism, and that the man of scientific training when he turns to the humanities is almost always an impressionist. The reason is plain: he simply carries into art the law of change with which he has dealt in his proper sphere, and acknowledges no principle of taste superior to the shifting pleasure of the individual. In this he is typical of the age, for if the particular causo-mechanical theory of evolution promulgated by Darwin has proved untenable, evolution itself has remained as almost the universal creed of those who believe that some such hypothesis will ultimately be found adequate to explain all the processes of life.

And it is easy to trace the working of the same belief in other regions of contemporary thought, most easy, no doubt, in philosophy, which is nothing more than the effort of the reason to interpret in its own terms the common

*"The Literature of the Victorian Era." By Hugh Walker, Cambridge University Press. New York: G. P. Putnam's Sons.

impulse and ambition of a period. The metaphysicians of to-day are not in harmony among themselves, as they never have been. There is a respectable school of idealists who hold to a theory of absolute unity and stability in which all the diversity and motion of the world are in some transcendental way absorbed. But these are not the regnant and effective teachers; they are, so to speak, the beautiful relics of a past creed. Pragmatism is the slogan of the hour, and there is a kind of truth in the remark thrown out recently in an English review that William James was the most influential leader in the spiritual life of the present generation. Now Pragmatism is just the culmination of what may be called the central philosophizing of the past century. It has assumed many forms, and is sometimes denied by its votaries; but always it is a philosophy of the flux, and its general tendency is at once romantic and scientific, an adventurous revolt against the dogmatic intellectualism in which science has involved itself, and at the same time thoroughly evolutionary, even Darwinian, in theory. In the words of Professor Dewey*:

> When he [Darwin] said of species what Galileo had said of the earth, *e pur se muove*, he emancipated, once for all, genetic and experimental ideas as an organon of asking questions and looking for explanations.

As a result we have the metaphysical conception "of a wide open universe, a universe without bounds in time or space, without final limits of origin or destiny"—in short, to use the elegant pragmatic diction borrowed from the police courts, "a universe with the lid off." No, continues our philosophical guide,

> Nature is not an unchangeable order, unwinding itself majestically from the reel of law under the control of deified forces. It is *an indefinite congeries of changes*. Laws are not governmental regulations which limit change, but are convenient formulations of selected portions of change followed through a longer or shorter period of time, and then registered in statistical forms that are amenable to mathematical manipulation.

I am not here attempting to controvert Pragmatism, though it may be well to repeat what has been said elsewhere, that it is just as much a one-sided rationalization of the data of experience as the contrary theory of idealism which Professor Dewey brushes aside contemptuously as "intellectual atavism." To the self-sufficiency of the pragmatist and idealist alike, there is one reply: "There are more things in heaven and earth than are dreamt of in your philosophy."

III.

Of the other manifestations of the law of change, I may speak even more briefly. In religion, it is exhibited in the extraordinary influence of Cardinal Newman upon Brunetière and other French modernists who see, or think they see, in his "theory of development of doctrine" a means of reconciling Christian dogma with the scientific spirit of the age. The Catholic theory of development as expounded by Newman meant the slow grasping by human intelligence of great ideas which were nevertheless "communicated to the world once for all by inspired teachers"; it is a perception of change playing about a fixed basis of unchangeable truth, with a growing tendency to lay weight in this dualism upon the element of change. The so-called "new theology" of Protestantism is more thoroughgoing, and, virtually dispensing with the relation of mankind to an immutable deity, discovers all of religion that is necessary in the varying sympathy of man with his fellow man unregulated by any divine command or revelation.

Economics in its acceptance of the temper of the times has undergone a strange but perfectly logical reversal. Synchronously with the growth of the evolutionary theory arose the economic doctrine of *laissez-faire*, which held that a world of economic order would develop mechanically from the free play of individuals upon one another without the intervention of any governmental and, so to speak, external regulation of competition. It was the acknowledged source of the Darwinian notion of the survival of the fittest amidst the accidental and competitive variation of individuals. Such a theory was pragmatic with a vengeance, and brought its pragmatic penalty of social disease and rebellion. In its place has arisen the socialistic creed, which for the struggle of individuals sets up the warfare of classes. It is withal as convincedly evolutionary as was its predecessor—however much it may threaten revolution in practice—and as impatient of any law of control outside of material forces, only these forces have assumed a social instead of an individualistic form. Both self-developing individualism and self-developing socialism are the children of the law of change, and the admixture of humanitarian sympathy in both is really only another aspect of the same principle.

And the theory of education has naturally gone along with these economic and philosophic innovations. The elective system in its present form is plainly a late-born offspring of the individualistic doctrine of *laissez-faire*. The whole shift of emphasis from the classics and humanities to scientific or quasi-scientific studies is a revulsion from the old notion that the experience of life in its essential phases is permanent and has once for all been expressed, to the conception of man as completely immersed in the *indefinite congeries of changes* which we call nature. We sometimes blame the teachers of Latin and Greek for certain disquieting weaknesses that have shown themselves in the recent results of education; as a matter of fact their only fault has been the lack of sufficient insight and strength to stem the tide of custom; by endeavoring to bring classical instruction into conformity with the spirit of the age they have largely forfeited its distinct virtue and have so far rendered it superfluous. If Greek affords no discipline corrective of the influence of science and different from that of the languages in which modern tendencies are expressed, the study of it is merely an enormous waste of time.

IV.

And inevitably as science, becoming aware of the sway of change in nature, tried to formulate this power in terms of a causo-mechanical law, so poetry attempted to give it expression in human emotion. If any one thing is learned from such a survey of the poets of the past age and of to-day as we get in Professor Walker's volume, it is the constant immanence of this philosophy of change, manifesting itself in both the form and the substance of our verse. Walt Whitman is taken by many to be the most significant poet of America, not on account of his mere democracy, but because his democracy was part and parcel of his proclamation of the philosophy of change and motion. The universe to his eye was a strange motley procession of shifting forms, at which he gazed undismayed, calling upon no passing appearance to stay for an instant and deliver its meaning. To William Morris also the world was a swift-moving succession of forms, glinting now with iridescent colors and breathing entranced melodies, with always the haunting fear in the observer's mind that if for one moment they should pause in their headlong flight they would vanish irrevocably into the void: life is many-hued, intricate motion; rest is death. And the evocation of Swinburne was essentially the same unintermittent flux of phenomena, though with him it took the special form of dissolving the earth into endless impressions of blowing wind and billowing water, with no solid ground beneath the feet. In Browning the new philosophy took the disguise of a buoyant revelling in the mere conflict and tumult of life without any formal restraint upon its multiform activity. His joyous acceptance of the world and his exultant optimism that all things will of themselves work out right have passed with many for spiritual insight, whereas in reality his appeal to the present is due to his blind courage in waiving the check that comes with insight into the spirit of permanence.

There is, of course, another aspect of Victorian poetry which must not be ig-

*"The Influence of Darwin on Philosophy, and Other Essays in Contemporary Thought." By John Dewey. New York: Henry Holt & Co.

nored. As no age, even the most self-satisfied, is entirely itself, but carries with it the memory of all that has gone before, so these singers of the flux are troubled at times by echoes of a past experience. Now and again a line, a note, will slip in that recalls the old desire of changeless rest and of the consummation of peace. It might even be more exact to say that the poets of the century as a whole do not so much give utterance to the unhesitating acceptance of the official philosophy as they express its ever-growing predominance. And thus the most characteristic voices among the Victorians were just the two, Tennyson and Matthew Arnold, who felt most poignantly and sang most clearly, though in diverse ways, the transition from the old to the new. In Tennyson the two fields lay curiously side by side, and it is the sign of a certain lack of hardness in his mental fibre that he never seemed to perceive their mutual antagonism. At one moment he is the conscious laureate of science and evolution and of a self-evolving change moving to some far-off divine event; at another he is the prophet of insight, singing the mystery of the timeless, changeless spirit. Matthew Arnold's intelligence was too well-knit to suffer any such disruption of its powers. With him the error was deeper, yet more logical. Emotionally he was about equally susceptible to the prevailing currents of his day and of the past, and their coming together produced a strange uneasiness of mind and heart, leaving him at home neither in this world nor the other. He looked abroad and saw nothing but change, and it seemed to him as if the permanent things that his soul craved were themselves in a state of transition. So it was he made his famous complaint, which is, in a way, the confession of his generation, at the Grande Chartreuse:

Wandering between two worlds, one dead,
The other powerless to be born,
With nowhere yet to rest my head,
Like these, on earth I wait forlorn.

But if this confusion in Matthew Arnold, or parallelism in Tennyson, of the past and the present is characteristic of Victorian poetry, the triumph in the end is coming overwhelmingly to the new philosophy. If any one writer represents the thought of those who are most deeply immersed in the spirit of the passing day, it is George Meredith, and there is no poet or prose-writer in English who more speaks and exalts the belief in humanity as completely involved in the process of natural growth. This, I suspect, rather than any perversity of wit, is the true reason that the few who have not yet bent the knee to the time-spirit, are at once attracted by his subtlety of superficial observation and repelled by the absence of those deep underlying emotions which they have learned to expect in great literature. He has written out his reading of life in "The Woods of Westermain," and the heart of his reading is at the end of his glorification of Change as the wondrous renovator and revealer:

Change, the strongest son of Life,
Has the Spirit here to wife.

Perhaps we do not often enough consider the profound innovation that such a sentiment indicates, nor look unflinchingly into the great gulf that is separating our little space of time from all that has preceded. Innumerable poets of the past have reflected on change and mutability and on its part and meaning in human destiny, and their testimony, until this moment of ours, has been almost universally that which Spenser sang so well in the unfinished book of "The Faerie Queene":

What man that sees the ever-whirling wheele
Of *Change*, the which all mortall things doth sway,
But that thereby doth find, and plainly feele,
How MUTABILITY in them doth play
Her cruell sports, to many mens decay?

V.

No doubt there is much to admire in our modern poets, with the great name of Tennyson at their head, who have bowed down in the temple of the idol of Mutability. They have many traits of beauty and strength; they tease us with subtle appeals to the heart and brain; they write from a wide and complicated experience, and their concern over "the hopeless tangle of the age" gives them often an air of profundity; yet withal they leave us doubting whether there is in them the solid stuff to endure. Some deeper satisfaction or assurance is wanting to their work, and they themselves seem in a way transitional and transitory, as their themes and their very rhythms spring from the spirit of change. For it is certain that the quintessence of poetical emotion, the very kernel of the bitter-sweet passion of life and the world, arises from the simultaneous perception in man's destiny of the ever-fleeting and of that which is *contrary to mutabilitie*. The contrast has taken a thousand forms and concealed itself under many obscure disguises, but always, if you search deeply, you will discover its presence in the passages of verse, or even of prose, that stir in the reader's heart the lasting response of art. If illustrations are necessary, the most familiar are the best. Thus Andrew Marvell, in the poem inscribed "To His Coy Mistress," starts suddenly from the contemplation of her several charms to that never-forgotten outcry:

But at my back I always hear
Time's winged chariot hurrying near,
And yonder all before us lie
Deserts of vast eternity.

In those lines, more perhaps than anywhere else in English, the coming together of change and changelessness, the conflict between the passionate desire of ephemeral beauty and the motionless depths of man's eternal nature, rises to a sublimity that is closer to fear than to pleasure. Oftener it speaks the language of regret or wistful playfulness, as in Waller's inimitable descant on the old, old theme:

Go, lovely Rose!
Tell her that wastes her time and me—

where the sting of the pathos is due to a kind of pretty condescension of the spirit to the transitory symbols of time. When I consider all the richness of emotional content that must go out of poetry with the loss in our consciousness of anything "stayed upon the pillars of eternity," I am filled with concern for the future of letters. Already the impoverishment of Victorian literature in this respect is notable, and even where the contrast between the two spheres of our nature is implied it comes generally with a significant assimilation of the higher to the lower.

The Victorian age, even more than others, was a time of transition. It has passed, and one thing at least is sure: we shall have no great literature again until we have looked once more within our own breasts and learned that there is something in human nature besides an *indefinite congeries of changes*. As it is now the very mould and *genre* of the higher emotion have been lost. It is almost inconceivable, for example, that a true tragedy should be composed to-day; for the tragic character, whether it be Antigone breaking herself magnanimously in the name of the unwritten eternal laws against the edicts of Creon, or Œdipus bruised and blinded by his ignorance of the divine purpose but caught up after years of submission into mystic fellowship with the gods, or Hamlet musing undecided while he listens to the fateful voices—everywhere the tragic mood depends on the unresolved conflict in human motives between the universal and the particular, the changeless law and the temporal passion. It even seems that, with the disappearance of the greater form, there is passing away the ambition to write greatly. And naturally. For if the permanence of a work of art is due to its fit expression of the permanent in human desire and experience, what room is there for the long hope, or what impulse to sacrifice present popularity for enduring fame, when the very notion has become discredited of any principle contrary to ceaseless change?

VI.

I have been concerned here primarily with literature, but obviously the perils of literature are bound up with those that beset the practical world. There is need of firm hearts and clear brains to

bring us out of this slough of indifference, but unfortunately the strong men are too often paralyzed by a curious superstition of words. The saying has gone abroad that strength means joy in change and that he who would question change is reactionary and effeminate; and so in the name of progress and virility we drift supinely with the current. If by reactionary is understood only the man who shudders at all innovation and who cries out for some impossible restoration of the past, the charge is well made. Such a man in the social realm corresponds to the metaphysician who would deny the existence of change and the many for an exclusive and sterile idealism of the one. But reaction may be, and in the true sense is, something utterly different from this futile dreaming; it is essentially to answer action with action, to oppose to the welter of circumstance the force of discrimination and selection, to direct the aimless tide of change by reference to the co-existing law of the immutable fact, to carry the experience of the past into the diverse impulses of the present and so to move forward in an orderly progression. If any young man, feeling now within himself the power of accomplishment, hesitates to be called a reactionary, in this better use of the term, because of the charge of effeminacy, let him take courage. The world is not contradicted with impunity, and he who sets himself against the world's belief will have need of all a man's endurance and all a man's strength. The adventurous soul who today against the reigning scientific and pragmatic dogma would maintain no vague and equally one-sided idealism, but the true duality of the one and the many, the absolute and the relative, the permanent and the mutable, will find himself subjected to an intellectual isolation and contempt as effective as the inquisition in producing a silent conformity. Submission to the philosophy of change is the real effeminacy; it is the virile part to react. P. E. M.

Correspondence.

WILLIAM JAMES.

To the Editor of The Nation:

Sir: All the students of Prof. William James, whether they knew him in the lecture-rooms at Harvard or in his books, and especially those to whom his gracious personality was the light of all his teaching, will be grateful, I think, to have called to their attention an article in the July number of the *Hibbert Journal* entitled "A Pluralistic Mystic." This essay is characteristic of Professor James, for, as his custom was, he speaks of the concrete, the human reality, the mysterious and unfinished world. And with habitual courtesy and generous eloquence, he writes not for himself, but for another. But I wish to call attention in particular to the closing sentences of this essay, which, as they are in one of his last publications, will have, for all who knew him, a striking solemnity:

Let my last word, then, speaking in the name of intellectual philosophy, be his word: "There is no conclusion. What has concluded that we might conclude in regard to it? There are no fortunes to be told and no advice to be given. Farewell!"

Those of us who are still leaning on the recollection of his generous and gallant life will hear in his "last word" what always thrilled us in his teaching: the call of undiscovered countries, the lure of enchanted cities, the shout of the mariner, and the cry of battle. I think in this message, as in all his life, we hear above the battle of the schools that cry of "On! On! On!"

And while we shall remember his great name and high example in many and affectionate relations, just now, I think, we shall bear him in our memory as one who was always pressing *on*, who never ventured to write conclusions and finalities, who never presumed to lock those open doors which no man may shut. There is "no conclusion" to such a life, or the nature of truth. Not unto us—*non nobis*—shall be given the divine right to say, it is finished.

Warren S. Archibald.

Pittsfield, Mass., September 28.

THE MEANING OF STYLE.

To the Editor of The Nation:

Sir: In tracing the sources of my discontent with usages and discussions of the word "style," some long familiar and some recent in your columns, I seem to be confronted, finally, not by a theory, but by a condition, namely, the condition of the word "style" as actually meaning more than one thing.

If it might be said that the "style" of Ruskin or Tolstoy or Arnold is good and his "manner" bad; that both the "style" and the "manner" of Newman are almost beyond criticism, and that the "manner" of Sainte-Beuve is perhaps even better than his "style"; and if I might say in illustration that while in the tendencies of my own thinking and beliefs, there is perhaps more agreement with Count Tolstoy than with Cardinal Newman, yet Newman's "manner" is so good that I sympathize while I disagree; whereas, if I disagree with Tolstoy, I am generally in a temper with him on account of his "manner" toward any one who feels competent to disagree—all this would very well define the word "manner." And this definition of "manner" would point also to the different definition of "manners" under which one may accurately say that the controversial "manners" of Milton and his contemporaries were bad—since brutal personalities are, of course, bad manners—whereas one would not go so far in expressing regret for the patronage and pedagogy of Ruskin and the superciliousness of Arnold as to say that it amounted to bad "manners."

But a definition of "style," as well as of "manner," is made by these illustrative contrasts, and this definition is open to the objection that it chooses questionably between the two meanings that especially afflict us with confusion in the usage of that word "style." "Style" in this choice meaning is that "rare gift of words, that union of simplicity and freshness, which lends a charm to writing quite independent of the ideas or images conveyed—there must be no false emphasis, no straining for effect beyond the needs of the time and place, no appearance of uneasiness, but quiet assurance and self-subordination. The law of style may be defined as the rule of Apollo: nothing too much; it is the art, first of all, of dealing frankly with the commonplace and the trivial without being common or mean." But it is easily recognized that the sense of the word "style" so analyzed is not the sense in which it is said that "the style is the man"—that is to say, a personality passed through the channel of written language, which is to the reader in some degree what the physical presence of the writer may be to those who know him. These two definitions are so far apart that, under the first, writers like Dickens or Carlyle would be said to have little or no style, and under the second, to have so much that hardly a sentence can be read without recognition; under the one definition it would be said that the great French writers have, on the whole, more style than the English, under the other, that the great English writers have, on the whole, more style than the French, a difference between French and English writers pointed out with some pains by Ferdinand Brunetière.

These two definitions, indeed, look back to, and are, perhaps, even founded upon, two literary ideals now rather vaguely defined as the classic ideal of self-control and the romantic ideal of self-expression, or the social desire for deference and restraint, and the personal desire for assertion and expansion. And this distinction in the usage of "style" is closely paralleled by the twofold use of the word "distinction" itself. For, to say that a man has "distinction" of style, or of personal bearing, would mean, in deference to etymology, that his personal bearing or literary style is marked, separate, and unmistakable; but in usage it means, also, if not rather, that his bearing or style has dignity and grace.

It is evident that to have two ideas to one word is poverty and misfortune, not so much because it renders the discussion of style difficult as that—words being the means as well as the conveyers of thought—it renders the antecedent thinking confused. Traces of this confusion are even in that fine analysis of the style of dignity and grace, which I have quoted. The "law" of even that sense of the word cannot be defined as the rule of Apollo: Nothing too much. The law must somewhere say, "There must be enough" with surely as much emphasis, and Apollo himself must hate poverty as much as he does superfluity and must love the noble generosities of language as well as its fine refusals.

At any rate, there can hardly be question that the poverty of a critical vocabulary is a darkening of counsel. No language is too rich in synonyms, in different words for associated things; and therefore another word is needed for one of the two meanings of style, and we do not know what the word should be. If we assign the word "style" exclusively to that rightness of form and freshness of phrase, and set apart by itself the meaning in which we say that anything characteristic is an element in style, and if we then assign to this latter meaning the word "character," we fall into a new family of confusions; for the word "character" is already burdened with more miscellaneous meanings than even the word "style."

Using the word "style," however, from this

point on, in the sense of character in letters, it is evident then, that not all style is beautiful or interesting any more than all human character is beautiful or interesting. But whatever the man behind it may be, if it expresses him, it expresses him as nothing else does. In all good writing that has style, that is, character, this style has been formed of constant, however unconscious, choices, innumerable sensitive gropings, instincts, suspicions, welcomes, hopes, and avoidances. It is something "closer than breathing, nearer than hands and feet." It is the color and shape things take in the crucible and mould of the self. If we try to restate some great man's message whose works have been active for generations, to lay bare the core of his wisdom and sift out "what it was he really had to say, stripped of the glamour of his style," we shall be apt to find it either false or commonplace, or both. Whatever was impersonally true in his message has long been impersonally absorbed in the common inheritance, and whatever was impersonally false is dead. But if we turn to his written words, we shall find his message neither false nor commonplace, but still fresh and true, for he himself was that message and we had left him out. "Stripping off the glamour of his style" was taking away most of his characteristics. The question, "What in point of fact, did the man mean by it all?" is answered. "Whatever he may have thought he meant, in point of fact he meant himself, and so far as he truly expressed himself his message was true." The world does not alter so much from age to age its large features of "hunger and labor, seedtime and harvest, love and death." The variation, which saves from repetitious monotony the succeeding reports upon it, is the variation in the witnesses.

It is true that written books live on for various reasons, and the Anglo-Saxon Chronicle, which is by nature one of the dullest and most impersonal things existing, will outlive many glittering competitors for the History of England; but the common antiseptic to the disease of time is style, because it is that which most directly conveys a person. Because it is through persons, through the separate man, rather than through organized systems or series of events, that divinity is manifested, if at all, in human affairs. The separate man is its channel of communication, its electric connection. Through him it always comes, the unstained wonder, the immortal novelty. Not in the thunder or the stars, or in the long fugue of history, but in the lonely soul that reaches upward in the dark is divinity most here and now, or whatsoever it is named which is always a problem and never an answer, and which is forever so mercifully wiser than those who seek it that it will not let them find it.

ARTHUR COLTON.

New York, September 26.

CLEVELAND'S APPOINTMENTS.

TO THE EDITOR OF THE NATION:

SIR: In your issue of September 22 you say, in discussing President Taft's promise to give patronage to insurgent Congressmen:

> The offices in question are those not covered by the rules, not in the classified service. These have been filled by all recent Presidents—by Cleveland as by Roosevelt—on the recommendation of Congressmen.

Is not this statement, so far as it applies to Cleveland, too sweeping? I am personally cognizant of a case in which his practice was the reverse of that ascribed to him. In this instance the candidate earnestly recommended by the local Congressman (the latter, by the way, was an able and influential man) was set aside because of a protest made on moral grounds by a fellow townsman, with whom Mr. Cleveland had no personal acquaintance, and who had no other means of influencing him than testimony deemed by him credible. Is it not probable that in other cases Mr. Cleveland spurned the evil unwritten law of Congressional patronage?

The question may be added: What action in a case like the above would Mr. Taft's letter lead one to expect from him?

"GOOD AND READY."

TO THE EDITOR OF THE NATION:

SIR: In his letter regarding "good and" and "make good" (*Nation*, September 8), which has just come to my notice, Prof. J. M. Hart asks whether "any one has discussed the phrase "good and ready" as a mere intensive="very, thoroughly." To mention only one or two works familiar to the student of English, this and allied forms of expression are adequately treated in Storm's "Englische Philologie" I (Leipzig, 1896), pp. 690-692, and in Greenough and Kittredge's "Words and Their Ways in English Speech" (New York, 1901, p. 315). While it is true that "good and" does not occur in the works of English authors, as far as one may judge from the Oxford Dictionary, other expressions of identical structure, such as "fine and strong," "nice and cool," which we are wont to use in this country, are not infrequently met with in England. Some of these are quoted from English novelists by Storm, who very properly classes them as instances of the substitution of parataxis for hypotaxis, such as we also have in phrases like "try and do," etc. In registering this construction s. v. *and* B, I, 4, (p. 316 c), the Oxford Dictionary cites a passage from Shakespeare, "Romeo and Juliet," ii, 2, 8: "Her vestal livery is but sicke and green," interpreting it as a case in point (="pale green"). For evidence of the usage under discussion in other languages it is only necessary to cite such an expression as the Italian *bell' e detto*, or the Anglo-Saxon *come and geseoh* (St. John, I, 46), translating the *veni et vide, erxou kai ide* of the Latin and Greek.

Boston, September 20.

NIETZSCHE'S MADNESS.

TO THE EDITOR OF THE NATION:

SIR: Is there enough critical interest in Nietzsche in this country to warrant a correction of a misstatement in regard to him by that undeniably clever writer, Vernon Lee?

In her "Gospels of Anarchy," she has a chapter on Nietzsche, and toward the close of it she says:

> Haunted, hag ridden, by the sense of his own sore and struggling ego, Nietzsche, true to the autobiographical instincts which he discovered in all philosophic systematizing, made life synonymous with that ego's realization and assertion. "Give," he wrote in one of his latest and finest works, "Give me, ye gods, give me madness! madness to make me believe at last in myself."

Now these words occur in what might be called an historical or psychological paragraph on "the meaning of madness in the history of morality." In it Nietzsche cites Plato and his high estimate of madness (see the "Phædrus," 244), one species of it, the prophetic, being called the special gift of heaven, and the source of the chiefest blessings among men. The general problem with which Nietzsche was concerned was how, under primitive conditions of thought, one with ideas at variance with the *mores* of his community was to be assured that he was right, though all that passed as morality (*i. e.*, conformity with *mores*) was against him. In just such a situation as this the significance of madness appears. For this, which consisted in a losing of one's proper senses, was, according to early ideas, not a degrading, but an elevated phenomenon, a kind of sign of divine possession and approval. Hence it was something that an innovator in lonely, despairing moments might covet. And Nietzsche, with that wonderful power of sympathetic portrayal of the past which he possessed, pictures such an one putting forth the ejaculation or prayer which Vernon Lee quotes. But she, apparently hitting simply on the words, and disregarding their connection, makes the ejaculation Nietzsche's own! A lesser inaccuracy is in attributing the passage to Nietzsche's "latest" works, when it actually belongs to his middle period—the period in which he was skeptical, positivistic, and, according to ordinary ways of speaking, coolest. It occurs in "Morgenröthe" ("The Dawn of Day"), section fourteen. Mr. James Huneker, in quoting the passage in his "Egoists" (p. 268), is less confused as to its date, but still speaks of it as "his [*i. e.*, Nietzsche's] prayer."

The serious study of Nietzsche is apparently yet to begin in England and this country. Impressionist writers like Vernon Lee and Mr. Huneker one had better beware of.

NEW YORK LOYALISTS.

Minutes of the Commissioners for Detecting and Defeating Conspiracies in the State of New York. Albany County Sessions, 1778-1781. Edited by Victor Hugo Paltsits, State Historian. Vol. I: 1778-1779, Vol. II: 1780-1781. Vol. III: Analytical Index. Published by the State of New York, Albany.

An adequate history of the Loyalists during the American Revolution has yet to be written. The studies of Messrs. Flick, Fisher, and Gilbert have advanced the subject in certain directions, and Mr. Van Tyne has pointed out in his excellent work the direction that further investigation should take. But for an account of the Loyalist movement in detail, we have not progressed much beyond Dr. Ellis's essay in the "Narrative and Critical History," published

twenty years ago. Yet even that scholarly paper says very little of the southern Loyalists and is based on an incomplete survey of the material. The transcripts of Loyalist papers in the New York Public Library, valuable though they are and forming in a way a first fighting line of evidence, are but a part of the available material; and there are other records, once extant, but now lost, that continued search will probably bring to light. To handle all the sources and to cover every part of the field will be a hard and prolonged task, but a worthy one, for it will demand peculiar qualities of mind and body: the spirit of mental detachment, coupled with hard physical labor. Generalizations as to the social status of the Loyalists will not be safe until hundreds of personal careers are examined and much genealogical work done, after the fashion of Sabine's well known collection of Loyalist biographies. Questions of culpability, injustice, and ill-treatment can be answered only when the laws in all the states relating to Loyalists and their property are analyzed and their operation noted; when the activities of State and county inquisitorial boards, of whatever kind and wherever found, existing for the purpose of detecting and punishing disaffection, are critically studied, and an estimate formed of their character and efficiency; when the later careers of refugee Loyalists in England, Canada, and the West Indies are to a certain extent followed up; and when the work of the Claims Committee in London has been more thoroughly investigated. Even then there will be left the difficult ethical, psychological, and economic aspects of the case, all of which must remain more or less speculative even among the most impartial observers. The subject is far from simple, and it has been shamefully neglected by nearly all our students of Revolutionary history. Except for Dr. Ellis, Mr. Van Tyne is the only one who has honestly grappled with it.

The two volumes which Mr. Paltsits, the new State historian of New York, has edited as the first fruits of his office, are a valuable contribution to the Loyalist question. They contain the journal of the Albany County commissioners, 1778-1781, appointed for detecting and defeating conspiracies in the State of New York, one of the few remaining records of its kind, since none of the other minutes of the seven New York county boards are known to exist, and even these minutes are incomplete, covering only about three-fifths of the five years of the board's life. The valuable collateral papers, frequently referred to in these minutes and consisting of the accumulated files of correspondence and the like, are unhappily missing also. The board was appointed to guard "against the wicked machinations and designs of the foreign and domestic foes,' and under its instructions, it concerned itself with a wide range of activities—counterfeiting, murders, robbery and plunder, passes, prisoners, deserters, etc., but its main business was watching Loyalists. In the widest sense the term "Loyalist" included not only those who had property claims to present to the Claims Committee after 1783, but also those who suffered no loss, except, perhaps, of liberty and bodily comfort. The board looked after every disaffected person—those who drank the King's health and "damned every one who opposed the King's laws," harbored or concealed emissaries from the enemy, furnished the enemy with provisions, sought to enlist men in the enemy's service, met in suspicious gatherings, as at Livingston's Manor or "back of Cooksakie, under a pretence of religious worship," or in general did anything that placed them in the class of suspects. Even the "Shaking Quakers" came under suspicion, "as having a tendency to alienate the minds of the people from their allegiance to the State by inculcating an opinion of the unlawfulness of taking up arms in defence of the American cause." The duties of the board were very undesirable, and when, in 1782, it was proposed to abolisn it, those who were members at that time declared that they did not "wish to insinuate a desire of continuing in the exercise of the office, it being a very disagreeable task and subject to aspersions." Yet the record of their attendance shows that in forty months, they met above 650 times.

From the rather meagre entries of the journal it is difficult to form a satisfactory estimate of the attitude and efficiency of the board. Everything goes to show, however, that the commissioners sought to act honorably both in law and equity. They were governed chiefly by two laws, that of February 5, 1778, which contained the instructions, and that of June 30, 1778, which concerned "neutral and equivocal characters." A later law of July 1, 1780, required them to provide for the removal of the families of persons who had joined the enemy. Under the second law, the justice of which has frequently been called in question, they "banished," that is, sent within the enemy's lines, certain persons of prominence in the State, who, though willing to take oath not to aid the enemy in any way, would not take the oath of allegiance required, and were compelled to leave at shortest notice, with those of their families incapable of bearing arms and, if they wished themselves to bear the cost of transportation, with all their clothing and household furniture. No one will deny that this law imposed excessive hardships upon those against whom it was directed, and the well-known "Life" of Peter Van Schaack, the most conspicuous member of this group, bears witness to the sufferings endured. Whether or not the law was necessary, we may not decide; the board certainly deemed it so and interpreted it with the utmost strictness, holding many of these Loyalists as prisoners of war subject to exchange. But the number of "banished" Loyalists was comparatively small, and we hear little of the law after 1778.

The main business of the board was not with these "neutral and equivocal characters," but with persons actively disaffected and consequently dangerous to the State and to the American cause. Hundreds of such persons are mentioned by name and occupation in these records. The most incorrigible of them the board confined in jail, where they were kept at the expense of the State for varying terms; but many more were simply placed under bond, either furnished by themselves or by some good surety, preferably a freeholder. Such persons pledged themselves to be on their good behavior, to remain within certain defined limits, sometimes on a farm, sometimes in a town, or sometimes within a larger area, to serve if called upon in the militia, and to appear before the board once a month or whenever required. The amount of bail ranged from £100 to £5,000, the sum depending, not on social rank, as a "gentleman" is bailed for £100 and a "taylor" for £2,000, but on the nature of the charge. During 1780 and 1781, nearly all who came before the board were allowed to go on recognizance or on bail.

There is ample evidence to show that the board could temper justice with leniency. It inquired carefully into the merits of every case and dismissed, with a reprimand to the accuser, many a person unjustly charged. In some cases where the evidence seemed doubtful, it called for additional witnesses, giving the suspect a full opportunity of clearing himself if he could. When requested, it took measures to protect individuals and families in danger of maltreatment from their neighbors, and allowed many wives of husbands gone off to the enemy to remain in their habitations unmolested, on assurance from well-affected persons that to do so would not prove dangerous or detrimental to the American cause. During the years 1780 and 1781, many in jail were released on petitions, for one reason or another, and allowed to go at large under bond, and in cases of sickness or of family need temporary release was frequently granted. The impression gained from reading these minutes is that the board enforced the law as the times demanded, but mitigated its penalties whenever justice or humanity required.

Mr. Paltsits, as editor, has done his work in a manner that is almost faultless: the text is reproduced with great care and accuracy, as is evident from the very short list of errata given in

the third volume, the introduction and accessory matter are all of value to the student, and the third volume contains an admirably constructed analytical index. The only addition of importance that might be suggested is a series of tabulations furnishing statistical data regarding the persons brought before the board—their names, residences, vocation, ground for suspicion, penalties, amount of bail, and the like. Such information, conveniently arranged, would save the investigator much time and labor.

CURRENT FICTION.

The Glory and the Abyss. By Vincent Brown. New York: E. P. Dutton & Co.

In "The Screen" this writer gave us not long ago a study of churchliness versus simple humanity which differed from current studies of the sort in being written from within the ecclesiastical enclosures. It was impossible to doubt that the deponent had intimate knowledge of the habit of life and thought prevalent within the Church of England fold. In "The Glory and the Abyss," also, the ecclesiastical, or at least parochial, atmosphere is felt. A rural vicar, his daughter, and his curate son-in-law, form a species of unsympathetic chorus to the tragic action. The daughter is really mistress of the parish, a sort of Mrs. Proudie in a nutshell—on the whole an oppressively inhuman figure. Set off against her and her interpretation of life is the vicar's brother, a writer whose theoretical pessimism and even cynicism merely masks the nature of an idealist. He only of the socially superior group discerns the marvel of Peter Bonoor's nature.

"The Soul of Peter Bonoor" might have been a fitter title for the story. He is the slow-moving, slow-thinking, illiterate son of a degenerating peasant stock. The father is a good-for-nothing drunkard. The mother has given birth to fourteen children, buried eight of them, and lives in a condition of feeble sentimentalism which is almost apathy; has her flabby being, as it were, on the border of two worlds. Four of the surviving children have gone to the bad or are on their way to it, when the story opens. Peter is the strong rock upon whom, as if in spite of itself, some sort of family life continues to be founded. One of the brothers is hopelessly depraved, but Peter saves the other for a decent manhood. A neighboring squire seduces the two pretty sisters in turn. Peter has nothing but love and pity for them, and by his influence they are saved from utter wreck. The event for Peter himself is prophesied by the literary ironist, Gilbert Biddulph, to the utter incomprehension of his churchly auditors:

"He is not a great man; but he is a great soul."

"What is the difference?" Mr. Haviland asked.

"I'll give you the world's answer. It has always martyred its great souls; and it has always grovelled at the feet of its great men. By all the spiritual laws known to me, Peter Bonoor ought to be sacrificed for his people. He is offering himself for them, and the great, still eyes of the gods are watching for the moment."

The total effect of the story is not morbid, or even sombre: Peter's soul is too great for that.

The Scales of Justice. By George L. Knapp. Philadelphia: J. B. Lippincott Co.

The usual conflict between the amateur detective and the professional takes the form in this case of a tirade against the use of the "third degree" in extorting confessions of guilt from innocent victims. The amateur is a supernaturally wise and strong young reporter—star reporter of a yellow newspaper; the professionals are the chief of police and the head of the detective department in New York. A great and merciless financier is murdered, and the professionals, forced to find some one guilty, batter a poor wretch of the streets into signing a confession. It is a lurid and monstrous presentation of a method of detective work bad enough in itself. The interest of the book is sustained by a rather amusing company of inquisitive boarders at the house where the reporter lives. The end is a well-managed surprise. As for the style, at least it moves.

The Peacock of Jewels. By Fergus Hume. New York: G. W. Dillingham Co.

A mysterious treasure whose secret is to be revealed by reading the hieroglyphs of a jewelled peacock, a Hindu prince in search of the secret, an old English abbey inhabited by a miser and his ward, a young London lawyer who is in love with the ward, and incidentally has some of the traits of Sherlock Holmes (as all lawyers and reporters have, in these days), and a lonely man living in the London slums—the ingredients are obviously orthodox, but Mr. Hume has made of them a detective story decidedly better than the average, and quite as original. The wicked woman of the story is a character well and effectively drawn.

Franklin Winslow Kane. By Anne Douglas Sedgwick. New York: The Century Co.

This book might be called the romance of a masculine Maggie Wylie—a man who has "nae charrm." It is candidly and simply a study of sentiment and exhibits a trio of complex, ultra-modern, and more or less morbid temperaments in their relations with a nature of transparent honesty and goodness. Althea Jakes, a young American of moderate wealth and spineless emotions, settles in an English country-house for the summer, and gathers to her there Gerald Digby, a fascinating but superficial young detrimental, and Helen Buchanan, a girl who, despite her singular charm, has loved Gerald hopelessly since their childhood. Gerald, blind to this attachment, proposes marriage to Althea on a basis of sound esteem and mutual helpfulness, which she accepts, only to find herself a prey to an exacting love which beats in vain at the indifference of her betrothed, while the helpfulness proves to be extended mainly by her to him. In the meantime, Franklin Kane, an American of scientific tastes, who has adored Althea as long and as vainly as Helen has Gerald, discovers unexpected balm in Gilead, namely, Helen. His friendship for her ripens to a love deeper than his long constancy to Althea, and although her affection for him is more theoretical than actual, she consents to marry him. Thereafter the three hungerers for impossibilities rend his poor soul among them, and though he is left at the end victor over himself and over circumstance, it is with a mortal hurt upon him.

Although such stress is laid upon Franklin's unattractive appearance, it is difficult to visualize his insignificance, and consequently to understand why he should seem so undesirable even to those who most clearly recognize his worth. The four are an exasperating collection, for even Franklin's nobility borders enough on that of Don Quixote to be trying at times, and the only personage of the story who does not irritate the reader is the excellent Aunt Grizel, who towers nobly above the nerve-storms that rage about her, stoutly panoplied in the saving common-sense, which seems, alas! so patheticaly uncommon.

Royal Lovers: The Adventures of Two Empresses. By Helene Vacaresco. New York: John Lane Co.

This book, printed in England, is sure of a considerable market in the land of the free. Nowhere are empresses more popular than on this side of the water: nowhere is the glamour of royalty more palpitatingly felt. What chiefly impresses us, no doubt, what, however fancifully, we most delight in, is not the white light that beats upon a throne, but the august shadows that surround it. This volume, bound in purple, gives forth the aroma of court life as the romantic reader would have it—as it is recorded in the letters and memoirs which are from time to time brought forth by the literary grubber, not to say the literary scavenger. Granted, the premises that the royal persons here presented are worthy of special attention because of the divinity

that hedges them, and all goes swimmingly. Otherwise, their experiences and utterances, as a whole, are of hardly more than ordinary interest. But the royalty is there, and the adventures of royalty are safe from reduction to terms of middle-class life. The rebellion of the Empress Georgina against the laws of her caste exhausts itself in epistolary protest: "I listen without benefit," she cries, "to the dictates of our rank; I shall never be reasoned out of my contempt. . . . What are stage tricks to our tricks, *s'il vous plait?* Sarah Bernhardt and Eleanora Duse assume a part for two or three hours, whereas we have to be unreal and deceptive from morning to evening." Georgina is daughter of a line in which madness has more than once appeared: her cousin, King Frederic, solitary and music-mad, is drawn from an easily recognizable model. Georgina and her royal husband adore each other, yet live together coldly, parted all their lives by a flimsy but insurmountable barrier. The second imperial pair, far more ill-matched, arrive at a sort of harmony through common suffering. The story takes the form of letters, written by some seventeen persons connected with one or both of the royal groups involved. As dramatic compositions, the letters have a good deal of merit.

ANECDOTES OF THE ENGLISH BAR.

Reminiscences of a K. C. By Thomas Edward Crispe of the Middle Temple. Boston: Little, Brown & Co. $3.50 net.

W. J. Locke in one of his early novels describes a cockney. He says quite truly that the real cockney never gets London out of him. No matter where he goes, he carries with him the look of the familiar streets: the City, with its narrow, winding lanes, for which, of course, the hansom was invented; the Strand, with its shops and 'buses; the dip of St. James's Street and Waterloo Place; the homely gloom of the heavy atmosphere, to him always pleasant. This scene is the only real home he will ever know. The author of these reminiscences is through and through a cockney. He does not tell us that he was born in London, but at five years old he saw the procession on the Coronation Day of Victoria, and was taken to the fair in Hyde Park, given in honor of that occasion. He saw there the celebrated "Hottentot Venus," upon whom he had a ride. He tells us: "I plied my toy whip on the flanks of my beautiful jade, who, screaming with laughter, raced me round the circle." From that day, which was in 1838, to the present, he seems to have been having experiences as amusing as the above.

The anecdotes of the bar he gives us are usually such as a traveller in England will hear in the parlor of an inn when a few barristers and solicitors are present. They consist of repartees which pass in court between opposing barristers or rebukes administered by judges to offending counsel. To the American mind there is in much of this rather more of rudeness than of wit. It is seldom that one encounters anything so good as the remark of a judge to a barrister who had said that the advocate on the other side was the greatest bore that ever addressed an English court: "Mr. S., you forget yourself." There is, perhaps, rather more of rudeness than of wit in the reply, related by the author, of Sargent Parry to an insignificant person who had said in court that Sir George Jessel dropped his h's: "Sir, I would rather drop my h's with Jessel in hell than aspirate with you in heaven." The writer of this notice, who has often been in Jessel's company and knew him fairly well, never observed that he had this infirmity. But a defect resulting from early education is more likely to appear in the course of a long address than in ordinary conversation. It would not be unusual, for instance, in England, to hear a clergyman, a university man and a scholar, who had made a slip of this kind in the course of a sermon, chaffed afterwards regarding it by some of his parishioners.

Mr. Crispe in his comment upon celebrated English judges and barristers is for the most part kindly, although now and then critical. He admires Lord Russell, but thinks he was not a good criminal lawyer. He says that Sir Edward Clarke would have easily secured Mrs. Maybrick's acquittal. It should seem that Russell, like many other able men, was not a good diplomatist. Mr. Crispe attended the trial of Col. Valentine Baker, and thought that he was not well defended by Sir Henry Hawkins. Of Hawkins, whom he does not admire, he has some new stories to tell, none, however, quite so good as one lately reported from London. Hawkins (Lord Brampton), coming out of the Athenæum Club, told the driver of a hansom to take him to the Courts of Justice. The cabman, who no doubt knew Hawkins perfectly well, said: "Courts of Justice, sir? Don't know 'em." "Don't know the Law Courts?" said Hawkins. "Oh! the Law Courts!" said the cabman. "I know *them;* but you said Courts of Justice. That's a different thing altogether."

There is much about Lord Justice Coleridge, who was a very brilliant after-dinner talker, and had a great fund of anecdotes. Mr. Crispe, as usual telling us what he has himself seen and heard, gives us some examples of Coleridge's wit. On one occasion, when the late King, then Prince of Wales, attended a dinner at the Middle Temple, Coleridge sat next the Prince. Coleridge reminded the Prince of the rigid rule that no toasts were allowed except the usual royal ones, to the observance of which the Prince promised compliance. But, notwithstanding his promise, he proposed the health of the Lord Chief Justice. Coleridge, in his reply, referred to the psalmist's injunction, "Put not your trust in princes." In the course of his speech he mentioned the reply of Pope to a certain Prince of Wales who had said to him, "Mr. Pope, you do not like kings?" "Sir," said the poet, "I prefer the lion before the claws are grown." The late King, who was a clever man, no doubt appreciated the wit and skill of this pretty flattery.

There are stories of the eccentricities and peculiarities of recent English judges. Certain judges did not allow barristers addressing them to appear with watch chains or flowers in the buttonhole. In the sixties and seventies these ornaments were much more brilliant than they have been since. Many men wore, not one rose, or a few violets, but small bouquets. The writer remembers that in those days, on the porter's table at the front doors of the clubs, there were a number of small glasses, containing water, in which men entering the club would leave their "buttonholes" to be kept fresh. In view of the size of these bouquets, it is not so surprising to read of Mr. Justice Denman's remark to a barrister, who was trying to address him: "You compel me to speak, sir; I do not allow buttonholes in my court."

The disinclination of some judges to listen to a barrister who wears a moustache (which, of course, does not look well with a wig) is a little harder for us to understand in this land of "go as you please." Mr. Choate relates that he was once looking out from a Foreign Office window with Lord Salisbury, when Mr. Choate pointed to some men lying about on the grass in St. James's Park, and said, "That would not be tolerated in America; we should keep them moving." "What harm do they do?" said Lord Salisbury. "That is what I say about you Americans. You have no sense of personal liberty." We fancy that these differences are very much matters of habit, of what you are used to.

After the bar, Mr. Crispe has most to say about the stage. Between the members of these two professions there seems to be a sympathy and an affinity. The author was in his youth an amateur actor, and has all his life been keenly interested in theatrical matters. His pages are full of reminiscences of the English actors of our own generation and the previous one and of persons connected with the stage. We notice an allusion to a little remembered person, which happens to be of interest to the present writer. The person is Mr. Bellew, the father of Kyrle Bellew, whom, however, Mr. Crispe seems only to remember as a clergyman of the

Church of England. He speaks of his incomparable reading of the services. The present writer, however, remembers seeing him in one of the most extraordinary theatrical performances it was ever his good or ill fortune to witness. The play of "Hamlet" was given in dumb-show. Bellew, a remarkably handsome man, stood at a desk in front of the stage in ordinary evening dress and read the entire play, while the actors, male and female, grimaced and gesticulated behind him.

Greece in Evolution: Studies prepared under the auspices of the French League for the defence of the rights of Hellenism. By Th. Homolle, Henry Houssaye, Th. Reinach, Ed. Théry, G. Deschamps, Ch. Diehl, G. Fougères, J. Psichari, A. Berl, M. Paillarès. Edited by G. F. Abbott. Translated from the French. With a preface by Sir Charles W. Dilke, M.P. New York: Wessels & Bissell. $1.50 net.

These ten lectures, as might be expected from the distinguished writers, contain much that is stimulating and timely, in view of the events in Greek lands which have taken place since they were delivered. The (anonymous) translation is uneven, and, at times, unidiomatic, but it occasionally reflects the charm of the original which appeared under the title of "La Grèce." The book is pervaded by a Gallic enthusiasm, welcome enough to ardent Philhellenes, but here and there calculated, especially in this crude translation, to awaken a certain hostility in the minds of the indifferent or uninitiated. The open-minded reader, however, will find in these lectures a well-developed brief for the claims of ancient and modern Greece upon the civilized world. These claims, however old, are renewed with a French precision in regard to the literature and art, the unique charm of the country and the people, the services of the Greek church and its martyrs in the cause of Greek independence, the burning question of Hellenism in Turkish Asia and in Macedonia. There are included an instructive chapter on modern Greek economics, a sketch of Heroic Greece in the years 1821-1827, a chapter on the significance of Modern Greece in Eastern Europe, and an approving résumé of what the Greeks themselves have done, as excavators and restorers, towards the renascence of ancient Greece.

It is to be regretted that M. Psichari in his otherwise admirable chapter on the poet Solomos, the author of the Greek national anthem, should have intruded one of his polemics on the modern Greek language. Non-resident Hellenists might well be silent after the temperate reply of Professor Hatzidakis, of Athens, to Krumbacher, in which he shows that this language, although a partial compromise between the literary inheritance and the rustic patois, has long been accepted as the medium of intercourse in business and society, the newspapers and the schools.

M. Fougères is especially effective in the chapter on Picturesque Greece. His thesis of the harmony of land and water reads like a pæan. But he is not merely exclamatory. As in a sparkling prism, all the color of the atmosphere is divided and reflected. He gives his reasons for regarding Greek landscape as unique—even in the Mediterranean. The following paragraph may serve as an example:

> The original feature of these Greek landscapes is a harmonious and firm plasticity. Each object is frankly either plain or mountain. . . . The lines are never vague, never lost or hidden. There is nothing mediocre, limp, common, ordinary. On the other hand, there is nothing out of proportion, nothing exceeding the compass of the eye, nothing but what can be perceived clearly and distinctly and compared, to use a technical term, with the human scale.

Philo-Judæus of Alexandria. By Norman Bentwich. Philadelphia: The Jewish Publication Society of America.

Among the Hellenized Jews of Alexandria, Philo, "the Jewish Plato," who lived in the first century of our era, stands easily first. But he has been, at any rate until lately, a prophet without honor among his own people. Gentiles call him "the Jew," with implied rejection of his Hellenism, while for the Jews he is "the Alexandrian," a heretic whose teachings were alien from the orthodox Palestinian tradition. He wrote in Greek, and in the early Christian centuries he was much read by the Christian fathers, but was not translated into Hebrew. His rejection by contemporary Jews reminds one of the similar treatment of Spinoza, and, furthermore, is typical, since the Jews have never welcomed a secular philosophy and must always regard with suspicion any doctrines which might change the character of their religion, that is to say, the basis of their nationality. Philo was thoroughly Hebraic in soul. He was a missionary philosopher, and, as Bentwich points out, he was far from wishing to tamper with the Mosaic Law; rather, he desired to convince mankind that the Torah contained the whole of ethics and metaphysics. All the most characteristic Platonic theories had there been anticipated. It was his aim to expound the allegories that he found in the Bible, and in so doing he became the greatest of all the allegorists. Although he never fought Plato's battle, he came under his spell and henceforth regarded Platonic ethics and metaphysics as a possession of Judaism whose beauties he was born to reveal. His failure was pathetic, and the tardy recognition by the Jews of his real greatness and singleness of aim is actually due to what he himself would have deplored, the slow secularizing of Jewish thought. Philo did not escape the influence, either, of Pythagoras, which made number symbolism a favorite superstition with the Greeks, and here again he found a link between the teachings of the Bible and Hellenic thought. Needless to say, he found in symbolic numbers, especially seven, ten, and fifty, further evidence of the sanctity of Jewish institutions.

Too Hebraic for the Hellenists, too Hellenistic for the Jews, Philo would seem to have labored in vain to convince, on the one hand, the man of secular culture of the truth and beauty of monotheism, and, on the other, to enlist Hellenic philosophy on the side of Judaism. But of late there has been a reaction of interest, if not conviction, in his favor. The Berlin Academy is preparing a critical edition of his voluminous writings, which will supersede the unreliable Tauchnitz text of eight volumes, and the bibliography in Mr. Bentwich's book shows the increased attention paid, in this century and the last, to the greatest of all the religious philosophers of the Jews.

Robert Herrick: A Biographical and Critical Study. By F. W. Moorman. New York: John Lane Co. $5 net.

On the score of diligence only praise can be given to Dr. Moorman's work, and if in his ransacking of documents he has discovered nothing of real importance, this is probably due to no fault of his, but to the treacheries of time. Some new light he throws on Herrick's relation to his uncle and on the career of the undergraduate at Cambridge, and does what he can to lend reality to the poet's friendships and surroundings, but the real puzzles of Herrick's life are left unsolved—must in all likelihood remain forever unsolved. There is nothing in a way strange in Herrick's career as we find him, first an apprentice in London, then a student at the university, then studying law at Trinity Hall, taking orders, going as chaplain to the Duke of Buckingham in his fatal expedition to the Isle of Rhé, accepting the vicarage of Dean Prior in Devonshire, living in retirement under the Commonwealth, and returning to Dean Prior in 1662. That was by no means for that age a life of surprising changes, but somehow the man through it all escapes our definition—his religion and his license, his paganism and his Christianity, his passion and his playfulness, somehow baffle us in their contrasts.

Much the best chapter in Dr. Moorman's book, in our thinking, is that in which he gives an historical study of Elizabethan and Caroline lyric poetry. His distinction between the school of Donne and the tribe of Jonson is well made, and is essential to a right com-

prehension of the poets that followed. With Dr. Moorman's chapters on the work of Herrick himself we are not so entirely satisfied. They are certainly too long, and they seem to us to contain some doubtful judgments. In part, his views are unquestionably sound. In contrast to Lowell's estimate of Herrick as "the most Catullian of poets since Catullus" he makes a strong comparison of Herrick and Horace, discovering many points of similarity, but emphasizing a little too much in our opinion the Horatian gravity in our English singer. It is in his final ranking of Herrick that we find ourselves in strong disagreement. To Swinburne the lyric poetry of the century "culminates in the crowning star of Herrick," and to Dr. Moorman Herrick was, in like terms, "the supreme master of the lyre in his own generation, and the glorious consummator of Renaissance song." Dr. Moorman continues:

> All the most melodious notes in that loud chorus which made of the England of the Renaissance "a nest of singing-birds" are heard in the "Hesperides." Herrick can attune his lyre to the strains of Marlowe and the earliest melodists of Elizabethan song, and at the same time, he can rival the courtly gallantries of his immediate contemporaries, Carew and Suckling. The varying ply of his genius gives him also the right to sit down, in that Elysium which his poetic fancy wrought, with Anacreon on his right hand and Catullus and Horace on his left. He is at once romantic and classic, learned and popular. Nothing is too low for his genius and nothing too high.

That, we protest, is altogether to lose sight of critical discrimination. In one sense Herrick was the true artist of his age in so far as he was able to maintain a surprising level of workmanship; he was, too, capable of a great range of styles and themes; there is, in fact, something of the mocking-bird in his power of imitation; but to intimate that he ever reached the supreme height of passion or expression, that in religious verse he wrote anything at all comparable to Vaughan's "They are all gone," or that in amorous verse he ever approached the passion of Donne, or that in classic beauty he knew the secret of Jonson's "To Celia"—is quite to forget his true place. In little things he was supreme; in great things he was only second. He was winsome enough and great enough to merit this careful biography, and, whatever room there may be for difference with Dr. Moorman on some points, all lovers of English verse will be obliged to him for his labors.

Women and the Trades. By Elizabeth Beardsley Butler. New York: Charities Publication Committee. $1.50 net.

Work-Accidents and the Law. By Crystal Eastman. The same. $1.50 net.

These volumes are the first of a series of six which are to embody in permanent form the results of that unique experiment in social research conducted by the Sage Foundation, the "Pittsburgh Survey." Local and limited as is their scope, their significance is national. For what is true of women and the trades and work-accidents and the law in Pittsburgh is true in other cities. The evils described are general, and the remedies suggested merit attention wherever women toil or the wheels of modern industry revolve.

Miss Butler's volume is a painstaking review of the conditions under which the 22,000 girls and women found to be employed in manufacturing and mercantile pursuits in Pittsburgh during the winter of 1907-8 earned their livelihood. Following an introductory chapter on Workers and Work-Rooms, are nineteen detailed chapters describing particular industries, from canning factories to mercantile establishments. The book concludes with two chapters on The Social Life of Working Women and four chapters summarizing the information previously given as to Wages, Hours, Health, and Economic Foothold. Logical as this arrangement is, it has the disadvantage of involving not a little repetition. Nor is the author's effort to disguise this by varying her phraseology always to be commended. Thus she tells the reader on page 25 that women are employed to "screw nuts on bolts" and a little later (p. 31), that their work is to "put . . . bolts on nuts." On the whole, however, the descriptions of women's work are accurate, vivid, and interesting. Appendices describing the methods of the investigation and giving useful supplementary information, a bibliography, and a full index make the book easily the most complete and scholarly study of American women in industry that has yet been undertaken.

Like every other investigator, Miss Butler finds low pay the most serious evil which confronts the woman wage-earner. Above three-fifths of the girls and women she studied earned less than $7 a week, and less than one-fifth of them earned more than $8. Like other investigators, also, Miss Butler finds the reason for this low pay in causes that can only gradually be overcome. Women have not the physical strength to do certain tasks. They cannot repair their machines and they dislike to clean them. Trade unions oppose their admission to occupations which have belonged in the past exclusively to men. As a rule, they expect to be gainfully employed only during the few years that precede marriage, and consequently they lack ambition to master difficult tasks or to rise above the general level. These circumstances, combined with others peculiar to smoke-begrimed Pittsburgh, limit the occupations that are open to women and make competition for these occupations so severe that employers, as Miss Butler was assured, rarely find it necessary to advertise for women hands, a simple sign in the window usually bringing an adequate supply.

In Miss Butler's opinion, the earnings of a majority of the working women of Pittsburgh are insufficient to maintain them in full economic efficiency. This does not mean necessarily that they are losing their health and vigor. Most of them are partly supported by their families. It does mean, however, that they fail to get a living wage. Socially their work is partly paid for by employers and partly by their fathers, brothers, or whoever else helps to support them. It is this fact that makes the lot of the working girl who has to support herself, and even more of the widow who has others dependent upon her, so often a tragedy. Beside this, the other unfavorable aspects of women's work—excessive nervous strain, unduly long hours, and unsanitary surroundings—dwindle into insignificance.

Miss Butler has no novel remedies to suggest for the situation she describes. Effective legal regulation of hours and working conditions, trade training that will fit girls for positions requiring greater skill and intelligence, and legal regulation even of wages, appear to command her support, but the great merit of her book is that it presents the problem of women in industry so fully and convincingly that even the blindest optimist is forced to face it.

Of somewhat different character is Miss Eastman's volume. Her task was to trace out the causes and results of the 526 fatal and the 509 serious, but non-fatal, work accidents which occurred in Allegheny County during the periods chosen for study, and to compare Pennsylvania's method of dealing with these accidents with the methods of other countries. With sympathetic insight, she tells the stories of these 1,000-odd persons who were killed or injured at their work. She concludes that 30 per cent. of the accidents were due to the negligence of employers or their legally constituted representatives, 28 per cent. to the negligence of the injured themselves or their fellow employees, 16 per cent. to contributory negligence, and 26 per cent. to the hazard of the industry. According to this estimate less than one-third of these accidents could be made the basis of a legal claim for damages against the employer. The actual proportion of cases, in which the employer made any substantial payment was even smaller. Thus the author found that in 53 per cent. of the industrial accident fatalities considered, the widow and children had to bear the loss of the entire income, and in less than 30 per cent. did they receive more than $500.

The defects in our system of employers' liability have been so often pointed out that there was little scope for originality in this part of Miss Eastman's

study, but she has shown the faulty operation of the Pennsylvania law with intelligence and skill. No one who follows her careful analysis of cases will dissent from her conclusion that "the law is not only in many of its principles unjust, but also in its method of operation harmful to the interests of all concerned." As to what is to be substituted for it, she offers no very positive suggestions. In her concluding chapter on legislation, however, she shows what has been substituted in other countries and lays down three principles which must guide any reform. Any new policy, she thinks, must put a substantial part of the burden on the employer to stimulate his zeal to prevent accidents; must shift the loss from the individual family of the victim of the accident to the industry he serves; and must reduce litigation to the lowest terms.

Like its predecessor in the series, Miss Eastman's book is supplied with a number of useful appendices and a full index. Taken as a whole, it is an admirable discussion of a complex topic, and must aid powerfully the wide-spread movement to substitute for our outworn employers' liability law a more rational method of distributing accident losses.

Notes.

Messrs. Longman have announced "The Collected Works of William Morris," in twenty-four volumes, under the editorship of Miss May Morris; the edition, which will contain introductions, biographical notes, facsimiles, and frontispieces, will be limited to one thousand copies. The first four volumes will appear in November, their contents being "The Defence of Guinevere," "The Life and Death of Jason," and two volumes of "The Earthly Paradise."

Two other volumes to be issued by this firm are "The House of Lords during the Civil War," by Prof. C. H. Firth, and "Lectures on the Greek Poets," by Prof. J. W. Mackail.

Edmund G. Gardner's new book entitled "Dante and the Mystics" traces the influence of St. Augustine, St. Francis, and other Christian mystics upon Dante, discusses the relation of the "Divine Comedy" to other vision literature, and attempts to define Dante's position in the Franciscan movement.

"Voices from Erin" is the title of a new volume of poems by Denis A. McCarthy, which is now in the press of Little, Brown and Company.

"The Second Chance," by Nellie McClung, is in preparation by Doubleday, Page & Co.

The publication was begun last month by the *Mercure de France* of the letters of Mérimée to Sutton Sharpe; these are of interest especially for their references to contemporary figures in literature and politics.

The Tandy Publishing Company of New York is to issue this month the first volumes of a revised and enlarged edition of "The United Irishman," by Richard Robert Madden. When completed, the work will contain twelve volumes.

Christopher Hare's "Charles De Bourbon, Constable of France" is to be brought out this week by John Lane Company; also "A Queen at Bay," by Edmund B. d'Auvergne, and G. F. Hill's "One Hundred Masterpieces of Sculpture," from the sixth century, B. C. to the time of Michelangelo, with plates and descriptions.

Wessels & Bissel will publish "The Sea Hawk," a story by Bailey Millard; "The Song Lore of Ireland," a volume by Redfern Mason, and a revised edition of Rossiter Johnson's "History of the War of Secession."

John T. Trowbridge's "Darius Green and His Flying-Machine," written more than forty years ago, will be re-issued by Houghton Mifflin Co. in a popular edition, with illustrations by Wallace Goldsmith. The same house is preparing the second volume of "The American People: A Study in National Psychology," by A. Maurice Low, which it plans to publish early next year.

A series of tales properly graded for the various ages of childhood is planned by H. M. Caldwell Company. It includes: "Stories from Grimm," "The Doctor's Lass," "Cherrythorpe Fair," "The Rambles of Three Children," "Stories from Andersen," "A Book of Stories from the Norse," "The Waits of Bremen," "Tales of an Old Yew Tree," "Things Will Take a Turn," "King Arthur and His Knights," "A Saxon Maid," and "The Knights of Charlemagne."

Carro Frances Warren's Garden Series for children, which is in the hands of C. M. Clark Co. of Boston, will shortly be increased by the volume, "Little Danny Dandelion."

B. W. Huebsch adds to his previously announced autumn list: "Temples of Peace Built of Untempered Mortar," a criticism of the protective tariff, by John Bigelow, and Frank Parson's "Legal Doctrine and Social Progress."

To the books which Frederick A. Stokes has promised for November should be added: "Home Rule," by John Redmond, M.P.; "Masterpieces in Color: Murillo"; in the Coast Series: "The Norfolk and Suffolk Coast," by W. A. Dutt; "The Cornwall Coast," by Arthur L. Salmon, and "The South Devon and Dorset Coast," by Sidney Heath; "Anti-Matrimony," a drama by Percy MacKaye.

Henry Frowde's autumn announcement of the Oxford University Press contains: English: "Essays by Members of the English Association" (H. Bradley, R. Bridges, W. P. Ker, G. Neilson, G. Saintsbury, E. Sichel, C. E. Vaughan), collected by A. C. Bradley; "Six Essays on Johnson," by Walter Raleigh; "The French Renaissance in England," by Sidney Lee; "Tudor and Stuart Library: Traherne's Poems of Felicity," now first published from the MS., edited by H. I. Bell; "The Oxford Book of Ballads," chosen and edited by Sir Arthur Quiller-Couch; "Plays from the Italian (Supposes, Buggbears, Misogonus), edited by R. W. Bond; "Coleridge's Poems," with much unpublished matter, edited by E. H. Coleridge; "Spenser's Poetical Works": volume i (The Minor Poems), edited by E. De Sélincourt; "The Englishman in Greece," with introduction by Sir J. Rennell Rodd. Modern languages: "An Introduction to Old High German," by Lionel Armitage; "Living Speech in Central and South Africa": an essay introductory to the Bantu language, by A. C. Madan; "The Life of the Black Prince," by the Herald of Sir John Chandos, edited from the MS. by M. K. Pope and E. C. Lodge; "Oxford Book of Italian Verse," XIII-XIX Century, chosen by St. John Lucas. Theology: "Old Latin Biblical Texts, VI: Codex Veronensis *b*," edited by E. S. Buchanan; "John the Presbyter and the Fourth Gospel," by Dom John Chapman, O.S.B.; "Gesenius's Hebrew Grammar," new edition, translated from the twenty-eighth German edition (by E. Kautzsch), by A. E. Cowley; "Studies in the Book of Isaiah," by M. G. Glazebrook, with two maps. History: "Tudor and Stuart Proclamations, 1485-1714," calendared by R. Steele under the direction of the Earl of Crawford, K.T., two volumes; Sir C. P. Lucas's "Historical Geography of the British Colonies": volume v, Canada, part iii (Geographical), by J. D. Rogers, with maps; "Documents Illustrating the Continental Reformation," edited by B. J. Kidd; "The English Factories in India," by W. Foster: volume v, 1634-1636; "Henry Fox, First Lord Holland," by T. W. Riker, two volumes, illustrated; "Trichotomy in Roman Law," by Henry Goudy. Classics: Oxford classical texts—"Tacitus, Histories," edited by C. D. Fisher; "Cicero, Orationes"—Post Reditum, De Domo Sua, De Haruspicum Responso, Pro Sestio, In Vatinium, De Provinciis Consularibus, Pro Balbo, edited by W. Peterson; Pro Plancio, Pro Fonteio, Pro Sulla, Pro Archia, Pro Scauro, Pro Tullio, edited by A. C. Clark. (The publication of these speeches will complete the edition of the Orationes.) "Historia Numorum," by B. V. Head, second edition; "The Works of Aristotle," translated into English under the editorship of J. A. Smith and W. D. Ross—"Historia Animalium," by D'Arcy W. Thompson; "De Partibus Animalium," by W. Ogle; Oxford Library of Translations—"Cæsar's Gallic War," by F. P. Long; among many school books are: "English Political Institutions," by J. A. R. Marriott; "From Metternich to Bismarck": a text-book of European history, 1815-1878, by L. Cecil Jane; "Kinglake's Eothen," with introduction by D. G. Hogarth and notes by V. H. Collins. In the Oxford Poets Series: "Dryden," edited by J. Sargeaunt; "Moore," edited by A. D. Godley; "A Book of Light Verse," edited by R. M. Leonard. In the Oxford Standard Authors: "Defoe's Robinson Crusoe," with Cruikshank's illustrations; "Dante's Divine Comedy," translated by Cary, with Flaxman's illustrations. In the Oxford Edition of Scott (with many illustrations): "The Abbott," "The Heart of Midlothian," "Kenilworth," "Redgauntlet," "The Fortunes of Nigel," "The Antiquary," and "The Monastery." In the Oxford Library of Prose and Poetry: "Clough's Poems," including "Ambarvalia" and the first edition of "The Bothie," edited by H. S. Milford; "Shelley's Poems of 1820"; "Jeffrey's Literary Criticism," edited by D. Nichol Smith; "Charles Reade's A Good Fight" (the first version of The Cloister and the Hearth). In the World's Classics: "Shakespeare's Plays and Poems," with a general

introduction by A. C. Swinburne, introductory studies of the several plays by E. Dowden, and a note by T. Watts-Dunton upon the special typographical features of this edition. Volumes i to iii. In addition: "Letters by Edward John Trelawny," mostly unpublished, edited by H. Buxton Forman, C.B.; "Pages from a Journal," by Mark Rutherford, second edition, enlarged; also a companion volume entitled, "More Pages from a Journal"; "The Serpent of Division," by John Lydgate, the Monk of Bury, edited, with introduction, notes, and glossary, by H. N. MacCracken, with facsimiles; "Wood Carvings in English Churches," volume ii, Stalls, by Francis Bond (Church Art in England Series); "American Railway Problems in the Light of European Experience," by C. S. Vrooman. Yale University Publications: "The Records of the Federal Convention of 1787," edited by M. Farland; "The Campaign of Chancellorsville; a Strategic and Tactical Study, by John Bigelow, jr., Major U. S. Army, retired, with 47 maps and plans, and "The High Court of Parliament and Its Supremacy": an historical essay on the Boundaries between Legislation and Adjudication in England, by C. H. McIlwain.

The ubiquitous Baedeker has revised editions, in English, of "Paris" (the seventeenth), "Berlin" (the fourth), and "Belgium and Holland" (the fifteenth), which we receive from Charles Scribner's Sons. They bring with them, as always, reminiscences and hopes of travel.

Dr. Henry Bradley has added to the "Oxford English Dictionary" the double section Sauce-Alone-Scouring (Clarendon Press). As compared with the previous instalment of S, this section makes somewhat dull reading; for words with long, diversified histories are notably few, and there is only a sprinkling of novel and curious outlanders from the Orient and the New World. Among the quaintest oddities are the obsolete oaths—the "fossils of piety"—exhumed from the older dramatic literature; *'sblood, 'sbobs, 'sbodikins, 'sbody, 'sbores,* and *'sbud* well illustrate the way in which blasphemy writhes behind the fig leaves of euphemism till a fastidious and sanctified lady may use in all innocence the blood-curdling ejaculations of bandits and bargemen. Of modern English made in America perhaps the most significant specimens are *scallywag, schoolmarm,* and *schooner*—"a tall glass of beer"—a word first recorded in Webster's Supplement, 1879, but now said to be available in various cities of the British Isles. The precise origin and development of *scallywag* are obscure: Bartlett localized it in 1848 as a "favorite epithet in western New York for a mean man"; during the Reconstruction it became a term of political reproach; in 1868 it was declared to have been originally a drover's word for ill-conditioned cattle; in 1891 it appears as trade-union slang for a man who will not work. Dr. Bradley strangely neglects to remark that *scallywag,* like *scamp* (which formerly meant a "highway robber"), has lost much of its early savor, and is now largely employed as a term of endearment for particularly vivacious and heart-ravishing infants. One is surprised, also, to find no mention of *scads*—Americanism—meaning "stacks," "heaps," or "bushels" of anything.

Of the longer articles, that on *science* is from many points of view the most interesting. Probably no other word has within the last hundred years so startlingly contracted the limits of its meaning. In the Middle Ages *science* meant, among other things, "knowledge as a personal attribute"; so that Chaucer could write of "the soule whiche that hath in itself science of goode werkes," and Lydgate could say that the cherubim are full of science and divine sapience, and a plain, pious man could declare that he had science of God. With the meaning, furthermore, of a "particular branch of knowledge," *science* was not then the antonym but the synonym of *art*; the "seven sciences" and "the seven liberal arts" were interchangeable terms. Even as late as the early nineteenth century *science* was applied at Oxford "to the portions of ancient and modern philosophy, logic, and cognate subjects, included in the course for a degree in the school of Literæ Humaniores." In 1884 Freeman writes: "I remember him years ago as a logic and science coach. I don't mean for cutting up cats, but what science meant then, ethics, Butler, and such like." In 1840 Whewell felt the need of coining the word *scientist,* and from about that period metaphysics and theology began to be excluded from the meaning of *science* and its scope to be limited to those branches of study dealing with the phenomena of the material universe, which in the seventeenth and eighteenth centuries had been commonly known as philosophy. One old sense of the word marked obsolete by Dr. Bradley—"a craft, trade, or occupation"—appears in this country at least to be enjoying a revival. "Whan a virgyn begynneth fyrst to lerne to sewe in the sampiar," says an author of the sixteenth century, "that scyence to her as than semeth very harde." If Dr. Bradley thinks this sense obsolete, let him look over the courses in sewing, sweeping, and bread-making offered as "household science" in American universities.

"The Forerunners of Dante: a selection from Italian poetry before 1300" (Frowde), is the last product of Prof. A. J. Butler's long study and great love of the Florentine master. The manuscript of the notes was finished only a fortnight before his death. The book contains about seventy *canzoni,* mostly of the Sicilian school, including several not to be found in the Italian anthologies. The sonnets had been reserved for a companion volume. The work was undertaken with the purpose of throwing light on the lyric tradition which entered into the work of Dante. Of the Italian poems referred to in the "De Vulgari Eloquentia," all those now extant, except Dante's own, are here—even "Una fermana iscoppai da Cascioli." The preface and the notes bear witness to the growth of Professor Butler's delight in the lyrics for their own sake. He found many a stanza form of peculiar beauty, many a perfect phrasing of graceful thought, and, here and there, the very thrill of passion. The *lamento* of Giacomino Pugliese, in particular, for its deep, manifold grief, directly voiced in worthy artistry, seemed to him comparable with the greatest poems of bereavement. The book is edited with scholarly care. The best texts of the several poems were utilized, and bettered, in a number of cases, through the conservative ingenuity of the editor. The notes, which are grouped together at the back of the book, leaving the poems free, contain enough explanation to make the reading of the *canzoni* possible for any reader of Dante, and afford many instances of new and valuable interpretation.

G. Barbèra of Florence has just published an attractive anthology of the sayings of Galileo, "Pensieri, motti e sentenze di Galileo Galilei," a small volume in 24vo., in the collection Diamante, originally edited by Giosuè Carducci. It has been compiled by Antonio Favaro, who for the past thirty years has been occupied in preparing the monumental National Edition of Galileo's works. The anthology is not, then, a chance, catch-penny piece of editing, but a maturely studied compendium. As Favaro observes, the dominating note is Galileo's passion for direct communion with nature and his consequent intolerance of the principle of authority.

"A Congressional History of Railways in the United States," by Lewis H. Haney (University of Wisconsin Bulletin, Vol. 6, No. 1), is the second volume by this author under the same title. Volume 1 carried the history down to 1850. This study continues the subject, and covers the period from 1850 to 1887. It is a time of general interest in railway construction, when the land-grant policy is begun, developed to its extreme, and finally, because of its glaring abuses, is brought to an end. During these decades, the Pacific railways are built, and the foundations are laid of our present regulation policy. All these questions are taken up by the author chronologically and topically; much attention is given to the various bills introduced, and particularly to the debates, for any side-lights which they may contain. There is very little of individual opinion or attempt at interpretation of the historical movement; rather is it a faithful record, carefully supported by elaborate references. Occasionally, however, the author ventures a personal conclusion on some mooted point. It is his judgment, for example, that had the railway come a little earlier, direct subsidies would have been given and governmental lines constructed, but this later became impossible, largely for political rather than for economic reasons. He fails to find any clear justification for the extensive subsidies to the Pacific railways, and considers it as certain that within two decades private enterprise would have sufficed to build the roads. Political considerations probably justified aid for one transcontinental line, but the United States would have best solved the problem by constructing a national railway over the central route, leaving the exploitation of other lines, without aid, other than right of way, to private initiative. The two volumes of this history provide a valuable and convenient work of reference to students of railway development in the United States.

"A Transformed Colony" (Lippincott), by T. J. Alldridge, is a description of the present conditions in Sierra Leone, as compared with those a few years ago. Then it was the prey of the slave-hunter and desolated by intertribal wars; now it is a land of security and freedom. The author has an especial fitness for his task, as he came to the country in 1871, and, as travelling

commissioner, did pioneer work in opening up the then unknown Hinterland, making treaties with the paramount chiefs, and pacifying the various tribes. In the latter years of his service he was the district commissioner of the Sherbro. In 1908 he made an extensive journey in the protectorate, going over much of the ground he had traversed before, and his book is a record of his experiences and impressions, together with much information about native customs, especially their secret societies. Beginning with a detailed account of Freetown, the capital, he describes a trip by the government railway over 200 miles into the interior, one which he had taken before by hammock. The most interesting incident in this was his visit to a government school at Bo for the sons of native chiefs, the object being to train them "in such a manner as to make them good and useful rulers of the country in the future." With this end in view, they are taught "the ordinary branches of an English education, together with special and practical training in farming, carpentry, bridge-building, road-making, and land-surveying"; and no dressing up as Europeans is permitted, according to the school regulations. All the methods of instruction planned did not meet with universal approbation. In the government notice of the establishment of the school it said:

> By means of lantern lectures pictures of the principal incidents in the lives of such women as Florence Nightingale, Elizabeth Fry, the late Queen Victoria, and many others, will be shown and explained to the pupils, with a view to increasing their respect for women.

Immediately a petition was sent in to the Governor, saying that Mohammedans objected to all this, because they had notable women of their own known to every Moslem. The opposition, of which this is only one form, was speedily overcome by the creation of a Mohammedan advisory board. At the time of the author's visit, the school had eighty pupils. Great emphasis is laid on the undeveloped native wealth of the country. Immense quantities of fruit, rice, cotton, and tobacco could be grown, while vast forests of oil-palms—a tree which may be said to be the "Ruler of West Africa"—are standing year in and year out untouched by any human hand. The rubber vine is also common throughout the Hinterland, but is neglected or destroyed by the native. The general prosperity of the protectorate, however, is indicated by the fact that the revenue, which in 1887 was $300,000, in 1907 was $1,800,000. The illustrations, sixty-six in number, are all interesting, but particularly those showing the members of the secret societies and their strange costumes. There is an excellent map, furnished by the War Office, also an index.

The ninth book of Livy contains an account of the battle with the Samnites at the Caudine Forks, and the subsequent sharp practice of the Romans in evading their obligations through technicalities. The famous speculation on the power of Alexander as compared with that of the Romans is also found in this book. These would be ample justification for the edition which has just been published by T. Nicklin (Clarendon Press). A short introduction is noteworthy only for a chapter of Hints on Translation in which stress is laid on the metaphorical character of Livy's language; the point is illustrated by quotations from English authors, only a single sentence in length, which when compared with the corresponding passages in the text show admirably the essential differences between English and Latin style. No indication is given of the source of the text. The notes are intended for freshmen students.

Col. A. O. Green, who has done much to facilitate the study of Arabic by the English officials in Egypt, has prepared a second edition of his "Modern Arabic Stories, Ballads, Proverbs and Idioms" (Frowde). The first edition employed the Arabic script; this one gives in part i the transliterated text, with grammatical notes, and in part ii the English translation, with explanations of local terms and customs. The selections (taken from Spitta and others, except a Voyage of Sindibad) form a valuable contribution to the history of Egyptian Moslem manners.

Part iii of the "Clavis Linguarum Semiticarum" (edited by H. L. Strack) is "A Manual of the Aramaic Language of the Babylonian Talmud," by Max L. Margolis, professor of Biblical philology in the Dropsie College, Philadelphia (New York: G. E. Stechert & Co.). The work consists of a grammar, with chrestomathy and glossaries. Grammatical forms, examples, and texts are taken from the best manuscripts and printed editions of the Talmud, and older and later forms and usages are distinguished. Here, then, we have for the first time a satisfactory grammar of this important dialect, and the Manual will doubtless be in the hands of all students of the Talmud.

Prof. Joseph Wright's "Grammar of the Gothic Language" (Clarendon Press), which author and publishers have seen fit to issue instead of a third edition of their "Primer," differs from the shorter work chiefly in being printed in larger type and being amplified in the direction of comparative grammar. The facts of Gothic grammar are presented in the same lucid order and for the most part in the same language as in the "Primer"; but in this book the Gothic forms are traced back to their Indo-European originals, parallel forms in Greek or Latin, in Primitive Germanic, Old High German, and Anglo-Saxon, and additional tables are given to exhibit the development of sounds and words. The inclusion of the Greek of some chapters of the Gospels, which are in part reprinted in the version of Ulfilas, will make the study of the Gothic more instructive. Professor Wright has here and there revised as well as supplemented his former treatment of the subject: he offers texts in sufficient abundance to enable a student to acquire a working knowledge of vocabulary and idiom; so that the book in itself is an adequate, as it is an admirable, introduction to the study of Germanic philology.

Students of Scandinavian languages have for years known that Verner Dahlerup, associate professor in the University of Copenhagen, editor of Icelandic sagas, and writer on Danish literary and lingulstic topics, has been working on a great dictionary of the Danish language. As long ago as Christmas, 1890, it was maintained at a meeting of the Modern Language Association of America, that the chief desideratum of those interested in Scandinavian studies was an adequate thesaurus of the Danish language, while others held that an etymological dictionary was the main thing wanted. The etymological dictionary has been supplied by Professors Falk and Torp of the University of Christiania (started in 1901 and completed in 1906), a German translation whereof is now in the course of publication. The absence of a satisfactory and accessible Danish dictionary has been partly remedied by the "Danish Dictionary for the People," which has been in the course of publication for the last seven years by the Gyldendal Publishing House (Copenhagen and Chicago), and which now, with its twenty-seventh part, has come down to about the middle of the letter S. This dictionary, while being distinctly better than nothing, is not of a kind to satisfy the present standard of scholarly thoroughness, correctness, and conciseness. It is, therefore, a matter of distinct gratification to all those interested in Danish, and we may well say Germanic philology, that the same publishing house (Gyldendal) has recently sent out a fascicle of Dahlerup's abovementioned work, entitled, "Ordbog over det danske Sprog" (Dictionary of the Danish Language), the publication whereof is to be started in the near future. The present fascicle of forty quarto pages carries us from A to Aarefistel, and shows that the work will be particularly valuable by its wealth of reliable and pertinent quotations. The dictionary will be especially devoted to the last two centuries of the development of the Danish language. One might perhaps express a wish that the author should give more detailed information in regard to the older history of the words.

Mrs. Rebecca Harding Davis, who died just a week ago, was the mother of Richard Harding Davis, and the widow of L. Clarke Davis, at one time editor of the Philadelphia *Public Ledger*. Mrs. Davis was born in Washington, Pa., in 1831. She began her literary career by contributing in 1861 to the *Atlantic Monthly* an article entitled "Life in the Iron Mills," in which she depicted the grinding life of the people about her. The following year the *Atlantic* published her first long novel, "Margaret Howth." In 1869 she accepted a position on the editorial staff of the New York *Tribune*, which she held for several years. Besides many short stories, Mrs. Davis was the author of "Waiting for the Verdict," "Dallas Galbraith," "John Andrus," "A Law Unto Herself," "Earthen Pitchers," "Kitty's Choice," "Kent Hampden," "Natasqua," "Silhouettes of American Life," "Frances Waldeaux," "Dr. Warrick's Daughters," and "Bits of Gossip."

Dr. William Maclagan, the late Archbishop of York, who died two weeks ago, had published several volumes of sermons and had written hymns, the music as well as the words.

Emile Raymond Blavet, who died at Nice at the age of seventy-two, was a journalist of high standing, a dramatist, and the author of several novels. He had contributed to the *Figaro* the section, "La Vie de Paris," and started the *Petit Bleu*. He was a member of the Legion of Honor.

The death is announced from Caen of the aged French philosopher J. A. Emmanuel Chauvet. He was professor of philosophy at Caen from 1870 until 1899, when he retired, and besides publishing many essays

he collaborated on a translation of the works of Plato.

The author of the history of Switzerland in twelve volumes, Prof. Karl Dändliker, died recently at Küssnacht, at the age of sixty-one.

Science.

Tactical Principles and Problems. By Capt. Matthew Elting Hanna, Third United States Cavalry. Menasha, Wis.: George Banta Publishing Co.

Formerly, West Point was the sole reservoir of learning for the land forces, and it has always been devoted to forming character quite as much as to supplying higher non-mathematical instruction. It gave no post-graduate course. Officers appointed from civil life absorbed the military rudiments by association with graduates; those commissioned from the ranks supplemented their familiarity with barrack and parade, and their usually slender book-learning, by what might be gleaned through observation of others who were better taught. But now conditions have changed, so that at appropriate posts there have been established graduate artillery, cavalry, engineering, signal, and army medical schools for officers of those respective arms.

At Fort Leavenworth, out of a veritable military kindergarten established in former years for insufficiently informed officers, have evolved an army school of the line and an army staff college. There Capt. Hanna has been teaching the art of war, and a part of his instruction is in the practical form of laying before the student-officers successive military situations and requiring them to solve problems based thereon. Certain conditions assumed, what would be sound tactical operations? When the field itself is not available for inspection, or there are no competent maps to be studied, such questions and their answers would be the haziest generalities. It is impossible to describe verbally the details of any terrain so that the memory may serviceably retain them. Often even veritable actions cannot be followed in detail without some graphical aid. Certainly, an account for the public should embrace the outlines of military geography quite as well as the movements of troops and their fire action.

Independently of their help in appreciating what has already occurred, topographical details are so essential in active field work that the command which neglects them handicaps itself exactly so much. The era of combined courage and momentum culminating in brutal frontal attacks upon selected positions, as illustrated at Bunker Hill and Fredericksburg, passed from even the most sluggish minds with the South African demonstration of its futility. The accuracy of to-day's long-range arms emphasizes the importance of approach under cover and of selecting, where selection is possible, defensible positions. This is especially true in such preliminary study of the field as patrol and outpost duty involve. The object there is to see without being seen, and the character of the field must be considered also when wider and more important work is at hand.

The use of cover is not new in American theory, but its scientific employment is more beautifully demonstrated in these Leavenworth lectures than ever before in American text-books. And they do not end there. They go on to illustrate the principles by which hostile contact should be conducted with independent commands, up to small brigades of infantry and cavalry without artillery. To make such demonstration possible, the volume is happily equipped with two large detached military maps on which every natural feature and the more important artificial ones are noted, and which are profusely sprinkled with numerals and letters for easy consultation and reference. One map covers about nine by sixteen miles around Fort Leavenworth on a scale of two inches to the mile, and the other about four by six miles of the same territory at four inches to the mile. The contour intervals are twenty and ten feet, respectively. There are also three small maps. The text is a well-written group of problems in the field use of infantry and cavalry, gradually increasing in complexity, each with a reasonable solution followed by practical comments. It is serious but not dry or abstruse. The student is encouraged to make a personal solution after a careful study of the problem, and then to compare it with that presented in the book. But Capt Hanna modestly announces that his own solutions are to be regarded neither as faultless nor as by any means the only good ones; and that any uncomplicated solution which violates no sound tactical principle and accomplishes its object is good. Clearly, the purpose is not to unravel arbitrary tangles, but to master the practical philosophy of the minor operations of war. When the available territory is examined with the care advised and the sagacious commentaries are absorbed, the student will have a fair comprehension of the applied tactics of two arms. Every officer of the organized militia, and equally his fellow in the permanent establishment, for whom this book was especially prepared, should be the careful student of these lectures. They should be interesting also to the general reader, especially in helping to dispel the popular delusion that soldiers are a fiat product, the immediate result of a call for volunteers. True soldiers are developed, not generated by command.

In construction the text is admirable. The narrative is clear, the orders are well written, the solutions and comments logical and acceptable, and throughout there is a refreshing absence of adjectives. Occasionally, it is true, shall and will, and should and would, replace one another; but these are slips which do not distort the meaning. There are, however, two misleading corruptions in the lettering of the staff map; one a matter of taste, the other an historical error. The first is "Sheridan's Drive," which also repeatedly appears in the letter-press. The possessive has no proper place there; otherwise there should be Grant's Avenue, Wagner's Point, and so forth. The "Sheridan Drive" is euphonious and consonant with descriptive nomenclature. Besides, that is its name. The other, "Kearney" Avenue, is a gross blunder, for it cannot hark back to Commodore Lawrence Kearney of the navy, distinguished as he was. The able and efficient Gen. Stephen W. Kearny had official association with Fort Leavenworth, and his dashing nephew. Philip Kearny, has conspicuous claim to soldierly remembrance. "Kearny" would commemorate either or both, "Kearney" neither.

In the next edition the value of this work would be increased by an analytical index; not a mere catalogue of names or a distended table of contents, but a careful alphabetical reckoning of principles under key words. It is well worth such labor, but an incompetent index might be worse than none. The very recent detail of Capt. Hanna to the General Staff is a deserved compliment to him and a comforting sign that the Staff is well selected.

"Bird Flight as the Basis of Human Flight," by Otto Lilienthal, has been translated from the second edition, and is to be issued by Messrs. Longman.

Tables of the four great satellites of Jupiter have been composed by Prof. R. A. Sampson of the University of Durham.

Very attractive in cover design and general makeup is "Louis' Every Woman's Cook Book" (H. M. Caldwell Co.), with its clear type and ornamental margins. One hundred and twenty pages are devoted to recipes, and an equal number of blank spaces are provided for memoranda. The directions are clear and simple, and the choice comprehensive.

In "Peaks and Glaciers, a record of pioneer exploration in the Punjab Himalaya," by Fanny Bullock Workman and William Hunter Workman (Scribner), the main point of interest to the unscientific reader is Mrs. Workman's record-breaking climb, when, with two companions, she ascended a peak 23,300 feet high, the greatest altitude ever reached by a woman. The party also camped higher than tents had ever been pitched before, with one possible exception, and their experience with change of temperature was probably unparalleled. In the after-

noon the mercury in the solar thermometer went up to 193° Fahr. "At sunset the temperature fell to freezing, and an hour later to 10 degrees Fahrenheit, reaching a minimum of —4 degrees before morning. It thus underwent a variation of 197 degrees in somewhat more than twelve hours." From the fact that during this climb five nights were passed without sleep, the inference is drawn that the loss of strength from sleeplessness, and not the difficulty of breathing, is the greatest obstacle to very high ascents. The student of mountain and glacier formation will find much interesting and valuable information, especially in regard to moraines, and the curious *nieve penitente*, the collection of pyramidal pinnacles of ice or hardened snow arranged in rows on the mountain slopes or glaciers. It was first noticed and described by Andean explorers, and for a long time supposed to be peculiar to the Andes. The Workmans discovered eight different varieties during this expedition, besides one made two years later, in 1908, which are described in detail, with photographic illustrations. They have added much to the exact geographical knowledge of this little-known part of the great range, with the intention of making a full and accurate survey map possible. The full-page photographic illustrations which appear between nearly every two pages, are remarkable pictures, especially of pyramidal peaks and glacial ice formations. One shows at the apex of a snow-covered summit a wonderful profile strongly resembling the Empress-Queen Victoria.

Drama and Music.

The fabric of Maeterlinck's "The Blue Bird" consists of such delicate and fanciful stuff that the transfer of it from the library to the stage, without the loss of any of its fragrance or bloom, must be an almost impossible task. To the long array of decorative and mechanical problems is added the need of sympathetic and enlightened acting. It is not surprising, therefore, that the present representation in the New Theatre fails to do more than suggest some of the author's ideals. The merely mechanical difficulties have been surmounted with much ingenuity, and several of the stage pictures are exceedingly beautiful, but they are not especially notable for high imaginative quality, and this last remark may be applied to most of the acting. It is not necessary to enter into any details of a story which must be well known to most of our readers. Briefly, it relates the dream adventures of two poor children who, under the guidance of a fairy, seek for the Blue Bird, which is the symbol of happiness. They are accompanied by the Cat—who, representing the powers of Darkness, is their secret foe—by the Dog, man's one friend among the animals, and by the embodied spirits of different elements and things, who give them no practical assistance in their quest. They invade the mysteries of Night, interview the dead in the Land of Memory, explore the Kingdom of the Past and Future, and learn finally that happiness is illusionary and fleeting, that it can be seized, lost, and recaptured, and that it may often be secured by imparting the means of it to others. On the surface a fantastic fairy tale for children, the piece is written in the simplest style, and yet is crammed with ingenious allegory, philosophic reflection, and poetic fancy. It requires acting of the most delicate and sincere kind, and the best ability in the service of the New Theatre might have been worthily employed upon it. For the lack of it, several scenes were deprived of nearly all their poetic and artistic significance and became conventional. The inadequacy of the actor entrusted with the part of Time, for instance, was almost fatal to the imaginative scene in the Kingdom of the Future. Eleanor Moretti played Night in the right vein, but an actress of more tragic power would have made the act doubly impressive. The Fairy Berylune was the ordinary fairy of pantomime. The children were unfortunately stagy and unreal. No parts, however, could be more difficult to fill. The Dog and the Cat were both excellent, the impersonation of the latter by Cecil Yapp being one of the features of the performance. The most successful scene of all was that of the Land of Memory, where Tylyl and Mytyl visit their dead grandparents. Here the acting of Robert McWade and Eleanor Carey was admirably simple and natural, while the scenic arrangements were perfect. Regarded as a whole, the entertainment is one of high merit and rare beauty, but it scarcely fulfils the highest expectations founded on the known resources and capacities of the New Theatre.

In a monograph entitled "Der bestrafte Brudermord, sein Verhältnis zu Shakespeare's Hamlet" (Leipzig: Leopold Voss), Marshall Blakemore Evans reopens an old, perplexing question and furnishes a highly probable solution. His conclusion that the German play goes back originally to the "Ur-Hamlet" and that this latter may reasonably be assigned to Thomas Kyd, will, of course, surprise nobody, as this has been the impression among scholars, in America at least, for several years. It is satisfactory, nevertheless, to have the impression confirmed by such a careful and minute study as Mr. Evans has here made. "Der bestrafte Brudermord," in its present form, dates from the year 1710, but the writer makes it clear that it, in all likelihood, preserves with considerable fidelity the version which an English company brought to Germany and acted in 1626, and then by the perilous but necessary device of parallels he sets out to identify it as the best extant relic of the "Ur-Hamlet," showing (1) that it is closer in its phraseology to the first quarto of Shakespeare's "Hamlet" than to the second, that the variations in the second quarto look, on the face of them, like later revisions; (2) that the German drama draws upon Belleforest for certain incidents which are not contained in the quartos; (3) that it makes use, to a much greater extent than the quartos, of Seneca, a thing to be expected in the adaptation of a pre-Shakesperean English tragedy; (4) that, not only in the matter of indebtedness to Seneca, but, in other details of style and construction, it bears a striking resemblance to the work of Thomas Kyd. Up to this point the argument is well handled, even if enthusiasm for his thesis leads the writer occasionally to submit evidence which proves nothing; incidentally, it makes the conclusion necessary that Shakespeare's first quarto, whether pirated or not, records a cruder form of the play than the second, in short, that Shakespeare must have made many revisions in the play in the year after its first appearance. The rest of the argument, which tries to work out in detail the genealogy of the Hamlet story, is, by the nature of the case, less convincing. At the end of the book is a reprint of Belleforest's novel, text of 1576, with variant readings and an introduction.

There are freshness and humor in "The Concert," which was produced in the Belasco Theatre on Tuesday evening. It is an English version by Leo Ditrichstein of a comedy by the German dramatist, Herman Bahr, which has had success in Europe. The hero of it is a famous pianist, who finds it difficult to resist the fascination of his adoring female pupils. One of them, a married woman, accompanies him to his bungalow in the mountains, whither they are promptly followed by the deserted wife and husband. These two profess to take a philosophical view of the situation and propose a peaceful and permanent exchange of partners, instead of a public scandal. Put in this ridiculously unromantic situation, the elopers speedily realize the folly of their conduct, and a general reconciliation is effected before irremediable mischief has been done. Mr. Ditrichstein's adaptation is clever, and the piece, which is beautifully mounted and very well played, is likely to prove a hit. It contains much effective satire upon the airs and affectations of the artistic temperament, has an abundance of comical incident, and some bright characterizations, but the concluding act would be much more effective if half an hour were cut out of it. Mr. Ditrichstein gave an admirable performance of the pianist.

Paris is somewhat behindhand as regards the production of Massenet's operas. The last three of them, "Thérèse," "Bacchus," and "Don Quixote," have not yet been heard there, the honors of the first performances having gone to Monte Carlo and Brussels. During the present season, however, "Thérèse will be produced at the Opéra-Comique. It was first heard at Monte Carlo on February 7, 1907, with a cast including two artists, known and admired in America: Clément as Armand, and Dufranne as André Thorel.

During Thomas Beecham's recent opera season in London, the biggest popular successes were Offenbach's "Tales of Hoffmann" and Johann (not Richard) Strauss's "Fledermaus." These two operas accordingly were chosen for the first week of this company's provincial tour.

The latest European sensation, Mahler's eighth "symphony," has just appeared in a version for piano with text included. According to the Berlin *Signale*, Mahler has not been idle since completing this work, but has already completed his ninth symphony, and got ahead, numerically, of Beethoven, Schubert, and Bruckner, by beginning his tenth.

Mahler is the subject of an enthusiastic tribute in the current number of *Die Musik* (Berlin), in which Dr. George Göhler places him in line with Beethoven, Schubert, Wagner, Bruckner, Hugo Wolf, Liszt, and Brahms as one who, scorning sensational advertising methods, is not known in his true greatness to his contemporaries, but will be admired more and more as time goes on. The fact that he calls for a large orchestra, larger even that R. Strauss, and that his works are very long, has caused

many to look on him as being of the same school. This notion Dr. Göhler controverts emphatically. A man who, like Strauss, spends years in setting to music manifestations of diseased feelings, can have little in common with an artist like Mahler, who writes music in which we hear "a thousand voices of nature—of the forest, the ocean, the starlit nights, the mountain solitudes, of spring, and of ripe summer." Mahler uses no programme notes to explain his scores, yet "every one who knows those voices of nature hears them in his music."

Art.

Die Papstgräber und die Cäciliengruft in der Katakombe des hl. Kallistus. Von Joseph Wilpert. I. Ergänzungsheft zu De Rossi's Roma Sotterranea. St. Louis: B. Herder. $6.75 net.

For the study of the life and beliefs of the first four Christian centuries no field is comparable to the Roman catacombs. In this field one man, G. B. de Rossi, one of the three or four greatest archæologists of the nineteenth century, established the criteria of judgment and brought order out of the chaos. His "Roma Sotterranea," supplemented by numerous periodical studies in his *Bullettino di Archeologia Cristiana*, is the cornerstone of the new science, and perhaps no scholar has ever shown so clearly the mechanism of his methods, so that others can apply them to whatever new material may come to light. Of his immediate pupils two showed especial activity and talent, Henry Stevenson and O. Marucchi. The brilliant Stevenson's early death and the widening of Marucchi's studies seemed to leave the field open, and it has been known among scholars for many years that a young German archæologist, Mgr. Wilpert, was intending to take up the work.

Wilpert came into notice through a controversy with certain Protestant scholars on the principles of Early Christian archæology, but particularly through a number of monographs (1889-1897), dealing very thoroughly with certain subjects of the catacomb frescoes. From these he passed, a few years ago (1903), to a more general work on the "Paintings in the Roman Catacombs," a monumental publication, in which the plates were remarkably fine and faithful. Now, as a logical growth, comes this volume of wider scope, in which topography, history, architecture, sculpture, inscriptions, graffiti, paintings—all the many-sided themes of Christian antiquity—are treated.

This volume is the first of a series which Wilpert plans to publish on the same scale as De Rossi's "Roma Sotterranea," and as supplementary to it. He is so fortunate as to be able to select for its matter the two most important single monuments in the entire field: the famous Papal Crypt and the neighboring chapel of St. Cecilia, in the Catacomb of Callixtus. When, at the close of the second century, the Apostolic cemetery at the Vatican became too small to receive any more burials, it was decided to prepare a sepulchral crypt in the one official catacomb of the church. This was done while it was administered by the deacon Callixtus, who afterwards became Pope, and who gave his name to the catacomb. The first Pope to be buried there was Anteros (+235), closely followed by Pontianus, Fabianus, etc. Nine popes and several prominent bishops received burial in this crypt during the third century. The body of Pontianus was even brought back from the Sardinian mines, where he had been deported by the Roman administration. Parts of the sepulchral inscriptions of seven out of the nine popes have come to light, and are given here in facsimile. It is interesting that all but one are spelled with Greek instead of Latin letters; and it is also significant that the title "martyr," which we read on several, was not original, but added later in the century. Of course, this Papal crypt has long been known and was carefully described by De Rossi as one of the most remarkable records of the early Church, but Wilpert, especially through discoveries made in 1909, is able to add considerably to our knowledge. Contemporary with the tombs of the popes is the sarcophagus, for instance, of an historical personage of some importance, Aurelius Prosenes, who, though a Christian, was a chamberlain of the emperors from Commodus to Caracalla.

There is a full description of the restorations of Popes Damasus and Sixtus, by which a more monumental aspect was given to the Papal crypt after the close of the era of persecutions. There is also an interesting discussion of two puzzling little monuments above ground—the two three-apsed chapels which have been thought to be rare examples of small places of worship before the age of Diocletian. In the opinion of Wilpert, fortified by excavations, this is not so. The chapels are early, but not earlier than the fourth century, and he believes that one of them marks the martyrdom and burial of Pope Sixtus II, and the other the tomb of Pope Zephyrinus. Throughout this part of his work the author indulges in controversy to a considerable extent, perhaps more than seems necessary in a work which should aim to confine itself to accepted facts. His method has the advantage, however, of acquainting us with the different theories that have been advanced on subjects that are of wide interest to all students of the first Christian centuries.

Perhaps this publication may stimulate further excavation in the Catacombs, which are among the few bits of territory that in 1870 were left by the Italian Government in the possession of the Pope. During the last thirty years, partly through lack of funds in the Papal treasury, very little has been attempted in the way of excavating or clearing out catacomb galleries. The public little realizes how much still remains undiscovered. It is a world in itself, with story on story of superposed galleries: many that were even known to explorers of the sixteenth century are now unknown.

Winslow Homer, the artist, died at his home in Scarboro, Me., last Thursday, aged seventy-four years. He was born in Cambridge. At the age of nineteen he was employed in a lithographer's office, making titles for sheet music and a series of portraits for the Massachusetts Senate. In 1859 he went to New York and attended a night class in the National Academy of Design. Two years later he accepted an appointment as war artist from Harper Bros., his Prisoners from the Front dating from this period. He received the following prizes: World's Fair, in Chicago, first prize; Pittsburgh, 1896, gold medal; Philadelphia Academy of Fine Arts, 1896, gold medal; Paris Exposition, 1900, gold medal; Pan-American Exposition, Buffalo, 1901, Temple gold medal; Philadelphia Academy, 1902, gold medal; St. Louis Exposition, 1904, gold medal, member of the National Academy. In 1866 he assisted in organizing the American Water Color Society. Some of the pictures devoted to the life of the fisherfolk are, the Life Line, Eight Bells, Danger, All's Well, Undertow, Watching the Tempest, and Perils of the Sea. Two of Mr. Homer's pictures are in the Metropolitan Museum of Art; they are The Old Gun in the Havana Harbor, and The Northeaster.

Finance.

A CURIOUS MONEY MARKET.

Two incidents in the past week's money market were of a character which, at this time in certain other years, would have impressed the financial mind with something like misgiving. The most interesting fact about them, on the present occasion, was that they seemed to have no effect whatever, either on the money situation of the week or on financial sentiment. One was the rise in the Bank of England's official discount rate, last Thursday, from 3 per cent. to 4, accompanied by an advance from 4 to 5 in the rate of the Imperial Bank of Germany, and from 4½ to 5½ in that of the Bank of Belgium. The other was a decrease for the week of $12,500,000 in surplus reserves of the New York Associated Banks, bringing the surplus down to $4,900,000.

A 4 per cent. London bank rate is not exorbitantly high, but it is higher than is usually reached as early as this in autumn, and is in fact as high a rate

as the Bank of England has fixed for a generation past in the last week of September, except in such autumns of abnormal strain as those which contained the Baring crisis of 1890, the London "Boer War panic" of 1899, and the New York crash of 1907. This comparison is the more noteworthy in that London, when its seemingly imminent financial strain was averted six months ago, was much inclined to assume that trouble had only been deferred until the autumn.

As for the New York bank statement of last Saturday, it is not only true that the $4,900,000 surplus reserve was unusually low for the opening of an autumn money market, and that it represented a decrease of $44,000,000 since August 27, whereas the decrease of the same five weeks was only $16,000,000 in 1909 and $25,000,000 in 1908, but the figures showed that another decrease, less than half as large as last week's, would bring the New York reserve below the 25 per cent. minimum of the Banking Law. Furthermore, the statement of last Saturday showed that loans had risen again above deposits, for the first time since July 23. This phenomenon is watched by the banking fraternity for the reason that it has been a singularly accurate reflection of underlying conditions in the field of credit.

Last year, it first appeared on October 30, when the New York bank position was certainly under considerable strain. The loan excess rose to $25,000,000 by December 31; relaxed with the inpour of new reserve money which followed; disappeared with the statement of January 15; reappeared on March 12; got as high as $27,000,000 on April 30, and was not removed until the statement of July 23, when Wall Street's forced liquidation was virtually completed. When it is added that, in the nineteen years preceding 1909, a loan excess was never reported at New York except in 1893, in one or two autumn weeks of 1902, in the "rich men's flurry" of 1903, in the months of 1905 and 1906 when the world-wide strain on capital had begun, and in 1907, it will be obvious enough why its return is always observed with conjecture as to its precise significance.

Yet the New York money market made no more response to this incident than did the London money market to last Thursday's rise in the Bank of England rate. In New York's case, this indifference is the more remarkable because one expedient for relieving the local position, which was open to the banks a year ago, is considerably less obvious a recourse now. It has been usual, in an autumn of dwindling New York bank reserves, to shift loans and liabilities from New York to the inland banks. This year, the banks of our interior cities have troubles of their own. They have been busy all summer in readjusting their own outstanding credits with a view to checking a rather dangerous expansion. The task has been faithfully performed; yet even so, last week's government compilation of the September reports of the 7,000 national banks showed the aggregate loan account to be $338,000,000 ahead of that month in 1909.

It still remains to see just how far the money markets, home and foreign, are destined to make response, later on, to this curious position. Sometimes it will be late in the autumn before the full effect is seen. But meantime, it is not to be forgotten that a "money strain" which is skilfully prepared for, is apt to turn out no money strain at all. Last April, London was gravely apprehensive over its own situation, with the wholly unprecedented subscription to new securities by the English public and the extravagantly wild speculation in rubber company shares. France had been placing capital, on an unprecedented scale, in new stocks and bonds; German money was tied up in industrial activities and speculation; the United States had been financing new security issues, new stock and land speculation, and new industrial activity, all at once, and had overstrained its bank resources in doing so.

But what was done last summer—at London, at Berlin, at Paris, in New York, and throughout our Western country—was to put the financial house thoroughly in order. The London rubber speculation and the New York stock speculation had to face a sensational decline of values. Activity in general business slackened; bankers all but stopped offering new securities. All that was left in uncertainty, as regards a possible serious strain on credit, was whether the expansion movement of last winter would or would not be resumed this autumn. There has been little sign of it, here or abroad.

BOOKS OF THE WEEK.

Abraham, G. D. Mountain Adventures. Doubleday, Page.
Allen, A. M. A History of Verona. Putnam.
Ashenhurst, J. O. The Day of the Country Church. Funk & Wagnalls. $1 net.

SALISBURY'S ELEMENTARY PHYSIOGRAPHY

By ROLLIN D. SALISBURY

Professor of Geographic Geology, University of Chicago

12mo. 359 pp., 47 plates. $1.30 *net*

A briefer book along the lines of the author's *Physiography for High Schools*. Some topics have been omitted, but more have been simplified and occasionally abbreviated. The purpose of the book is to give the beginner some insight into the method of the science with which the book deals, as well as to convey information. It is intended to help the pupil to reason and to follow reasoning in the conviction that the development of his powers is more important than the facts he can acquire.

HENRY HOLT AND COMPANY, 34 W. 33d St. NEW YORK

MR. OWEN JOHNSON'S

Lawrenceville Stories

The Varmint

"It's a wonder. . . . And the joyful pathos of the last installment choked me all up—it was so true, and generally and specifically bully."—Booth Tarkington.

12mo, 396 pages. Illustrated by Gruger. $1.50.

The Humming Bird

One of the most amusing baseball slang stories ever written. 12mo, illustrated. 50c.

The Prodigious Hickey

Originally published as "The Eternal Boy." The First Lawrenceville Story. 12mo. Illustrated. $1.50.

A History of Verona

By M. ALLEN

8vo, with 20 illustrations and 3 maps. $3.50 net.

No. 3 in Historic States of Italy Series.

PREVIOUSLY ISSUED

Milan: The House of Sforza. By C. M. Ady
Perugia. By W. Heywood

A description of the development of the city, of its rise and fall, and of its final absorption into the Venetian Dominions in 1405. Much attention is devoted to the laws and institutions which regulated the daily life of the citizens and an excellent account is given of the very distinctive schools of painting and sculpture which flourished at Verona from the twelfth century onwards.

Corneille's Le Cid

EDITED BY

JAMES D. BRUNER, Ph.D.,

President of Chowan College.

"An unusually good piece of work, and a model of the **édition classique** such as France itself could not surpass."—Prof. J. E. Spingarn.

"With his edition of the **Cid**, Prof. Bruner sets a new standard in the preparation of classical French texts for school and college use, in that he makes it his first duty to present the work as a piece of literature to be understood and appreciated by the student as such. . . . A valuable contribution to our literature on the drama."—Modern Language Notes.

NEW TRAVEL BOOK

The Island of Stone Money

UAP OF THE CAROLINES

By WILLIAM HENRY FURNESS, 3rd, M.D., F.R.G.S.

Author of "Home-Life of the Borneo Head-Hunters"

With thirty full-page illustrations from photographs and a map. Octavo. Cloth, gilt top, $3.50 net. Post-paid, $3.70.

This authoritative and informing book is an intimate account of the author's visit with these far-off people, who, while they have become gentle, docile, and lazy, as a rule, have nevertheless retained so many of their primitive manners, traits, and beliefs that there is still much about them to interest and attract the stranger.

Dr. Furness writes in a lively and humorous style, with much literary power, and has graphically illustrated his story with numerous reproductions from photographs taken by his own camera.

Important Books from the Fall List of the
HOUSE OF CASSELL

(Complete Catalogue Mailed on Request)

E. KEBLE CHATTERTON'S
Steamships and Their Story

(By the author of "Sailing Ships and Their Story")

The first really exhaustive story of the development of the steamship—a most fascinating volume of progress, enlivened by contrasts and anecdote, and describing vividly the struggles and triumphs which finally evolved the monster turbine liners of to-day.

With 153 Illustrations, including many full-page plates in color. Octavo. Postpaid, $5.30; *net,* $5.00.

Australia: The Making of a Nation

By JOHN FOSTER FRASER, author of "America at Work," etc. Mr. Fraser, the noted journalist, traveled 32,000 miles solely to investigate the social and economic conditions of Australia, and his observations are embodied in this fresh, keen and exhaustive study, the newest and most informative book on the great Commonwealth. 80 *Full-page plates. Postpaid,* $1.90; *net,* $1.75.

Puritanism and Art

By JOSEPH CROUCH. An original and inspiring defense of Puritanism with relation to the fine arts, which will amaze those who have believed the charge against Puritanism to be irrefutable. 14 *Full-page plates. Postpaid,* $4.00; *net,* $3.75.

The Dictionary of English History

Edited by SIDNEY J. LOW and F. S. PULLING. A new and thoroughly revised edition of this indispensable reference book, brought quite down to the accession of King George V. The seventh revision of this standard work since 1884. *Illustrated. Postpaid,* $3.75; *net,* $3.50.

Breeding and the Mendelian Discovery

By A. D. DARBISHIRE. A remarkable book. It contains the first successful efforts to apply the discoveries of Mendel in heredity to practical problems of breeding—a book for modern farmers, gardeners and horticulturists. *Postpaid,* $1.90; *net,* $1.75.

Napoleon in His Own Defense

By CLEMENT K. SHORTER. This important contribution to Napoleona contains the great Emperor's *own* views of his captivity and his *own* estimate of his career, the material gathered from authentic sources and edited by Mr. Shorter. *With 4 plates. Postpaid,* $4.30; *net,* $4.00.

In the Heart of Africa

By ADOLPHUS FREDERICK, DUKE OF MECKLENBURG. A stirring volume by a famous sportsman, and of scientific as well as adventurous interest. The enormous German success of this book on the Duke's expedition is sure to be duplicated among English and American readers. *Very Fully Illustrated. Postpaid,* $5.50; *net,* $5.00.

Henry VIII and His Court

By HERBERT BEERBOHM TREE. Coincident with his important revival of "Henry VIII," Beerbohm Tree has written this suggestive little volume which presents a contemporary picture of the characters in Shakespeare's play. He also defends his spectacular production of the play which has met with some criticism. *Postpaid,* 55c.; *net,* 50c.

The Light Side of the Law

By GEORGE A. MACDONALD. Human and entertaining sidelights on the law—stories grave and gay, anecdote, the law as a calling, etc.—a real record of "hardened law illumined by a human-hearted writer." *Postpaid,* $1.90; *net,* $1.75.

"The best-reviewed novel of the year"

Warwick Deeping's "The Rust of Rome"

A fine and moving romance laid in modern England, rated among the best fiction of the year by the Boston Transcript, Brooklyn Eagle, New York Times, and many other conservative critics. *Frontispiece in color. Net,* $1.20.

Freda

By KATHARINE TYNAN, author of "Peggy the Daughter," "Mary Gray," etc. Miss Tynan's new novel, the story of a young orphan, has all the quiet charm and real appeal of its widely-known predecessors. *Frontispiece in color. Net,* $1.20.

Janey Canuck in the West

By EMILY FERGUSON. "Janey" is a Tom Sawyer in short dresses—a most original and amusing character creation and a real product of the Canadian West. Like Tom Sawyer, the book is typical of a place and period. *Illustrated. Net,* $1.20.

THE TWO MOST IMPORTANT OF FALL PUBLICATIONS

GLADSTONE'S RELIGIOUS LIFE

The Ecclesiastical and Religious Correspondence of William E. Gladstone

Selected and arranged by D. C. LATHBURY. *Two vols., with portraits and illustrations.* $5.00 *net.*

AN ESSENTIAL COMPLEMENT TO MORLEY'S "LIFE OF GLADSTONE."

"It has been said that Morley's 'Life of Gladstone' is the best biography of a great man ever written; and yet it had little to say of the thing nearest the heart of this great man—religion. It may be that Mr. Morley is the great biographer that he has proven himself to be because he knows so well his limitations. He calls himself an agnostic, and Mr. Gladstone was always deeply religious; therefore he did not think he could properly treat the religion of the Great Commoner. So it was inevitable that some one would give proper attention to the story of the religious life of Mr. Gladstone. We have waited seven years for that story, and now we have it; and in such form that Mr. Gladstone himself, for the most part, tells the story. It is a long story. The letters cover a period of over sixty-five years; and in them will it not only be possible to trace the religious development of Gladstone, but also the religious and ecclesiastical history of England in the nineteenth century. . . .

"Morley's volumes make a great biography, but an incomplete one; these volumes are an indispensable supplement to those who wish to understand Gladstone in his entirety."—F. W. C., *Boston Evening Transcript.*

It is a man's deepest interest which determines his character; hence the consummate importance of these volumes to any student of the times in which Mr. Gladstone played so large a part.

EVERY LIBRARY THAT OWNS MORLEY'S "LIFE OF GLADSTONE" SHOULD ALSO HAVE "ECCLESIASTICAL AND RELIGIOUS CORRESPONDENCE."

LORD BEACONSFIELD'S LIFE

The Life of Benjamin Disraeli

A book which will unquestionably take rank beside Mr. Morley's Life of Gladstone has for its subject the Earl of Beaconsfield. It is edited from official sources by Mr. W. F. Monypenny of the London *Times,* and will contain letters and documents which have never heretofore been published. The first volume, to be published very shortly, covers Disraeli's early years of study and travel, the period in which "Vivian Grey" and "Contarini Fleming" were written, and that of his first entrance into Parliament. Later volumes to the number of three, or possibly four, will follow promptly.

Letters and Memorials
OF
Wendell Phillips Garrison
Editor of The Nation 1865–1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

JOHN BROWN: A BIOGRAPHY FIFTY YEARS AFTER
By OSWALD GARRISON VILLARD

Thomas Wentworth Higginson
"It may be safely said that there now remain very few of the personal friends of John Brown of Osawatomie who will not be surprised and deeply impressed by Mr. Oswald Garrison Villard's large and mature memoir of him It is, as the author calls it, 'A Biography Fifty Years After,' and I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

John T. Morse, *Editor of American Statesmen Series.*
"The story has the movement of a Greek tragedy, with its simple beginning, then its creation of the sense of personal nearness, then its vague foreboding of terrible disaster, and finally its grand and fatal close. Perhaps in thus dramatically fashioning his volume Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

Fully illustrated with portraits, and other illustrations.
With copious notes and bibliography. $5.00 *net;* postage 26 cents.

By BERTHA E. BUSH. A story of pioneer days in Iowa. *$1.50.*

OLD MOTHER WEST WIND

By THORNTON W. BURGESS. Quaint stories of the wind and small animals. *$1.00.*

THE CHILD'S HARVEST OF VERSE

By MARY W. TILESTON. A new collection. *Illus. $1.50.*

KNIGHTHOOD IN GERM AND FLOWER

By JOHN H. COX. Stories of the days of chivalry. *$1.25.*

LOUISA ALCOTT STORY BOOK

By FANNY E. COE. Some of Miss Alcott's best stories. *50 cents net.*

SUGAR AND SPICE AND ALL THAT'S NICE

By MARY W. TILESTON. New and enlarged edition. *$1.50.*

LITTLE, BROWN & CO., Publishers, 34 Beacon St., BOSTON

The Nation.

NEW YORK, THURSDAY, OCTOBER 13, 1910.

The Week.

It is always awkward for a great moral victor to have to explain that it was not all victory and not all moral, and Mr. Roosevelt is no happier in the process than those who have attempted it before him. Having heard from his own insurgent West, where dissatisfaction with his own New York platform is so violent, he is driven to drawing nice distinctions and to showing that, as a "practical" man, he had to bargain with the very bosses he was attacking. Asked how he can reconcile his Western speeches against the Payne-Aldrich tariff with his unqualified laudation of it in the New York platform, his answer is that he cannot reconcile them, and that he did not make a fight on the tariff plank at Saratoga because it would have been "folly to jeopardize success" on the more important issues. All this should help the faithful people of the West to get a more accurate idea of their hero. They must now begin to perceive that he is something more and other than an impetuous and uncalculating champion. We have heard of "the two Roosevelts," but there appear to be at least three or four. This latest manifestation certainly reveals him as closely akin to Pascal's Monsieur Distinguo, able to split hairs with the subtlest of the Jesuits. But *this* Monsieur Distinguo is, unfortunately, on record as against the very moral distinction which he now urges. To-day he declares that the New York platform is simply a compromise for local consumption. But in his speech of acceptance in 1904, it was the Democrats whom he taunted with writing insincere platforms, while he affirmed that it was the glory of the Republicans never to palter with the truth or with the voters, and to stand for policies which are "*the same for all sections and localities.*"

Gov. Harmon referred grimly in his opening speech of the Ohio campaign to the "explosives" which the Republicans had been incautious enough to leave lying about the State Capitol, and last Thursday he set some of them off. By his direction, the Attorney-General began suit against the former Republican State Treasurer and also the Secretary of State, to recover interest on State funds which they had illegally deposited in favored banks without interest. The sums sued for are not great—not more than $18,000—but the principle is vital and the effect on public opinion must be considerable. This last arises from the fact that both the men to be prosecuted are to-day active in Republican politics. Indeed, the former Treasurer, Mr. Laylin, is now the Chairman of the Republican Executive Committee, while the former Secretary of State was a prominent candidate for Governor, and also, later, for the State Committee Chairmanship. What makes the Governor's action seem particularly cruel is the fact that, at the very moment when the Republican managers are having unusual difficulty in raising funds for the State campaign, he should be suing them for restitution of money unlawfully kept from the State Treasury.

The latest forest fire horror should have the effect of so crystallizing public sentiment for the adequate patrolling and protection of our forests that such calamities should be made virtually impossible in the future. This year has witnessed, we believe, a greater amount both of destruction of the woods and especially of agonizing loss of human life, than any previous one. The laying waste of the forests themselves is a sufficiently melancholy thing, involving, as it often does, not only vast economic injury, but the ruin of a natural possession that cannot be replaced; but when we hear of towns and villages blotted off the map, and of scores and hundreds of people perishing in the flames, it is time that resolute action were taken. At the bottom of this trouble is not "crookedness," or monopoly, or plutocracy, or one view rather than another of State or Federal functions; at the bottom of it is simply an easy-going neglect to take into account a terrible danger, a willingness to run risks rather than go to the trouble and expense of systematically guarding against them, which is one of the defects of the American temperament. In spite of the terrible lessons of the present year, it will require the most persistent endeavor on the part of those who are working for forest protection to bring about the adoption of the measures necessary for safety.

The statement made by Judge Hand the other day, as to the future policy of the United States Courts in New York in reference to flagrant cases of tourist smuggling, is highly interesting and important. In imposing upon a rich business man a fine of $5,000 (in addition to the forfeiture of the goods seized), for attempted smuggling of a large quantity of jewelry and wearing apparel, Judge Hand announced that in future all such offences would be punished by a jail sentence. He took this action after consulting with Judge Holt and Judge Hough; and it is stated that all three of the judges had come to the conclusion that United States Attorney Wise was right in the view he had expressed to the court, that punishment by imprisonment was the only means of preventing the practice. And we are confident that if this remedy is vigorously applied it will have the desired effect. Moreover, it should be remembered that the wholesale searching of the belongings of passengers, which is a disgusting feature of the return of American travellers to their native land, will no longer be justifiable when severe punishment for smuggling, as a genuine crime, shall have reduced the practice to insignificant dimensions.

The International Prison Congress at Washington took a highly important action last week when its delegates, representing thirty-seven nations, unanimously endorsed the probation system for criminals and warmly recommended its extension by all civilized governments. The congress declared in its resolutions that the effects of probation were beneficial when applied with due regard for the protection of the community and to persons who may reasonably be expected to reform without resort to imprisonment, and when the supervision is by competent officials for a reasonable length of time—limitations everywhere recognized as essential to the success of the system. The congress then went so far as to vote that new laws on this subject should everywhere be in-

troduced and old ones extended, and that each State or country should establish some central authority to exercise general supervision over the probation work. Finally, the congress voted in favor of probation officers in juvenile courts. Naturally, the American, and particularly the New York, delegates are jubilant, for, as is not generally known, probationing of prisoners originated in this country, and the New York State Probation Commission was the first body of its kind the world over.

At a time when the President of the United States has just been giving, by word and act, the strongest kind of testimony to the efficacy and the necessity of the merit system by extending it to the appointment of assistant postmasters, the anomaly presented in New York city by the refusal of the Municipal Civil Service Commission to apply it to the choice of probation officers is peculiarly striking. The plea of impracticability in the appointment of probation officers is answered by the experience of Syracuse, Rochester, Buffalo, and other cities in this State, and by that of Chicago and other places outside the State. It is late in the day for such a dodge to succeed as that attempted by Senator Grady, who was chiefly instrumental in having a clause inserted in the law declaring that probation officers are the confidential officers of the justices and magistrates. Gov. Hughes, in signing the bill, realized that this language was designed to have the effect of exempting these posts from the competitive system, but stated that no such effect need follow from it. The question is solely whether the posts are such as can properly be filled by competition, and there is really no room for reasonable doubt as to the answer to this question.

The Massachusetts Democrats, like Mr. Hearst's Independence Leaguers, may truthfully lay claim to a representative convention. As with the Democrats at Rochester, there was no union possible on either one of the three leading candidates, Foss, Hamlin, and Vahey. This time the compromise was on an unknown, Frederick W. Mansfield of Boston, who is, however, to resign within seventy-two hours to make way for another selected by a special committee of five. While we welcome conventions of this kind, in which the delegates honestly try to thresh out among themselves the question who shall lead, and while we see in the intensity of the struggle clear evidence of the returning vigor and vitality of the party, we cannot but express our regret that the party could not have united on Charles S. Hamlin. His fitness is so obvious that Republicans and Democrats alike admit that his success would be as probable as anything which lies in the future. Perhaps this unusual committee of five may yet select him as standard-bearer.

The lack of enterprise on the part of our insurance companies is again brought to notice by the publishing of the rates at Lloyds for the risk of George V's coronation. The figures at present range from 8 to 10 per cent., but, it is said, are likely to rise as the date for the event approaches. The possibilities of analogous insurance in this country are at least as numerous. Think of the sleep that it would bring to many a restless pillow to have the certain knowledge that, no matter what happens in November, one will not be financially bankrupt. It is morally certain that the rush to insure their political lives against the accidents of a cruel campaign, by the nervous "Ins" and the doubtful "Outs," would necessitate the opening of a special department in every important insurance office in the land. This department might be looked upon with special satisfaction as a strictly business institution substituted for the recently abandoned political division to be found in most of the big companies.

It will be a pity if Tufts should attach itself to the colleges which shine by reason of silly sensationalism. The sociological professors of the University of Chicago and the psychological president of Clark University have done much to vulgarize the distinction and the elevation of college life. President Hamilton of Tufts (who frankly admitted last spring that women had to be excluded from his college because they were taking too large a share of the honors) says now that female teachers in colleges should be married women or widows. The absurdity of this is apparent. It is true that there is some loss of the best social conditions, for boys and girls both, who leave cultivated families behind them, when they go to college. The ideal surroundings for the young girl would be the home and simple, natural intercourse with young people of both sexes. But girls must go to college, and not every home has a college in its immediate neighborhood. Both the co-educational and the separate college have disadvantages as regards the social life during a formative period. Wise parents make their choice with some reference to the characteristics of the particular girl. But the difficulty is not serious, and to suppose that it will be remedied by such proposals as this of the president of Tufts is on a par with the plea of Stanley Hall that girls should be able, when they feel depressed, to weep on the shoulder of a male teacher.

Col. Gädke, the German military expert, was present at the recent British manœuvres, and gave it as his opinion that the soldiers were excellent but that the generals did not know their business. Resenting this, English newspapers rejoin that Gädke was on the ground only as a correspondent, not as a military attaché, and could not have known much about the orders actually issued or the strategy attempted. However, the criticism of the foreigner is only about what the average Englishman has been free to say. When unlucky Gen. Buller telegraphed, after his first great defeat in South Africa, "The men are splendid," the general comment was, "Yes, but what about their commanding officers?" It has been supposed that an improvement in command has since been effected, but, short of the test of actual war, the British public will remain a little skeptical about this. If Col. Gädke had wished to be cruel, he might have added to his strictures by citing the story of Radetsky and the Piedmontese commanders in 1848. The Austrian marshal is said to have issued the order to his sharpshooters: "Pick off their commissioned officers, but spare their generals, for they are useful to *me*."

The report of the Scottish Education Department on secondary education in that country is being received in England, at least, with expressions of regret over the sad literary conditions in a land "where booksellers have been known to flourish, and where it was

the boast of every cotter that he knew his Bible and his Burns." The report indicates that the rising generation in Scotland knows little of Scott and less of Burns, who has become to them not so much a literary idol as "a warning example in morality." All this has a familiar sound, almost like an echo from this side of the water. Nor are the explanations offered entirely novel. Mr. Lloyd George hints gently at faulty instruction from teachers, but the *Westminster Gazette* puts the blame upon "children's books," against which the Library Institute recently made a vehement protest. It is with the publishers, declares the *Gazette*, "who have devised for Scotch children less exacting and more attractive hunting-grounds than the prose of Scott and the poetry of Burns, rather than with the literary indifference of these children or of their teachers, that Scotchmen old enough to remember the days when their capital was first called the modern Athens have to reckon, if the claims of their chief city to that title are still to be upheld." Of course, the parents who furnish the money for the "children's books" and have the first chance at their literary taste are, as in other matters pertaining to their offspring, quite irresponsible.

A few years ago anyone who should have prophesied that the London *Times* would issue in 1910 a "Woman's Supplement" would have been threatened with an examination into his sanity. But here is the woman's supplement, following in the train of literary and engineering supplements and a disastrous venture into the book business. In it the anxious mother can learn all about bead-work and "bringing out a daughter," the sportswoman's clothes, Florence Nightingale, the country cottage woman, and the breakfasts she prepares. If this does not shock into a decline the staid British matron who draws the breath of her intellectual life from the *Times*, we shall be surprised. But this is but one of many signs of the difficulties that have beset the *Times* these last ten years or more. What fun *Punch* will have with it need only be suggested. Or will it sarcastically assert that the *Times*, having, as Kinglake put it, been in the graver affairs of women and children "one with them in their hopes and their despair, in their joy and in their sorrow, in their gratitude and in their anger," is now applying itself to menus and underwear, silk stockings, and the proper trimmings for hats?

England's only living Conservative ex-Premier has found a subject worthy of his subtlest ratiocination. At North Berwick recently Mr. Balfour quite unintentionally drove his golf ball into the sea, and is reported to have been surprised "at the unsatisfactory provisions of the rules in regard to such an occurrence." He thereupon formed a resolution to "redraft the rules of golf and submit his suggestions to the rules committee." That such an undertaking is equal, not only in delicacy of adjustment of conflicting interests, but also in its effect upon the happiness of multitudes, to any problem that came before him on the Treasury Bench, is, of course, the most alluring of reasons for his attempting it. The philosopher-statesman's greatest surprise, nevertheless, must have been over his inability, which we cannot believe more than fleeting, to construe the existing rules in such a way as to make their applicability to the water, and even to the air, as plain as the most lucid of his demonstrations of the tax-cheapened loaf.

Where France is to find meat is a question raised by the *Temps*, which points out that the balance between supply and consumption is now so exact that an increase of 10,000 in the number of cattle exported has proved sufficient to cause a rise in the price. Henceforth, accordingly, France will be between two dangers: if cattle are raised for use as beef, there will not be enough veal, and *vice versa*. This limitation in the choice of an important part of one's dinner leads the journal we quote to seek new sources of supply. Isn't it about time, it asks, to draw upon the resources of "our African possessions," which "are immense"? After some consideration of the possibilities of Madagascar, it turns to a larger and closer field, Western Africa "between the forest zone and the steppes which border on the Sahara," and believes it to be comparable to Northern Argentina. There is a difficulty there, however, in the probable opposition to such a development from "le parti protectionniste."

It would be easy to exaggerate the significance of a recent report of the German state railway administration which declares that nothing discovered in its exhaustive investigation of the best methods for preventing accidents causes it to alter its preference for men over mechanical devices. Nevertheless, the generalization is very tempting that such a conclusion is exactly what would be expected of Germany, where a man is able to become, to all intents and purposes, as automatic as a machine, while remaining sufficiently volitional to avoid the stoppages that occasionally beset every machine. In America, on the other hand, one might say, men have too much initiative to do work which calls for a minimum exercise of intelligent choice and direction. There may be some truth in this distinction, but whatever there is, it is not so flattering to the spirit of the New World as some may promptly assert. We rate brilliancy, real or apparent, above everything else, forgetting that the qualities of caution, patience, and, above all, reliability, are the everyday, wearing virtues which no amount of sparkle or even of genius can displace. The fearful trolley disaster in Illinois points this moral anew.

The calling of a conference in Havana by the chief of police with a view to taking counsel as to the numbers of idle and homeless persons crowding the city, calls fresh attention to the abominable evils of the Cuban lottery. For it is to this wicked agency that the sudden increase in vagrants is admitted by the chief of police to be due. Cuba being a small country and its inhabitants of an easily impressible character, the damage done by the lottery is plain to all. The large prizes offered and distributed every week have had a most demoralizing effect not only in Havana, but elsewhere in the island. Even cultivators of small patches of land have ceased to take the trouble to plough or plant. What is the use, they say, when we shall probably win a fortune in next week's lottery? The savings of the poor and their weekly wages flow to Havana so regularly that there is actually a scarcity of small coins reported in the western portion of the island. It is as if the whole island were engaged in one great gambling game, and the weekly profits are declared to be fabulous.

THE JUDGE AND THE EXECUTIVE.

President Taft's letter to Judge Moody, on the occasion of his retirement from the Supreme Court, contained a passage which has attracted wide attention both on account of its substance and of the depth of feeling which is stamped upon its language. "It was the summit of your ambition," said Mr. Taft, "to become a justice of that court, and there opened before you nearly two decades of hard work, it is true, but work of the highest good to the country. It would all have been such a labor of love. One who has tasted the sweets of judicial life can sympathize with you deeply in this. The approaching of every question for decision with indifference to every consideration except to reach a right and just conclusion and to preserve the fundamental structure of our government as our fathers gave it to us makes the functions of the office most precious to one who feels in every fibre, as you do, their sacred importance."

It is the stress laid upon the function of the court "to preserve the fundamental structure of our government as our fathers gave it to us" which has naturally provoked most comment. Whether so intended by Mr. Taft or not, the solemn expression of his conviction of the "sacred importance" attaching to the Supreme Court's custodianship of the Constitution under which our nation's greatness has been established and preserved could not fail to be regarded as peculiarly significant at a time when an attitude diametrically opposed to this is so conspicuously manifested in other quarters. But, however great the weight attaching to this consideration, we feel sure that the other sentiment expressed in the passage quoted was at least equally operative in the President's thoughts as he wrote to his old associate. One can feel the wistfulness with which he is thinking of an office—one that he himself had hoped some day to fill—in which every question might be approached for decision "with indifference to every consideration except to reach a right and just conclusion." It is an inevitable inference that Mr. Taft has felt keenly during the past eighteen months the necessity of taking into account considerations of a different kind, and, on the other hand, it is equally certain that he would never have used this language did he not desire to make his conduct in executive office conform as nearly as may be with the standard which upon the judicial bench he would regard as a matter of course. The man who easily accommodates himself to the supposed exigencies of shifty policy is not the man to lament over the necessity of compromise.

However, it may be questioned whether the difference between the attitude of a judge and that of a high-minded President is really so great, after all. Unquestionably, the President has laid upon him the necessity of keeping the wheels of government running; he must take into account, far more keenly than does the judge, considerations bearing on the immediate, as distinguished from the remote, effects of his acts; he cannot look so far back into the past for the foundation, or so far forward into the future for the justification, of his decisions. Nor, again, in grappling with the questions before him can he indulge in that rigorous weighing of argument against argument, that patient examination of evidence and sifting of truth from falsehood, which give to the judge a mental gratification inextricably bound up with the satisfaction he takes in the beneficial result of his labors. But, after all this is admitted, it remains true that the moral attitude of the President toward his duties may be fundamentally identical with that of the judge. In every crucial act of his administration, he may appeal to the same criterion of right and wrong, the same test of fidelity to principle and of obedience to the highest duty, as determines the course of the Supreme Court judge when confronted with those doubts and perplexities that constitute the real difficulty of his office.

It is not necessary to go far back into the past to find a concrete embodiment of this idea of the Presidential office. No man can live up to it in every act, and it would be idle to pretend that President Cleveland did so. But to do it so far as was humanly possible was not only his earnest desire and his constant endeavor, but an integral part of his conception of the Presidential office. He had to carry on the government, and he had to make concession to circumstances in order to do so; but when it came to any matter that he regarded as fundamental, he asked no question except what was right and what was wrong; and when he had decided that question, he balked at no personal sacrifice that might be involved in doing his duty as he saw it. He threw away his party following by standing out like a rock against the silver madness—the only man of high prominence in either party to stand unflinchingly for sound money in fair weather and foul; and what he did in this great cause he did in precisely the same spirit in the matter of private pension bills, and the dependent pension bill, and the Texas seed bill, and Hawaiian annexation. Against the clear dictate of a fundamental principle he admitted no appeal; he did not deceive himself into accepting that which was immediately convenient for that which was right. Just where to draw the line between expediency and principle is a problem which it would be absurd to pronounce easy; nor can it be claimed for any practical Executive that he has at all times lived up to his own highest level in the matter, whatever that may be. But there is no difficulty in recognizing a high standard and a true devotion to it, when they are presented; and we have cited the case of Cleveland because undoubtedly it is the general recognition of these attributes that has given him the high place he holds in the nation's regard.

GOV. HUGHES'S WORK.

The retirement from the Governorship of Charles E. Hughes, after nearly four years of service in that office, should be made the occasion of more than mere compliment. His success has been undeniably great. Not only has he won the admiration of the people of his State in an extraordinary degree, but his work as Chief Executive of New York has made him a national figure. No man ever passed in this country more quickly and surely from the position of an unknown private citizen to that of a recognized public force. But such an effect does not come without adequate cause; and we ought to ask ourselves at this time what that cause was, and what is the peculiar contribution which Gov. Hughes has made to our whole conception of democratic government. A bare summary of his achievements is less instructive than an explanation of the method by which he brought them about, if we can put our hands on it. Gladstone once defined his

ambition to be to "make the institutions of his country work." Mr. Hughes has certainly made the government of New York work; and no inquiry can be more profitable, whether for present teaching or future guidance, than how he did it.

The element of personality has been, as always, of large weight. A man of less marked ability and compelling character than Gov. Hughes could not have conquered as he has even though striving in the same way. That is fundamental in all these questions. First catch your man. But the finest and most telling personal qualities have to find their modes of expression and exertion, after all. They do not work in a vacuum; they must be in touch with the breathing world. The man of force has to use the tools that others have made for him. In politics he has to take institutions as he finds them and then invigorate them; shaping old forms anew by a fresh and creative hand. And in that spirit Gov. Hughes has labored.

This new breath of life which he infused into our political methods came largely from his steadfast reliance upon reason and justice. No public man ever treated a democracy more consistently as a fair-minded court that could be prevailed upon to see where the weight of argument lies and what is the right thing to do. This was implied in the address which Gov. Hughes made a year or two ago before the Columbia Law School. He said that it had been his passionate desire to see what could be done by applying sheer reason to public affairs. In his case it seems to have been partly the acquired habit of the lawyer. He had been accustomed to arguing cases through; and he set out to convince the people and their representatives that the positions he took were fortified by right reason. He was, of course, greatly aided in this by his remarkable power of lucid statement; but behind that was his unfaltering faith in free discussion as a means of hammering out the truth, and his conviction that the people would cleave to the truth when once they had been brought to perceive it. But this was by no means the whole of it. With this clinging to reason and justice as his only armor, went that complete rejection of the small arts and the sinuous devices of the politician which Gov. Hughes has lived up to throughout his Governorship. He would not dicker or bargain. He would not help his bills through the Legislature by either log-rolling or patronage. Succeeding to Governors who had thought it necessary to threaten and to reward or punish, Mr. Hughes astonished observers at Albany by taking every case on its merits, by signing the bills of his enemies, when they were deserving, as freely as those of his friends. The oldest legislative hand could make nothing of this innovation. It was thought to spell failure. So it did in many matters; but it spelled triumph in others, and in all it spelled consistency and high resolve on the part of a Governor who had placed before himself reason and justice as the sole rules of his action.

If we were to single out one other characteristic which marks off Gov. Hughes's administration from all that had gone before it, we should dwell upon his free resort to the people over the heads of the members of the Legislature. He early foreshadowed this plan. In a speech at Albany, shortly after becoming Governor, he declared that if he could not persuade the Legislature to enact the reforms which he advocated, he should go directly to the constituencies. This he did in instance after instance, and with what effect the whole State knows. It was a new departure in the conception of a Governor's power, which was so striking and, on the whole, so victorious that it attracted attention and provoked imitation all over the country. Woodrow Wilson is to-day promising to do in New Jersey what Hughes did in New York—that is, to insist upon State-wide discussion of State-wide interests, and when necessary to go behind the Legislature to the people. It is one of those great changes that sometimes are wrought in the ongoing of our government without statutory or constitutional enactment, and all owing to the initiative of a bold and self-reliant man who quietly puts old materials to new uses. This goes well, too, with the rising assertion of the power of the States. One can distinctly see the coming of a New Stateism to offset or withstand the New Nationalism; and of that movement Gov. Hughes has been a leading prophet and exponent.

Of him New York took leave last Thursday with sincere regret and a deep sense of indebtedness. The high example which he has set will make lapses from it more difficult and more unforgivable. How the good that he has done will live after his official life is over we get a hint in the way in which both parties have now been forced to adopt his despised and defeated plan for direct primaries. He will not be here at the final triumph, but it will be his triumph. And in many other ways the faithful and unflagging labor which he gave to the State will be fruitful after he is gone. No one but would wish him different in some respects; but we have to take men as they are, and so taking Charles E. Hughes, we gratefully acknowledge that he has ennobled our public life and quickened our hope in democracy.

THE CHURCH AND THE REVOLUTION.

A painful feature of the news from Portugal is the wholesale expulsion of monks and nuns. That a strong anti-Clerical feeling had long existed in the country was well known. Even the Ministry of King Emanuel had its recent clash with the Vatican. In general, conditions across the Portuguese frontier have been very much what they are in Spain. That is to say, a people unquestionably Catholic in their preferences, and seemingly among the most obedient sons of the Church, had conceived a violent antagonism to the political activities and pretensions of the Clerical party. And hostility has been directed with special intensity against the religious orders. Hence it is not surprising that they have had to suffer in the downfall of a Catholic dynasty, yet it is pathetic to find that men and women vowed to a religious life and dedicated to works of charity and beneficence should have so completely failed to endear themselves to the people. Into the reasons we cannot now go, but the result is tragic.

Dispatches from Rome represent the Pope as greatly distressed over the revolution in Portugal. It is not that the Holy See stands for monarchy, or for one form of government as opposed to another, but that the outbursts of the Portuguese people against the Church, with the haste of the new régime to proceed in a pronouncedly anti-Clerical spirit, are causes of great disquiet. That the secular clergy should have been exposed to attack, in addition to compelling the members of the religious orders to leave Portugal must cause

Pope Pius both grief and alarm. Whereto will this thing grow? May not the anti-Clerical movement press on to new attacks in Spain and even in Italy? Almost within hearing of the Vatican, the Mayor of Rome spoke bitter words about the Pope on September 20. It was the fortieth anniversary of the entry of the Italian troops into Rome, marking the end of the temporal power of the Papacy, and Mayor Nathan, in language of which at least the good taste was open to question, referred to the Vatican as the "fortress of dogma," still clinging to the ideas which the new Rome and the new Italy have left far behind, and as the "last despairing support of the reign of ignorance." These words the Mayor of Rome justified by the recent deliverance of the Pope against Modernism, especially his placing the reading of the periodical press under the ban.

The reference is to the Papal encyclical, issued early in September, absolutely forbidding students for the priesthood to read newspapers or magazines, even when such publications are Catholic. Such a direction seems of incredible severity, but it is set down explicitly in the Pope's letter, *Motu proprio*. And the official explanation is given from the Vatican that this form of the remedy against the disease of Modernism, while admittedly heroic, was necessary—made so by the fault of the rectors of Catholic seminaries. The Vatican statement declares:

> Formerly the permission to read Catholic newspapers and periodicals was left entirely to the discretion of the superiors in the seminaries, but some of these abused their liberty, and under the classification of allowable journals, admitted some that were far from orthodox. The only way to prevent this was to prohibit the reading of any papers or magazines whatever.

This sweeping prohibition by the Pope is set in the proper light by the Vatican correspondent of the *Corriere della Sera*—a correspondent, it should be said, who writes in entire sympathy with the Church, and is, indeed, understood to be himself a Catholic prelate. He takes this latest Papal document as only one step more in the movement against Modernism which Pius X has incessantly pushed since his accession. In public addresses, as well as in private audiences, the Pope has held but one tone about the great peril to the Church which lies in modern ideas. To carry out the Pope's warnings, the Congregation of the Index has been condemning suspected books. In 1906 Fogazzaro's "Il Santo" was put on the list of prohibited books. Later came the encyclical *Pascendi*, and a series of condemnations directed against the chiefs of the Modernist movement—Loisy, Tyrrel, Murri, Schnizler, and others. All that the Pope has now done is to "complete the work, and to eradicate the last traces of the dreaded evil."

We refer to this absolutely *intransigeant* attitude of the Vatican, because it helps us to understand much that has been going on in Portugal and Spain and Italy. It is not to be denied that there is something admirable in the simplicity and consistency with which the Pope confronts the problem before him. It was said of Pius IX that he brought the ideas of a parish priest to the administration of a world-empire, and something like that may be said, without derogation, of Pius X. He is the same unaffected man as Pope that he was as Cardinal Sarto. But such troubles as have befallen the Church in Spain and in Portugal, partly in consequence of the absolutely unyielding position taken by the Vatican, and the apparent purpose of the Pope to proceed to one measure after another that the world will call anachronistic, must cause his advisers, and indeed intelligent Catholics everywhere, to wonder if his policy is not mistaken. In the past the Catholic Church has shown itself to be the most wonderful organization on earth for its marvellous flexibility in adapting itself to the changing conditions under which it has to live and do its work. Unless this capacity for adjustment is lost, we may expect to see the Vatican sooner or later taking to heart the hard lessons of these latter days, and showing itself more sensitive and conciliatory to the thought and aspirations of the world about it.

SCIENCE TO THE RESCUE.

Not only the armed struggles of the nations, wars and preparation for war, involve needless waste and blind groping in the dark. In the political contests of the world, in the wranglings over laws old and new, there is vast commotion with slow and small results. We tug and strain, now this way, now that, and there is no telling when the issue will be decided or whether it will be decided right. Millions of persons are enlisted on the one side or on the other, often hardly knowing how or why they came to be there rather than in the opposing camp. As Stephen Blackpool keeps saying, in one of Dickens's greatest though not most widely read books, "It's a' a muddle."

Out of this muddle, so far as regards some at least of the questions which we are thus blindly fighting out year after year, decade after decade, Prof. J. Pease Norton of Yale, in an article in the *Popular Science Monthly*, entitled "The Supreme Court of Science," proposes a means of escape. "Many of the issues," he points out, "which divide the country, in fact all countries, into opposing camps are scientific in their nature. Long campaigns must be fought to decide policies which are capable of easy solution, if only an impartial court existed before which such issues could be tried. Just as technical questions require technical experts, technical issues require a technical court. The Administration at Washington favors the establishment of a court of commerce. Why should there not be a court of science to determine questions of scientific truth, the application and the feasibility of issues based on scientific knowledge?" As a first illustration of the desirability of such a court, Professor Norton instances the question of compulsory vaccination, into which he enters at considerable length; but he goes on to indicate that not only such questions as this, but issues like that of a tariff for protection, or of free coinage of silver, might be effectually disposed of by regular judicial procedure before a high court of science, and a score of wasteful controversies be thus brought to an end.

It is hardly necessary to mention that Professor Norton is too good a democrat to imagine or to desire that the decisions of a court of this kind should be clothed with legal authority. They would simply carry the authority due to public confidence in the ability, attainments, and integrity of the judges and the special juries of experts who had investigated the question and recorded their conclusions. And indeed it can hardly be denied that much needless agitation might be saved by the possibility of reference to such a record. But there is something almost sublime about the writer's calm confidence both in the possibility of judicial perfection in his court, and in the complete sway of sweet

reasonableness among the people to whom its decisions should be addressed. "Should the supreme court of science," he says, "decide after a fair trial that compulsory vaccination was indefensible on the evidence, and that the practice of vivisection was defensible and desirable within proper limits, two costly 'movements' would be ended with these findings." Well, maybe; but to us it seems that movements in the nature of a protest against prevailing opinion would be quite as likely to gather energy from the sense of something that they could regard as centralized official injustice. And when it comes to such a question as that of protection or of bimetallism, no method thus far revealed to man would suffice for the selection of a jury in which both sides had confidence. A unanimous decision would be taken by the defeated side as the sure sign of a packed court, while a divided judgment would be hailed by the minority as proof positive that their view had respectable scientific warrant.

It is quite true, as Professor Norton says, that "our good people are wearing themselves out trying to form intelligent opinions on all kinds of technical questions without proper evidence presented on either side." But there is no short-cut method by which this state of things can be brought to an end. It might be mitigated by the introduction of some more systematic method of making the public acquainted with the state of expert opinion on these questions; but a radical cure it is idle to expect. In the case of one of the controversial subjects mentioned by Professor Norton the leading nations of the Western world made a gallant effort to do something not unlike what he proposes; but the series of international monetary conferences for the settlement of the silver question constitute nothing more than a monumental warning of the difficulties of such an attempt. To be sure, more than this might be accomplished in other instances; but in matters in which the interests of human beings are directly involved, no amount of scientific sterilizing of the atmosphere will suffice to keep out the germs of dissension. In nearly every instance the court, if it could decide at all, would have to record a decision based on a mere preponderance of merit on the one side or the other; such a thing as an absolute yea or nay could seldom be attainable by a strictly judicial tribunal. And so long as that was the case, the matter would again become, as it was before, an affair of majority conviction and minority doubt or protest. Whatever medical science or economic authority may declare, the followers of Mrs. Eddy will go serenely on their way thinking disease a delusion of mortal mind, and Mr. Moreton Frewen will continue to be immovably convinced that upon the par of exchange between Orient and Occident turns the future weal or woe of European civilization.

POWER TO THINK STRAIGHT.

In one sense it is comforting to hear that the rising generation of Frenchmen cannot write their native tongue decently. For we had supposed that slovenly writing was confined to Americans, and in an offhand way had attributed it to the great influx of broken English to our shores. But the defect is apparently much more widespread, and its cause lies deeper down. The question, as it applies to France, is discussed in an article in the *Revue des Deux Mondes* by the well-known critic, Emile Faguet, in which he admits the distressing condition, even among students intending shortly to teach, but disclaims all responsibility for the university, because, as he insists, it is for the lycée, and not for a higher institution, to instruct in French composition.

The condition described by M. Faguet might well alarm every really thoughtful person, because it is safe to say that if ability to write is dying out in France—a nation of stylists—the same is true in even greater degree elsewhere. Of course, the danger has long been recognized in this country, but doubtless most people have felt that we were well fortified against it. And it is true that in no other country is there so much instruction given in the native tongue. Not only in the secondary school, but into the first year in college, the student is kept everlastingly at it. At Harvard especially there is a strong conscience pricking to huge endeavors. There it is the boast that no man is relieved from the labor of composition until he can write respectably. At any rate, infinite pains have been spent toward a method which should show results. Taking little or nothing for granted in the boy upon entering, those in charge have put him through very simple paces before letting him essay any flourishes. Recently, we learn, the notorious English A has been further improved by a division of the sheep from the goats and the creation of a foreign squad, an awkward squad, and sections for the rest who show not so great infirmities. This is desirable, since it was pretty hard for a Chinaman, say, to keep up with a son of the Mayflower—not that the latter was always so remarkable. In short, for an outsider to listen to the infinite workings of the Harvard method is to wonder why the period of perfect expression does not arrive. Students in sections of not more than thirty each are turned over to a section-hand, as he is sometimes called, and are threatened, pommelled, so to say, and really taught something, for a good instructor will take a quavering or crabbed sentence and lick it into shape, giving the student in the process the clue to a good many tricks of the trade.

Yet despite our pains, M. Faguet's admission concerning France makes us far from hopeful about America. From his discussion of the matter it is clear that the real trouble must lie, here as there, with the element upon which style fundamentally depends—the thinking. For one reason or another, the power to think straight is lessening all over the world, and no doubt the French critic is right in the general causes which he assigns for it. Every one must have seen one of them, at least, operating in this country—the mental dissipation wrought by light reading and all kinds of frivolous entertainment. Of course, the parents who permit this will not soon see the evil of their ways, and probably never will until the college itself assumes some of the responsibility and forces the point home to fathers and mothers. The truth is, we believe, that the college truckles rather too much to the conditions which exist outside. The inner workings of any college office reveal how much allowance is made for the foibles and social ambitions of a boy's people; thus absence from town for a week or so for no imperative reason is sometimes excused, and a boy is treated good-naturedly in spite of shameful blunders, simply because his well-known forebears are scatter-brained. The college, more than is generally supposed, has it well within its power to keep the student immersed in an intel-

lectual atmosphere. This would not necessarily entail interference with clubs and the social aims of the undergraduate body: society outside is bound to be more or less reflected within. But the intercourse between student and instructor could and should be made strictly intellectual—though in a broad sense—and all recognition of merit by the faculty should be on the same basis.

Coming back to the actual instruction in English composition, one may question whether our college systems are not too ambitious. Students are commonly taught all the various kinds of style, instead of being held for the entire year simply to clear exposition of an idea. It would be desirable if the pure drill were confined to the study of a small number of authors and consisted in the analysis of their thought, day in and day out. By such a method, even the dullest student could hardly fail to get an accurate feeling for nice distinctions of meaning and for that power of sustained and orderly thinking which is so little a part of the rising generation. Once a man can think straight, the chances are that what writing he needs to do will nearly take care of itself.

RECENT GERMAN FICTION.

Jacob Wassermann is a conspicuous figure in German letters. The philosophical reflection of the Teuton and the torrid imagination of the Oriental blend together in this author, whose reputation was made by a novel of Jewish life, "Die Juden von Zirndorf," and has since been greatly strengthened by his "Geschichte der jungen Renate Fuchs." To the latter, his new book, "Die Masken des Erwin Reiners" (Berlin: S. Fischer), is in some respects a companion. For while Renate has been held up as a model of that purity which, in the language of the moderns, can walk unsullied through the mire, Virginia Gessner embodies that heroic resistance to evil which, with other ethical ideals of our forefathers, has been banished to a garret-corner of the modern conscience. Attractive as is the figure of the girl who carries her symbolical name with unusual grace and distinction, the interest of the reader soon centres in that of the young æsthete who, below the many masks that fascinate the world about him and hide his identity, bears a haunting resemblance to Dorian Gray.

August Friedrich Krause is a Silesian writer who came into prominence some years ago by his novel "Sonnensucher," which traced with unusual insight the growth of a man's inner life. The keynote of the new book, "Das stille Leuchten" (Berlin: Egon Fleischel & Co.) is also "the quiet, pure, and strong light which rises from the depths of our soul" and makes us masters of our instincts. But in this story its light is dimmed and disturbed by the lurid flame of elemental passions. A noteworthy achievement is the portrayal of the woman: proud, strong, and firm of will, she has heroic lines of character exceedingly rare among the female types of contemporary fiction. When the man who has won her away from another, a peaceful non-resistant, in savage jealousy kills his rival and on awakening to the realization of his crime thinks of nothing but its effects upon his career, her love for him dies. He, who had been the hero of the village for his physical prowess and jolly good-fellowship, has not the courage to face the consequences of his deed and prepares to flee. The tragedy of these three lives has a many-voiced chorus of villagers and the author shows remarkable skill in their delineation. The story belongs to the provincial fiction favored by the adherents of what is called "Heimatskunst."

The title of Karl von Perfall's new novel, "Hörner trägt der Ziegenbock" (Egon Fleischel & Co.), is reminiscent of "Faust," yet its choice was rather unfortunate for it does not suggest the serious undernotes of the story. A German baron who by nineteen years of hard work in America has done penance for an act of his youth, returns to Germany with a fortune, and under a new name tries to begin a new life. He becomes infatuated with the handsome daughter of an ill-reputed peasant and prepares to marry her. But the attachment excites the antagonism and later riotous hostility of the villagers; for the pet of the girl is a goat which follows her about like a dog, and that arouses suspicions of witchcraft—a fallacy still alive in rural communities of southern Germany. The book is full of reflections on the degeneration of the nobility, the social rehabilitation of its recreants, the superstitions of the peasantry, and the power of the clergy.

Lola Kirschner, who writes under the pseudonym Ossip Schubin, has long been a favorite with American readers of German fiction, some of her books having been translated into English. She is a writer of amazing productivity, but it cannot be denied that her recent work lacks the spontaneity of her earlier books. "Die Tragödie eines Idealisten" (imported by Lemcke & Buechner) is the story of an attachment between a young widow of the Austrian aristocracy and a titled Englishman who has a demented wife at home. Somehow both characters fail to seem quite real. Their love runs the usual course of a clandestine passion which exhausts itself before it is legitimized in the eyes of the world.

Maupassant has many imitators among the younger novelists of Germany. Raoul Auernheimer is not one of the most gifted, but the most daring among them. His "Renée und die Männer" (Egon Fleischel & Co.) is the story of a *demi-vierge* of Vienna, who, after an amusing search for a husband among her many suitors, marries a man she does not care for, but finally falls in love with him. There is a piquant dash in the writings of Auernheimer, though his touch is not as fine as that of his great model. Another volume of Auernheimer is called "Gesellschaft" and contains a collection of short stories in the dialogue form which was so effectively handled by the late Jeanne Marni. A sort of connection is established in the first sketch, where an author and an illustrator meet in a café in the theatre district of Vienna, and, finding people that promise to make good copy, decide to collaborate upon a book. The same characters reappear in the following sketches, and the reader gets an idea of the incidents that make up the days and the nights of the Viennese smart set. The individual characters are sharply outlined, and the book is charged with real vitality.

"Der verirrte Vogel," by Karl Bittermann (S. Fischer), is the story of a woman of the lower middle class of Berlin, who, as landlady of two widely different types of men, both of the intellectual world, resists the timid attentions of the one and yields to the dashing advances of the other. Frau Stilke belongs to those simple women whose morals are spotless until a strong temptation makes them oblivious of principles and scruples. She is a plain woman, but has that feeling for the finer things in life which often grows into an invisible barrier between laborers' wives and their coarser husbands. Yet the author succeeds in awakening the reader's sympathy for the poor deluded victim of a season's passion, who in her fatal flight into a "higher world" is as much a stray bird as the youth whom jealousy of the favored rival and grief over her defection drive to suicide. The book touches some vital problems of metropolitan life with sincerity and seriousness.

Enrica Händel-Mazetti is a notable personality among the women writers of modern Germany. In "Die arme Margaret" (imported by G. E. Stechert & Co.), a story of the Thirty Years' War, she has admirably caught the turbulent atmosphere of the period hot with religious dissension and with the barbarous cruelty of warfare. The heroine, a widow of a Protestant heretic, holding her own against a community hostile to her faith and against a horde of military brutes revelling in legalized bloodshed and plunder, is a figure that seems to have stepped forth from the pages of an early Christian chronicle.

When she is stirred with pity and implores the authorities to pardon the man whose criminal designs have exposed her and her child to privations, nearly causing their death, the reader receives something like a shock. Yet this step is in perfect harmony with the character of the woman. This is one of the most remarkable books of the year.

There is great variety in the four stories which Emil Strauss has collected under the title "Hans und Grete" (S. Fischer), though they have in common the rarely treated theme of a fraternal affection between man and woman. In the first story this attachment is misunderstood by the lover of the girl. During a boat-ride on the Rhine, he drops the oars, and as the boat drifts down the rapids and is capsized, he and the girl drown, while the innocent friend is saved and lives to tell the tragedy. The second story has for its heroine the Princess Philippa of England and relates her experiences from the time when she disappeared to escape from a hated marriage, until she dies in a German convent. She, too, at a crucial moment finds a brotherly protector in a sturdy peasant who is struck by her resemblance to his dead sister. The grateful devotion of a girl whom a Berlin student meets under equivocal circumstances and saves from the effects of exposure, is the theme of the third story. The last is aglow with tropical sensuousness and thrills with haunting mystery. The hero is a German teacher in a school in Brazil, and the author works out effectively the contrast between his charmingly simple affection for a robust German girl whom he has met in the city, and his infatuation for an elusive apparition in the luxuriant vegetation of an old park. The book is well written and by its originality stands apart from the average output of German short stories.

Carl Hauptmann's new book "Judas" (Munich: George D. E. Callwey) contains three stories, taking its title from the second, the story of a spy in autobiographical form which the author read during his American tour two years ago. The title is symbolical, for the first story, "Einfältige," has also its Judas motif. The daughter of an old peasant couple in Silesia comes back from Berlin, whither she had gone to work as a servant, and gives birth to a child which she leaves with her parents. When she reappears in the village, she brings with her a suitor for her hand, and is duly married. But after the young couple have stolen the old people's savings, they generously leave them the boy and go back to the metropolis. "Graf Michael" is a young nobleman whose irascible father is wont to reproach him at inopportune moments with the artistic temperament inherited from the mother. He has the habit of seeking oblivion for real and imaginary sorrows in association with the visitors of the vilest dens of the city. The psychology of the narrative is good. But unfortunately the author's mannerisms of style mar the enjoyment of his work. His long and involved sentences tend not only to obscure his meaning, but to disturb the rhythm. A. von Ende.

NEWS FOR BIBLIOPHILES.

It can now be announced positively that the great Robert Hoe library will be dispersed at auction, under the management of the Anderson Auction Company of New York city. The first sale will take place in February in the company's new and more spacious premises, at the corner of Madison Avenue and Fortieth Street, which are now being made ready for their removal early next year. All American collectors, librarians, and book dealers should be pleased that the executors have decided to dispose of the great library here, instead of sending it abroad. American collectors have been responsible for the high prices of rare books and there can be no doubt that the keenest competition will be attracted by such a sale. English and Continental collectors will send over representatives, and new high records on great books may be expected.

Mr Hoe, in his fifty years of book-collecting, covered a wide field, and his library, the most valuable private library in the world, includes rare books in almost every department. It will, however, not be sold by departments, but the first portion, to be sold in February, will include a representative selection from the various departments: manuscripts, early-printed books, books in fine bindings, French books, Americana, first editions, etc.

The fifteen volumes of Mr. Hoe's privately printed catalogue enumerate 13,030 titles, forming 20,962 volumes. This does not include the illuminated manuscripts, a very important and extremely valuable section, and the one in which he took the greatest personal pleasure. The library, we may presume, comprises upwards of fifteen thousand titles, and its value may be estimated at something approximating two millions of dollars.

No such library has ever been dispersed at auction in recent times. The Sunderland Library, removed from Blenheim Palace, sold by Puttick & Simpson, 1881-1883, comprised 13,858 lots, and brought a total of £65,581 6s. William Beckford's library, sold by Sotheby, Wilkinson & Hodge, in 1882-1883, comprised 9,837 lots, and brought a total of £73,551 18s. More recently, Lord Ashhurnham's library, sold in 1897-1898 by Sotheby, Wilkinson & Hodge, contained 4,075 lots, and brought a total of £62,712 7s. 6d. To this may be added the Ashhurnham manuscripts, sold in 1901, 628 lots, bringing £33,217 6s. 6d., making a total for the collection sold at auction of £95,929 14s. Earlier than this, shortly after the death of the Earl of Ashburnham, the British Museum had purchased a portion of the manuscripts (the Stowe collection), paying £45,000 for them. Another portion (from the Libri collection) was purchased by the French government in 1888 for £24,000, and others were sold privately. It has been estimated that altogether something more than £160,000 may have been realized for the entire Ashburnham collection of books and manuscripts, between five and six thousand lots.

But the Hoe collection, with its fifteen or sixteen thousand lots, pales beside the great Richard Heber library, which was sold in thirteen sales in 1834-1837, the catalogues describing 54,234 lots, and which brought some £65,000. Heber said: "No gentleman can be without three copies of a book, one to show, one for use, and one for borrowers." Mr. Hoe did not go to this extreme, and there are few duplicates in his library, though he did have two copies of the first of all printed books, the Gutenberg Bible. Another great English library which surpassed in number of volumes even the Heber collection was that brought together by Robert Harley and his son Edward Harley, which was sold upon the death of the latter to the bookseller, Thomas Osborne, in 1742. For this great library, which contained about 400,000 books and pamphlets, Oshorne paid £13,000, which was several thousand pounds less than the cost of binding alone. He issued a catalogue in five octavo volumes, 1743-1745, describing 51,561 lots. This catalogue, prepared in large part by William Oldys, and with an introduction by Samuel Johnson, is one of the most interesting of the old library catalogues. The library included a large number of Caxtons, among them Mr. Hoe's unique perfect copy of the first edition of Malory's "Byrth, Lyf, and Actes of Kyng Arthur" (1485); also many of the early tracts on America, which, when they come up at rare intervals nowadays, bring such high prices. Horace Walpole, in 1758, writing of rare books, said:

> A third sort . . . are things become rare from their insignificance. Of this species was that noble collection of foolish tracts in the Harleian library, puritanical sermons, party-pamphlets, voyages, etc., which being too stupid to be ever reprinted, grew valuable as they grew scarce.

The new auction season is now under way, and the four American auction houses will all hold sales the coming week, though nothing very notable will be included. On October 18, 19, and 20 the Anderson Auction Company will offer the library of the late John R. Van Wormer. Fine library sets, many on large paper, and some extra-illustrated; a first edition of Keats's "Endymion" (1818), with the half-title and the errata leaf in the correct earliest state; first editions of Dickens's "Christmas Books," and Audubon's "Birds of America," 7 vols. (1861), are among the more important lots.

The Merwin-Clayton Sales Company will offer on October 18 and 19 the second part of the library of James S. Green, and on October 20 they will sell a miscellaneous collection.

In Boston C. F. Libbie & Company, who have now removed to No. 597 Washington Street, will sell on October 19 and 20 a portion of the library of the late William Plumer, formerly Governor of New Hampshire. A very extensive collection (more than 300 lots) of American and English children's books, chap books and chap-book literature, forms the most notable section of the catalogue, which includes, besides, town histories, genealogies, American annuals, Masonic and anti-Masonic narratives and addresses, and a collection of Revolutionary and early nineteenth-century broadsides.

In Philadelphia, Stan. V. Henkels will offer on October 21 and 22 a miscellaneous collection from the libraries of James Richmond, W. W. Ruley, and Washington B. Powell, all of Philadelphia.

Sotheby, Wilkinson & Hodge's season in London opens with a sale on October 26, 27, and 28 of a miscellaneous collection made up from libraries of several owners and including a set of Gould's great work on "Humming Birds" (1861), with 360 colored plates. Their sale of November 3 and 4 includes several specimens of early printing; a set of the nine tracts on the American Indians by Bartolome de las Casas, printed in Seville in 1552 and 1553; Hakluyt's "Voyages" (1598-1600); Linschoten's "Voyages" (1598); Peter Martyr's "Historie of the West Indies" (1612); Purchas's "Pilgrimes" (1625-1626); Audubon's "Birds of America," first octavo edition (1840-44); Wilson and Bonaparte's "American Ornithology" (1808-33); a collection of first editions of Defoe, etc.

Correspondence.

PROBABILISM

To the Editor of The Nation:

Sir: My correspondence in your number of July 14 was not, as Mr. J. Alfred Faulkner's letter on "Probabilism" (September 1) supposes, an "apology for the Jesuits." The French edition of Professor Boehmer's book was sent me with Professor Monod's card; and I found the latter's introduction to the book worthy of extended review. As to Probabilism, without asking you to open your columns to unsuitable discussion, may I give the testimony of nearly fifty years' experience among Roman Catholics of the Latin peoples, learned and unlearned, religious and irreligious? My experience confirms my conclusions from all these years of historical study, that no Catholics do, or ever did or ever could, run around to discover casuists authorizing them to "do the act forbidden by the ethics of Jesus" and so avoid being "held up for it in the confessional." Voltaire, with his usual common sense, sums up this particular controversy: "No sect, no society, has ever had or could have a deliberate design to corrupt men" (quoted by Professor Monod).

Professor Monod himself remarks the difficulty of reconciling the Jesuit preacher Bourdaloue's sermons with the controversial view of Jesuit casuistry, and suggests that Bourdaloue may have been at variance with the teaching of his brethren; but a little patient looking through the numberless volumes of other Jesuit sermons of the seventeenth and eighteenth centuries would show they were all at one in their moral teaching. Professor Monod, not writing controversy for history, also points out that casuistry, *i. e.*, a body of decisions in formally proposed cases of conscience, is for confessors, just as legal decisions and precedents are for judges, and that it serves to keep the confessor from imposing his own single opinion. Mr. Faulkner, by restating "the situation supposed by Probabilism" in Calvinistic formulas quite displaces the historical question. Independently of Jesuits, and long before the "elevation" of Liguori, who was not a Jesuit, Rome consistently condemned the teaching ("Tutiorism") that there is an obligation under pain of sin (the Catholic formula) to take the so-called "safer" course when the law which alone creates the obligation of conscience has no certain application in the case. Such teaching, for one thing, was often reproached with driving scrupulous souls to madness; and a French pathologist, who does not consider the question of sin since he does not believe in a God of whose law sin is the transgression, has lately maintained that Pascal suffered at the end from religious mania. That Jansenist vigor turned ordinary mortals from religious practice is an historical commonplace used to explain the French Revolution.

Mr. Faulkner says I "confuse the matter" by referring to the philosophical basis of Probabilism; yet the name itself rests on philosophical, and not on theological, teaching. It comes from Cicero's use of the word *probabilis* in his exposition of Greek philosophy; and the only weight which casuists attach, in uncertainties of conscience, to the "opinion endorsed by one learned teacher", or by many, is the probability added to the original reasonableness of the opinion by such supposedly responsible and competent authority. But Probabilism is also constantly applied in their books from considerations of reason alone, without doctors' authority, as may be seen in practical expositions like Gury's, which Paul Bert brought into the French Parliament in my time, or in Pascal's Escobar, or in any present-day Latin manuals for the use of Roman Catholic theological seminaries. And this principle for the guidance of reason of which conscience is a function, is, as I said, philosophically identical, though in varying subject-matter, with that used by the Anglican Butler and the atheist Mill.

Professor Monod takes pains to recognize that the use of the principle in Roman Catholic casuistry, which once again concerns "sin" and not "ethics," is largely in the confessor's decision as to obligations consequent on sin, such as restitution of ill-gotten goods, avoidance of scandal, incurring of ecclesiastical censure, and the like. It is doubly curious that the poet Browning should have made his Bishop Blougram apply Probabilism precisely in a case where Rome had condemned its application; and that this application of it was one of Pascal's practical arguments, often cited, for holding fast to Christianity. The philosopher Renouvier, however, says that Pascal was conscious of his lapse and afterwards explained it away as reasoning *ex hypothesi*.

I seize the opportunity to draw attention to the constant enriching of French history by new documentary researches concerning the lives, opinions, and influence of Pascal and the Jansenists of Port Royal and their friends. A bibliography would be needed to index the most recent authentic editions, books, and review articles in this field. I am still more grateful to Mr. Faulkner for allowing me, outside my own province, to point out the inestimable value of the publication of John Wesley's manuscripts which has been undertaken by his disciples. We should not let his influence as the chief dissolvent of the older Calvinism in America eclipse the fact that well-nigh all earnest English thought centred in him at one period of the eighteenth century. I cannot give my references from readings of forty years since; but I did not invent or guess that the "missions" which had interested Wesley in Italy first suggested to him systematic "revivals." Whether these missions were preached by disciples of Liguori or by Jesuits is a question of date. If I remember, it was a contemporary who remarked the resemblance. Curiously enough, the objections made against Wesley's spiritual "method," which his primitive disciples practised and so acquired their name of Methodists, were very much like those brought against the "spiritual exercises" of the founder of the Jesuits. In notes on his readings, Wesley mentions a life of Ignatius of Loyola and compares his Christianity with that of Cromwell—unfavorably to both. I may add, since Mr. Faulkner refers to the Quakers of the seventeenth century, that their theologians Barclay and L'Abadie had the Jesuit spiritual formation to start with.

I am sorry Mr. Faulkner should accuse me of sarcasm with respect to Professor Boehmer's "habits of mind." I thought I had given more than sufficient examples, and they might have been multiplied; but sarcasm profits neither to truthful history nor to valid criticism. S. D.

Biarritz, September 24.

THE TRAVELLER AND THE TRAMP ROYAL.

To the Editor of The Nation:

Sir: During a desultory search for entertainment among the great names of the eighteenth century, a comparison, ludicrous but irresistible, suggested itself. It may not be seemly that the sedate and profound meditations of Goldsmith's "Traveller" should bring to mind the audacious, happy-go-lucky philosophy of Mr. Kipling's "Sestina of the Tramp Royal"; but the idea, once conceived, is hard to dismiss. It may be that, after all, the comparison is not so impertinent as it seems at first thought, for it is entirely probable that the Traveller would bore Mr. Kipling quite as much as the Tramp would have offended Goldsmith's classical taste.

As far as form goes, the two poems have nothing in common, except five iambic feet to the line, and each illustrates admirably the literary characteristics of its own century. The elegant diction, slow movement, and elaborated thought of the one form a sharp contrast to the rapid, succinct colloquialism of the other. Dialect poems were beneath the literary aristocrats of Goldsmith's day; and to frame a bit of serious philosophy in language literally taken from the vulgar would doubtless have been held the height of inconsistency. On the other hand, if "The Traveller" were sent to one of our leading magazines to-day, what would its chances be with the editor?

When we examine the thought which underlies the form, it is curious to see that, in spite of differing aims and temperaments, the two wanderers arrive at many similar conclusions. The temperamental difference appears in the first verse of each poem. The Traveller, drawn by ties of affection, wanders unwillingly,

> Remote, unfriended, melancholy, slow.

There is a suggestion of pose about him, and he evidently takes himself and his mission very seriously. The Tramp is frankly irresponsible, and is sufficiently a child

of this introspective age to know that his wander-fever is a definite psychological condition, and that all roads are good

For such as cannot use one bed too long
But must get 'ence, the same as I 'ave done,
An' go observin' matters till they die.

The Traveller gives a conscientious, detailed account, extending through many instructive but somewhat wearisome couplets, of the countries and customs studied in his pilgrimage. The Tramp, with charming simplicity and twentieth-century conciseness, reduces the panorama to its lowest terms:

Speakin' in general, I've tried 'em all,
The 'appy roads that take you o'er the world.

And to him, "The different ways that different things are done" gives an adequate idea of what he has seen.

A most interesting point is the way in which each of our philosophers analyzes his own sensations and motives. The Traveller voices his unrest:

Thus to my breast alternate passions rise,
Pleased with each good that Heaven to man supplies:
Yet oft a sigh prevails and sorrows fall,
To see the hoard of human bliss so small;
And oft I wish, amidst the scene to find
Some spot to real happiness consigned.

The Tramp, perhaps with keener insight, observes:

It's like a book, I think, this bloomin' world,
Which you can read and care for just so long,
But presently you feel that you will die
Unless you get the page you're readin' done,
And turn another—likely not so good;
But what you're after is to turn 'em all.

A psychological problem here suggests itself. It sometimes happens that one who believes himself to be pursuing a lofty purpose is merely following the bent of his temperament; and, likewise, one who thinks he is drifting aimlessly may be in reality reaching out blindly for sweetness and light. May it not have been "something in his 'ead" that upset the Traveller? And was the Tramp, perhaps, animated by deeper motives than he knew? The Tramp, indeed, has rather the advantage. He cherishes no lofty illusions as to his motives; but, for all that, there is a certain self-respect about him, and he seems to have spent in honest labor the time employed by his eighteenth century prototype in sitting upon mountain-tops, engaged in pious meditation. His testimony is clear:

I've turned my 'and to most, and turned it good,
In various situations round the world—
For 'im that doth not work shall surely die.

The difference in temperament is again apparent at the close. After following the Traveller's fortunes to the end, one feels that his pilgrimage has saddened him, and that he has found the world a somewhat depressing place on the whole. Not so the Tramp, who concludes:

Gawd bless this world! Whatever she 'ath done—
Excep' when awful long—I've found it good,
So write before I die, 'E liked it all.

CORINNE ROCKWELL SWAIN.

Philadelphia, October 5.

CUSTOMS AMENITIES.

TO THE EDITOR OF THE NATION:

SIR: I came in this morning on the Kaiserin Auguste Victoria. I had with me only a few trifles purchased abroad. I could only declare three bottles of ink (costing about 18 cents), three bits of Dresden china (costing about $3.75), one suit of Jäger flannel (costing $5). Otherwise I had nothing which I had not taken abroad with me. I was charged $2.40 as fine or duty (it is not stated which) on the three bits of china, on the plea that they are household goods. They are bon-bon holders. According to the slips distributed to us on the ship I am entitled to bring in $100 worth of personal belongings. I actually brought in less than $10 worth, some of which was passed free. But on $3.75 of it I am made to pay $2.40 fine or duty. Perhaps it doesn't count for much if one confesses to being ashamed of a country which can annoy and exasperate its citizens with such petty meanness.

J. R. S. STERRETT.

Cornell University, September 26.

BIOGRAPHICAL SINCERITY.

TO THE EDITOR OF THE NATION:

SIR: When an ecclesiastical council of a certain church organization meets to select a saint for canonization, an *advocatus diaboli*, or sort of prosecuting attorney, is appointed, whose business it is to collect and present all that can be said against the character of the proposed saint. In the preparation of a biography, when the work is to be done by a friend and admirer of the subject, would it not be well to have an *advocatus diaboli* appointed? His findings could be printed in an appendix, and two editions of the book could be published, one without the appendix, for the family and friends, and one with it, for those who want to know the truth.

This idea is suggested to me by reading several recent biographies of public men in which their lives are pictured as absolutely flawless. A. W. MACY.

Chicago, October 3.

THE NOSE IN POETRY.

TO THE EDITOR OF THE NATION:

SIR: As Mr. Rockwell in your issue of September 29 finds only Holmes to cite in proof of his contention that the poets have not neglected "the manly nose," permit me to anticipate any attempts to work this theme back into past centuries of appreciation by reverting to a poem published a couple of thousands of years ago by one Vyāsa, who describes his hero Battle-strong as "possessed of light complexion, slender height, a monstrous nose, and enormous eyes." Oriental exaggeration must be allowed for, as also perhaps an unconscious reversion to that Aryan ideal in the Rig-Veda which provokes contemptuous allusion to "foes with no noses," as opposed to those whose very gods were said to be gifted with good noses. But also to anticipate remote allusions to heroines as well as heroes, may I close with a citation from another Hindu whose epic heroine is described thus: "She has fair hair and fair is her nose; graceful is she, as were she the goddess of this wood, radiating beauty like Fortune herself." Thus Vālmīki, portraying the perfect woman Sītā, and, by implication, even divine beings. "Having a good nose" is a common description of heroes in both the Hindu epics. E. W. H.

THEORY AND PRACTICE OF PUBLIC LIFE.

The Old Order Changeth. A View of American Democracy. By William Allen White. The Macmillan Co. $1.25.

Public Mindedness. An aspect of citizenship considered in varous addresses given while president of Dartmouth College. By William Jewett Tucker. Concord, N. H.: The Rumford Press.

These two books represent instructively certain differences between the most advanced political thinking of the East and the West. And if the distinction may be packed into a phrase, the Eastern publicist believes in criticism as a preliminary to action, while the Western publicist would act first and criticise afterwards. Both are convinced democrats, but Mr. White trusts the people in a somewhat mystical sense, and regards their decisions as instinctive and partaking of the divine. Mr. White believes in leadership, but hardly emphasizes its need. With or without leaders, the people will muddle through to some expression of its will. President Tucker thinks leadership all important and trusts rather little to the collective initiative. The editor manifests a more breezy faith and a vaguer logic; the college president, as might be expected, displays a broader historic sense and a more calculating spirit. Oddly enough the New England clergyman gives a stronger sense of worldly wisdom than does the Kansas editor.

In a rapid survey of our national history, Mr. White shows how republicanism fell under the control of a moneyed oligarchy, a process completed in the last decade of the nineteenth century and embodied in the personality of Mark Hanna. The new century has been distinguished by a remarkable democratic reaction. With mysterious unanimity and almost without visible leadership, the people have been reclaiming and extending their control. The right to nominate Senators, the initiative and referendum, the recall and the direct primary, these are issues that have triumphed widely and will, in Mr. White's opinion, prevail universally. From the small beginnings of a partially reformed civil service and the secret ballot, the appetite for self-rule has grown until the old-style boss has become obsolete. An incident of this silent democratic revolution has been the increasing inclination of the people to do its own business. Municipal trading is everywhere popular, city debts for water, light, and transportation constantly mounting. Government regulation of rates is merely a symptom of sentiment for government operation of railways. Arguments from efficiency and expense are met by the simple response, "the people wills it."

Such, in brief is the picture and eulogy of the new democracy as drawn by Mr. White. As usual he does not spare the colors.

In the main it is a just and striking presentation of the political ferment of to-day. A criticism or analysis it can hardly be called. No shadow is admitted except the relative inefficiency of our schools. Mr. White admits that the average child loses about two years by wasteful methods of instruction, but feels that the evil will promptly produce the remedy. Only raise salaries and attract more male teachers, reimburse poor parents for the time of their children at school, and all will be well. In fact Mr. White is by no means free from the prevailing superstition that most desirable things can be bought, from street railways to efficient male teachers. What he does not perceive is the danger of an education that informs without instructing. We have five million graduates of high schools and colleges in America, and yet a serious book of literary or educational criticism is lucky to find a thousand purchasers. In short, we are possibly in some peril of overproducing the average, hopeful, half-educated person, complacent in the consciousness of powers which he does not possess, refractory to leadership, except that of his own sort, more eager to undertake difficult private and political enterprises than able to carry them through successfully. We somewhat lack clear ideals, such standards as science imposes upon Germany, and specialized education upon France. Instead, Mr. White would have us put our trust in strenuous farmers with motor cars, mechanical pianoplayers, and unlimited subscription to the muckraking magazines. The merits of this class we do not disparage, we merely should be glad to see it more ready to acknowledge spiritual achievement and more apt to produce real leaders. Of such leadership, Mr. White himself might seem to be an excellent example, but he evidently lacks the sterner qualities that could rebuke a public bent upon folly.

A disagreeable feature of his book is his comment on the personnel of the Federal courts. To show the hesitation of the Federal courts toward new problems is well enough. Such a tentative attitude does credit to our national judiciary. Mr. White's list of the Federal judges appointed between 1891 and 1909, and their endorsers seems to us an unworthy piece of innuendo. The implication is that these justices are of capitalistic bias, that lawyers of equal legal talent, but of more liberal temper could and should have been found, and that since 1909 the appointments have been of a very different character. We believe that all of these inferences are false, mischievous, and superfluous. No significant fact is involved, except the proper conservatism of the bench, and, as Mr. White himself points out, if evil there be, it bears its own remedy, since the Federal courts are quickly renovated and the appointments automatically influenced by the current feeling of the people. Despite the drawbacks of this book, it does tell most lucidly just what is working in the popular mind. Those who by no means share Mr. White's easy optimism may learn from him the sentiments with which sane leadership must reckon.

President Tucker's two dozen addresses delivered before all sorts of hearers show naturally a certain inequality. What distinguishes them all is the emphasis set upon individual character. "Good Citizenship Dependent Upon Great Citizens" is the first address. It sets the tone for the others. To the inadequacy of mere education, President Tucker is fully alive, also to the hazards of character—the dangers of complacency, the possibility of moral collapse. This is old-fashioned teaching. Many of us prefer to depend upon instinctive collective movements which may or may not make for righteousness. Upon these unconscious movements our author lays little stress. His argument is pretty consistently *ad hominem*. Such subjects as "The Spiritual Life of the Modern City," with especial regard to the increase of small cities and their social advantages; "The Conscience of the Nation," a sermon preached when the Cuban war was imminent; "The Revival of Civic Pride in the Commonwealth of New Hampshire"; "The Ownership of Land"; "The Mind of the Wage Earner," a plea against class enmity; "The Rights of the Period of Education," "Arrested Education—How Recovered"—such subjects as these are typical, besides a number of topics more nearly related to collegiate education. In many instances, President Tucker covers the ground of Mr. White, and frequently agrees with the Kansas publicist. Their discussion of the defects of public education are strikingly similar in tone and in results. They part company in respect of the need of a serviceable superiority—of trained leaders. Mr. White assumes that these will rise as a kind of emanation from the mass; President Tucker believes that deliberate training will best produce our guides. Mr. White's book is obviously adjusted to the mood of the day, President Tucker's urges a kind of personal obligation which up-to-date man is prone to transfer conveniently to the State, and such traditional teaching may not make much of a stir. However that be, the commonwealth is fortunate in which fundamental principles have been upheld with such sobriety and vigor. The effect of such counsels may well outlast that of Mr. White's genial appeal to a collective efficiency which is to dispatch masterfully what is supposed to be everybody's business and nobody's.

An American Citizen, the Life of William Henry Baldwin, jr. By John Graham Brooks. Boston: Houghton Mifflin Co. $1.50 net.

Without the usual biographical materials, for the late W. H. Baldwin, jr., wrote few letters, and apparently kept no journals, Mr. Brooks has given a vivid presentment of one who was emphatically a citizen. Inheriting from his father a fine tradition of philanthropy, Baldwin's forceful and lovable character gave promise of greatness even to his college mates. After graduation at Harvard in 1885, there was a characteristic period of hesitation. His concern was to choose the calling that permitted the cleanest success and afforded the best opportunities for doing good. The ministry was considered, but the chance of a Western position with the Union Pacific determined his vocation. For nine years he remained in the West, being rapidly promoted; at thirty-one he was general manager of the reorganized Southern Railway, at thirty-three president of the Long Island system, a position which he held until his untimely death in 1905.

During his railway experience he touched most of the sore spots of our industrial life—strikes, drunkenness of employees, rebates, unfair traffic agreements, and, during his Southern days, the race problem. He made it his task to understand these evils and to seek their remedies. Gradually he worked out a system of business morality which he expressed, as regards the railway business, in lectures at Cornell. The kernel of his system was Socratic, that men sin more from ignorance than from malice. Publicity of great transactions, full explanation between employers and employed, between corporations and the people, he felt to be the beginning of industrial righteousness. In fact, candor, and with it kindness, were the ruling passions of the man. His axiom was that people would usually do the reasonable thing when all the facts were understood. Confronted with a strike on the Southern Railway, he prepared for the men an elaborate report showing clearly that the earnings of the road did not permit the increase of wages, and that executive salaries had been cut more severely than wages. The explanation was accepted. In a similar spirit of getting at the facts he served the Southern Educational Committee and the Committee of Fifteen on the Social Evil in New York City. What he sought was primarily clear vision, without which interference is mere blundering. His own cheerful and resolute optimism had worked wonders with weaker men, and his faith in democracy was a kind of religion. During the exposure of spoliation by corporation managers he

declined to fix personal guilt. We had all sinned together, in providing temptation or in yielding to it; the grandees of finance had merely offended as humbler men would have done under like conditions. What he desired was a general amnesty, a proper revision of the moral and penal code, and a fresh start. He even imagined some process of personal conversion by which Trust magnates should agree to play fair, should consent to make money more slowly, and admit the expediency of working with instead of against the people. He cherished a vision of the ten or more great managers of finance meeting in committee and honestly promising to be good.

There was about him an old-fashioned plainness and integrity that led him to the heart of difficult problems. He assumed that the State had a right to regulate corporations the magnitude of whose business affected the public welfare. He assumed that if employers might combine, so might, nay, must, employees. He was a friend of the unions and of the open shop. From the simple observation that the negro of property was respected dated his zeal for Tuskegee, which he long served as trustee, and for industrial education for the negro. There was in this eminently simple and practical man much of the spirit of science, but his investigations were tinged with an extraordinary tenderness. He felt as deeply as he saw clearly. As an example of a sensitive conscience unscathed among great affairs his life is of singular value. To his friends this biography will be of absorbing interest, and even strangers may glimpse in it the traits of a sweet, resolute, and most serviceable personality.

CURRENT FICTION.

The Husband's Story. By David Graham Phillips. New York: D. Appleton & Co.

Of Mr. Phillips's novels it must be said, at least, that they are never mere literary performances. He always has something "on his chest"—something that must be got off for his own comfort. He delivers his message in a tone of loud and cheerful disgust. Whatever at the moment he loathes most in modern life becomes, for that hour, the darling of his pen. If (as we have more than once suggested) his rôle is virtually that of the bull in the china-shop, it is clear that he has no suspicion of the fact. He smashes away with the solemn zeal of a prophet, and the attendant crash and jingle are sphere-music to his robust sense. His most cherished hatred, as his readers know too well, is reserved for the sins and follies of fashionable life. If for an instant, in "White Magic," he seemed inclined to look with indulgence upon certain persons born or bred under the curse of "society," he has promptly, and let us hope, permanently, repented. For Mr. Phillips is far more amusing, as well as more profitable, when he is discharging his proper mission than when he is experimenting with the material of Robert W. Chambers.

As a piece of literary art "The Husband's Story" is atrocious; and experience of Mr. Phillips does not incline us to lay its atrocity altogether at the door of the supposed story-teller—a flimsy "dramatic" man of straw, if there ever was one. Godfrey Loring is intended to stand as a superior example of the American business man, brought close to ruin by contact with the accursed "American woman." We do not mean financial ruin, for Loring's business activity is able to keep pace even with his wife's extravagance. But his money is won at the expense of his moral nature—a fact of which the woman pretends to be ignorant, and to which she is really indifferent. Her father is an undertaker, and Loring's is a small grocer, in a small and dingy city. The girl, with her little soul, marries Loring out of pique. He has, by chance, the business sense, and they presently find themselves with money to spend. The woman's ambition is aroused. We follow the pair by way of a Brooklyn purgation to the glories of a New York establishment. Social supremacy for herself and her daughter becomes the woman's sole aim, and Loring contemptuously applies the golden key to New York's most exclusive set. But there is another world to conquer on the other side of the water: the upshot of it is that the daughter becomes a marchioness and the mother a princess —by virtue of Loring's money. We leave the man at the outset of a fresh matrimonial experience. The motive, it will be seen, is anything but novel: for some reason title-hunting is a pet theme of the hour. The striking thing about the book is its truculence. Under the transparent cover of Loring's authorship, Mr. Phillips hoarsely bellows his contempt for American womanhood. He is continually dropping his story to insult the "gentle reader"—"you, with the foolish, chimera-haunted brain, with the silly ideas of life, with the ignorance of human nature including your own self, with the love of sloppy and tawdry clap-trap." He has begun the tale with the admission that the American writer of fiction must "catch the women"; is he right, we wonder, in fancying that abuse will serve for bait?

The Soul of a Serf: A Romance of Love and Valor Among the Angles and Saxons. By J. Breckenridge Ellis. Chicago: Laird & Lee.

If the heaviest battalions are proverbially possessed by an ally of unmatchable distinction, the beaten cause is at least reasonably certain of the services of Romance. It is Arthur, the briefly successful leader of a forlorn hope, who lives in song and story the flower of kings; the deeds of the Germanic conquerors of his people found no lasting reflection in literature. Not till the Anglo-Saxons themselves were on the defensive do we get the fine valor of the "Battle of Maldon."

In the present romance we meet with some authentic folk: Penda, the fierce Mercian; Coifi, the heathen high-priest whose naïvely pragmatical views of religion are recorded by Bede, and a somewhat too faint-hearted Edwin of Northumbria. Antiquities, too, are not slighted; the gleeman's song is heard in the mead-hall, shields clash assent, the ethics of the *comitatus* are acted out, people talk about the folk-moot and (so hard error dies) about drinking mead from the skulls of their enemies in Valhalla. But the incredibly brave and high-minded hero and the incredibly beautiful and disdainful heroine, though they for the nonce find themselves in this Germanic museum, essentially are not of it. Their pedigree is quite other. For Usfrey, who from a ceorl becomes ealdorman, and for Cuthberga, who, like the fairy-tale princess, marries him out of spite, the course of true love is as thrillingly troubled with whirlpools and sunken rocks as for any hero and heroine between the covers of a book; who, indeed, they are. There is, besides, some good fighting.

An appendix supplies some historical background. In the main it is sensible, but it is scarcely judicious to deny to Celtic Christianity a particle of influence upon English culture or to ascribe to the Anglo-Saxon of the seventh century an unswerving faith in the entire mythology of the Norse Eddas.

The Motor Maid. By C. N. and A. M. Williamson. New York: Doubleday, Page & Co.

This story of the Williamsons' differs only in the slightest degree from their other automobile novels. Having made themselves supreme in the motor-car field, they have worked with increasing industry and devotion. Incidentally, they have made most of their readers learn a good deal about European geography and history. We know of devotees of the products of this co-partnership who annually follow in the tracks of the latest Williamson heroine, and the increased sales of a certain motor-car mentioned by these authors in one volume are said to have necessitated a new factory; we are even told that where one tourist to France buys a Baedeker, two buy a Williamson. More than that, we are asked to believe that every American girl whose father is a millionaire beseeches her "Dad" to take her and a motor-car to Europe, and to hire a chauffeur abroad in the expectation that he will surely prove one

of those dukes or princes in disguise who, according to the Williamsons, form a majority of all able-bodied European motor-car drivers.

In the "Motor Maid" the two persons who occupy the front seat of the automobile are people of exquisite taste, gentle birth, and astounding historical and literary knowledge. Both are in temporarily straitened circumstances, and therefore act as maid and chauffeur to two quite unattractive *nouveaux riches* in a light blue, sixty-horsepower car. The maid is warned against all chauffeurs, but "never was a chauffeur so long, so slim, so loathery as this one." Long and slim as he is, he slips speedily into her affections. As for the rest of the volume, the transformation of the chauffeur into the lady's protector, brother, and fiancé is rapid enough to please the most exacting maid of sixteen. Why not? A romance that takes place in a sixty-horsepower motor ought surely to move with more than lightning speed, and so the reader is transported from Cannes into Italy and then into France and up to Paris, learning all about the scenery and history of the country from the wise maid and chauffeur. As usual, the descriptions are excellent, and they afford a pleasant contrast to the human beings who ride in the car. As a whole, the volume entertains. But if we must explore so many miles of country in the course of our light reading, a road map of Europe at the end of each volume would add much to its charm—and to its usefulness as a guide-book.

The Hollow Needle. By Maurice Leblanc. New York: Doubleday, Page & Co.

The secret of the hollow needle, which has been in the possession of Cæsar and Charlemagne and Louis XIV and Louis XV and Napoleon and has now come to the knowledge of the egregious Arsène Lupin, is so incredibly fantastic as to spoil a detective story which otherwise has many interesting qualities. How the young Parisian student wrestles with the Napoleon of crime for his secret, and the conclusion, must be left to the discovery of the reader of the book.

The Window at the White Cat. By Mary Roberts Rinehart. Indianapolis: Bobbs-Merrill Co.

One of the peculiarities of this detective story is the absence of any real detecting. The hero, a lawyer this time, and not a reporter, is busy haunting dark windows and exploring midnight corridors, but for the most part he fails to discover anything through falling down dumb-waiter shafts or bumping his nose or forgetting his shoes. And when the mystery is revealed, it is as much a surprise to him as to the reader. And there is a vast amount to reveal. The iniquities of politics and the eccentricities of woman never before created so complicated a series of mysterious happenings, including murder and disappearance. The best thing in the book is the description of the political club called the White Cat; that is an invention of genius. The poorest thing is the disappearance of Aunt Jane, which does indeed darken the mystery of the plot, but only by an illegitimate trick on the reader. The author's sense of humor is at times delightful, and, oddly enough, seems not at all out of place in a story of blood and horrors.

A GREAT CATHOLIC BISHOP.

The Life and Times of Bishop Challoner. By Edwin H. Burton, D.D. Two volumes. New York: Longmans, Green, & Co. $7 net.

Those who contemplate the present strength and prosperity of the Catholic Church in England are too often apt to forget the terrors and sufferings of that dark and distressing but yet comparatively recent epoch in its history which stretches from the Revolution of 1688 to the first Relief Act of 1778. Identified in the sixteenth and early seventeenth centuries with the interests of a detested Spanish power, which gave way in the age of Louis XIV to an equally detested French one; coupled in men's minds with the vast majority of real rebellions and plots (not to speak of the even larger proportion of grossly exaggerated or wholly fictitious ones) in which Tudor and Stuart history abounds, it is small wonder that the cause of Roman Catholicism in England suffered at the hands of the subjects of "Dutch William" and his successors. They were debarred from the enjoyment of many privileges, disabled from holding office, and on occasions actually persecuted. That it was ninety long years after the "glorious Revolution" before this policy began to be modified, need not occasion too much surprise. The "Fifteen" and the "Forty-five" gave renewed proof that the old alliance of Catholicism with England's political foes on the Continent was not yet utterly forgotten; while the Revocation of the Edict of Nantes in France, and the interpretation of "Cujus regio, ejus religio" by some of the less enlightened German princes, not to speak of the policy of Spain and of the majority of the Italian states, showed that, though the wars of religion were past, the embers of the old hatreds and jealousies continued to burn.

During this dark period of doubt and suffering, the foremost figure among the English Catholics was Richard Challoner, Bishop of Debra, and vicar apostolic of the Southern and most important of the four "districts" into which the Catholic flock in England was divided, for administrative purposes, from 1688 to 1840. Born three years after the accession of William III, the son of a Puritan father who died when he was very young, the future bishop was brought up in Catholic surroundings, and sent at the age of fourteen to be educated for the priesthood at the English college at Douay, where he remained, almost uninterruptedly, as student, priest, vice-president, and professor till 1730. In that year he finally received permission to resign his offices at the college and go as a missionary priest to London; here he devoted himself to the cause of Catholicism in England, until his death half a century later. He is best known for his theological and devotional books, which number nearly two score. "The Garden of the Soul" (1740), "The Memoirs of the Missionary Priests" (1741-2), and the "Meditations" (1754) are perhaps the most famous, and on them succeeding generations of English Catholics were brought up. But his activities were by no means limited to the authorship of these works. In addition to his difficult episcopal duties (he was consecrated bishop in 1741), he founded two Catholic schools in England which survive to-day as St. Edmund's and St. Wilfrid's Colleges, and was the benefactor of the English Catholic colleges on the Continent. He strove in every way to alleviate the sufferings of his co-religionists, and to gain for them the toleration which they began to enjoy in his last years. "He was not, indeed, a man of genius, or even of striking originality. By nature he was a stanch conservative, who loved to walk in the old paths. But he possessed marked intellectual ability and that strong practical sense which knows how to turn knowledge to daily use." It is doubtful if a more brilliant or daring man would have served the Catholic cause as successfully as he did, in that day and generation. The Catholics were in such a minority that they could not hope to gain their ends by force; they must rather suffer long and uncomplainingly, and thus prove beyond the possibility of a doubt that religious dissent no longer walked hand in hand with political rebellion. Under such circumstances, a leader of indomitable patience, absolute self-abnegation, and pre-eminent personal holiness was a priceless boon—and such a leader they possessed in Challoner.

Dr. Burton's book is a most thorough and scientific piece of work, a monument of careful, painstaking scholarship—a trifle too exhaustive, in fact, to appeal to readers who are not specialists in this particular field. It is much more than a life of Challoner; it is really a history of English Catholicism in the eighteenth century. Though frankly a panegyric, the book does not

give the impression of prejudice or partisanship; for the hero was one of those rare personalities whose character commanded the admiration of friend and foe alike, and Dr. Burton wisely refrains from going out of his way to censure the statesmen and churchmen who opposed him. As a biography of Challoner, it may justly be described as final; and no student who is interested in the religious movements of the eighteenth century, or in the history of the Catholic Church since the Reformation, can afford to ignore it.

The Campaign of Trafalgar. By Julian S. Corbett. New York: Longmans, Green, & Co. $4.50 net.

Following up his solid studies of Drake and Drake's successors in the seventeenth and eighteenth centuries, Mr. Corbett has now written what is likely to remain for some time the definitive account in English of England's naval policy in the momentous year 1805. Popular imagination and general histories have been wont to approach the subject merely in its relation to the figures of Napoleon or Nelson.

There is the fascination of Napoleon's grandiose project of the invasion of England and his Boulogne flotilla. There is a glamour about Nelson's chase after Villeneuve to the West Indies and back, his warning to England, and three months later his brilliant action at Trafalgar. Mr. Corbett, however, though he has a great enthusiasm and admiration for England's naval heroes, is not concerned with hero-worship, or led astray by legends. He has made a minute study of the diplomatic correspondence of 1805, and of papers in the Foreign Office as well as those in the Admiralty Office. On the basis of these he traces in a clear and vigorous fashion Pitt's general war and naval policy. Most writers have looked upon the naval campaign of 1805 merely as a defensive movement; Nelson has been regarded as saving England from Napoleon's invasion. But Mr. Corbett shows that in reality the campaign was an offensive one. Of course, it was the prime duty of the English fleet not to allow any descent upon the English coast. But Mr. Corbett takes his reader to sit with the venerable Barham and the Sea Lords in the dingy little offices in London, and lets him listen to Pitt and Melville, and shows him how the far-seeing and sure purpose of these men was more than the mere defence of England. They were aiming, in coöperation with Russia and Austria, to secure for England more territory and power in the Mediterranean, and to seek out and destroy the French fleets in their own French waters. It is Mr. Corbett's admirable statement of the general naval policy, of which Trafalgar was but the culminating incident, which makes his volume of special value. In saying this, we do not mean to imply that he has been neglectful of the battles upon the sea. On the contrary, he has a good deal that is new in regard to the naval tactics of Collingwood, Cornwallis, and Nelson. His account of Trafalgar itself is very careful and quite detailed. He gives elaborate charts, several contemporary plans of battles, and a very interesting list of all the signals set by Nelson on the morning of Trafalgar.

For the futility and madness of Napoleon's naval orders the author can hardly find language strong enough. He thinks the real blame for the failure of Napoleon's projected invasion lies wholly with the Emperor himself. It was only after the failure that Napoleon angrily shifted the blame to Villeneuve and established another Napoleonic legend which has lost little of its vitality to the present day.

Thomas Carlyle as a Critic of Literature. By Frederick William Roe. New York: The Columbia University Press.

This new volume of the Columbia Studies in English undertakes for Carlyle what some three years ago Miss Margaret Ball undertook in the same series for Scott: to define his critical ideals, to fix his place in the history of criticism, and to measure his achievement as a critic. Like his predecessor, Mr. Roe has been rather more successful in the expository than in the historical and critical parts of his task. Generally confining himself to the literary essays, he has collected, condensed, and set in order his author's somewhat difficult and mystical utterances on the nature of reality, on the nature and function of poets and poetry, and his distinctly less esoteric doctrine on the nature and function of critics and criticism. By way of illustration Mr. Roe has examined in some detail the articles on Goethe, Voltaire, Burns, Johnson, and Scott. Considered as analysis of theory and critical method, his work is patient, competent, and useful.

To point out Carlyle's position in his times it is necessary as it were to rise above and see all around him, looking before and after. Mr. Roe, it must be confessed, seems mainly to survey Carlyle's position through Carlyle's own eyes. He is frequently beguiled by Carlyle's contempt for all those to whom he was indebted—his assumption of complete independence of his English contemporaries and forerunners. Mr. Roe takes his author's word for it that the new critical movement—sympathetic, imaginative, historical, comparative—was founded upon the transcendental philosophy and came from Germany during the first quarter of the nineteenth century. He fails to bring out the important fact that the really durable elements in the new critical movement—the sympathetic insight, the study of a work of art in relation to the artist and his age, the cosmopolitan attitude toward literature—have absolutely no necessary connection with transcendentalism, and have, in fact, been chiefly carried forward by the anti-transcendental party. He observes, indeed, that there were signs of change in England before the German influence made itself felt; but his earliest reference is to Wordsworth's preface to the "Lyrical Ballads," 1800. And behind that date, he lets us infer, stretched the unbroken and arid desert of eighteenth-century neo-classicism represented by Johnson and Pope. This is, of course, to magnify the critical originality of Carlyle. But it is also to ignore without excuse the cloud of witnesses that cried out against the Augustan régime long before even Wordsworth declared himself a revolutionist. It is to ignore, for example, the powerful yeast of Young's "Conjectures on Original Composition," 1759, and the new and trenchant appraisal of Pope, the sympathetic insight, the insistence upon the historical and comparative method, displayed in the critical writings of Thomas and Joseph Warton, with whom Carlyle was perfectly familiar, but who are quite unmentioned in Mr. Roe's treatise save in one insignificant footnote. As a matter of fact, Carlyle's critical activity, beginning about 1827, did not precede but followed the romantic triumph, and the new critical standards which legitimatized the new poetry and fiction—despised, for the most part, by him—had been widely accepted before he commenced to write.

In estimating Carlyle's achievement as a critic of literature, it seems, furthermore, an evasion of responsibility to limit the inquiry to articles on men of letters. He did not care, as Mr. Roe points out, for the novel or the drama, and he regarded "the sonnet, elegy, song" as belonging to the "out-lying province of poetry." From the outset, in fact, he was preoccupied with ideas; in his "Cromwell" and his "French Revolution" he is exercising the same faculties—and with similar intention—that he exercised in his "Goethe" and his "Voltaire." To him, certainly, literature meant the complete record of life in all its departments. "The critic," Mr. Roe explains, "must have interests beyond the merely literary, he must be competent to understand and interpret influences, social and political, religious and philosophical." Precisely. For that reason it is as important to dwell upon the "Latter-Day Pamphlets" as upon the "Burns." Before we can properly value Carlyle's accomplishment we must take full account of the enormous discrepancy between his ideal of the critical function and his own performance. We must see him in the central forty years of the nineteenth century, imperv-

ious to the light of noonday, obstinately blind to the revelations of science, insensitive to the irresistible force of the democratic movement, futilely opposing the master currents of his generation, and seeking up and down the history of the world only corroboration of his preconceptions.

A Documentary History of American Industrial Society. Edited by John R. Commons, Ulrich B. Phillips, Eugene A. Gilmore, Helen L. Sumner, and John B. Andrews. With preface by Richard T. Ely, and introduction by John B. Clark. Vols. I and II. Plantation and Frontier, 1649-1863; by Ulrich B. Phillips, Professor of History and Political Science, Tulane University. Cleveland: The Arthur H. Clark Co.

As Professor Ely indicates in his preface, the American Bureau of Industrial Research was organized in March, 1904, "for the purpose of preparing a full and complete history of American industrial society." A search was begun to locate material that was deemed essential. There were eventually assembled a mass of early newspapers, and nearly 2,000 pamphlets originally issued in behalf of wage-earners in this country. Many of these were transcribed and classified. A collection was also made of labor conspiracy cases, and the entire body of documents was catalogued. From the material so organized, a selection has been made by the editors of this series. Professor Ely indulges in the somewhat roseate hope that these ten volumes of excerpted documents "will do for the social and industrial life of the American people what the publication of Colonial records, town, State, and Federal records, has done for the political, constitutional, and military life of the people" (i. 31).

While the first two volumes alone are specifically under review here, it may be said at the outset that the title of this series of ten volumes is quite misleading. The ten volumes do not contain "a documentary history of American industrial society." They contain an amount of illustrative material upon two or three important phases of American industrial history. This becomes more clearly evident when we note that the first two volumes are virtually upon plantation economics; that the second two volumes are devoted to labor conspiracy cases up to 1842; and the remaining six volumes to the labor movement between 1820 and 1880. The title of the series, therefore, preëmpts a territory indefinitely more extended than the series exploits. The volumes themselves, moreover, are inaccurately labelled, in that they do not contain a documentary history of even the partial phases of industrial history of which they treat. An accurate title would be: documentary excerpts illustrative of certain phases of American industrial history. While the entire series has not yet appeared, there is no indication that it will endeavor to cover, except by occasional implication, foreign commerce, transportation, colonial policy, manufactures, internal improvements, currency, banking, public lands, corporations, and other topics of cardinal importance. A modern philosopher has protested against the inveterate habit of his class of decorating, each his own peculiar philosophical fancy, with the flag entitled Real World. Historians bent on accuracy may well observe the obligations thereof in the names which their volumes are made to bear.

Professor Clark in the general introduction which he contributes remarks: "What is especially needed is a confirmation of principles of economics by a wide induction from the facts of history—such facts as the present work furnishes" (vol. i, p. 43). How far the essential process of verification of hypothesis can be obtained by historical induction it would be very difficult to say. It is well, however, to remember Keynes's warning that "all that is given to us in each case by direct evidence is a highly complex sequence of events, in which the true bonds of causal connection may be disguised in a thousand different ways, so that, far from being patent to every observer, they can be detected only by the trained student thoroughly equipped with scientific knowledge."

The gem of the first two volumes is Professor Phillips's introduction (vol. i, pp. 69-104). His justification of the title—Plantation and Frontier—on the ground that "the most perfect types both of plantation and frontier occurred in the Southern Colonies" (vol. i, p. 71), is dubious so far as the frontier is concerned. But his characterization of the plantation and its implicates in respect of labor organization; his differentiation of plantation types—the Virginian and Carolinian (or West Indian); his exposition of the constant transference of the plantation régime to the unexhausted lands of the South and Southwest, first to the Carolina and Georgia uplands, and thereafter to the Mississippi and Texas region; these are all remarkably well handled. The running competition between the plantation and the farm was characteristic of the economic history of the South. The seaboard plantation raising staples by means of bond labor forced the farmer to the early frontier. Soil exhaustion in Virginia and Maryland disrupted the plantation system on their seaboard, and the small farmer reclaimed the land. The fresh land of the uplands after the invention of the cotton gin gave the cotton plantation a new lease of life in a new habitat. The alluvial basins with their inexhaustible soil promised to give it permanent life in those sections. But the farm had a staying power which earth-butchery denied the plantation, and was free from dependence on slavery which proved the ruin of the old plantation system.

The documentary excerpts which Professor Phillips appends are well selected and classified, and hardly warrant his own semi-depreciatory comment that the "result is fragmentary at best" (vol. i, p. 98). His criteria in the selection of material *en appui* were "rareness, unconsciousness, and faithful illustration," and are well justified as a whole. He undertook, of course, a difficult task, in endeavoring to give in proper proportion the varied colors and tones of the plantation system and its envelope—slavery. What is perhaps most surprising is the infrequent reference to legislation. In *Monumenta* we expect to find the *Leges* conspicuous. But Professor Phillips is more inclined to take his excerpts from newspaper editorials, news items, and advertisements, or from letters, diaries, books of account, and travellers' records. The topical rather than the chronological arrangement is abundantly justified by the fact that the plantation régime flourished in different regions at different times. But under each particular heading, Staples, for instance, it is rather strange that the chronological order is not adhered to more closely. Why should Sugar Methods in Jamaica in 1815 (vol. i, p. 281) precede Benedict Leonard Calvert's letter of October 26, 1729 (vol. i, p. 282), illustrative of the uncertainty of returns in tobacco? Some of the documents cited to display plantation routine are a bit wearisome and not over instructive. The space devoted to the "poor whites" is confessedly disproportionate to their relative importance in the economy of the South. Occasionally, the annotation is parsimonious. Thus Washington's account of his weaving establishment (vol. ii, pp. 324, 325), deserves some editorial analysis and comment. The light and shade of plantation life are well conveyed by the happy selection of extracts typical of the conscientious slave-owner, the barbarous slave-driver, runaways, epidemics, slave insurrections, the cruel situation of the free person of color "possessing neither the rights of citizens nor the protection of slaves" (vol. ii, p. 158). The section devoted to Migrations of Slave-owners gives also a vivid picture of a process of which all too little has been known hitherto, while the temper and philosophy of the Southern frontier is excellently illustrated by the citations printed. The two volumes are indispensable to the student of the industrial life of the South before the war.

Madame Royale, the Last Dauphine: Marie-Thérèse-Charlotte de France, Duchesse d'Angoulême. By Joseph Turquan, author of "The Sisters of Napoleon." Edited and translated by The Lady Theodora Davidson. New York: Brentano's. $3.75 net.

Marie-Thérèse-Charlotte, Madame Royale of the old régime, and Duchesse d'Angoulême, also Dauphine, of the *émigration* and Restoration, lives in history under a dual visage. For the royalists, this daughter of Louis XVI and Marie Antoinette, who shared the captivity of her parents in the Temple, was an object of almost idolatrous adoration. Even the transformation of the timid and shrinking girl of eighteen, who issued from her prison on the 27th Frimaire, the year iv, under the Directory, into the cold, hard-featured woman of thirty-eight who returned to France with the royal family under the protection of the Allies, could not affect or diminish this cult, which remained constant to the day of her death in 1851. On the other hand, for those who approached her in the hard light of day and without any such veil of sentiment to obscure their sight, she was merely a rude and disagreeable woman of narrow intelligence, if considerable force of character, who had her full share of the proverbial ingratitude of her race, and who requited her most faithful adherents with harsh words and contempt.

Joseph Turquan, thoroughly sifting, in his usual manner, all the memoirs and other personal material of the period, presents the reader with plenty of evidence as to the real character of the princess, and as to the opposite ways in which she was regarded by friend and foe. He also seeks to discover the cause of the changes that took place in her. For, in spite of the fact that she displayed radical and dangerous defects even as a child, causing her mother some concern by her arrogance and obstinacy, he credits Madame with a natural warmth and generosity that she was far from exhibiting in later years. Accordingly, he sees the first cause for the deterioration in the influence of the Austrian court, where she found a refuge after her release, and where she was destined by the Emperor for marriage with an archduke. She resolutely declined this alliance, however, and finally married the Duc d'Angoulême, whom her parents had designated as her future husband, and whom, for political reasons, her uncle, Louis XVIII, was anxious to have her wed. It is, above all, to this loveless and disappointing marriage that M. Turquan attributes the blighting of the princess's heart. It may well have been so. Her letters indicate that she surrounded the suitor whom she had never seen with an atmosphere of romance. The disillusion was prompt and complete. Her biographer draws the picture of the meeting at Mitau:

> When the carriages halted opposite each other the King descended from his. This was not only a great condescension on his part, but a work of time, for he was very corpulent. Madame, light as a bird, in spite of a month spent in her carriage, jumped down, ran across to the King, and knelt at his feet to receive his blessing. There was a pretty scene, and a few happy tears were shed, after which Louis XVIII drew from behind his sheltering rotundity a frail creature of monkey-like appearance. "Your betrothed, the Duc d'Angoulême," he announced, placing a large fat hand on the puny shoulders of the Prince and propelling him towards his niece.

His appearance, however, was not the worst thing about the man whom pride and a sense of duty still forced the princess to accept as her husband. Physically, mentally, and morally a weakling, and at times, apparently, almost a drivelling idiot, with gross manners, unpleasant personal habits, silly vanity, and a bad temper, this hero of Bouvard and Pécuchet was no match for the fine and vigorous woman who, whatever her defects, certainly would have made a good wife and mother. The union was an unfruitful one, and the thwarted affections of the princess withered and turned sour. At least such is the author's hypothesis, and it seems plausible. What, however, is perhaps the most interesting trait of her character is the loyalty which she maintained toward her husband, and which made her endeavor always to place him in positions where he would appear to the best advantage. It should seem almost as if she tried to deceive herself concerning him. In her last exile, when Chateaubriand called upon her as an ambassador from the Duchesse de Berri, she asked suddenly: "What do they think of Monsieur le Dauphin in the army? He is immensely respected, is he not? He is remembered?" There may have been merely pride in this attitude, another manifestation of that obstinacy which made her follow without faltering any line she had once adopted, but the fact should be counted in her favor, as should also her affectionate devotion both to her uncle and to her father-in-law, Charles X.

But while Marie-Thérèse seemed content to shine in the reflected glory of the duke whose laurels she so assiduously gilded, it was really from her that d'Angoulême gained any political importance and popularity he enjoyed, if we except that which came to him from his happy entry into Bordeaux with the armies of Soult and Wellington on the eve of the Restoration. Indeed, Madame, until her unlucky visit to Vichy, of which Charles X took advantage to break his pledge and publish the *Ordonances* that led to his downfall, was the ruling spirit of two reigns, and more than any one else managed to maintain the equilibrium of the monarchy. She was narrow, and lacking in tact, but she had a measure of political instinct and independence of judgment that was wanting in the others. She was also brave and resolute, and showed marked administrative capacity, as in her conduct of affairs in the Southwest at the beginning of the Hundred Days. Napoleon himself said of her that she was the only man of her family, and he seems to have been right. It is hard to waken much interest in the affairs of a family so lacking in dignity and a sense of their situation. Nor, in spite of certain bold traits, is the Duchesse d'Angoulême a sufficiently distinguished figure to detach herself completely from her sordid background and to dominate it. She only occasionally emerges and gives a gleam of the faded glory of her ancestors to the throne she occupied for an instant between two abdications, that of her father-in-law and that of her husband, which were accomplished in a single séance. And even this glory was largely of a sentimental order, the result rather of a devotion on the part of those who were determined to see in the Princess of the Temple an embodiment of the past than of any heroic gesture of her own.

Notes.

Harpers have added another volume, "Desperate Remedies," to their thin-paper edition of Thomas Hardy's novels.

Prof. J. W. Mackail's "Lectures on the Greek Poets," which will be published by Longman this month, include three essays on Homer; two on the lyric poets, with special reference to Sappho and Simonides; one on Sophocles, and a cursory treatment of the Alexandrians, Theocritus and the Idyl, and Apollonius of Rhodes and the Romantic Epic.

The same house has in the press "Educational Aims and Efforts, 1880-1910," by Sir Philip Magnus, and "Philosophical Essays," by Bertrand Russell.

H. Thiselton Mark, lecturer on education at the University of Manchester, is publishing with Fisher Unwin "The Unfolding of Personality as the Chief Aim of Education."

The autumn books of Herbert E. Daniel include "Talleyrand the Man," translated from the French of Bernard de Lacombe, with two portraits.

"The Progress of Revelation," by Canon G. A. Cooke; "Early Ideals of Righteousness (Hebrew, Greek, and Roman)," by Prof. R. H. Kennett, Mrs. A. M. Adam, and Professor Gwatkin, and "An Introduction to the Literature of the New Testament," by Dr. James Moffatt, will be brought out by T. & T. Clark.

Lee Warner promises shortly: "The Letters of Alesandra Macinghi degli Strozzi, 1447-70," now first translated from the Italian by Robert Cust, and "A Flower Anthology," a selection by Alfred Rawlings of English flower poems.

An outline of philosophy in England from Bacon to the present day will be published by A. & C. Black, with the title, "English Philosophy: a Study of Its Method and General Development." The author is Dr. Thomas M. Forsyth.

"The Two Religions of Ancient Israel: with a Re-Examination of the Prophetic Narratives and Utterances," by Prof. T. K. Cheyne, and Joseph McCabe's "The Evolution of Mind," will be issued by the same house.

"The Reminiscences of Goldwin Smith," edited by Arnold Haultain, which is in the hands of Macmillan, will be ready November 23.

Books which will appear in November from the press of Frederick A. Stokes Company include: "Historical Vignettes," by Bernard Capes; "Old Kensington Palace," by Austin Dobson; "Unfrequented France," by Betham Edwards; "Springs, Streams, and Spas of London," by Alfred Stanley Foord; "Highways of Japan," by Lady Lawson; in Masterpieces in Color series: "Watts" and "Ingres"; in the Painters' series, "Metsu" and "Vermeer"; "The Argentine Republic," by A. Stewart Pennington, and "Spain from Within," by Rafael Shaw.

With the intention of presenting to the public the whole love story of the Brownings, Paul Elder & Company are bringing out a new edition of "Sonnets from the Portuguese," which will also contain lyric interludes by Mrs. Browning and Robert Browning's poems to his wife. Arthur Guiterman is the editor.

A new novel of Southern life, entitled "Out of Drowning Valley," by S. Carleton Jones, is announced by Henry Holt & Company.

The same house will soon have ready Storm's romance of German student life, "Auf der Universität," edited, with a vocabulary, by Robert N. Corwin of Yale. Somewhat later this house will publish an enlargement of Pancoast's "Introduction to English Literature," which is undertaken by Pancoast and Sebelling, the latter of the University of Pennsylvania.

The following books are in preparation by Longmans, Green, & Company: "A Soldier's Recollections: Leaves from the Diary of a Young Confederate, with an Oration on the Motives and Aims of the Soldiers of the South," by Randolph H. McKim, and "Back to Holy Church: Experiences and Knowledge Acquired by a Convert," by Dr. Albert von Ruville, professor of modern history at the University of Halle.

The British Museum manuscript of Traherne's poems, which the Oxford University Press is about to issue, has the following title page: "Poems|of|Felicity.|Vol. I.|Containing|Divine Reflections|On the|Native Objects|Of|An|Infant-Ey.|By|Tho: Traherne, B.D|Author of the Roman Forgeries,|& Christian Ethiks.|Printed for Ph. Traheron, B.D. | And are to be sold by," etc. The manuscript is Burney 392.

If the number of books published on a subject is any indication of its popularity, Nietzsche's philosophy must be making rapid conquests in this country and England. Besides the steadily increasing volumes of the translation edited by Dr. Levy, we have every few months a volume of biography or exposition or extracts. The latest of these are "The Quintessence of Nietzsche" (Duffield), by J. M. Kennedy, and "The Gist of Nietzsche" (Luce & Co.), by Henry L. Mencken. Mr. Kennedy is one of Dr. Levy's corps of translators and knows his subject well. He brings out clearly the three main points of Nietzsche's doctrine, viz., the distinction between master and slave morality, the superman, and the everlasting recurrence; but, being himself a full-blooded Nietzschean, he naturally does not go below the surface and drag into light the underlying inconsistency and morbidness of the philosophy. Mr. Mencken's little book gives a series of quotations from Nietzsche under proper heads.

"Mr. Dooley Says" (Harpers) offers the familiar and always palatable ragout of shrewd sense and broad burlesque. Divorce, vacations, books, religion, the Japanese scare, doctors, expert testimony, panics, the tariff are among the chief topics that occupy the sage of Archey Road. Concerning religious faith, Mr. Dooley says, quite in pragmatic vein, "Anny kind iv a fact is proof iv a belief. A firm belief atthracts facts. They come out iv holes in th' ground an' cracks in th' wall to support belief, but they run away fr'm doubt." Of timely weight are Mr. Dooley's views on the Supreme Court: "I have a gr-reat respect f'r th' Joodicyary, as fine a lot iv cross an' indignant men as ye'll find annywhere. I have th' same respect f'r thim as they have f'r each other. But I niver bow to a decision iv a judge onless, first, it's pleasant to me, an', second, other judges bow to it. Ye can't be too careful about what decisions ye bow to." Mr. Dooley, like other institutions, is not always on his high level, but his geniality compels hearing and disables criticism.

The New Library Edition of Pater's Works (Macmillan) now adds three volumes, including "Appreciations," "Plato and Platonism," and the unfinished novel of "Gaston de Latour." We have been stimulated by the pleasant margins and clear type of this new edition to read again the exquisite, languid novel that introduces us to the hesitant contemporary of Ronsard and Montaigne and Giordano Bruno and Charles IX—introduces us only, for the story breaks off just when the influence of Ronsard's modernism and Montaigne's skepticism and Bruno's pantheism are leading the young man away from the traditional religious views with which he started in life. It is rash to venture a guess as to how Pater meant in the end to reconcile these conflicting views of life, but there are hints here and there which lead one to suspect that Gaston—like his creator, for that matter—was to find a compromise between religion and the world in the æsthetic worship of the moment. If this is so, the novel would have been, so to speak, a sequel and conclusion to "Marius the Epicurean." As the fragment stands—evidently in need of revision and expansion—it falls too much into talking *de umbris idearum*, and wavers too much in the twilight of emotion, to be as effective as "Marius," but it has a fascinating charm of its own, and the chapter on Montaigne is a complete and notable study.

"H. J. Mozans, A.M., Ph.D.," manifestly a pseudonym—the author of "Up the Orinoco and Down the Magdalena" (Appleton), opens his book with the statement that it contains the "record of a journey," but he gets nearer to the truth of the matter on page 17, when, after a long digression on the Florida Fountain of Youth (!), he admits that his purpose is "not so much to give descriptions of the countries through which we shall pass—something which has in most instances been done before—as to give the impressions of their earliest explorers, and to dwell, as briefly as may be, on topics relating to the various regions visited." In other words, this is really a sentimental journey, quite a unique performance in these days, at least so far as South America is concerned. As such it is extremely well done, and will give abundant pleasure to that anomalous individual known sometimes as "the curious reader" who delights in being continually interrupted by classical allusions, bits of poetry, more or less appropriate selections from Greek, Latin, French, and Spanish authors, and countless other evidences of an omnivorous erudition. Here are all his old friends: Pliny and Bret Harte, Macaulay and John Fiske, Dante and Mark Twain; there is not one missing. Casual references to megatheriums, mylodons, and megalonyx, the paintings of Raphael, Claude Lorrain, and Ruysdael, the climate of the Hawaiian Islands and the view from Mount Parnassus, all, all are here. Furthermore, by elaborate and painstaking research, "Dr. Mozans" has referred, either in text, foot-notes, or bibliography, to nearly all the ancient and modern writers who have had a word to say about the Orinoco or the Magdalena. As a compilation of extracts from Spanish chroniclers, German savants, and English historians, it is truly remarkable. It is the kind of laborious erudition that would have delighted our grandfathers. But he who comes to this book looking for a single new fact will be grievously disappointed. Altogether, "Dr. Mozans's" work only furnishes another example of the truth that one can know and write a great deal about a country without leaving the vicinity of a good library.

It is not easy to estimate the value of "An Eighteenth-Century Correspondence" (Duffield), edited by Lilian Dickins and Mary Stanton. In substance the book is a collection of letters written to Sanderson Miller of Radway Grange, Warwickshire, by such well-known men as Deane Swift, Pitt, the Lyttletons and the Grenvilles, the Earl of Guilford (father of the famous Lord North), Charles Jenkinson (Earl of Liverpool), etc. Miller's replies have not been preserved, and we thus get a curiously reflected portrait of the man as he appears in the minds of his friends. He was, as the names of his correspondents testify, a pretty well known man in the friendly days of George II although, curiously enough, he is omitted from the Dictionary of National Biography and all other reference books. Apart from his gift of friendship, he was notable as one of the early workers in the Gothic revival (earning thereby the jealous ill will of Horace Walpole), and a large number of these letters deal with various projects of restoration and building in which his advice was sought. The word restoration calls to mind the many acts of vandalism for which the new enthusiasm

was responsible, and it cannot be denied that Miller was as guilty here as another. His building, too, quite often took the form of setting up sham ruins and useless towers; but on this side he has at least to his credit the Warwick County Hall, which, however, is Palladian in style, and not Gothic at all. One is glad to add this amiable and talented gentleman to one's list of eighteenth-century friends. As for the letters themselves, they were excellent in their day and private capacity, but their literary charm, with the exception perhaps of Sir Edward Turner's bouncing epistles, is generally to seek. We fear that only the confirmed lover of that age and society will get very far in them. Yet their very average quality does in a way produce an unusual impression. It would not be easy to say where one should find a fairer picture of the cultivated squires and country gentlemen of the age. There is no touch of genius in the correspondence, neither is there vulgarity or malignity or affectation. One thinks inevitably: These are men I should like to live with. Some value the letters possess also as adding a little to our knowledge of such men as Lord Lyttelton and William Pitt, and especially in the latter case we see a man, commonly portrayed as austere and unfriendly, here displaying unexpected geniality. It is a large tribute to Miller that Chatham could be easy with him. But the value of the correspondence in this direction cannot honestly be placed very high. The editing is for the most part excellent, and one even wishes that the editors had been more generous with their comments and explanations. In one or two places their Latin is strangely at fault.

In "Dead Letters" (Houghton Mifflin Co.) Maurice Baring has made Claudius and Messalina, Catullus, Mæcenas, Marcus Aurelius, Nero, Guinevere, Lady Macbeth, Hamlet, and others, interesting by the rather obvious device of making them quite modern and very English. We have as well French impressions of a Shakesperean performance at the Globe Theatre, and Lord Bacon's correspondence with a literary agent regarding the overhauling of certain dramas by a practical collaborator, William Shakespeare. The book contains in the Roman portions one or two flashes of characterization that make one wish that the letters had been carried beyond the point of sprightly journalism.

The massacre of Fort Kearney ranks next to that of Custer and his troops in the annals of American army tragedies. On December 21, 1866, eighty-one officers and men of the Eighteenth Infantry perished in combat with three thousand Indians, near Fort Kearney, a fort which for months was besieged by hostiles. Frances C. Carrington, the author of "Army Life on the Plains" (Lippincott), was then the wife of one of the officers killed in the massacre and subsequently married the colonel of the regiment, now Brig.-Gen. Henry B. Carrington, retired. Mrs. Carrington has set forth in this volume the record of her brief and tragic frontier experience, and to it is added an account of a trip taken to Wyoming in 1908 with Gen. Carrington to unveil a monument to the massacred of 1866. Gen. Carrington was entitled to state his side of the massacre (a speech of his reviewing it is given at length), and of the conditions at Fort Kearney precedent thereto, for which he was by some unjustly censured. Mrs. Carrington's story of what it meant to be an officer's wife in Indian fighting days adds another to the growing number of such records, of which Mrs. Custer's heads the list. Each one contributes matter of value to the historian who will some day write a history of the army's part in the winning of the West, and make of it an amazingly interesting and touching narrative.

Mrs. Augusta Cooper Bristol, poet, author, and lecturer, who nominated Gen. Benjamin F. Butler for President of the United States on the Greenback ticket, and delivered the principal address at the World's Fair at Chicago before the Women's Conference, died last week at Vineland, N. J. She wrote: "Poems," "The Relation of the Maternal Function to the Woman Intellect," "The Philosophy of Art," "The Present Phase of Woman's Advancement," "Science as the Basis of Morality," "The Web of Life" (poems), and "A Spray of Cosmos."

Science.

The Mammals of Colorado. An account of the several species found within the boundaries of the State, together with a record of their habits and of their distribution. By Edward Royal Warren, S.B., Director of the Museum of Colorado College. With three maps and a full series of illustrations, reproduced from photographs taken from nature. New York: G. P. Putnam's Sons. $3.50 net.

The scope of this handsome volume is indicated by the title and subtitle. In compact and well-ordered form it supplies a large amount of information, both interesting and useful, both popular and technical, and its publication should encourage the production of similar works for other States and localities. With few exceptions, the eighty-one illustrations are based upon excellent photographs; the coyote taken in a trap (figure 78), has an appropriately despondent expression; the frontispiece might well have represented a more impressive form with a less formidable Latin name. Of the statements as to habits, many are credited to other observers, but the author's contributions are among the most important and readable; for example the account on p. 230 of the persistent efforts of a she-bear to provide sleeping accommodations for herself and her cubs at the expense of some travellers. Other noteworthy passages refer to the habits of the prairie dog and the badger. The slaughter of the latter the author deprecates, but, on the other hand, he condemns without qualification the coyote, and states that in Kansas, during the year 1903-4, bounties were paid upon 19,514 of these animals. The Rocky Mountain sheep is commonly believed to fall upon its enormous horns, when leaping from a height, but one was seen to leap from a cliff at least twenty feet high and to alight upon its feet. Although usually direct and graphic, the author's style is sometimes crude, as exemplified particularly in the second paragraph of the introduction. The brief business epistle of John Jacob Astor, dated June 25, 1834, was well worth quoting (p. 8), but its defects of scholarship should not be criticised too severely by an author who shows in his text such solecisms as "ventriloqual" (p. 248); "Spazzani" for Spallanzani (p. 270), "a pair of scissors are" (p. xix), and "data is" (p. xxxiii). The bibliography and glossary are useful features, and the index is fairly complete, but disfigured by the needless repetition of headings.

The growth of manual training in high schools calls for such text-books as "Shop Problems in Mathematics" (Ginn), by Breckenridge, Mersereau, and Moore of the Stuyvesant High School of New York city. This is an excellent little book—clear, concise, and interesting. If studied in connection with the practical work in the shop, something more should be attained than the ability to make trifling articles. The second part of the book contains a review of such mathematical problems as arise in shop work. The chapters on fractions, ratio and proportion, and mensuration might be condensed to a mere set of tables and formulæ, but the chapter on the use of the slide rule is very opportune.

"Field Zoölogy: Insects and Their Near Relatives and Birds," by Lottie E. Crary, has been published by P. Blakiston's Son & Co. The work is divided into two portions, 248 pages being devoted to insects and their allies, and the remaining 107 to birds. The first section of the work is praiseworthy; each important order has a chapter on practical field work, followed by another of more detailed comment. To the smaller groups are allowed a few pages of facts only, and the whole is preceded by six chapters of general discussion. The illustrations in this part are mostly good reproductions of those used by previous authors. The section on birds, however, is below the high standard set by the preceding work. Three pages only are given to field work; these are followed by general comment on migration, nesting habits, etc., and the section ends with a jumble of statements, divided among the various groups. Numerous errors have crept in; the passenger pigeon is scarcely "known in most countries"; and surely "domestic chickens and geese and turkeys" all cannot be included in Lamellirostres, even under the somewhat erratic American system. The few illustrations of birds are crude pen sketches and photographs of indifferently mounted specimens. A very complete index concludes the volume.

Announcement is made of the death of Dr. Theobald Fischer at the age of sixty-four. He was professor of geography at Marburg and had written on his subject, especially on Morocco, extensively.

Music and Drama.

Standard History of Music. By James Francis Cooke. Philadelphia: Theodore Presser Co. $1.25.

Natural Laws in Piano Technic. By Mary Wood Chase. Boston: Oliver Ditson Co. $1.25.

Musical history is now taught by specialists in many of the American conservatories, but great as is the number of these institutions, and of their pupils, the majority of the students are still under private teachers. The happy thought has occurred to James Francis Cooke of providing these teachers with a concise and lucid text-book which shall enable them, though they have made no special study of the subject themselves, to give their classes the training in this important branch of the art which heretofore has been imparted only in the larger schools. There are plenty of the more bulky volumes on this subject, but for the purpose indicated there was need of just such a volume of some 260 pages as Mr. Cooke's. There is a picture or portrait for nearly every page, and the text also strives constantly to bring out picturesque and personal aspects that help to interest the youthful mind.

The early chapters in the history of music are, owing to our incomplete knowledge, extremely difficult to write in a clear and convincing way, but by confining himself to essentials Mr. Cooke has solved this problem. Throughout the volume he has shown excellent judgment in selecting from the bewildering multitude of names and facts those which are of most importance. The critical estimates are remarkably sound as well as free from bias. American composers, performers, and teachers are not ignored. The book is divided into forty lessons, each of which is followed by ten questions. A table covering three pages illustrates the growth of modern music, and a novel feature is a map of Europe, with an index of names which enables one to locate the birthplace of great musicians in a moment. The author, one is glad to see, condemns the ridiculous English nomenclature which includes such a monstrosity as "demi-semi-quaver" for the much more sensible "thirty-second note." On the other hand, he sensibly sides with the English in spelling the name of Russia's greatest composer, Tchaikovsky. An appendix gives useful advice concerning the organizing of young folks' musical clubs. One difficulty, it seems, is that in some localities a club is almost impossible because "people of a priggish or snobbish nature resent having their children associate with any one but those whom they personally select." This attitude, the author advises, should be "soundly ridiculed" by the teacher. He has had much experience with musical clubs and has come to the conclusion that an important element of success is to bear in mind that the member who has an office takes a more active part in behalf of the club, wherefore it is wise to create plenty of offices, "as was done in the old Polish nobility, when it was said that every man in seven had been created a nobleman."

Mary Wood Chase's "Natural Laws in Piano Technic" is also a book for both teacher and pupil. She informs the reader that she is a pupil of the late Oscar Raif, who had a way of proving his theories by demonstrations. One of these was to give a certain difficult passage to a number of his pupils. The right hand was trained to play this by the methods usually taught, while the more awkward left hand followed his theories; the result being that at the end of the prescribed time, without exception, the left hand had gained over the right in surety, velocity, and endurance, and continued to gain over the other week by week. Raif's directions are given in the book, as well as the author's own views. Notwithstanding the amount of space given to anatomical illustrations in the piano "methods," she holds that "muscular study has not been thoroughly treated." She therefore discourses about "weeping sinews," which cause badly-trained players so much annoyance, and about many other aspects of execution. The various kinds of touch are analyzed, and there are useful hints regarding the most effective use of the several pedals. Attention is called to the fact that deep breathing is as helpful to a pianist as to a singer, especially in the execution of difficult passages and as an aid in overcoming nervousness. Playing in public, interpretation, memorizing, are other topics discussed. It is to be regretted that the author perpetuates the absurd use of the word portamento as usually applied to a detail of piano playing. The expression "demi-marcato," which Louis C. Elson suggests in its place in his "Music Dictionary," is preferable for this mode of execution. A real vocal portamento, or gliding from one tone to another, as the wind rises and falls, is, of course, impossible on the piano.

Henry Holt & Co. will soon have ready for class reading two German plays: Gutzkow's "Uriel Acosta," edited by S. F. Cutting and A. C. von Noe of the University of Chicago, and Fulda's "Der Dummkopf," edited by W. K. Stewart of Dartmouth.

An attractive little volume (the Marion Press, Jamaica, N. Y.) has been prepared by Joseph I. C. Clarke and Harry P. Mawson, a committee of the American Dramatists' Club, as a memorial of Bronson Howard, the distinguished dramatist and founder of the club. It contains the addresses delivered at the memorial meeting held in the Lyceum Theatre, in October, 1908, a reprinted appreciation by Brander Matthews, a biography, two addresses by Mr. Howard, and a list of his plays with their original casts. The whole constitutes a fitting tribute to an earnest, able, high-minded and genial gentleman, who did much excellent work as a pioneer in the American drama. Long after his plays have fallen into oblivion he will be remembered for the gallant and successful battle which he fought in the interests of theatrical copyright, and as the organizer of the club, over which he presided until his death. His position as a dramatist he perhaps owed quite as much to the conditions of his time as to any transcendent ability of his own, but there is much solid merit in his "Aristocracy," "The Banker's Daughter," and "Young Mrs. Winthrop," the three comedies upon which his reputation rests most securely.

Charles Frohman has decided to postpone his production of "Chantecler," with Maude Adams, in the Empire Theatre, until the middle of January. The time thus secured will be occupied by Fred Terry and Julia Neilson in "The Scarlet Pimpernel."

During his New York engagement in November, William Faversham will make two new productions, one "The Faun," by Edward Knoblauch, the author of "The Shulamite," and the other a Shakespearean play.

Mrs. Fiske will soon produce a new play, by Harry James Smith, entitled "Mrs. Bumpstead-Leigh." This is the author's first attempt at drama, and is said to be on new lines, with an amusing part for the star. With it will be played one of J. M. Synge's Irish plays, "The Shadow of the Glen." Mrs. Fiske also has a new comedy by Langdon Mitchell, called "The New Marriage," and a piece by Gertrude Atherton, called "Julia France," which seems to include a vision of the woman of the future.

"The Fire Screen" is the name of a new play by Alfred Sutro, of which the American rights are owned by Charles Frohman. It is reported to be a work of considerable power.

The new comedy upon which Sir Arthur Pinero has been engaged for a long time will be produced in London on the 6th of January.

"As You Like It" is to be acted from October 17 to 22 at the Court Theatre, London, by the British Empire Shakespeare Society, with Elizabethan or traditional music performed by the Arion String Quartet; the morris dances in the "Masque of Hymen" will also be given.

There is another tempest raging about the ears of Mr. Redford, the English examiner of plays, who must be getting pretty well used by this time to public denunciation. Now he has refused a license to a play by Laurence Housman, in which, it is said, some sort of violence has been done to the sacred memory of King George IV. He fortifies himself, on this occasion, by declaring that he has acted under the express direction of the lord chamberlain. Official anxiety at this late date about the reputation of Florizel seems a trifle superfluous.

The late Josef Kainz, who in many respects surpassed all other German actors, succeeded in overcoming certain natural disadvantages, especially his slightness of stature. Such was his art and such the

supreme control of his voice that he was able to impersonate characters of even heroic proportions. His versatility is seen from the great range of parts which he attempted; they include tragedy, comedy, and vaudeville.

Art.

The Monuments of Christian Rome from Constantine to the Renaissance. By Arthur L. Frothingham. New York: The Macmillan Co. 1908.

Roman Cities in Italy and Dalmatia. By Arthur L. Frothingham. New York: Sturgis & Walton Co. 1910. $1.75 net.

The subject of Rome and Italy has proved popular with many writers, and every year the number of books—both popular and scientific—dealing with their various aspects, is considerably increased. A new volume, therefore, on this familiar theme must have either of two excuses: it must supply us with fresh discoveries, and thus add to our stock of definite knowledge; or it must present for the first time in a more popular form the scientific discoveries already made, and thereby render them accessible to the layman. Of Professor Frothingham's two new books, the first is justified on both these grounds; the second on the latter.

In "The Monuments of Christian Rome" the author traces the development of Christian art through the several centuries during which it flourished. The volume differs in two points from the numerous German and Italian handbooks which deal with early Christian and mediæval art: it confines itself to the discussion of Christian monuments of the city and province of Rome; and it is not a mere résumé of the investigations and opinions of other authorities, but sets forth the author's own researches regarding certain monuments. Indeed, the book is of greater scientific importance than its character of manual would lead one to expect, since the theories put forth are often quite original and raise new problems which cannot be ignored by other investigators. But in choosing to put forth new theories in a handbook the author appears to have fallen between two stools. The very originality of these theories detracts from the value of the book as a manual, especially as the reader is often left in the dark as to when the author is advancing his personal opinions and when he is adhering to the results arrived at by other scientists. On the other hand, the scientific value of Professor Frothingham's new ideas is minimized by the absence of a full exposition of the arguments supporting his hypotheses. In their present form as *ballons d'essai* they are merely provisional, and as such can hardly be either attacked or endorsed. Thus the great importance he claims for the late classical and mediæval monuments of Rome for Christian art history (pp. 7 and 8) is more than is usually allowed them. The statement that "the new art of Constantine bloomed with undoubted and sudden originality in the field of architecture and mosaic painting" will find many contestants. The theories concerning the relation of the mosaics in Ravenna to those in Rome are ingenious. In the same simple way in which new theories are advanced without adequate proofs, the results of other investigators are rejected without reasons given. The author denies, for instance, that the mosaics of S. Maria Maggiore in Rome belong to pre-Constantine art, and not to the fifth century. In view of the elaborate arguments advanced by J. P. Richter in favor of the earlier dating one might expect more than a mere statement of denial.

A series of good illustrations, well chosen, accompanies the text.

In "Roman Cities in Italy and Dalmatia," Professor Frothingham gives us an account of ancient Italy as we learn it, not only from Rome itself, but from her early rivals and off-shoots—a subject, which, though it has received its due of attention from the expert, has been practically outside the grasp of the average traveller for lack of appropriate treatment. As the author aptly says, "To know Rome well, you must go elsewhere." Rome passed through so many vicissitudes that many traces of earlier periods were obliterated, which are still clearly seen in cities whose later history was less eventful. In this early time, the history and monuments of the cities are closely connected. The author, therefore first gives the history of the period he is describing, and then gives an account of the ruins and finds of typical cities during that period—such as Norba, Ferentino, and Alatri, for the prehistoric age; Perugia, Volterra, Falerii, Tarquinii, and Assisi for Etruscan, and Umbrian dominion: Spoleto, New Falerii, and Cosa for the subsequent period; for the age of Cæsar and Augustus—Spello, Aquino, Verona, Turin, Salona, and so on.

What we miss most in the book is scholarship. The chief points of historical and archæological interest in each city are, indeed, noted, but without that thoroughness, which even a popular hand-book on such a subject requires. The absence of a bibliography and of references to other works, takes away from its value for the beginner, who might have used this manual as a primer to lead him on to more serious studies. The book seems to have been written more in the form of a diary of impressions of an intelligent and observant traveller, than with a view to providing a standard volume on the subject in hand.

"Modern Scottish Painters," with an introduction by Percy Bate, and sixty-one plates, is promised this autumn by Otto Schulze of Edinburgh.

The Earl of Carlisle is publishing with Smith & Elder fifty illustrations in color of old English ballads and songs. The work is called the "Picture Songbook."

A new volume of the Artistic Crafts Series, "Hand-Loom Weaving, Plain and Ornamental," by Luther Hooper, has just appeared from the press of John Hogg.

Five years ago the late Russell Sturgis embodied the results of a life's curiosity in the handsome two-volume work, "The Artist's Way of Working in the Various Handicrafts and Arts of Design." The book, with its many illustrations, is the best comprehensive manual of the arts from the point of view of their production, and was fully reviewed in the *Nation* (February 8, 1906). We have now only to note its reissue by Dodd, Mead & Co., in a more convenient form, at the reduced price of $5 for the two volumes.

Prof. William H. Goodyear, in the *American Architect* for September 28, analyzes the recent government report on the Leaning Tower of Pisa (See the *Nation*, September 22), and concludes that there is no immediate danger. The government commission, which last July reported alarming increase in inclination since 1829, professed to base its calculation on the plates and measurements in Cresy and Taylor's "Architecture of the Middle Ages in Italy." According to Mr. Goodyear the commission did not use this English authority, but the plates and figures of Ranieri Grassi who, largely on the basis of Cresy and Taylor, published "Fabbriche Principali di Pisa" in 1831. Grassi's figures are inaccurate, and all inferences drawn therefrom naturally worthless. Professor Goodyear sensibly protests against statements of average inclinations. A building, the walls of which diminish in thickness and the lean of which varies at different parts, is a refractory object to measure. Comparisons of inclination are valueless unless we know just how and at what point the inclination was tested. In conclusion, a simple method of ascertaining any settling that has taken place since 1829 is suggested. In the light of this criticism the commission report looks very like a mare's nest.

The landscape and figure artist and former manager of the Brooklyn Art School, William H. Snyder, died last week at the age of eighty.

Finance.

SIGNS OF THE TIMES.

Much that is highly perplexing continues to be presented in the financial situation. This week two important statements were given out, bearing on current trade and industry, and they pointed on their face in distinctly opposite directions. The report on the season's crops by the Department of Agriculture indicates that the country's yield of corn and oats will break all records in the nation's history, while the

estimated yield of wheat, though considerably less than in 1909 or 1906, exceeds that of the two intervening years, and is larger by ten or twelve million bushels than the lately prevalent ideas of the trade itself.

As against this indication of better industrial conditions, the United States Steel Corporation, in its statement of unfilled orders on its books at the close of September, showed this week a decrease for that month of 379,000 tons, or 11 per cent., and a decrease from last year of 1,639,000 tons, or 33 per cent. The total value of the remaining orders is, in fact, the smallest ever reported by the company since the steel trade reaction of 1903 and 1904, when the corporation's capacity of output was less than 70 per cent. of what it is to-day.

Similarly conflicting evidence is presented in the money market. That a general movement to cut down overexpanded credits was initiated in this country during the early months of 1910, every one is aware. At New York it took the form of prolonged and compulsory liquidation on the Stock Exchange. In the West it directed itself to reducing outstanding loans of a more or less speculative character, based upon land and produce. That this revision of credits had substantially improved the position of affairs, was admitted on all hands at the opening of autumn, and, in fact, the ease in New York's money market up to the present time, as against the numerous predictions of great stringency, has itself been witness to the fact.

The more recent turn of events in the New York bank situation was explained in this column a week ago; it took the form of a reappearance of that excess of loans over deposits which has invariably, in the history of the decade past, reflected a local strain on capital. The weekly bank statement of Saturday, October 1, showed a loan excess of $14,000,000. On October 8, last Saturday, although the surplus reserve was increased by "shifting" of loans to other institutions, the loan account stood nearly $25,000,000 above deposits. This is virtually as great a disparity as was presented at any time last winter, when the bank position was admittedly unfavorable.

Perhaps even more attention has been attracted by the government's report, last Saturday, on the condition of national banks, in various sections of the country. It showed that, notwithstanding the effort to curtail credit in the interior money markets, the Middle West, including communities of the Ohio and Mississippi valleys, has in the aggregate not reduced loans at all since its June reports, and it now has outstanding $111,000,000 more loans than a year ago. The Western communities between the Missouri River and the Rocky Mountains have done better; they have reduced their loan account $10,500,000 since last June. But it remains $27,000,000 higher than last year, and the year has brought no gain in cash reserves. The South, everything considered, makes the poorest comparative showing of all; its loans are $8,500,000 greater than in June, and $83,000,000 greater than in 1909.

This increase over a year ago is no less than 15 per cent., and it is not accompanied by any considerable addition to reserves. These figures from the Southern banks bear their own suggestion as to the pending cotton speculation, and the returns from both South and West give much food for reflection. Not the least impressive fact disclosed by these detailed figures is that, out of the $37,200,000 total increase in cash reserves of the country's 7,173 national banks, $37,000,000 is accounted for by the banks of New York city.

Taken altogether, this showing of the general bank position, of a highly favorable agricultural outcome of the year (except perhaps for the cotton crop), and of continuous contraction in the steel trade, which is so often called the "industrial barometer," creates a sufficiently perplexing problem. The one unquestionable fact appears to be that the halt in the forward movement of finance and industry must be continued longer. Next to that rather obvious inference, the questions, to what extent the present confused situation results from abnormally high prices of commodities, and how, if that be the cause, the thing is to be corrected, are the most interesting economic problems of the day.

MR. OWEN JOHNSON'S

Lawrenceville Stories

The Varmint

"It's a wonder. . . . And the joyful pathos of the last installment choked me all up—it was so true, and generally and specifically bully."—Booth Tarkington.

12mo, 396 pages. Illustrated by Gruger. $1.50.

The Humming Bird

One of the most amusing baseball slang stories ever written. 12mo, illustrated. 50c.

The Prodigious Hickey

Originally published as "The Eternal Boy." The First Lawrenceville Story. 12mo. Illustrated. $1.50.

THE BAKER & TAYLOR CO., NEW YORK

BEYOND THE MEXICAN SIERRAS

By DILLON WALLACE.

"Much interesting matter, descriptions of regions new to history, and many wise and valuable suggestions in practical economics, are to be found in this work."

—*Philadelphia North American.*

Profusely illustrated. Cr. 8vo, $2.00 net.

A. C. McCLURG & CO., CHICAGO

George Sand

SOME ASPECTS OF HER LIFE AND WORK

By RENE DOUMIC

Author of "Studies in French Literature," etc

Translated by Alys Hallard.

8vo. With 19 Illustrations. $2.75 net.

This finely sensitive exercise in creative criticism first took the form of a series of lectures, delivered before the Société des Conférences, in Paris, during the course of last year. M. René Doumic, of the Académie Française, is peculiarly qualified to estimate the work, and to interpret the life of this diverse and elusive genius, and his study will be found to be full of subtlety and sympathetic intuition. There are several portraits of interest, some of them of a rare order.

G. P. PUTNAM'S SONS, NEW YORK & LONDON

SANITARY LAW IN QUESTION AND ANSWER

For the Use of Students of Public Health

By CHARLES PORTER, M.D., B.Sc., M.R.C.P. (Ed.), Author of "School Hygiene and the Laws of Health." Crown 8vo. pp. xiv+150. $0.90 *net.*

LONGMANS, GREEN, & CO., New York

FOUR IMPORTANT NEW NOVELS

BY POPULAR AUTHORS

MR. FREDERICK ORIN BARTLETT'S new novel

The Prodigal Pro Tem

is the gayest, most spirited story for many a year. This is not only because it deals with a peculiarly delicious situation—which it would be an injustice to the reader to reveal—but also because the people are delightful, well-bred—just like people you know—and because Mr. Bartlett tells the story with a charm and a humor that carry the reader along joyfully. *We have had to print an extra large edition to take care of the advance sales of this latest book by this popular novelist.*

Illustrated by Christy. $1.50

The Scourge

A NOVEL OF THE NEW SOUTH

By WARRINGTON DAWSON

Author of "The Scar." $1.50

In an editorial in *The Outlook* THEODORE ROOSEVELT says of Mr. Dawson's work: "This author writes with power and interest of vital matters."

The scene of "The Scourge" is laid in a small Virginia city, and the story brings out, perhaps more clearly than ever before, the sharp line of demarcation between the viewpoint of the native-born and the vivid, constructive imagination of the transplanted Northerner. "The "Scar" dealt with typical Southern country life in the early nineties; "The Scourge" deals with the time a decade later when much wealth floated about in the smaller cities and towns, but profited outsiders more than it did the people of the soil. Mr. Dawson has won his spurs as an important American novelist.

"A captivating story."—*Mercure de France.*

"A simple story, told very simply by a master. In reading you forget to appreciate the masterpiece; you think you hear the voice of someone you know, who remembers the things he has lived."—*Berlincr Tageblatt.*

"Mr. Dawson belongs to that small but distinguished band of novelists who deal with the great problems that arise from distinctive social and national conditions. There is something more than mere fiction in what he writes. The story is engrossing; as a study of national attributes it has enduring value."—*London Academy.*

SECOND PRINTING OF

Down Home with Jennie Allen

By GRACE DONWORTH

Author of "The Letters of Jennie Allen." *Illustrated by F. R. Gruger. $1.50*

"The host of readers of 'The Letters of Jennie Allen' will hail with pleasure this continued acquaintance with a character whose simplicity, humor and wisdom have endeared her to the great American reading public. Each page of this book is full of laughter, philosophy and humanity. It is sure to have a country-wide circulation. Its illustrations are as laughter-compelling as the text."—*Journal of Education.*

When Love Calls Men to Arms

By STEPHEN CHALMERS

Author of "The Vanishing Smuggler." *Illustrated by Howard Chandler Christy. $1.50.*

"A stirring romance, which reminds one now and then of Scott and again of Stevenson. It carries one on with a rush from the summer evening when we see young Rorie Maclean (of the clan Campbell), a roaring young 'Hielan' laddie of eight, carrying home the milk pails and stopping to peep from between the trees at 'La Trinidad,' a storm-tossed galleon of the Invincible Armada, as she drifts, burning, up the Clyde, till we see him, seventeen years later, seeking to escape the fury of the Macdonald. It is to the vivid pictures of those wild days when might was the only right recognized, when treachery was almost certain to be met half way by treachery, that the book owes its power. The escape of Rorie and Mariposa from the Bute stronghold of the Macdonalds, and the pursuit to Glasgow in which the Lord of the Kyles is foiled only by the wit of Master Bordeaux (a friend, by the way, as he often assures us, of 'Will Shaxper' and Ben Jonson) is as thrilling an episode as we remember in fiction."—*Cincinnati Enquirer.*

Second printing.

SMALL MAYNARD & CO., Publishers, BOSTON

Free Library of 29 Jan 10

The Nation

VOL. XCI.—NO. 2364. THURSDAY, OCTOBER 20, 1910. Reg. U. S. Pat. Off. PRICE TEN CENTS.

From the Scribner Autumn List

The Intimate Life of Alexander Hamilton

By Dr. ALLAN McLANE HAMILTON

With 25 full-page illustrations. 8vo, $3.50 net. (Postage extra.)

By his grandson, the distinguished New York alienist. Treats particularly his relations with his family and his friends, his tastes, his amusements, and his methods of work. Dr. Hamilton has used many letters of Hamilton which have never before been published.

The Servian People

Their Past Glory and Their Destiny.

By Prince Lazarovich-Hrebelïanovich in collaboration with Princess Lazarovich-Hrebelïanovich.

Fully illustrated 2 vols, $5.00 net. (Postage extra)

The first thorough, complete, and comprehensive account of the Servian race and nation from every point of view, taking up not only their history and development, but treating exhaustively of their present condition to-day and of their future aims and prospects. An invaluable account of an interesting race and of a people who are an active and important factor in the Eastern question to-day.

The French Revolution

A Political History

By A. AULARD

Professor of Letters at the University of Paris.

Translated from the French of the Third Edition, with a Preface, Notes and Historical Summaries, by BERNARD MIALL. *In four volumes.*

The set, $8.00 net.

"This great work details the whole history of the Revolution in excellent perspective."—*Globe* (London). "It will become a standard work of reference."—*Liverpool Post.*

France Under the Republic

By JEAN CHARLEMAGNE BRACQ, Litt.D.

Professor of Romance Languages in Vassar College. $1.50 net. Postpaid $1.65.

A vigorous, comprehensive, interesting, and thoroughly documented account of the progress and development of the French nation under the present Republic, giving a vivid idea of the conditions, favorable and unfavorable, which the nation is facing to-day. A large part of the book is devoted to the contest between Church and State.

Moliere: His Life and His Works

By BRANDER MATTHEWS

Professor of Dramatic Literature in Columbia University.

Illustrated, 8vo, $3.00 net. (Postage extra.)

In this brilliant study of Molière and his plays and his times, Professor Matthews presents the most complete, masterly, and notable biography in English of the great dramatist. He sets forth the facts of Molière's life stripped of all the legends that have gathered about it. He traces carefully his development as dramatist, making it plain how cautiously he advanced in his art and how slowly he reached the full expansion of his powers. At the same time he gives a striking picture of the period in which Molière lived, and of his relation to it.

Justice

The Play That Changed the English Prison System

By JOHN GALSWORTHY

Author of the play, "Strife," and of "Fraternity," "A Motley," etc.

60 cents net. Postpaid, 65 cents.

Says the London *Evening Standard*: "Everybody who saw 'Justice' was impressed, and many saw it. Everybody who read 'Justice' was impressed, and many read it. Everybody who heard of it was convinced that this was no ordinary play, no play with an ordinary purpose."

Morituri

Three One-Act Plays

By HERMANN SUDERMANN

"Teja," "Fritzchen," "The Eternal Masculine"

Translated from the German by Archibald Alexander.

$1.25 net. Postpaid, $1.35.

The Town Down the River

A Book of Poems

By EDWIN ARLINGTON ROBINSON

12mo. $1.25 net. (Postage extra.)

This volume is made up of new poems, now first collected, by the author of that remarkable volume, "The Children of the Night," published a few years ago. It shows a distinct advance in poetic insight and in that unusual ironic view, based on a deep philosophy, which has not appeared in modern verse since Browning.

J. B. LIPPINCOTT COMPANY PHILADELPHIA

Publishers of LIPPINCOTT'S MAGAZINE and CHAMBERS'S NEW ENCYCLOPEDIA

An Important Work
On a Profoundly Interesting Subject

The Hygiene of the Soul

By GUSTAV POLLAK

"A few years ago Mr. Gustav Pollak enriched American literature by an important work on the greatest dramatic poet of German Austria, Franz Grillparzer. By now introducing to us another famous countryman of his, the philosopher, poet and physician, Ernst Baron von Feuchtersleben, he has performed another great service to American literature. The particular merit of Mr. Pollak's work consists in the fact that he gives us no mere translation of the 'Hygiene of the Soul,' but a profound study of the life and deeds of Feuchtersleben, which is the result of his perfect familiarity with the entire literature of German Austria. This great erudition is shown in the numerous interesting and instructive quotations and foot-notes."—*New York Staats-Zeitung.*

"Mr. Gustav Pollak attempts to render the 'Hygiene of the Soul' in his own language and to make that work intelligible to us by placing before us the intellectual atmosphere from which it sprung. He has, in our opinion, been eminently successful in his task. . . . The English-speaking world has never heard such eloquent and convincing praise of pre-revolutionary Vienna."—*Vienna Neue Freie Presse.*

"Mr. Pollak's skill as an adapter and translator is well known. In these days of 'mental healing' it is good service to offer in so attractive a form the wisdom of a healthy mind."—*The Nation.*

PUTNAM'S FALL BOOKS

ROMANCE OF IMPERIAL ROME

By ELIZABETH W. CHAMPNEY, *author of "Romance of Italian Villas," "Feudal Chateaux," etc. 8vo. With Photogravure and Other Illustrations. $3.50 net.*

Here is Mrs. Champney's opportunity as well as her chosen field. She leaves to technical experts the discussion of the stage scenery of her theatre and plunges at once into its drama,—giving us graphic sketches of the least known (but not least entertaining) traditions of Italy.

WHERE GHOSTS WALK New Series

The Haunts of Familiar Characters in History and Literature

By MARION HARLAND, *author of "Where Ghosts Walk," "Some Colonial Homesteads," etc. 8vo. Photogravure and Other Illustrations. $2.50 net.*

"Long-forgotten heroes live once more; we recall the honored dead to life again, and the imagination runs riot. Travel of this kind does not weary, it fascinates."—*New York Times.*

THE CAMBRIDGE HISTORY OF ENGLISH LITERATURE

Edited by A. W. Ward, Litt.D., Master of Peterhouse, and A. R. WALLER, M.A., Peterhouse.

To be in 14 Volumes, Royal 8vo, of about 600 pages each. Price per volume $2.50 net.

Subscriptions received for the complete work at $31.50 net, payable at the rate of $2.25 on the notification of the publication of each volume.

Vol. 5. The Elizabethan and the Jacobean Drama I.
Vol. 6. The Elizabethan and the Jacobean Drama II.

These volumes deal with the history of dramatic writing in England to the closing of the theatres under the Puritan rule—that is to say, to about the middle of the seventeenth century.

THE SILENT ISLE

By ARTHUR CHRISTOPHER BENSON, *author of "From a College Window," etc. $1.50 net.*

In this delightful volume of essays Mr. Benson discourses about many phases of life that are not the experience of the individual narrator only but of the world as well, and that will strike a responsive chord in many a heart.

SHELBURNE ESSAYS

Seventh Series. By PAUL ELMER MORE. *$1.25 net.*

This seventh series of "Shelburne Essays" contains papers on the following subjects: Shelley, Wordsworth, Hood, Tennyson, William Morris, Louisa Shore, Thomas Bailey Aldrich, Francis Thompson, The Socialism of G. Lowes Dickinson, The Pragmatism of William James, Criticism, and Victorian Literature.

THE RIVER AND I

By JOHN G. NEIHARDT. *8vo. Illustrated. $1.75 net.*

Under this rather unusual title, John G. Neihardt, the Nebraska poet, tells the story of his descent of the Missouri in quest of exercise, adventure, and impressions.

SCHOOLS OF PAINTING

By MARY INNES. Edited, with a chapter on Schools of Painting in America, and certain further additional material by CHARLES DE KAY. *8vo. With 100 Illustrations.*

The book is intended for schools, students, and the general reader, and offers a general view of the development of painting in Europe from the first century A. D. to the beginning of the nineteenth.

SONNETS TO A LOVER

By MYRTLE REED, *author of "Old Rose and Silver," etc. Crown 8vo. Gilt top rubricated. $1.25 net.*

In these delightful sonnets we have the concentrated essence of all that has endeared Myrtle Reed to her thousands upon thousands of readers: ardor of feeling, grace of imagery, wholesomeness of sentiment, daintiness of touch, and beauty of conception all combined into liquid melody of utterance.

THE MISSISSIPPI RIVER and its WONDERFUL VALLEY

Twenty-five Hundred and Fifty Miles from Source to Sea. By JULIUS CHAMBERS, F.R.G.S. *Large 8vo, with 100 Illustrations. $3.50 net.*

The Mississippi, whether it be considered from the geographic or historic standpoint, has a significance which few rivers possess. Mr. Chambers has recorded in a style worthy of a theme so mighty the great events that have been enacted along the course of this river.

MEMOIRS OF PRINCESS CAROLINE MURAT

8vo With Portraits. $3.75 net.

Hardly any person was better equipped than Princess Caroline to write an account of that incomparable assemblage of all that was best and brightest in the intellect of the Second Empire, and she has stated with frankness and fearlessness her impressions as well as her convictions.

GEORGE SAND

Some Aspects of Her Life and Work. By RENE DOUMIC. *8vo. With 19 Illustrations. $2.75 net.*

M. René Doumic, of the Académie Française, is peculiarly qualified to estimate the work, and to interpret the life of this diverse and elusive genius, and his study will be found to be full of subtlety and sympathetic intuition.

THE NEW INTERNATIONAL ENCYCLOPAEDIA

A SELECTION FROM THE LIST OF

D. APPLETON & COMPANY

29-35 West 32nd Street, New York City

Reminiscences of Rosa Bonheur

By THEODORE STANTON

This book consists of the intimate letters written by members of the great animal painter's family to her, those of her close friends, and her own replies thereto, together with the opinions and recollections expressed by those friends concerning the artist and her work. Compiled, as it is, from sources of information hitherto inaccessible, it is, perhaps, the most intimate picture of Rosa Bonheur's character yet given to the public.

Illustrated with 24 pages of half-tone reproductions of paintings, etc., and with many sketches in the text. 8vo, cloth, $3 net.

Studies in Spiritism

By AMY E. TANNER, Ph.D.

Dr. G. Stanley Hall writes: "I know nothing in the field that has appeared in recent times that at all ably and adequately represents the negative side with reference to the spiritualistic-telepathic hypothesis, which I think is very strongly favored by our studies of Mrs. Piper." A timely book, in view of the recent death of Professor William James, and the spiritistic messages alleged to have been transmitted by him from "the other side."

With an introduction by Dr. G. Stanley Hall. Large 12mo, cloth, $2.50 net.

Problems of the Elementary School

By ARTHUR C. PERRY, Jr., Ph.D.

A book which cannot fail to interest not only superintendents, principals, and teachers, but the lay reader and the student of education as well. The first of its two parts deals with the general problem of the elementary school—its organization and the relation thereto of the curriculum and moral training. The second treats of certain specific problems in method and management; it offers solutions of these growing out of the author's personal experience in the school and class-room.

12mo, cloth, $1.25 net.

The Young Privateersman

By WILLIAM O. STEVENS and McKEE BARCLAY

This is a story of the enlisting of three Baltimore lads, one of whom is a negro slave, on a privateer during the War of 1812. They meet many exciting adventures. Their ship runs the blockade, they engage in several fights, are put in charge of a captured prize, are themselves captured by the English, imprisoned in Dartmoor prison, escape and flee with difficulty across the moors, board a friendly frigate, are again captured, make a surprising discovery, and after various adventures finally return home.

Illustrated in colors. 12mo, cloth, decorated cover, $1.50

The Big Game of Africa

By RICHARD TJÄDER

The author has been more than once to Africa for the American Museum of Natural History; and, on his return from his last trip, he furnished the Museum with thirteen tons of specimens, including the head of an elephant larger than "Jumbo," and brought to the Bronx Zoölogical Gardens a live rhinoceros. This book differs from other books describing hunting for big game in Africa, inasmuch as it has a scientific basis and deals very fully with all of the requirements for such an expedition.

Illustrated with 32 pages of photographs taken by the author. 8vo, decorated cloth cover, $3 net.

Descriptive Meteorology

By WILLIS L. MOORE

Chief U. S. Weather Bureau

A book that brings the essentials of meteorology up to date in an available form. The fact that meteorology may be an entirely new subject to the reader has constantly been kept in mind. An effort, too, has been made, by the inclusion of a chapter on forecasting, to show the practical uses to which the science of meteorology is every day being put. Chapter IX is especially of interest to those engaged in the navigation of the air.

Many charts and illustrations. Cloth, $3 net.

American Corporations:

The Legal Rules Governing Corporate Organization and Management. With Forms and Illustrations.

By J. J. SULLIVAN, A.M., LL.B.

Instructor in Business Law, University of Pennsylvania, author of "American Business Law"

This volume combines a scientific treatment of corporation law with a mass of practical information which must usually be sought through a number of different books. In addition, the subject is handled in an interesting way, so that the casual reader may find entertainment as well as instruction.

Large 12mo, cloth, $2 net.

Rulers of the Surf

By J. W. MULLER

The story of a boy who is rescued in a terrible wreck, adopted by a fisherman in a little village, brought up in the life of bay and surf, learns how to sail and to fish, to work as a life-saver, and undergoes all the experiences of life by the sea. The events are true, and the descriptions of sea life are from the author's personal experience. The work of life-savers in a winter gale is not exaggerated, but based upon an actual wreck.

Illustrated in colors. 12mo, cloth, decorated cover, $1.50

Three Most Important Contributions to Historical Writing

"THE RECORDS OF THE FEDERAL CONVENTION OF 1787"

Edited by PROFESSOR MAX FARRAND *of the Department of History, Yale University*

This great work supplies what will probably prove to be the final edition of the proceedings of the Convention which framed the Constitution.

Its accurate reprinting of original manuscripts, its collation of all the existing accounts, its exhaustive analysis of differences, will render the book of extreme importance to students of constitutional law, while as a source book it will be invaluable to lawyers and legislators. It affords a means of understanding the spirit of the Constitution in a way made possible by no other work.

Among the subscribers to the Limited Edition are the following: Hon. William H. Taft, Hon. Franklin MacVeagh, Hon. Whitelaw Reid, Hon. Charlemagne Tower, Hon. Frank B. Weeks, Hon. Eli Whitney, Hon. Truman H. Newberry, Hon. J. Benjamin Dimmick, Hon. Benjamin S. Cable, J. Pierpont Morgan, James J. Hill, Cornelius Vanderbilt, Robert W. De Forest, Professor Henry C. Emery, Frederick W. Vanderbilt, Adrian H. Joline, Hon. John F. Dryden, Hon. Herbert Parsons, James Schoulcr, Hon. William B. Davenport, and many others.

Subscribers' Edition, limited to 250 sets, numbered and signed by the Publishers, printed on Van Gelder hand-made paper, bound in blue boards, vellum back and corners, three volumes, each six hundred (600) pages, in a wooden box, net $30.00, carriage extra. But fifteen (15) sets now remain unsold. An eight-plate facsimile of the Constitution appears in this edition, together with two half-tone plates.

Library Edition, three volumes, each six hundred (600) pages, bound in buckram, gilt top, net $15.00, carriage extra.

READY IN DECEMBER

THE HIGH COURT OF PARLIAMENT AND ITS SUPREMACY

An Historical Essay on the Boundaries Between Legislation and Adjudication in England

By CHARLES HOWARD McILWAIN

Thomas Brackett Reed Professor of History and Political Science in Bowdoin College.

The peculiar timeliness of the work will serve to enhance its value as a piece of original and scholarly research in a subject of great permanent and present vital interest.

This book should prove suggestive and valuable reading to students of constitutional history, and to all those interested in the origin of the forms of government which have so largely influenced us in the development of our existing system.

Sufficient endorsement of its scholarly character lies in the fact that the Oxford University Press will publish it in England simultaneously with the present publishers.

Octavo, cloth binding, gilt top, 400 pages, index. Price $2.50 net; postage 16 cents.

THE CAMPAIGN OF CHANCELLORSVILLE

A STRATEGIC AND TACTICAL STUDY

By MAJOR JOHN BIGELOW, Jr., U. S. Cavalry, Retired.

Author of "Mars la Tour and Gravelotte"

The Campaign of Chancellorsville presents a greater variety of military problems than any other in which the army of the United States has taken part. The author's object in describing it has been not only to tell what was done, but how it was done; to present a typical view of the conditions and methods of troop-leading that obtained during our Civil War; and to do this in a way to interest and instruct the general reader as well as the military student.

"Major John Bigelow's book is intended for use in the study of the art of war, and is of great value. . . . Interest in the events and in his telling is so great as to make it hard to leave the study and turn to other demands."

—Hartford Courant.

"Although Major Bigelow's position enables him to speak with authority on the conduct of a campaign, it is not always that one is able, as he has shown in this volume, to make a military history interesting to the lay reader. This volume is so authoritative that every modern soldier should read it."—*Boston Transcript.*

"No more instructive and readable book on a single battle of the Civil War has appeared."

—Army and Navy Journal.

"Major Bigelow's point of view seems very fair and altogether removed from prejudice. The volume is intensely interesting, and because of its information on many hitherto unnoticed points, and its accuracy as to detail, will doubtless attract wide notice and comment."—*The Times-Dispatch,* Richmond, Virginia.

Illustrated with 47 maps and plans, strictly limited to one thousand copies, printed from type. Size 8¼ by 12, in a slip case, net $10.00, postage 33 cents extra.

Dr. George B. Mangold's *discussion of*
Child Problems *(Citizen's Library)*

is a scientific and comprehensive survey of the child problems which modern society is attempting to solve.

Cloth, leather back, $1.25 net; by mail, $1.35

Delos F. Wilcox's *analysis of*
Great Cities in America

Also in the Citizen's Library, is an essential to every man who has occasion to refer to any problem of municipal administration in America.

Cloth, half leather, $1.25 net; by mail, $1.35

Pres. Charles R. Van Hise's *valuable book*
The Conservation of Natural Resources in the United States

is a compact, comprehensive statement of what the nation owns, of forests, minerals, soils, and water, and of what laws are needed to protect its resources.

Fully illustrated, cloth, $2.00 net; by mail, $2.14

Prof. William Stearns Davis's *interesting book*
The Influence of Wealth in Imperial Rome

is faseinating in itself and because of a striking similarity in some respeets between present conditions and those he deseribes.

Cloth, 8vo, $2.00 net; by mail, $2.14

Life in the Roman World of Nero and St. Paul

By T. G. TUCKER, Litt.D., is as vividly real to the reader as was the same author's *Life in Aneient Athens.*

Cloth, 8vo, illustrated, $2.50 net; by mail, $2.68

Mabel Osgood Wright's *new book*
Princess Flower Hat

It solves no problems, preaches no fad, is simply a light-moving eomedy of life and love with a liberal savor of fun.

Cloth, 12mo, $1.50

Clara E. Laughlin's *new novel*
"Just Folks"

is a sympathetie story of the fortunes of a poor family whose members are neither social problems nor charity cases, but "just folks."

Cloth, 12mo, $1.50

E. V. Lucas's *new novel*
Mr. Ingleside

Is something better than any ordinary novel; it is like sharing all the interests of modern London, with a set of delightful people with whom the reader is on intimate terms.

Cloth, 12mo, $1.35 net; by mail, $1.48

Mr. Stephen Reynolds's *characteristic book*
Alongshore

A drifting, leisurely sort of book which will appeal to every one who knows intimately the atmosphere alongshore.

Cloth, 12mo, $1.20 net; by mail, $1.31

Samuel McChord Crothers's Book of Friendship

is one of the friendly books to keep at hand to pick up for the resting moment. Decorated with full-page drawings. A companion to Mr. Mabie's "The Book of Christmas" and Bishop Doane's "The Book of Easter."

Cloth, gilt top, $1.25 net; by mail, $1.35

Jacob A. Riis's *new book*
Hero Tales of the Far North

A book to widen sympathy, setting beside the heroes whom we show to Americans of foreign birth the heroes which the Scandinavian offers in his turn to our honor and admiration.

Cloth, illustrated, $1.35 net; by mail, $1.47

Anathema
By Leonid Andreyev

(A Play) Translated by HERMAN BERNSTEIN.
Author of "The Seven Who Were Hanged."

An allegory on broad lines of the spirit of reason facing the inserutable mystery of human misery.

Cloth, 12mo, $1.25 net; by mail, $1.35

Pietro of Siena
By Stephen Phillips

Author of "Ulysses," "Herod," "The Sin of David," ete., the most brilliant and poetie playwright of modern England.

Cloth, 12mo, $1.00 net; by mail, $1.10

The Religious and Ecclesiastical Correspondence of W. E. Gladstone

Scleeted and arranged by D. C. LATHBURY. An essential supplement to Mr. Morley's great "Life of Gladstone."

Cloth, 8vo, 2 vols, $5.00 net

The Life of Benjamin Disraeli, Lord Beaconsfield

By F. W. MONYPENNY. Edited from official doeuments, and including letters and other papers as yet unpublished. To be eomplete in four octavo volumes, of which the first is to appear at onee.

Ready in November

Reminiscences of Goldwin Smith
Edited by Arnold Haultain

A book of unusual interest, as presenting the impressions reeeived by one of the most scrupulously aeeurate, high-minded, and sympathetic observers of Amerlean life.

Illustrated with portraits, etc. Ready in November

Published by **THE MACMILLAN COMPANY** 64-66 Fifth Ave., N. Y.

The Nation.

NEW YORK, THURSDAY, OCTOBER 20, 1910.

The Week.

It is difficult to believe that President Taft is seriously thinking of making Senator Root a justice of the Supreme Court. Concerning his legal ability there can, of course, be but one opinion, and his distinguished career as a public man would on its face make the selection a natural one; but there is an objection to it which is, in our judgment, absolutely fatal. Whatever his actual merits in the past, and however confident Mr. Taft might be that no criticisms that may be made upon that past would apply to the conduct of Mr. Root upon the Supreme Court bench, it is the simple and absolute fact that he does not enjoy that kind and degree of public confidence, in relation to the most vital questions nowadays likely to come before the Supreme Court, which it is of the utmost public importance that the members of the Court shall command. In placing Gov. Hughes on the bench, Mr. Taft's great service lay not only in adding to the Court a man of rare intellectual vigor and professional ability, but far more than this in the reinforcement which the authority of the Court derives, in the mind of the whole nation, from the presence of a man like Hughes upon it. The extraordinary confidence which he commands for absolute rectitude of purpose was what found expression in every State in the Union, in the press of every shade of party feeling, when his appointment was announced; a circumstance the more remarkable in view of the adverse judgment widely entertained of his opinion on the income tax amendment. In Mr. Root's case, it may almost be said that a sentiment of precisely the opposite character would be manifested by a large part of the people of the country; and unnecessarily to challenge such a sentiment would be an act not only likely to be of disastrous effect to Mr. Taft, but emphatically opposed to the highest considerations of public policy.

Only a glance is needed at Western newspapers to see how serious is the difficulty which Mr. Roosevelt confronts in being one thing in the West and another in the East. The Des Moines *Register and Leader*, writing for the Iowa insurgents, refers to the unmistakable "suspicion and distrust" caused by the platform in New York "wholly out of keeping with the Osawatomie speech." The *Oklahoman* concludes that there is "somewhat a Jekyll and Hyde nature about Roosevelt's principles." And the Southern newspapers along his route were asking Mr. Roosevelt if he would champion Stimson by repudiating the tariff plank on which that candidate stands, and how long he would continue to side with Payne and Taft in New York while sticking knives into them in the West. Such are some of the troubles of one who tries to be Radical and Conservative at the same time, and of whom it can be said, in the paraphrase of Hosea Bigiow printed in the Indianapolis *News:*

But jest to decide 'twixt stan' pat an' insurgent
He finds ain't expedient, not to say urgent;
He hums an' he haws, backs an' fills till you're dizzy;
In Kansas is one thing; in New York whut is he?

Mr. Stimson's speech to the Republican Club of Columbia University was so well put as to deepen the regret that New York has not a campaign this year in which he might be judged for what he is in himself. It is the unfortunate fact, however, that very little attention will be paid to his personal candidacy, or to what he says. With or without his consent, the chief issue before the people of the State is an endorsement of Rooseveltism; and no arguments which Mr. Stimson may make can really divert the main attention from that. It may be said that this is wholly irrational, but political campaigns never were synonymous with pure reason; and if it is asked who is to be blamed for distorting and confusing the contest this year, applicants must be referred to Oyster Bay. If Mr. Stimson talks about Rooseveit's views, by way either of defence or apology or mitigation, he will be heard, and his words will be duly weighed; but on other subjects he might as well speak in a foreign language. This is a pity, but it is true.

The document itself has not fallen under our notice, but the statement is made that the Democratic State Committee of New York is distributing a leaflet "to inform voters that Republican rule has increased the cost of living 60 per cent. in ten years." On this matter of the increased cost of living there is a vast amount of buncombe in the air, and very likely the leaflet in question is a good specimen of it. Nevertheless, two things must be borne in mind: In the first place, that the Republicans are now getting a dose of their own medicine, and deserve precious little compassion; they have been claiming all the credit for all the prosperity and welfare the country has enjoyed in the past half-century, and they have got to take the lean with the fat. The Democratic campaign charge that the high prices have been created by Republican rule is, at all events, not so palpably and obviously false as the assertion which Republican statesmen of the highest rank have made a thousand times that panics come only under Democratic rule, when the most terrible panic the country has ever passed through—that of 1873—came in the very middle of a long period of unbroken Republican rule. And, secondly, even though the high prices of the present time be due chiefly to other causes, there is no doubt that a great many prices would be much lower than they are if the protective tariff tax did not stand between the consumer and the markets of the world.

The Penrose candidate for Governor of Pennsylvania, John K. Tener, has, it appears, engaged in some other means of obtaining a livelihood than playing professional baseball. He is accused by the Philadelphia *North American* of having lent his name to a fraudulent concern, the National Public Utilities Corporation, of which he was president until May 2 last and a director until only a few days ago. His salary as president was $5,000, and he received a stock bonus of $50,000. The corporation was capitalized at $2,000,000, and while William L. Chrisman, Tener's successor as president, says that only $50,000 of the stock has been sold, the *North American* presents a list of the stockholders which shows that $1,145,480 worth of

stock (taken at its par value) has been unloaded on the public. The assets of this remarkable corporation were the assets, or, as the *North American* puts it, the "worthless remnants, of four other corporations, organized and wrecked by the same swindlers, which had fleeced numerous investors." To sell the stock of this fraudulent Tener company two "fake" banking concerns were formed. "Haines & Co., Bankers," one of these concerns, is composed of Linwood Haines, described as a convicted swindler, and Thomas Bromley, jr., a bankrupt, who escaped conviction on a technicality. The real man in the Tener company is Frank L. Smart, whom the *North American* portrays as a "close friend and business associate of John K. Tener, and a professional promoter of swindles."

President McCrea of the Pennsylvania Railroad, at the Washington hearing before the Interstate Commerce Commission, made what was in many respects the fairest presentation of the argument for higher freight rates. His testimony perhaps had special weight, in view of the well-known fact that the Pennsylvania opposed as unwise and unbusinesslike the movement started by Mr. Harriman, in 1908, to put up rates in the face of the prevalent industrial depression. His argument of last week was largely based on the great amount of capital which the company has taken from current earnings to put back into the property. Naturally, stress was laid on the New York terminal undertaking, which Mr. McCrea declared had already cost $97,000,000 and would cost, in all, $108,000,000, but from which, he affirmed, the company expected no return whatever. His general conclusion was that "it would be wholly unsafe to assume that the company will, as the result of the growth of its business, be enabled to recoup itself for the depletion in its surplus revenue which is certain to result from a continuance of the present operating cost."

The *Nation* has frequently pointed out that these are questions of fact, which it is the duty of the Commission impartially to determine. The existence of what amounts to a monopoly in the transportation business, through the concerted action of the companies on competitive rates, has made it out of the question to leave the fixing of the rates wholly to the companies, and that is why the present hearing is in progress. It still remains to be settled just how large and how permanent the increased running expenses are, just to what extent the natural increase of traffic counterbalances them, and just how far the present rates are really higher than they were in previous years when the rebate was habitually practised. We believe that the Commission may be trusted to reach a decision on these points with entire fairness of spirit towards the railways. With Mr. McCrea's affirmation, reported in some of the accounts of his testimony, that the present depression in financial markets was primarily and absolutely due to the rate investigation and the political situation, we have no great sympathy. Such things undoubtedly influence the market. But Mr. McCrea is not so simple a financier as to be ignorant of the larger and temporary causes—chief among them the premature financial exploitations of last year—which led directly to the present state of things.

Had Julia Ward Howe been of the other sex, she would have been affectionately and gratefully termed a "grand old man." But an old woman no one could have called Mrs. Howe, even in the most reverential of moods, however much the other adjective was merited. For hers was a spirit youthful to the end. As with her husband, Mrs. Howe's best claim to the gratitude of posterity is as a soldier in the war of humanity. The battle hymn which in after years became almost a plague to her because of the public's sentimental insistence upon knowing how and when it was written, will remain, of course, a permanent memorial—as an illustration of how a great poem may be struck off in a moment of national danger. It was, she always declared, the outcome of her prayer that she might be of some assistance to her embattled country. A similar height she was never again able to reach. But as one of that remarkable New England group of men and women of letters of which Thomas Wentworth Higginson is now the sole survivor, she shone none the less. To her reform-work she came at first reluctantly. She had thought Garrison and the other Abolitionists "to be men and women of rather coarse fibre, abounding in cheap denunciation"—until she met the leader and became convinced by the "glory of sincerity in his ways and words." Then she joined the cause with all her heart, as later she espoused that of the woman suffragists, against whom she was also bitterly prejudiced until she met face to face the saintly Lucy Stone, "who had long been the object of one of my imaginary dislikes," only to find her "pure, noble, great-hearted, with the light of her good life shining in every feature of her face." It is a strong example she has set all her sex these last ten years by toiling, despite lameness and physical weakness, up and down the land, bound never to rust out and as young in heart as the great-grandchildren she adored.

The untimely death of William Vaughn Moody is a real loss to American letters. His rare poetic quality made itself felt and won instant recognition while he was yet an undergraduate. The present dearth of real singers makes men's ears keenly sensitive to the notes of any new lyre, and when Moody's "Ode in Time of Hesitation" and his verses "On a Soldier Fallen in the Philippines" appeared, there was distinctly the thrill with which men greet the first proofs of a master mind. Not only did the poetic quality of this writing speak for itself, but there was in it much of the lofty patriotism of James Russell Lowell. If it is true that none of his later verse reached the great heights of these poems, there are a number that have found a permanent resting place in American anthologies. How much ill-health and how much devotion to dramatic writing had to do with his failure to reach again the heights of his art, may appear later. Suffice it to say that his first drama, "The Great Divide," stirred the theatre-going public as much as did his poems in their more limited literary field. If it had the inevitable defects of a first play, its strength and power were unmistakable. It is idle to wonder now just how far Mr. Moody would have gone had the long life he deserved been vouchsafed him. But this we do know: he was a man pure of heart, unsullied by contact with the world, with the best feelings and the highest aspirations of an artist.

The general regret at Senator Dolliver's death is due not only to the fact that he is a public man cut off in his prime, but to the belief that he was just entering upon a career of wide usefulness. His coming to the front within the past two years, with a display of unusual powers, was a striking case of political development. It was not that his abilities were ever "arrested," but their range was known only to his friends until he was roused by the events of last year to put forth those exertions which revealed him to the country as a powerful debater, and as a man who would break with his party rather than with his conscience. Mr. Dolliver's reputation became most surely based in the course of the Senate debates on the tariff. In them he showed a mastery of the particular subjects which he had made his study, together with a skill in logical fence, a readiness in argument, and a power of thinking on his feet, which made him a notable figure. His series of attacks upon Senator Aldrich in that gentleman's chosen field—the tariff on cotton goods—were as brilliant as they were successful, the veteran from Rhode Island being more than once convicted of ignorance, while on one occasion he was so confused and exasperated by the Iowa Senator's persistent and sarcastic questions that he beat a precipitate retreat from the Senate Chamber. Dolliver was a poised and strong man of the kind that the country can ill spare.

While we are waiting for our own Tariff Commission—which will, of course, make every tariff schedule as clean as a hound's tooth, and will do it with such neatness and dispatch that we shall hardly know that anything is going on—it is interesting to cast an occasional glance at the goings on in less fortunate countries. One of Mr. Chamberlain's devices for gilding the pill of protectionism for the English people was the organization of a Tariff Commission—a volunteer affair, to be sure, but guaranteed to be strictly scientific in its operations. This was about seven years ago, and once in a long while the fact that the body is still in existence is brought to the public notice; as is done, for example, just now in a passage-at-arms between the veteran Liberal statesman, Lord Eversley—better known as John Shaw-Lefevre—and Mr. Hewins, secretary of the Tariff Commission. Much as we regret to admit any shortcoming in a gallant attempt at scientific reform, we have to record the fact that Lord Eversley's showing makes the Commission's labors look very melancholy. It has taken the Commission all these years to report its findings with respect to three out of the fifteen trades it undertook to look into; and meanwhile the facts upon which its findings were based have become so antiquated as to have no proper bearing on existing conditions. When to this simple objection is added a long list of charges of sins both of omission and of commission involved in the methods employed, there seems to be little left of any chance that the Commission's conclusions will be accepted as authoritative. Incidentally, Lord Eversley points out that "every one of the dismal prophecies of decadent trade by hundreds of witnesses has been falsified by subsequent events"; and, although it would be hard lines for any of us if we were to be judged by our merits as prophets, there can be no doubt that the perversity of facts in refusing to conform to the Chamberlainite predictions has had a most powerful influence in discrediting the whole protectionist agitation in England.

If London has found a way of uniting increase of traffic with decrease of noise, she will become the object of general envy and interrogation. And no less an achievement than this is claimed for her. Starting with the remark of a long-absent emigrant to Australia that the most striking contrast between the capital as he left it and as he finds it now, is its silence, the London *Times* endeavors to account for the paradox. The root of the explanation it discovers in the fact that noise of traffic depends no more on its volume than upon other factors, such as its congestion and the character of the vehicles and of the roadway. In all of these respects the last fifty years have seen vast improvements in the metropolis. The construction of the Thames embankment and of the "tube," the use of wood, asphalt, and macadam for paving, and of rubber tires, have more than counterbalanced the enormous growth in the number of noise-making contrivances. The writer is not so carried away by his gratification over the improvement as to deny the existence of all noise in the London streets, but he holds that "the silence of London is just as much of a reality as its noise."

Premier Briand's happy combination of firmness and conciliation has had its irresistible way with the French strikers. The massing of troops at critical points, upon which the dispatches lay the emphasis, contributed the necessary assurance of the government's readiness to employ the final argument wherever it might be required; but the Premier's announcement of negotiations with the employers, looking to an increase in wages for the men, was at once the justification of force and an act best adapted to rendering force unnecessary. It is not surprising that such able handling of a very threatening situation should so promptly find its reward in averting what threatened to be almost a revolution. Napoleon III's ill-omened boast has been suitably altered and quietly put into effect by his less ambitious successors: *La République, c'est la paix.*

On the occasion of Emperor William's recent visit to Vienna, the Tripie Alliance was naturally magnified, and special emphasis was laid upon the friendly coöperation of Germany and Austria. The Kaiser himself, in his public address, referred to the way in which Germany had stood by her Austrian ally at the time of the annexation of Bosnia and Herzegovina. In the picturesque figure of Imperial speech, Germany had taken her stand "in shining armor" beside Austria in compelling Russia to acquiesce in the annexation. This refers, of course, to the threat to mobilize the German army which was said to have been sent to St. Petersburg at that time. This the Emperor now appears to confirm, and even to exult in; but a very different tone was taken in the authoritative account of the affair published in the *Norddeutsche Zeitung* on March 31, 1909. In that it was declared that the story of threats addressed to Russia was "grotesque," since the only exchange of views "took the form of friendly conversation." But it would now seem that one at least of the conversationalists was in shining armor clad. In diplomacy circumstances alter phrases.

ARE THE PEOPLE FOR RADICALISM?

The Cincinnati *Times-Star*, a newspaper owned by a brother of President Taft, raises the question whether there would be any chance of a Radical candidate or a Radical party carrying the country in 1912. Its own conclusion is that there would be no chance at all. Recalling the fact that, three times since 1896, the Republican party, as the party of conservatism, has shown that it could win the electoral vote of every large State north of the Ohio and east of the Mississippi, it asks what would happen if "Republicans and Democrats should change positions in the next Presidential campaign." If the Republicans were to have a Radical candidate on a Radical platform, and were to be opposed by the Democrats on conservative lines, it is the belief of the *Times-Star* that the latter would have an easy victory.

Such advance political speculations are usually pretty barren. It is hard enough to have a philosophy of history as respects the past; the future eludes us because we cannot know what unexpected conditions may arise to vitiate our wisest forecasts. There is no likelihood, for example, that the issue will ever present itself in the clear-cut form imagined by the Cincinnati *Times-Star*. We shall not have a frank avowal of thorough-going Radicalism on either side. If a candidate is put up who is really a Radical at heart, he will make a campaign in order to persuade people that he is one of the finest and most trusted Tories that ever lived. And his rival, if a known Conservative, will be driven by stress of political weather into intimating that, if it comes to smashing corporations and ripping things up generally, he will be found to be quite a devil of a fellow himself. Thus, instead of having a Radical squarely pitted against a Conservative, the chances are that we shall have only a Conservative Radical in one party standing against a Radical Conservative in the other.

We have, however, in our recent political past something pretty solid to go upon, in this matter of the inclination of the American electorate towards Radicalism. In 1896 we had the issue presented in as sharp a form as we are apt ever to see it, and with all the advantages on the side of Radicalism that it could ever hope to have. It was championed, that is to say, by a popular orator of tireless energy and a fanatic strain, whose inflammatory appeals fell upon the ears of workingmen out of employment and farmers deeply in debt and seeing no exit from their hard times. It should seem a perfectly safe prediction that, if a man like Bryan could not procure a majority for Radicalism at a time when his agitation was so highly favored by circumstances, no other man need hope for success under any conditions that are even remotely probable. In 1896, for example, the West and the South were poor; today, they are the sections of the country where wealth is perhaps most generally diffused, and where certainly the sense of being well-to-do is most frequent. Does any man suppose that he could advocate a policy which might fairly be construed into an assault upon property, and now expect the support of States where property has been most rapidly accumulating?

There are two mistakes which ambitious politicians make in playing with Radicalism because they think it is popular. They confuse dissatisfaction and a desire for political change with a readiness to upset established institutions. Now, grumblers usually have special grievances; the discontented have particular things in mind which they very much dislike. About them a great deal of clamor may be raised, without at all implying that the dissatisfied voters are ready to take up with any kind of destructive course commended to them by demagogues. An intense and widespread dissatisfaction with the high cost of living does not mean that a happy-go-lucky statesman who proposes to make the necessaries of life cheaper by government regulation can count upon a great rush of the electorate to his side. Discontent is a passing phenomenon, while Radicalism is a permanent attitude; and it is a blunder to think that one necessarily grows out of the other. The dissatisfied may appear to be as numerous for the moment as "the myriad cricket of the heath," but it does not follow that the Radicals will be equally so. That is the second mistaken inference of the eager agitators who hope to ride into power on a wave of Radicalism. They ought to be more careful of their definitions. They say that the country believes in progress, and that therefore its citizens must be "progressives"; but then they proceed to slip into the word progressive various doctrines which are instantly perceived to be violently Radical and upheaving. Yet there is no evidence that Americans are disposed to run after such novelties, whether they be labelled progressive or reactionary. They have not got over their historic fondness for the cautious, rule-of-thumb and inch-by-inch method of making progress; and if anybody believes that he can suddenly convert them to the plan of making everything new overnight, he is destined to a rude awakening.

AVIATION.

The public statements made by Mr. John B. Moisant in England, as well as since his arrival in this country, have been of extraordinary interest. No one else talks with the assurance and apparent mastery of the subject displayed by this young American, whose flight from Paris to London, carrying a mechanic with him, recently startled the world. Not that Mr. Moisant is in the least boastful or visionary. He is simply in deadly earnest and seems sure of his ground. Though deceiving himself in no wise as to the progress thus far made, he is positive, for instance, that an aeroplane will cross the Atlantic in ten years. To a reporter he stated last week that aeroplanes may really be said to have been in service for only one year, and he complained that the American public expected too much. "They want us to run before we can walk, and walk before we can creep. That is the wrong spirit." Yet he is confident that each month will see a marked advance in the practical development of the art of flying.

For all their impatience, Mr. Moisant indicts Americans for failure as individuals and as a nation to lend the aid and stimulus to this new art which are so notable in France and Germany. In that respect there seems to be a close parallel to the development of the automobile, save that the Wright brothers were indubitably among the first to develop a usable biplane. But the Wrights are to all intents and purposes devoting themselves to the purely commercial side of the business, while Moisant, Harmon, Hoxsey, Ely, and all the rest of the many who have suddenly gone into the business of flying are in the van of

American progress, but apparently far behind the developments in France. True, we are seeing a large number of "aviation meets," and many prizes are offered for long-distance flights. But Mr. Moisant feels that the latter do not help at present, and that the refusal of capital to go into the business in a serious way is likely to keep America in second place in flying matters, as it has been in fourth or fifth place in the development of the automobile—behind France, Italy, and Germany.

What, we presume, Mr. Moisant wishes is that some man of great wealth or that some great business concerns would take up the aeroplane and deal with it in a broad-minded and scientific spirit. There is a rumor that Charles M. Schwab has decided to become interested. We hope it is true. Mr. Moisant points out the kind of things he has had to learn by experience—the replacing of wires by tubular metal, the use of metal instead of wooden planes, the strengthening of the frame without increasing its weight, etc. He has even ordered a 100-horsepower engine to weigh only 214 pounds. But all these things are difficult for one man of small means to accomplish, and his progress must be comparatively slow. Were some large concerns like the Bethlehem Steel Corporation, for example, to experiment with a view to manufacturing frames and engines, the story might be a totally different one. As for the army, we must admit that there is not much in what it has done with the aeroplane this year to call for enthusiasm. Here, too, it seems as if progress must come from private initiative.

Whether this is due in part to military reluctance to develop a weapon which may make armies impossible, it is too early to say. On this point Mr. Moisant is as emphatic as Mr. Harmon, and in these words:

> When I talk about what can be done by the plane in war I am talking about an accomplished fact, not a dream. It is not that we must make the aeroplane practical; it is only that we must put it into practice. That is only a question of time and of capital. People talk of shooting at flying machines from the ground and warding off an attack in that way. We can travel seventy miles an hour, and more than that soon, and can go up 5,000 feet or more. Can they hit us under those conditions?

He can himself, he says, steer his aeroplane with one hand and drop missiles with the other; and a passenger could give his whole time to that occupation. Now, if there is anything at all in this it is the duty of every government to investigate it at once at any cost. As scouts, the German and English aeroplanes do not seem to have been very successful. As attacking forces they have not been tried out anywhere. But here is a practical question of such great moment to all the world that, if no one else will assume the burden, the peace organizations should lend their aid to solving it. At any rate, Congress should promptly make liberal appropriations for experimenting with an invention which cannot fail to be of enormous benefit to humanity, even if it should not bring about peace.

As to the question of custom houses, it is far too early to say that the aeroplane will make tariffs impossible, as Mr. Moisant seems to think. It may be difficult at the present time to see how aerial smuggling could be prevented, but the ingenuity of protectionists, of which we have had so many sad examples, may be relied upon to invent devices or to make laws that will compel men coming in from over-sea flights to land at certain points or be subject to drastic penalties. Whatever the future holds in store in this respect, the appearance in the field of aviation of practical, far-sighted men like Messrs. Harmon and Moisant is the surest guarantee that the progress thus far made is only the beginning of the most fascinating enterprise and sport of modern times.

A LANDMARK OF MEDICAL PROGRESS.

With the opening of its hospital on Monday, the Rockefeller Institute for Medical Research in New York entered upon a new phase of its great work. At the same time, the announcement was made of an additional endowment of $3,800,000. The results already attained, and the ample promise of others equally important, have fully justified the hopes of those who have been instrumental in organizing and conducting the laboratories in which the labors of the Institute's investigators have thus far been carried on. But now, in addition to this research work, the Institute will conduct a hospital designed for the purpose of concentrating upon a certain number of patients suffering from the particular diseases to which it is thought most important to direct study all the resources available to medical science for their relief, and of gaining for medical science all the instruction that can be furnished by the most accurate and unremitting observation. Nothing that spaciousness and careful planning in the buildings, or any of the appliances of comfort and of medical care, can do to promote the well-being of the patient and the opportunities of the physician, has been omitted.

It must often have struck any one who has thought of the slow advancement of medical science—slow, at least, compared with what the eager interest of mankind would demand—that it labors under a disadvantage, in comparison with other sciences, which is inherent in the conditions upon which medical practice must be carried on. The very obligation lying upon the medical practitioner to do whatever seems most likely to benefit his patient deprives him of the chief weapon of the scientific investigator in any other field of research. Everywhere else, the scientific worker's cardinal resource is freedom of experiment. Speaking generally, he does not care a button, when making a particular experiment, whether a given effect will be produced or not; he is intent not upon making something happen, but upon finding out what *will* happen. The medical practitioner, on the other hand, whether in private practice or in the hospital, is under the most sacred obligation to make, in a sense, no experiments at all; he makes *efforts*, and only such efforts as his previous knowledge tells him are likely to prove beneficial. Only by the comparison of results in countless cases—attended, too, with all sorts of complications—do these various efforts, sometimes successful, sometimes unsuccessful, more often still of doubtful effect, finally yield results comparable in point of certainty with those obtained by free experimentation in other fields. When we think of the complexity of the subject-matter, and of the tremendous difficulty of bringing to a focus the results of inquiries conducted in this way, the wonder is not that medicine has not advanced more rapidly, but that it has conquered as much ground as it has.

But this debarment from the resources of experimentation is not the only fundamental disadvantage under which medicine has labored, in comparison with other sciences. Upon the side of observation—the twin sister of

experiment—the difficulty, while not so definite, has been almost as serious. Until the days of the modern hospital, the medical practitioner had only the most imperfect opportunity for thorough observation of the patient. Not merely did he see his patient only in a fragmentary and irregular way during the time his services were in requisition, but in ninety-nine cases out of a hundred he had little or no accurate knowledge of what took place after his services were dispensed with. Of anything like that minute and unremitting observation which is the key of so many of the great achievements in the biological sciences generally, the practice of medicine, up to a comparatively recent time, except in a few signal instances, offered hardly a trace.

In modern days there has been an enormous advance toward supplying both these deficiencies, and with it there has come that magnificent progress of medical science and practice which is reflected in the conquest of some of the most deadly diseases and in a decisive reduction of the general death-rate. The sciences of physiology and chemistry, as such, have contributed greatly to this result; but preëminently important have been, on the one hand, systematic experimental research conducted through the use of the lower animals as subjects, and on the other hand the thorough organization of the modern hospital, in alliance with the medical school and the system of trained nurses. Laboratory research, amply endowed and directed with perhaps unprecedented perfection of system, has been the line on which the Rockefeller Institute has thus far worked; now it is aiming to push the idea of the hospital as a means of investigating disease to a degree of efficacy never before attained.

WOMEN'S CLUBS.

We believe that most readers will agree with us in the assertion that the current magazine literature of social progress and social reform is, as a general rule, anything but cheerful reading. This is not to make any accusation against it, or to deny to it high merit and great usefulness; it is simply a statement of fact, and of a fact that is natural enough. One may be delighted, for example, to learn all about what Judge Ben Lindsey has done for the children of Denver and of the country and for the purification of Colorado politics; and yet the reading of his story of the Beast and the Jungle is certainly not an exercise calculated to raise one's spirits, unless one's cheerfulness is of the Mark Tapley variety. It is fine to be told of the thousand ways in which work is being done to improve the condition of the poor, but it is a rare thing nowadays to come upon any such account without having the sins of the rich, and the shortcomings of society in general, thrust at us with quite as much emphasis as either the misfortunes of the poor or the success of the men and women who, with so much unselfishness and so much intelligence, devote themselves to this or that work of progress. All this, though it may sometimes be sadly overdone, doubtless tends to edification; what we are remarking just now is simply that it seldom makes cheerful reading.

The immediate occasion for this remark, however, is an article to which it does not at all apply. In the *Century* for this month, Miss Hildegarde Hawthorne gives an account of the General Federation of Women's Clubs which presents a most pleasing picture of a group of activities that we all know something about, but the scope, variety, and importance of which are probably very imperfectly appreciated by most people. What strikes one particularly about it is the wholesomeness of the spirit in which the work is done, the catholicity of the aims represented, and the salutary effect which, in the vast majority of cases, it must exercise upon the women engaged in it, no less than upon the community at large. What the women's clubs busy themselves with cannot be better indicated than in the graphic words in which Miss Hawthorne portrays the activities represented in the Federation:

> It reaches all over the land, and starts the people to making their homes, their yards, their streets, squares, and parks clean and beautiful. It provides playgrounds for children and rest-houses for weary mothers. It seeks to keep the child out of the factory and mill, and to improve the schools. It brings travelling art-galleries to places that never had the chance to see a good picture, and establishes yearly exhibitions. It has free and loan scholarships for both young men and maidens, and provides opportunities for them after they have been graduated. It works with men to pass good laws and restrain lawlessness, to conserve the great natural resources of the country, to clean rivers and harbors, and redeem their banks from ugliness and neglect. It sends lecturers on art, literature, civics, and household economics wherever they are called for, and it inspires the desire for them; moreover, when necessary, it gladly pays their expenses. It is non-sectarian and non-political, and though both suffrage and anti-suffrage clubs shelter under its broad wings, the Federation remains impartial.

Not the least of the merits of the Federation is its genuine and spontaneous promotion of a true spirit of democracy. This has been a marked feature from the beginning, and it would not be easy to estimate the beneficial effects that have flowed from it, especially in view of tendencies of the time working in quite the opposite direction. Miss Hawthorne tells the story of a most interesting episode which not only illustrates this spirit of democracy, but also serves as an excellent example of the twofold good that the work of a woman's club is capable of accomplishing—the good that the workers aim to do, and the good that inevitably comes to themselves from the doing. In the canal zone at Panama there existed a social condition of such unrest and discontent within our colony of canal-builders as to give the Administration at Washington great concern. President Taft had the happy thought of applying to the Federation of Women's Clubs for assistance in the situation, and the result was that Miss Helen Varick Boswell was sent to the Isthmus to see what could be done. She found the women not only consumed with *ennui*, but also divided into numerous social cliques which would have nothing to do with each other. All this she promptly set about transforming:

> She went to each of the eight large towns in the Canal Zone, met the women, talked to them of their duty to the community, organized clubs in each place, and got acquainted with everybody as a first step to making them all acquainted with one another. Women of all social grades joined these clubs, each of them finding an interest in one or more of the four departments, the home, the educational, the philanthropic, and the entertainment. Incidentally they found one another, and presently liked one another. They worked together for the common good. They taught the native women how to cook, they began to take the children in hand, they studied the best methods of living in the tropics, and on the hygienic perfection created by the men they superimposed beauty and charm.

It is not necessary to imagine that all of the 800,000 members of the clubs composing the Federation are either giving or receiving such benefits as Miss Hawthorne's article describes, in order to be deeply impressed with the

value and importance of this remarkable development of the last few decades. The change in domestic conditions has been so widespread and so profound that an enlargement of the sphere of women's interests and activities has been an inevitable consequence. Of the entrance of women, by the hundred thousand, into industrial and business fields formerly occupied by men only, we have heard a great deal, and we all recognize that, for a vast body of women, this has been an unquestionable necessity. Their participation in political government through the suffrage is now the subject of one of the most interesting struggles of the time. Intermediate between these two fields may be placed that occupied by the activities of the women's clubs, which, at their best, must be recognized, by lovers of the old order as well as champions of a new, as furnishing at once a wholesome outlet for natural and beneficent impulses and an unexceptionable means of accomplishing many objects of the highest value to the whole community.

JOHN BROWN.

Of all the men who have held, for some brief space of time, the eye of the American people, none has evoked more diverse estimates of his character, motives, or achievements, or stirred more deeply or lastingly the fountains of enthusiastic praise and bitter hate, than John Brown of Osawatomie. The student of American history finds him acclaimed, on the one hand, as the saviour of Kansas, the chief agent in negro emancipation, and the one sure forerunner of the civil war; and, on the other, denounced as a half-crazy religious enthusiast running amuck in the modern world, a fanatical leader of wild and hopeless enterprises, a criminal, and even a murderer. A whole literature of books, poems, and magazine articles, and a still larger volume of myth, tradition, asseveration, story, and prejudice, have grown up about this extraordinary person. Men and women who never saw him, and who would have fled in terror from his presence, have vied with his companions and intimate friends in describing his appearance and habit of life, or in analyzing his mind and appraising his work, or, more easily, in acclaiming or denouncing him. It would be hard to find, in the history of any country, a man whose actual operations of a public sort covered so short a time or so small an area, who, nevertheless, for what he did, or planned, or intended, has been at one moment spurned as a criminal and a fraud, and at the next elevated to a rank with such as are rated little lower than the gods.

So far as the text and notes of Mr. Villard's handsome volume* show, no pains has been spared to produce a biography both accurate and complete. Not only has he, with lavish disregard of labor and expense, literally swept the field of documents and personal testimony, but he has traced Brown's life from day to day throughout the entire active period of his career, gone minutely over the ground on which he operated, and tested every printed or verbal statement with the rigid thoroughness of a laboratory investigator. Doubtless the immediate result of it all will be to stir rather than lay controversy; those persons, and they are many, whose misstatements, aspersions, or extravagances are here exposed are certain to be forward in their own defence; but at least we have here a book, and the only book, in which the unquestioned facts of John Brown's career are completely exhibited. If the author's conclusions differ from the conclusions of others, he cannot be charged with either withholding or distorting the evidence upon which they are based.

The early life of John Brown, here for the first time searchingly examined, shows a curious blending of the good and the questionable. Of honorable New England ancestry, though not a Mayflower descendant, Brown came to manhood through the rough experiences of the frontier, with little education or personal discipline, but with clean morals, an acquaintance only too intimate with frugality and hard work, religious convictions rivalling those of the most austere Puritan of the seventeenth century, and a stern conception of fatherhood which ruled his family with a rod of iron. He was for a time a postmaster under the second Adams; but an invincible fondness for speculation, entire freedom in the use of other people's money, bankruptcy in 1842, and repeated suits for irregular financial transactions of an unpleasant cast, make his record as a man of affairs one of suspicion and failure. As a member of the firm of Perkins & Brown, wool merchants, at Springfield, Mass., he showed virtually complete incapacity for business, while a trip to Europe in 1849 netted a loss of about forty thousand dollars. When, at the age of fifty-five, he threw himself into the Kansas struggle, he had, save in a few minor transactions, failed in everything he had undertaken, aroused in more than one quarter uncomfortable suspicions as to his honesty, and succeeded in earning only a meagre living for himself or his family.

Just when John Brown conceived of the idea of freeing the slaves is uncertain. Mr. Villard, who examines the question with care, is unable to find documentary evidence before 1840 of anything more than a family agreement among the Browns to oppose slavery; or until after 1846, when Brown removed to Springfield, of a deliberate intention to use force. The abolition movement under Garrison, with its consistent opposition to forcible measures, did not appeal to him; nor was he at any time, save after 1850, particularly in touch with either the political or the moral agitation of the slavery question which stirred the country after 1835. "In 1851, however, the policy of armed resistance becomes much more clearly developed; the man of war is now emerging from the chrysalis of peace" (p. 50). Mr. Villard thinks that the moving influences here were, first, contact with the zealous abolitionists of New England, many of whom were not at all averse to fighting; and, secondly, the passage of the Fugitive Slave Act. Whatever the cause, however, Brown had passed, before the Kansas struggle opened, from simple moral opposition to slavery, such as many Northern men felt, to a conviction that slavery must be destroyed by force, and that he was divinely commissioned to lead the onslaught. From this point the course of his thought to Harper's Ferry, which was almost certainly in his mind before 1854, and to Kansas as an intermediate ground on which the virtues of guerrilla warfare might be tested, was an easy transition. The plan was fixed by 1855, when he removed his family for a second time to North Elba; and from then until his death, with dependence upon friends as his only important means of livelihood, he was a man of one idea, an enthusiast unselfishly devoted to a great cause.

Of John Brown's spectacular career in Kansas, the salient point for the historian and the moralist is, of course, the Pottawatomie massacre. Thanks to Brown's son, Salmon, and to his son-in-law, Henry Thompson, Mr. Villard is able to present for the first time an accurate account of what took place; and the story in all its detail is worthy of careful perusal. It seems now unquestionable that the plan of attacking the pro-slavery squatters was conceived by Brown, with the active encouragement of H. H. Williams, who himself designated the men to be killed, and with the assent of the majority of Brown's followers; that the unfortunate victims were accurately described as "brutes and bullies," though later declared to have been peaceable and of good character; that the delay of twenty-four hours near Dutch Henry's Crossing was not due to the reluctance of one of the party to proceed, but to the necessity of rest after a night's march and a day of work and travel; that two of Brown's sons, while probably protesting, submit-

*John Brown, 1800-1859: A Biography Fifty Years After. By Oswald Garrison Villard. Boston: Houghton Mifflin Co. $5 net.

ted, though without becoming actual participants in the killing; and that Brown himself killed no one, though he directed the movements of the party and probably fired a shot at the lifeless Doyle.

Over the question of the attitude of the Free State leaders towards the massacre, and the effect of the episode on the Kansas situation, controversy still rages, and Mr. Villard's conclusions are not likely to go without rejoinder. Yet I am compelled to think that Mr. Villard's narrative makes it clear, beyond any possible doubt, that the Pottawatomie massacre, far from checking the attacks of the border ruffians, not only had no such effect, but, in fact, inspired retaliation; and a retaliation, too, which eventually drew Free State and pro-slavery men alike into reckless and indiscriminate raiding, plundering, and killing. The sword of the avenger, wielded with cool calculation and ghastly effect on the Pottawatomie, opened the Kansas border to anarchy; as a means of silencing the pro-slavery attacks, it was a patent failure. Nor were there precedent conditions which justified it. No Free State person had been killed near Osawatomie, and only five offences of a lesser sort can be definitely established. Neither does it appear conclusively that Brown acted at the suggestion or under the direction of Free State leaders, much as it may have suited the devious purposes of Robinson and others to approve the killing later. If there be any justification for the act, it must be found in Brown's undoubted conception of himself as an agent of the Almighty, sent to kill in order that freedom might the sooner reign; but neither the unselfishness of his purpose, nor the spiritual exaltation in which it was carried out, suffices to save him from absolute condemnation. As Mr. Villard well says, "if he deserves to live in history, it is not because of his cruel, gruesome, reprehensible acts on the Pottawatomie, but despite them" (p. 188).

The main features of the Harper's Ferry raid have long been known, and Mr. Villard's pages do not materially alter the understanding of them; but he has added a good deal to our knowledge of details, especially as regards the period of direct preparation, the movements of Brown in Iowa and during his second sojourn in Kansas, the organization of the new government at Chatham, Canada, and the collection of arms and money. Long as the Virginia plan had been in contemplation, and subordinate as were the Kansas operations to the achievement of this larger purpose, the matured project was not revealed to Brown's Massachusetts friends until 1858. It must ever remain one of the wonders of American history that men of sense and substance could be found to contribute money, to be spent without accounting by a man like Brown, and in aid of an undertaking obviously both treasonable and impossible; or that Brown could impress even his most enthusiastic supporters with his ability, given a handful of men and a few hundred dollars, to bring slavery to its knees. As it was, when the restiveness of the little band at the Kennedy farm, long inactive and fearful of exposure by inquisitive and suspicious neighbors, made it necessary to launch the enterprise, Brown, for all his years of thinking, went into Harper's Ferry on that fateful October night with no definite plan of procedure, and no provision for retreat in case of possible failure.

Into the trial of Brown Mr Villard goes at length, paying particular attention to the charge, strongly urged at the time in many parts of the North, that the trial was unduly pressed and was not fair. In a generation not yet hardened to long-drawn-out criminal proceedings, the fact that Brown was still suffering from his wounds, and lay most of the time on a cot in the court-room, too weak to sit or stand, naturally aroused sympathy; but the jail physician testified that the prisoner was able to undergo the ordeal without danger, and the haste, even though unseemly, was at least in conformity with Virginia law. It does not appear that Brown suffered any denial of substantial justice, or was discriminated against by the court, albeit the prosecutor, Andrew Hunter, pressed the case aggressively. Brown's own statement, in his memorable last speech in open court, that he was "entirely satisfied" with the treatment he had received, is weighty testimony to the same effect.

Only the legalist who sees in John Brown merely an insane criminal or a common murderer, or in whose mind character and motives can never be separated from acts, can view without awe the final scenes: the defeated prisoner, with the dream of his life ended, refusing to countenance plans for escape and calmly awaiting death; the jailer wiping away tears at the pathos of the letters he perforce must read; the wife coming at the last, to whom were permitted to be given, though with scanty mede of time or privacy, the final instructions, the last messages to family and friends, and the good-by. Even the elaborate military accompaniments of the execution, suitable only for some desperate criminal, were, after all, no unfit array for the departure of a man who might have said, at any moment of his life, what he is reported to have said at taking leave of it, "I am ready at any time."

History has yet to pass its final verdict upon John Brown; and while Mr. Villard's researches, praiseworthy in high degree for their painstaking thoroughness, lighten at many points the task of appraisal, they also, of course, somewhat complicate it. There will still be asked the questions which, asked and answered a score of times already by enemies and friends, penetrate to the heart of Brown's career. Was he an irresponsible fanatic? Did he save Kansas for freedom? Did he give to emancipation its final impetus? Did he precipitate the civil war?

To each of these questions the answer, I think, must be, though with unequal emphasis, no. To ignore the element of religious assurance in John Brown's nature, his sincere and unshaken belief in the guidance of Providence, or to adjudge him a lunatic or a criminal because he was also a fanatic, is only to deny the potency of spiritual experience in human history. It is not the least of Mr. Villard's successes as a biographer that he has grasped clearly, and at the same time estimated at its true worth, this fundamental religious influence in Brown's life. Mental unbalance, as he points out, keeps no such high level of thought and expression as characterizes the later extant letters and speeches of John Brown; nor are we yet reduced to the necessity of interpreting historical events by the easy device of denying sanity to men who are visionary or intense.

Nor may we hail Brown as the saviour of Kansas or the liberator of the enslaved blacks. Freedom dawned upon Kansas no sooner because of what he did. As to emancipation, the solid preparation for that great step is to be found in the long and persistent agitation of the abolitionists, and the slow growth of a moral condemnation before which the system of slavery could not stand. Slavery was doomed before Brown began his attack upon it; and while his terrible blows startled the defenders of the fortress, they could not break down the gates. So, too, with the civil war. The irrepressible conflict was too far advanced, the bitter enmity of South for North too deeply stirred, the political and social antagonism too obviously irreconcilable, years before John Brown marched into Harper's Ferry, to be either checked or hindered. Neither the secession of South Carolina, nor the election of Lincoln, nor the attack upon Sumter, nor any other of the many important events which paved the way to war, was immediately affected by the raid, or, for that matter, by the discovery of a sentiment in the North friendly to it.

The service of John Brown was, rather, to reveal to the North, not by his life but by his heroic death, the depth and intensity of its own moral sense. What others had conceived of as, at best, only a remote possibility, he dared in amazing rashness to undertake. The foolishness of his plan at Harper's Ferry, and the pitifully impotent means with which he undertook to carry it out, do not obscure his purpose

or the spirit in which he acted. His place, in other words, is not so much with men of action, or great leaders, or far-seeing reformers, as with the noble army of martyrs and the goodly fellowship of the prophets. He was the herald of a new day, the preacher of a militant social righteousness which ignored conventional limitations and gloried in hardship and sacrifice. No one could have been less a model in the troublous times he looked upon, or approached the performance of a solemn duty with a past more deeply stained and scarred; yet not even Lincoln himself was a greater inspiration to the soldiers who, in a few short months, were fighting for the Union. To have told with accuracy, sympathy, and impartiality, as Mr. Villard has done, the story of this remarkable life, is a solid achievement in the field of historical scholarship. WILLIAM MACDONALD.

TOPOGRAPHICAL MAPS OF THE UNITED STATES.

About thirty years ago the several independent geographical and geological surveys that under different departments of the general government had been for the previous ten years exploring and mapping the then little-known "Western Territories," were discontinued on account of lack of correlation and frequent duplication, to say nothing of unfriendly rivalry in their work. In accordance with a recommendation of the National Academy of Sciences, a single organization, the United States Geological Survey, was then established by Congress in their stead. The new Survey was charged with the task of preparing a geological map of the national domain; and as no topographical map existed on which the geological formations could be represented, the Survey, under the able direction of Major J. W. Powell, undertook the production of a topographical map of the United States. This caused some adverse comment at the time, and it was in fact a novel arrangement, for according to all European precedent the preparation of topographical maps should have been the work of army engineers, or should at least have been conducted under their direction. Ours is, I believe, the only geological survey in the world which includes a large corps of topographers, and which thus surveys, engraves, and prints for itself the indispensable topographical base on which its geological maps are published.

It must be admitted, however, that during the first ten or more years of the Survey's work, many of the topographical maps were, to say the most in their favor, of no great merit; for although the Survey received large, indeed enormous, appropriations for this work, it was for a time impossible to procure expert topographers in sufficient number; and when to this difficulty there was added the official pressure for large area of results and an insufficient inspection before publication, it is not surprising that many of the sheets issued between 1880 and 1890 had to be resurveyed in later years.

Thirty years of experience have witnessed great progress. It is chiefly in order to emphasize the excellence of the really admirable maps issued during the past fifteen, more particularly in the past ten, years, that mention of the earlier imperfect work is here made. Many of the sheets lately issued are masterpieces of cartography. The standard of accuracy demanded has been constantly rising. Inexperienced young surveyors have been trained into expert topographers. Inspection has become more and more thorough. The truthfulness of the maps, and hence their value in many practical uses, has gained wide recognition. They constitute to-day an indispensable element in the equipment of any one who would acquaint himself with our geographical foundation for problems of any sort. A good number of States now contribute towards the expense of surveys within their boundaries; but the work of surveying is left wholly in the hands of the national organization.

The best of it is that these excellent maps are made available for wide use by being sold at a merely nominal price. The cost of surveying, drawing, and printing is charged to the Geological Survey, which must have the maps whether they are otherwise used or not. If any one else desires a map, he can have it at the cost of printing, five cents for a single sheet, or three cents a sheet by the hundred. The sheets are now called quadrangles; an explanation of the style of the map is printed on the back of each sheet. A list of all the quadrangles thus far published, with index maps of the several States, can be had free on application to the Director, United States Geological Survey, Washington. Large orders, as for schools or libraries, can be conveniently sent in by marking the maps desired in the printed list.

If any one wishes to measure the recent improvement of the Survey maps, let him look first at the Tell City, Ky., and Fort McKewett, Texas, quadrangles, with their monotonous uniformity of contour-line curvature, and then examine the delicate lines on the Bessemer, Ala., and Socorro, N. M., quadrangles, by which so nice an expression is given to many kinds of surface; or let him confront the earlier and later editions of the Fort Payne, Ala., or Oconomoc, Wis., quadrangles, and note the vast increase of detail in the newer maps. If any one wishes to note the sketchiness of some of the maps drawn over from earlier surveys, let him look at the Uinta, Utah, sheet, on a scale of four miles to an inch with an overlarge contour interval of 250 feet, and then turn to the Gilbert Peak and Hayden Peak quadrangles, which include part of the same area on double the scale, with 100-foot contours; it is really rather difficult to identify corresponding points, so vaguely does the older map represent the singularly sharp forms shown on the later maps.

The surveys undertaken in coöperation with some of the States have in a few cases resulted in bringing out maps of special districts on an exceptionally large scale, to meet particular economic demands. Thus a survey of that part of the Mississippi flood-plain known as the Yazoo basin, in conjunction with the State of Mississippi, has produced a series of "advance sheets" on a scale of 1:24,000, with five-foot contours, which exhibit the behavior of wandering rivers on a flat flood-plain with a degree of detail seldom equalled. Similarly parts of the great plain known as the Sacramento valley have been surveyed in conjunction with the State of California on a scale of 1:31,680, again with five-foot contours; and here one may see how actively the streams from the adjoining mountains have been aggrading or building up the plain, for the contours frequently turn down-stream instead of up-stream as they pass a water-course. The demand for information about Alaska is bringing forth some extraordinarily interesting sheets; for example, the Fairbanks and Nizina quadrangles, on which the peculiar forms of severely glaciated mountains are portrayed with great expressiveness. At the present rate of progress, we are really in a fair way to have our geographical features well recorded within the life of those now living.

It may be suggested that a case, measuring about two by four feet on the base, and six feet high, with many narrow-spaced shelves holding stiff-paper folders, will contain a great collection of the topographical maps here described. By beginning betimes with a moderate outlay for the maps already published, a small annual appropriation will keep a most serviceable collection up to date for the future. Let it be noted further that "Professional Paper, No. 60," prepared by Professors Salisbury and Atwood of the University of Chicago, and recently published by the Geological Survey, contains samples of many maps with brief explanatory text, frequently illustrated by photographs. It will therefore serve as an excellent guide to the appreciative use of the maps in general. This volume was so actively demanded all over the country that its first edition was soon exhausted; but it is understood that a second edition will appear at an early date. If it were generally known that explanatory handbooks of this kind are to be had, and that three hundred and thirty-three ex-

cellent maps can be bought for ten dollars, many a library and school, where few maps are to be found to-day, would begin a map collection and build it up towards completeness by new orders every year. The maps issued by the Geological Survey are a highly educative advance over the fancy-colored pages of school atlases, and the roughly printed pocket maps of the States prepared for commercial use. The more they are known, the more generally will they be used, and the better we shall know the land we live in.

W. M. Davis.

RECENT FRENCH HISTORY.

Paris, October 8.

"La Guerre de 1870" (2 vols., 8vo Plon), by Henri Welschinger, examines the causes and responsibilities of the Franco-Prussian war. The author is known for conscientious work in French history, of mildly conservative tendency. There are so many still living to whom the great war brought the downfall or the accomplishment of their political hopes; its consequences are still so dominant in the international life of Europe; so much partisan passion, misunderstanding, misrepresentation, recrimination, still exist after forty years, that fair and full examination seems at once an imperative necessity and a practical impossibility. For M. Welschinger, it may be said that he has written the best book, all told, which has yet appeared on the subject. It is more documentary than any other yet published; it has less partisan emphasis—and less omission. It fails where all the historians of a time so confused with passion, which was not all political, have consistently failed.

The late Edmond Rousse's legal career, which many years after brought him to the French Academy, was rudely interrupted by the war and the ensuing Commune. He said of it in dispassionate words what M. Welschinger has heeded better than most Frenchmen: "Let us not deceive ourselves; let us not throw on a few the faults committed by all." No doubt Napoleon III allowed Prussia to grow until its advance became identical with the realization of a United Germany. But is it certain that, if he had so wished, he could have prevented, in presence of England's inaction, the rude brushing away of Denmark from Schleswig-Holstein? or, considering the steady growth of political opposition at home, that he could have intervened later to prolong Austria's leadership among the petty German States? It is true that Sedan followed Sadowa, but both came after Magenta and Solferino. If Napoleon III had never had a policy of "nationalities," if he had never occupied France in foreign wars, it is possible that Cavour would not have succeeded in uniting Italy. It is not certain that Bismarck would not have reached his ends. French writers too easily suppose that France put at her Emperor's disposal power sufficient to regulate the entire Continent.

M. Welschinger recognizes that political opposition at home was largely responsible for the inferior state of the French army when war came, and that the Emperor had vainly tried to overcome this opposition. It was those leaders who seized the opportunity of Sedan to get possession of the government in France, it was their party which was to centre its hopes in Gambetta when too late to remedy the evil for which they were as responsible as any others. They did this with a full knowledge of the insufficient effectives of France and of the 900,000 trained soldiers ready to take the field in North Germany. In a note addressed individually by the Emperor to each member of Parliament, the comparison was made for them. They rejected the Emperor's appeal and even the compromise proposed by the War Minister, Maréchal Niel. The Prince Imperial, shortly before his death, took occasion publicly to recall this fact. No historian who loves truth more than the cult of the founders of the Third Republic can neglect it.

Again, during the last stormy sessions of the Imperial Parliament, no one cried louder for war than Gambetta. *Paroles scélérates!* was his protest against Robert Mitchell, who insisted that the reply of the Prussian King did not compel France in honor to declare war. It is to be regretted that M. Welschinger, while dwelling on this paralyzing opposition, should not credit their large part of it to those who, to satisfy their republican ambition, sacrificed, not only the Empire, but France itself. Their opposition was made effective, as M. Welschinger points out from his own recollections, by the abhorrence of the middle classes for any compulsory military service which should mix up their sons with those of the common people. He does not remember the persuasion among religious people that universal military service was an artifice of free thinkers to debauch the Christian faith and morals of French youth. Men like Jules Ferry and Ferdinand Buisson, who were to give its anti-Catholic organization to the Republic, helped the opposition by the part they took in international peace congresses.

Coming down to the immediate declaration of war, M. Welschinger still attributes a part of the responsibility to the Empress Eugénie, to her court and party among the Deputies. The Empress, as a foreigner and *parvenue*, as a sovereign conferring ostentatious brilliance on Imperial rule in the eyes of the whole world, and as a Catholic protecting the Pope, had incurred animosities distinct from the mere political opposition to the Empire. She was the scapegoat ready to hand—the war was her war the moment it failed.

For years, childishly and ungallantly, those who had clamored for war after refusing the Emperor the means needed to prepare for it, tried to cast the responsibility for it on the unlucky Empress. It remains the popular legend, ready for political use. A sober historian like M. Welschinger, whatever his political prejudices, could not go to such lengths. But he seems not to have weighed sufficiently the evidence from within of a man like Emile Ollivier, whom the Empress did not love, but who refuses to believe in the supposed influence of the Empress over her husband's decisions. As to her activity in Cabinet councils, which was a part of the legend, his testimony must be taken as final.

The disastrous effects of court influence in keeping in office aged and incompetent generals and the consequent inefficient organization of the means which had been allowed the Emperor for waging war, is another question. The Emperor's desperate state of health, which was unknown even to the Empress, counted for much. Such evil was perhaps inherent in rule like his, which was never more than a prolonged Imperial adventure.

The commission organized at the French Ministry of Foreign Affairs for the publication of the documents in its archives relating to the origins of the war of 1870, has two volumes ready for publication. Their appearance is delayed by a controversy concerning the publisher chosen by government. The three responsible editors are MM. Joseph Reinach, Emile Bourgeois, and Professor Aulard. Their political complexion was sure to excite criticism, M. Reinach as inheriting Gambetta's traditions, M. Bourgeois for the stand taken in his works on France and the Roman Question, M. Aulard for his understanding of history as a "Republican defence." If the diplomatic documents are given complete, and not in a selection, the publication will be sufficient for historians otherwise equipped for this most arduous study of the truth of contemporary history. Editorial narrowness is chiefly to be feared in not going far enough back or far enough afield. The conflict between French and Prussian diplomacy did not begin with the Danish Duchies nor grow by Austria and Rome alone.

S. D.

NEWS FOR BIBLIOPHILES.

Eighteen or twenty years ago a friend gave to the Hon. Peter A. Porter of Niagara Falls, N. Y., a copy of one of the many editions of Hennepin containing the engraving of Niagara Falls which first appeared in his "Nouvelle Découverte" (1697). This was the beginning of Mr. Porter's Niagara Falls collection, one of the most notable

local American collections ever brought together. This library he has recently disposed of to a firm of booksellers in this city.

The Falls of Niagara were known to European travellers long before they were seen and described by Hennepin. In Champlain's first publication, that little pamphlet "Des Sauvages" (Paris, 1603), which is now worth much more than its weight in gold, there is a mention of a waterfall between two great lakes, around which the Indians are obliged to carry their canoes. The same little volume contains a poem in which a great cataract is mentioned, and this is supposed to refer to Niagara. The second and third references to the Falls in print are found in the Jesuit Relations of 1649 (in a letter written by Father Ragueneau) and 1653 (in a letter by Father Bressani). The fourth mention, so far as Mr. Porter could discover, is in a supplement, by Dr. Gendron, added to the last volume of an enlarged edition of a history of the world originally prepared by Pierre Davity and first published in 1626. This revised edition containing Dr. Gendron's account of the Huron country is dated 1660. These writers described the Falls from hearsay only. The Falls had been indicated on Champlain's map of 1632, but without name. The earliest map which Mr. Porter could trace upon which the Falls are named is one in an atlas published by Sanson (a great map publisher of Paris) in 1657. Upon this map is found the name "Ongiara Sault."

It is probable that French traders and *coureurs du bois* had many of them seen the Falls before Father Hennepin, but his description, printed in his first book, "Description de la Louisiane" (Paris, 1683), is the earliest printed account by an eye-witness. And on the map published with the same book the Falls are designated as "Le gran sault de Niagara." This is the earliest appearance of the modern spelling of the name in print. In the text the Falls are not mentioned by name, but "La Rivière de Niagara" is referred to. The first engraved view of the Falls appears as a folding plate in Hennepin's second book, his "Nouvelle Découverte d'un tres grand Pays" (Utrecht, 1697).

Mr. Porter was especially interested in Hennepin and his writings, and made every effort to secure every known edition of any of his books or extracts from them. His Hennepin collection is without doubt the most extensive ever brought together, notwithstanding the fact that there are half a dozen or more editions or variations known to exist which he has never had the opportunity to acquire. He was, however, able to procure several volumes not described by any of the writers upon the bibliography of Hennepin.

Three books, the two later being in fact based in part upon the first, comprise all of Hennepin's writings known. The first editions are (short titles only):

"Description de la Louisiane," Paris, 1683.
"Nouvelle Découverte d'un tres grand Pays," Utrecht, 1697.
"Nouveau Voyage d'un Pais plus grand que l'Europe," Utrecht, Ernestus Voskuyl, Imprimeur, 1698.

These three books, with condensations of them and extracts from them, were more often translated and printed in the various countries of Europe during the early years of the eighteenth century than the works of any other traveller in America.

The earliest issue of the "Nouveau Voyage" with the printer's name "Ernestus Voskuyl" in the imprint is of excessive rarity. It is mentioned by Dr. Paltsits (the latest bibliographer of Hennepin), who says:

It is very uncommon, and is known to me only from Felix van Hulst's "Notice sur Le P. Hennepin, d' Ath," Liège, 1845, p. 36; and from a copy offered for sale in the spring of 1902 by a Jesuit in France, in correspondence with Mr. Thwaites.

Most copies of the book have the bookseller's name in the imprint, which reads "Utrecht, Antoine Schouten, Marchand Libraire, 1698."

The first book, the "Louisiane," was dedicated to Louis XIV of France. Before the publication of the "Nouvelle Découverte" Hennepin had fallen under the displeasure of that monarch and had been exiled from France. He resided for a time in Belgium and is believed also to have lived in London. His two later books, as well as the somewhat enlarged translation of the two issued in London in 1698 under the title of a "New Discovery of a Vast Country in America," were dedicated to William III of England. Mr. Porter's copy of the second issue of the "Nouveau Voyage" is a presentation copy from the author to (apparently) Thomas Herbert, eighth Earl of Pembroke, who had been the chief English plenipotentiary at the treaty of Ryswick in 1697, when William III was acknowledged King of England. We may presume that Hennepin had made the earl's acquaintance there.

John Law's Mississippi scheme was apparently responsible for several exceedingly rare little books, extracts from Hennepin, printed in 1720 on poor paper, perhaps for free distribution among prospective purchasers of stock in the Mississippi Company. Mr. Porter procured four pamphlets of this character in French, three of which are undescribed, and no other copies known. Of the fourth there is a copy in the Lenox Library. These are:

(1.) "La Nouvelle France, ou la Description de la Louisiane, Connuë sous le nom de Mississipi. Nouvellement découverte par ordre du Roy [4 lines] Par le R. P. Louis Hennepin, Missionaire Recollet & Notaire Apostolique. Sur l'imprimé à Paris. M.DCC.XX." Signatures A-D, each twelve leaves, consisting of title, 1 leaf; Dedication, 5 pages; "Les Mœurs des Sauvages," pages [2]-54; "Description de la Louisiane," pages 55-66 and 57-80.

(2.) Same title as No. 1 except date, which is "M.DC," the other letters having dropped out. Same number of leaves but contents partly differing. The Dedication is in small type, filling four pages only, which is followed by "Le Royaume de la Louisiane ou de la Nouvelle France," pages 1-4, not in the other edition. Then comes "Les Mœurs des Sauvages," pages 5-54, and "Description de la Louisiane," pages 55-66 and 57-80. The two editions are generally page for page, but one chapter of the first part, "Remèdes contre les Maladies," pages 12-15 of the first edition, is omitted in the second. They are both from the same printing office, but are two distinct settings of type, the headlines throughout being in capitals in the first edition and in italics in the second. No other copy of either edition is known, and they have never been described by any bibliographer, so far as can be traced.

(3.) "Description du Mississipi, Le Nombre des Villes & Colonies établies par les François, [8 lines] Par M. le Chevalier de Bonrepos, Ecrite de Mississipi en France, a Mademoiselle D. . . . Imprimé à Roüen, Se vend à Paris, Chez Berthelemy Gurin, ruë du petit Pont, près le petit Châtelet. 1720. Avec Permission." Signatures A, 8 leaves; B, 4 leaves; C, 8 leaves, and D, 3 leaves. The text begins on page 3 with the heading "Description du Mississipi" and ends on p. 45 with "Ma tres-chère Cousine, Vôtre tres-humble Serviteur, Le Chevalier de Bonrepos," followed by "Fin." On page [46] is the "Permission." dated July 1, 1720. The book is an extract or condensation of Hennepin's "Louisiane." There is another copy of this book in the Lenox Library.

(4.) "Relation du Voyage de Mississipi, par le R. P. Hennepin Recolet." No title-page, the above being the heading of the first page. Signature A, 4 leaves. At the end is the colophon: "Sur la copie Imprimée à Evreux, chez Jean Malassis, Imprimeur de l'Evêque." Nothing is known of the Evreux edition and no other copy of this reprint can be traced. The date is probably about 1720.

Besides the four extracts or condensations described above there is also one in English more frequently met with, having the title "A Discovery of a Large, Rich and Plentiful Country, in the North America; Extending above 4000 Leagues. [6 lines.] London: Printed for W. Boreham, at the Angel, in Pater-Noster-Row. (Price Six-Pence.)" This consists of Signatures A, 2 leaves; B, C, D, and E, each 4 leaves, made up of title, 1 leaf; preface, 2 pages; text, pages 1-24 and 17-22; advertisement of books, 2 pages.

Correspondence.

UNIVERSITY STUDY OF ART.

To the Editor of The Nation:

Sir: At the outset I would distinguish clearly between the collegiate study of the history of art and the same subject as a branch of university instruction. For years excellent courses in the history of art have been given to undergraduates at Harvard, Princeton, Brown, Williams, Bryn Mawr, Wellesley, the University of Chicago, to mention only typical colleges. The women's colleges have encouraged these studies more seriously than the men's. We are still as a nation in the stage where the study of art smacks suspiciously of dilettantism. Throughout the West and middle West courses in drawing and painting have been popular, and this, while well enough in itself, has introduced a rather unfortunate confusion between the historical study of art as a means of culture and the rudimentary practice of the handicrafts underlying art. Many will regret that Columbia University, by nominally affiliating the National Academy of Design, some years ago, gave countenance to this prevalent confusion of ideals. On the whole, the historical study of art in the colleges has had a slow but normal growth. It is hindered at present merely by the privileged position of the older departments of the curriculum and by the scant supply of competent instructors.

As a university study, art is only at its beginnings. There have been notable instances of professors who have individually put their experience at the disposal of advanced students, but no such thing as an art seminary has yet existed in America, and outside the field of classical archæology I suppose the number of doctorates granted in the history of art could be reckoned on the fingers of one hand. Harvard and Princeton are, I believe, the only American universities which have regularly trained advanced students, and the effort has been chiefly in the classical field. Now much of

this neglect of one of the most interesting of subjects lies in the very nature of the case. If the student of history and philology suffers from the absence of his original sources, the student of art suffers tenfold. Photographs and casts are at best sorry substitutes for the marbles of Greece and the frescoes of Italy. Mere book learning can never replace the vivid experience of masterpieces. So keen has been this conviction that such self-made authorities as Bernhard Berenson and F. M. Perkins have simply expatriated themselves and pursued their investigations individually on the spot. Such a course was inevitable twenty years ago; it is so no longer.

Obviously the time will never come when the student of art will not need to travel much, but the hour has already struck when he can advantageously pursue the better part of his university studies at home. Within twenty years America has supplied herself with abundance of original material, from the primitive art of Greece, Egypt, and the Far East to the product of yesterday. Between the public museums and private galleries, which are usually accessible to students, every branch of the fine arts may be studied in superior examples. We lack and always shall lack the monumental works associated with architecture, but of portable objects we already have an abundant supply of good quality, and are to have more. To put the matter practically, in every subject there is in our Eastern States plenty of material for information and research, enough, I should say, to keep a diligent graduate student going for a couple of years; his third year, and perhaps fourth, should be spent abroad. I see, that is, no reason why a graduate student of fine arts who can afford at least one year of travel should not look forward as confidently to his doctorate as a chemist does.

But nobody wants a doctorate in fine arts. Such is the fact, and it merely illustrates the sheeplike tendency of student human nature. Because there never has been a career open to the trained scholar in this subject, people act as if there never could be. As a matter of fact museums are springing up throughout the land, and every one is put to it to find a well-trained director or curator. Our great museums still have to recruit their staffs from abroad. College lectureships and professorships of art are vacant because there are no fit candidates. In short, about the only learned profession that is not sorely overcrowded is precisely this delectable neglected one of art critic and historian. When these facts are realized there naturally will be seminaries of art history in our universities.

A word on the conditions of such study and, avoiding odiously detailed comparisons, on present academic facilities for work may seem in place. In all fields the graduate schools will in time come to see that their aim is a dual one. An elect minority of students must be trained as specialists; the greater number need merely a scholarly and somewhat discursive knowledge which shall equip them as teachers, or writers at large. Prof. Irving Babbitt has defined these two goals with pungent eloquence. Professor Trent, in a recent charming essay in the *Nation* (September 8), assumes this duality as a dictate of common sense. Some dozen of our universities are already prepared to help the graduate student who means to become a journalistic critic or a collegiate teacher. Indeed, a number of colleges can, and occasionally do, award the master of arts in these branches. That a master's degree is not a certificate of fitness to teach is undoubtedly true. I think, however, that this ancient but rather discredited degree could and should be rehabilitated. It would serve as the goal of a thorough cumulative course, as the doctorate stands for experience in original research. But my immediate concern is chiefly with the candidate who wishes to become a specialist or expert in the fine arts looking forward to museum work or a university post. What can we do for him? Nowhere near what Berlin or Paris can do, yet a good deal and enough. Moreover, foreign methods and too much unassimilated travel are confusing and time-wasting to the immature student. Under the right guidance he can pass his first year or two more profitably about Boston or New York than he could in Athens, Rome, or Paris. But where shall our incipient expert go?

The question is of some delicacy. Boston probably still offers the best general facilities as regards materials and association with the right sort of scholars. The Boston Art Museum is the best balanced in the country; the Public Library has a fine equipment of books and photographic reproductions; the private collections are noteworthy; Harvard has her small museum with photograph and print collections and a few well chosen originals. The atmosphere is favorable to the subject; a rather youthful group of professors make up in enthusiasm for what they may lack in experience. Yale has in the Jarves collection a most interesting gallery of Italian primitives, but confines her academic efforts to practical classes in the arts and to courses for undergraduates. New York is rapidly passing Boston, probably has already done so, in wealth of original works of art. The Metropolitan Museum, between the galleries and library, will some day be a Mecca for students, and already attracts many; but the art department of Columbia University is still merely on paper. Unless it be occasional courses in classical archæology, no graduate instruction is given. For want of funds or of the right initiative a unique opportunity is going begging. The University of Chicago has a strong teaching force but is handicapped by scarcity of original material and the remoteness of the great Eastern museums. Princeton with an art department of five professors, each a specialist, the beginnings of an art museum, and a working library including 4,000 books and more than 40,000 photographs, may fairly claim academic primacy in this branch. The university is conveniently situated, so that the collections both of New York and Philadelphia are accessible. In fine, while other universities afford special facilities in single branches, Harvard and Princeton alone combine a fairly comprehensive schedule of courses with the necessary library and photographic aids and with accessibility to large collections of fine originals.

For the present a far-sighted student of the history of art would have to choose between more varied and numerous courses at Princeton, and the superior outside facilities offered to the graduate student of Harvard. A man who needed direction would probably fare better at Princeton, one who had already found his way might do better at Cambridge. Of course, some unexpected turn may alter the entire situation. Whenever Columbia is able to muster a strong art faculty, her position will be the strongest. The transfer of the Freer Collection to Washington, would, if accompanied by appropriate instruction, make the capital a centre for the study of Far-Eastern art. Institutions like the University of Pennsylvania and the University of Chicago are advancing at a normal pace. Eventually university instruction in the history of art will have its outposts in European schools under American management. Already such work is done by the School at Athens and the School of Archæology at Rome. The task is merely to extend such facilities to the entire field of art.

We are at present in the anomalous position of having two or three courses and professors of art for every graduate student. As I have already pointed out, the simple economic demand for trained men will soon remedy that paradox. It has seemed worth while to give this cursory survey and forecast of a university movement which, though at its beginning, is evidently in accord with the tendencies of the time and full of promise.

STRIKING AT THE KING.

TO THE EDITOR OF THE NATION:

SIR: In the view of the writer, the *Nation* may now, in all fairness, be classed with the critics of Theodore Roosevelt. And certainly few men can better afford than he to regard his critics with equanimity. After nearly eight years in the Presidential office, he was still strong enough to name his successor, and that successor would, doubtless, have been himself had he but spoken the word. And there are to-day thousands, yea, millions, who regard him as the strongest personal force in American public life. It seems to be of little use to pick at him or portray his faults and weaknesses; to review again his unfortunate personal controversies. Was it Emerson who said, "If you strike at the King you must kill him"? It is true that Roosevelt is not a Washington or a Lincoln, but in comparison with Jackson, the most powerful leader of his time, he shows to good advantage. Roosevelt has no unworthy favorites. He elevated the tone of public life; called men of education, ability, integrity, and capacity to the public service. It is true that he did not accomplish all that he or his supporters desired, but consider how the money power has developed since Jackson's time, and how strong are they who desire or tolerate corporation rule in politics and legislation. Both these great forces have little love for Roosevelt. The writer agrees with the *Nation* in calling Gov. Hughes "the finest figure in our public life," but it may be well that he withdraws from the rough-and-tumble fight of politics to take a higher station. Roosevelt is evidently able to give Barnes, Wadsworth, Woodruff, etc., "all the fight they want," as he promised.

In the matter of "contempt of court," if Roosevelt cannot stand with Lincoln, he stands with a vast number of his countrymen. Several years ago, in an address before the Yale Law School, so good a lawyer and judge as William H. Taft stated that the administration of criminal law had broken down in this country, and supported his position with abundant proof. He also said, and it appeals to the common sense of every intelligent person, that there should be no retrial in a criminal case if the higher court is satisfied of the justice of the verdict in the trial court.

In the view of his critics, Roosevelt is a dangerous man. In the view of his friends, he is not an ideal man. Some of us "love him best for the enemies he has made." He is a good fighter, perhaps the best his party can show to-day.

LEWIS HYDE.

Spiceland, Ind., October 5.

A LETTER FROM THE PHILIPPINES.

TO THE EDITOR OF THE NATION:

SIR: Your readers may be interested in the following extract from a recent letter written by a government employee in the Philippine Islands, a college man who earned distinction in his undergraduate days as an able student and who has won promotion in the Philippine service by his executive ability. I hope the extract may help to impress upon the readers of the *Nation* the fact that the longer we remain in the Philippines the more difficult it will be for us to withdraw.

E. M. H.

Moscow, Idaho, October 8.

You have doubtless been reading a little of the visit of Secretary of War Dickinson to the islands. His coming was known well in advance of his arrival, of course, and you can hardly imagine the wild anticipations with which the Filipino political leaders looked forward to the visit. They had it all planned out that the Secretary was to look around a little, scourge the American administration, and then reach into his pocket and gracefully extract and hand to them "Philippine Independence," as a little memento of his visit.

Of course it is unnecessary to add that the Lincolns and Washingtons and Websters of the Philippines were sadly disillusionized. Their newspapers are bewailing the affair yet. What made their disappointment especially keen was that they had such a magnificent petition for *la independencia* all made out, with thousands of signers from every province, and then it fell so flat!

There is one politician here who is so far ahead of every other in popularity that there is no comparison. His name is Dominador Gomez. He has served one term in the penitentiary for importing opium illegally, and is now under sentence for having fomented a groundless strike among the 'longshoremen and others in Manila; yet none of his odorous exploits seem to lessen his hold on the popular mind. In a wildly applauded speech in the province of Negros Oriental recently he said that it was a coincidence which might have some significance that the locust pest and the rinderpest (a cattle disease) and the Americans had all arrived in the islands at about the same time.

You will infer that the political horizon is pretty dark, but it must not be imagined also that we Americans oppress our minds very much with the doleful situation. We go on about our work and think about it as little as possible. It really doesn't matter very much what the natives think or do about politics. American capital is being invested here to such an extent that independence is not in the slightest degree a present menace. And the more capital comes the farther off is independence.

LATIN-AMERICAN SPANISH.

TO THE EDITOR OF THE NATION:

SIR: One of the common or "vulgar" errors fit to figure in a modern "Pseudodoxia Epidemica" is the fixed belief that Latin-American Spanish is a deplorable corruption of Castilian Spanish. Mr. Claude King of "Sports Afield," dwelling on the topic in a recent communication to the Chicago *Inter Ocean*, regrets the prevalence of this idea. It may be of interest to some of your readers to know that the Spanish of the Southwest, South America, and the Antilles may rightly claim to be, indeed, nothing other than an excellent preservation of a good, old dialect spoken now, as in the past, in the very heart of Castile itself. If this fact were widely known, Americans travelling in Spanish-American countries might have one less reason for superciliousness toward those whom they benignantly term "the natives."

When Columbus left Spain on his first voyage of discovery he set out from the port of Palos, in the Andalusian province of Huelva. This established the custom for navigators of sailing for America from the southern seaboard, some leaving by way of Palos, and some from Cadiz. After the first voyages there was established in Seville an office called the Casa de Contratación, for the purpose of furnishing supplies and equipment for the vessels departing for the New World, "a body at once administrative and judicial, which soon became subordinated to the council of the Indies. . . . No ship was permitted to sail from Spain to America, or land from there, until it had been inspected by the officers of the Casa, and had received a license. Of everything a most careful register was kept. Charles V had ordered, on pain of death and confiscation, that every Spaniard, embark where he would, must direct his journey back from America only to Seville; and soon the journey out was only permissible from Seville. . . . This preference for Seville came from the fact that it was the only large place in the kingdom of Castile which could carry on ocean commerce, and at the same time had a considerable river trade. Then, again, since the kingdom of Castile alone had borne the expense and dangers of the discovery of America, it wanted to have all the profit of it." As a result of these regulations—quoted from Wilhelm Roscher's "The Spanish Colonial System"—and of the monopoly of trade possessed by Seville and a few other Andalusian cities, it was quite natural that most of the emigration should have been from the country round about the southern seaports. The difficulty of communication with the interior forbade, for a long time, any general emigration from other parts of Spain. It is the speech of these first settlers from Andalusia which constitutes the fundamental element of contemporary Latin-American Spanish.

One instance out of many of the conservation of the original language is furnished by the inhabitants of Porto Rico. A comparison of the speech of the average Porto Rican, and more particularly of the *jibaro*—descended from the old Spanish stock—with that of the present-day Andalusian, shows a striking similarity down to extremely minute details. Wulff's phonetic transcription of Andalusian, made in 1880, is nearly pure Porto Rican.

Don Manuel Fernández Juncos, a Spanish writer, long resident in Porto Rico, has pointed out other evidences of the Andalusian origin of the *jibaros*. They are fond of the sentimental songs of the Andalusian type; they use the *vihuela* and the *tiple*, which are abbreviated forms of the Andalusian guitar; they believe in common Andalusian superstitions; and the occurrence among them of such family names as Jiménez, Montilla, Córdoba, Sevilla, Sarmiento, Jerez, recalls to mind places, estates, and old families of southern Spain.

What has been said of our island possession may be said of Latin-America as a whole. The language spoken there is, with all its peculiarities of pronunciation, genuine Spanish.

J. WARSHAW.

University of Missouri, October 13.

THE NOSE IN POETRY.

TO THE EDITOR OF THE NATION:

SIR: Did the symposium on noses (see the *Nation*, September 29 and October 13) bring out the passage from Aristophanes, "Clouds," 341-44, which may be roughly Englished as follows:

Strep. Tell me, what's the matter with them, if they are really clouds, for they certainly resemble mortal women? They surely are not such.

Soc. Well, what are they?

Streps. I don't know positively. They certainly resemble spread-out fleeces and not women, by Jove! for these have noses!

The emphasis on this feature is interesting.

GEORGE H. DANTON.

Butler College, Indianapolis, Ind., October 15.

Literature.

ONE OF THE TRAGIC COMEDIANS.

Princess Helene von Racowitza, an Autobiography. Authorized translation from the German. By Cecil Mar. New York: The Macmillan Co. $3 net.

The Macmillan Company has issued in attractive form an English translation of the autobiography of Princess Helene von Racowitza. The German original was noticed in the *Nation*, October 28, 1909. The translation by Cecil Mar reads as though the story had first been told in French, for there is a sprightliness, a vivacity, a sparkle to the narrative which is fairly exhilarating. Minor blemishes in the translation there are—the German *genial* can hardly be transliterated into the English "genial"—but the spirit and verve of the author live in the present version.

The story of her life in this country will give the book an additional charm for American readers, although they will readily detect certain inaccuracies. For example, *John* Smith instead of *Joseph* Smith is credited with founding Mormonism (p. 308). The "marriage stone" in every village before which in colonial America marriages were verbally contracted (p. 348) is, of course, mythical. Most readers will be surprised also to learn who held "the ex-

alted post of Marshal of the United States in Washington" (p. 370).

Helene von Racowitza, as it pleases Frau von Schewitsch to call herself after her first husband, has a double claim upon public interest. She is the woman for whom Ferdinand Lassalle lost his life in a duel, and she has written the most absorbing autobiography since Marie Bashkirtseff. The story of her love affair with Lassalle furnished Meredith with the plot of "The Tragic Comedians." But her entire career, checkered as it is, falls not a whit behind that dramatic episode in its power to enchain attention.

It is too late, of course, to raise the question of the transcendent ability of Lassalle. On that point the testimony of Bismarck, who recognized in Lassalle a potential Alcibiades, is conclusive. But many a genius cuts a sorry figure in a love affair, and this was emphatically true of Lassalle. His fatuousness peers out from behind the screen of affection with which Princess von Racowitza would shroud it. When her own family had made an indignant outcry over her announcement of her engagement to Lassalle, and when she had fled from under her father's roof to meet Lassalle on his arrival in Geneva (where her father was Bavarian ambassador), the wretched lover ordered her back to her parents, despite her tearful and well-grounded assurances of their eternal obduracy. Lassalle's overweening self-conceit made him imagine that he must prove irresistible to her family. Not content with this, he sought to enlist the interest of his former mistress, Countess Hatzfeldt, in his avowed effort to obtain the hand of Helene in marriage. Naturally the countess proved a "false friend." Even Princess von Racowitza cannot help exclaiming, "How little Lassalle must have understood of woman's character, notwithstanding his many love episodes!" (p. 129.) There is little use in attempting to explain his conduct. His "overwrought nervous condition" and his ingrained "Jewish filial affection" which would not countenance an elopement, cannot palliate his downright folly. He finally realized the tragic truth himself, when he wrote, "My criminal stupidity is now my martyrdom" (p. 129). Meredith's fine characterization is quite literally true.

> He perished of his weakness, but it was a strong man that fell. If his end was unheroic, the blot does not overshadow his life. His end was a derision because the animal in him ran him unchained and bounding to it. A stormy blood made wreck of a splendid intelligence.

The subject of these memoirs was descended on her father's side from Swedish-Norwegian ancestry, while her mother was the daughter of a cultivated Jewish family of Berlin. Her father was a courtier and diplomat, representing Bavaria at Victor Emanuel's court in the late fifties. Her early associations and surroundings were those of the *grand monde*, particularly at Nice, that caravanserai of cosmopolitan society solely intent, before the impending war clouds descended upon Europe, to "fleet the time carelessly, as they did in the golden world." Despite the subtle moral poison with which the atmosphere was charged, there are certain indelible pictures which she draws of the place and its habitués. The following of Bulwer Lytton invests him with a perpetual fool's-cap:

> . . . His fame was at its zenith. He seemed to me antediluvian, with his long, dyed curls and his old-fashioned dress . . . with long coats reaching to the ankles, knee-breeches, and long colored waistcoats. Also, he appeared always with a young lady who adored him, and who was followed by a man servant carrying a harp. She sat at his feet and appeared as he did in the costume of 1830, with long flowing curls called *Anglaises* . . . In society, however, people ran after him tremendously, and spoilt him in every possible way. He read aloud from his own works, and, in especially poetic passages, his "Alice" accompanied him with arpeggios on the harp (p. 46).

Bulwer Lytton is only one of a long line of celebrities with whom Princess von Racowitza, in her social life or afterwards in her dramatic career, was thrown into contact. Cavour, Hans Christian Andersen, Von Liebig, Meyerbeer, the Empress Eugénie, Wilhelmj, Hans Makart, Liszt, Madame Blavatsky, Björnstjerne Björnson—all appear in her pages in very vital portraiture. Many of the reminiscences are emphatically not *virginibus puerisque*, but her "Pompeian excavations" do not spare herself, nor is there bitterness therein, save against her own family and the Countess Hatzfeldt.

The philosophy of life and morals which the volume frankly unfolds is, to put it unequivocally, quite impossible. Briefly, it is a frank avowal of what the author calls "the equal rights of man and woman in love affairs" (p. 63); "the equal rights in love of the free woman with those of the man, provided no regard need be taken for wife or child" (p. 231). This is not at all synonymous with the so-called "single standard" of sexual morality which metes out disapproval upon offences irrespective of the sex of the offender. It is rather a positive justification of the *Wahlverwandtschaften*, provided only that the *liaison* does not harm innocent third parties, from whom childless spouses appear by definition to be excluded. The writer herself does not seem able to hold consistently by this novel philosophy of conduct. If it were true, why the frequent plea of inheritance, the "Viking blood," in frequent exculpation of her own passionate youth? Or, why chide early upbringing and seductive surroundings when the tree of forbidden fruit is, after all, only a bogey?

And yet with all her fantastic philosophy, and her occasional lapse into occultism, and despite her most regrettable deviations into the primrose path, the final impression made by these confessions is that their author has a winning and essentially lovable spirit. "I have often," she says, "and with full consciousness, acted in defiance of the moral laws of the world; but I have always taken the consequences upon myself without hesitation" (p. 231). If she was inconstant in love, until the great love of her life for Serge von Schewitsch sprang up, she was never mercenary. Exposed to the temptations of a singularly insidious profession, she apparently never entertained the slightest envy for her rivals on the stage. A Trilby of the Faubourgs not inappropriately describes her, in personal charm, in natural straightforwardness, in her sense of humor, in her gift of comradeship. Besides these she has rare powers of appreciation for great art, and—still rarer—can wake the responsive chord in those who read her rhapsodies.

CURRENT FICTION.

Rewards and Fairies. By Rudyard Kipling. New York: Doubleday, Page & Co.

The Same in the Outward Bound Edition of the Works of Rudyard Kipling, Vol. XXV. New York: Charles Scribner's Sons.

There are many Kiplings, but none so thoroughly delightful, not to say approvable, as the one that keeps the fairies alive for an age that feigns to doubt their existence. For Kipling's fairies are, in one respect at least, like Shakespeare's: they are for the mature reader no less, perhaps even more, than for the child. And, in his latest collection of fairy stories, the later writer suggests the earlier in another quality: the power of mingling fact and fancy, or, rather, the possible and the supernatural, without incongruity. It is the renewed revelation of capacities of this sort that are, despite a mass of crude verse appearing in recent years to his discredit, his literary salvation. That one of the most sophisticated writers of a boastedly sophisticated time should be able and willing to do something of sufficient simplicity to suggest, if only from afar, the well-nigh perfect symmetry in the weaving of such a diversity of elements as are combined in "A Midsummer Night's Dream," speaks significantly for the survival of the imaginatively fit.

In "Rewards and Fairies," which is "Puck of Pook's Hill" a "year so so" later, there are three diverse elements: Dan and Una and their mortal acquaintances, Puck, and historic men and women who live again. Yet he would be a

sensitive reader indeed who felt any shock of anachronism or of any more palpable incongruence in the coalescence of the three kingdoms. One blends with another and still another so imperceptibly that it is no matter for surprise that even so real a boy as Dan felt, at most, a mere vagueness as of something forgotten.

The range and definiteness of the historical element is indicated by the appearance of Sir Francis Drake, Henry I, Saint Wilfrid, Talleyrand, Red Jacket, and Washington. America, particularly Philadelphia, occupies a large space in this part of the book, and lends itself to the atmosphere of it excellently. Throughout are the characteristic Kipling allegorizing and half-cynical maxim-making. Each of the eleven stories is preceded and followed by a set of verses, more than one of them real poems. The author's touch here is not always provocative of admiration, although he gives a swing to his least volatile conceptions. Here appear again the Hebraic mysticism, the Browning resolution, and the Danny Deever crisis-flashings which are of the essence of Kipling as poet.

Mr. Ingleside. By E. V. Lucas. New York: The Macmillan Co.

Mr. Lucas got so delightful a quality into his "Over Bemerton's" that it is not surprising he should have wished to repeat the success. The situation in "Mr. Ingleside" is, of course, different. In place of the old bachelor who, returning to English after many years, took up quarters over Bemerton's second-hand book shop, and mingled his renewed experience of London with quaint lessons from old books, we now have a widower whose two daughters, coming back to his home, afford him opportunities for communing with his friends on the new ways of life. It must be confessed that Mr. Ingleside's girls are a poor substitute for the odd and lovable people that surrounded the bachelor of Bemerton's, and if Mr. Ingleside's group of cronies furnish Mr. Lucas with the opportunity for some clever character sketching, the characters themselves, when they come to act, have just a touch of the extravagance of puppets, and do not seem quite human. "Mr. Ingleside" grows rather less entertaining as it progresses, whereas "Over Bemerton's" rose in interest to the very end. All this is not to say that the present story is without entertainment. It has abundance of that kindly satire and Lamb-like humor which only Mr. Lucas among the living London wits is able to provide. Its hardest rival is its predecessor.

Flamsted Quarries. By Mary E. Waller. Boston: Little, Brown & Co.

Miss Waller's story is one of which the interest would be doubled had the novel been halved. She has a good old-fashioned habit of introducing a variety of interests which has much in its favor, provided proportion be preserved. A moving panorama has the same right to existence that a picture has, but it should move. The justification for five hundred pages would be the necessity of each one. The story deals with the protracted lives of some dozens of persons who sooner or later gravitate to the Flamsted quarries in Maine. Natives who own the quarries, a young man whose soul is set on riches, a child who is rescued from the vaudeville stage via a stay in an orphan asylum, the French priest who rescues her, the girl whom he had long ago loved in France, village tradesfolk and officials, village aristocrats with bitter family feuds, city relatives, and quarry workers of every nationality—all arrive in Flamsted and live or die through scenes of joy, sorrow, temptation, and rescue. The New York setting which precedes that of Maine is a volume by itself. At the Flamsted Tavern there rages enough talk to make another volume. Descriptions and sentiments would make a third. Remains the story, in its main lines one of quite sufficient strength to stand alone. A youth ruined by his passion for money lives to save his soul by voluntary submission to humiliating punishment. The fine old priest expiates an early deed of rashness by a life of unsentimental helpfulness. Youthful tampering with wrong brings forth much bitter fruit. Humility and unselfish service alone redeem humanity. The lives that illustrate these truths are not unskilfully knitted together. There is more or less melodrama, but at least one genuinely dramatic moment, which concerns a little dog—at this page any reader may be forgiven a tear. The assembling of the best in the book by practising the art of omission would have prevented the reader from feeling like a sharer in the dedication "To Those Who Toil."

Master of the Vineyard. By Myrtle Reed. New York: G. P. Putnam's Sons.

Those who are familiar with Myrtle Reed's work need only be told that her latest novel is of the same character. It has the accustomed lofty purpose and syruppy soulfulness. Woman's heart and woman's clothes divide the interest. Love is enough and even more than a genteel sufficiency. The dedication is "To all who have loved in vain," and it will be enlightening to see whether this will operate as a prohibition to purchase or will make it a best seller.

The moral of the story seems to be that no one loves in vain. An unhappy wife can run away from her husband and fall in love with a young vine-grower who is betrothed to a simple adoring village maiden. The vine-grower can love the wife, madly, deeply, highly, widely, as she him. They can appeal to the husband to set her free. He can decide that he wants to try once more to make her happy. She can return to him and make him and herself loftily blest while still loving as above the vine-grower, who, in the light of a passion so sublimated, can reconstruct his own, pick up the fragments of the dropped Rosemary and take her into a philanthropic partnership, thus making happy all who were not so before. Thus does a properly managed four-in-hand love-in-vain affair make folk pour out their affections on their partners, the world, and one another. Edith and Alden, having dispensed felicity on all sides and having vowed never to meet again, maintain a mystical relation which enables them to meet in spirit on call at certain hours when "the tide of the night turns," and converse in words chiefly of one syllable, as "mine" and "thine." The millinery is engaging. "She was not in the mood for jewels, but she clasped a string of pearls around her perfect throat." The language is uplifting. "Think of all I give you in a cup of tea," says mother-in-law-to-be to Rosemary. "See the spicy, sunlit fields, . . . sand and heat and purple dusk, tinkle of bells and scent of myrrh, . . . dreams and moonbeams and starry twilights, . . . here, my dear, I give them all to you."

Buried Alive: A Tale of These Days. By Arnold Bennett. New York: Brentano's.

Here is entertaining farce extracted from the old device of the master changing places with his servant. It all comes about from a more or less natural misunderstanding when the valet catches cold and dies, and Priam Farll, the greatest of modern painters, a blend of James McNeill Whistler and Mr. Locke's Septimus, too shy to take the trouble to correct the misunderstanding, steps forth into London, a discharged middle-aged valet. Priam Farll is dead. Unknown in England save as a signature on sundry much-talked-of masterpieces and equally unknown in the big Continental hotels where his shyness has led him to find solitude, buried alive, in fact, he enjoys the by no means unique experience of reading his own obituaries. With some agitation, however, he attends his own funeral in Westminster Abbey and learns that his large fortune is to be applied to the foundation of a Gallery of Great Masters. Then it was that Mrs. Alice Challice proved balm to him. She was not a lady, but a woman, and as such she understood everything. She is really quite worth knowing. Married to her, Priam discovers Putney, as Mr. Chesterton would have him do. But his idyll is farcically complicated when for a livelihood he is betrayed into painting Putney. There is a good deal of the satire on British institutions, the

press and the bar in particular, just now in fashion, and both character and situation have whimsicality enough to disarm any serious charge of thinness and imitativeness.

PROFESSOR TRENT'S ESSAYS.

Longfellow and Other Essays. By William P. Trent. New York: Thomas Y. Crowell & Co. $1.50 net.

Of the eight essays which are comprised in this volume none is quite new; some have been read before more or less popular audiences, a few have formed the introductions to text-books, and the remaining one or two have appeared in periodicals. The result is not what might be expected, for, despite their heterogeneous purposes, there is, on the whole, a surprising evenness of tone and method. The reason for this is clear after one reads but a few pages. The writer's approach to literature is instinctively too human ever to become pedantic or even intricate, and too scholarly to permit of frothiness. The trait which, above all, pervades the book is a sweet sanity of reasonableness always alert to remove prejudice by a judicial regard for the facts. Professor Trent is preëminently a literary moderator.

His skill as such shows to great advantage when concerned with such a difficult problem as the American conception of Longfellow. Admitting with the worshippers the pragmatical value of this poet's long-standing popular appeal, he leads him up the mount of inspiration, but quietly and urbanely leads him down again to a position somewhat lower than the angels or even Poe and Hawthorne, and ends fairly, as it should seem to all his readers, by insisting that a few of Longfellow's poems—if only a few—are sure to live. Such a method of recognizing the force of even distorted notions, before proceeding farther, is almost necessary in this country, whoever the author discussed may be, since literary criticism is less crystallized here than elsewhere. Extravagant esteem goes hand in hand with philistine contempt, and Shakespeare and Dante, though accepted traditionally by the unthinking, have, with the opposite class, constantly to rewin their laurels. Of this Professor Trent is well aware, and so he asks the question in every case, What does the world think of this author, and what are its grounds for so thinking? and then, with malice toward none and sympathy for all, he embarks on the question with resolute accuracy. This is the way, certainly, to reach the American public as well as to confer a much-needed service; although the price extorted is high, for the language of the essays is largely argument, in which the primitive terms "admirers" and "detractors" occur very frequently

Not that Professor Trent himself lacks a more purely literary appreciation. Tucked away in a mere phrase sometimes, or in a single sentence at the most, are judgments so suggestive that many a reader will feel impatience that they are not expanded. We should have been glad to hear more of the "unity of atmosphere" which is the real unity of "The Faerie Queene," to mention only one instance. His general estimates, too, though nothing so new, clearly emerge from a mind and a heart to which literature has been a very personal matter. For that reason it is to be regretted that in not one of the essays on a literary figure does he toss aside the burden of proof and tell us elaborately what he himself thinks. Even in his remarks on Milton, who, he confesses, has meant more to him than any other poet, we have to be content with a rise in the argumentative pitch and with hearing truly significant questions brushed aside:

> To endeavor to determine the special characteristics of his imagination, to set his charm over against his power, . . . to try to determine the relative value and standing of his several works, to compare Milton himself with other great writers of the world, all this, however legitimate to my theme, would carry us too far afield now, and—to be honest—is something I never intended to attempt.

In some respects the most effective essays in the volume are two in each of which the writer is uttering an earnest message. In that dealing with the relations of history and literature, though he again dismisses for the nonce the most interesting relations of all—the history-making power of literature and the sort of history which creates literature—he at least holds the historians to whom the essay is addressed up to the high calling of several of their predecessors, by contending that history should always be regarded as a branch of literature and deserves therefore something better than a scientific presentment of facts.

In the latter of the two essays, which was originally delivered to a band of future teachers, after an introduction as ingenious, as insinuating, as it is good-humored, the writer speaks from very rich first-hand experience concerning the relative advantages to the young teacher of the country college and the city university. It will hearten many a man who is starting out, he scarcely knows whither, to read:

> All things considered, my judgment is that the country is a better nurse of strong character than the city, the college than the university. I suppose many would deny this; but the longer I live the less I am impressed with the essential independence of the mind and character moulded by large cities and large institutions. It is independence, thoughtfulness, creative energy, and versatility that one should mainly want to see every student display. Accuracy of scholarship and neatness of method and general urbanity rank below these qualities, and I think there is more chance of the greater qualities being developed by the man or woman that leaves the university than by the man or woman that stays.

STUDIES IN CHRISTOLOGY.

Christologies, Ancient and Modern. By William Sanday. New York: Henry Frowde.

The Person and Place of Jesus Christ: The Congregational Union Lecture for 1909. By P. T. Forsyth. Boston: The Pilgrim Press. $1.50 net.

The Self-Revelation of Our Lord. By J. C. V. Durell. New York: Imported by Charles Scribner's Sons. $2 net.

The Ethics of Jesus. By Henry Churchill King. New York: The Macmillan Co. $1.50 net.

It is interesting to note the effect of German historical criticism of the New Testament, particularly that which concerns the synoptic gospels, upon British and American theologians of varying temperaments. The Germans leave their creeds behind them much more easily, lay them upon the shelf as important monuments of dead ages, and plunge more deeply into the historical studies which revealed the inadequacy of the classic symbols. They appear to be not greatly disturbed in their piety, and even their English critics admit that they write on religious topics with a fervor and devotion now almost unknown among conservative theologians of either continent. The British scholar, on the contrary, is thrown into violent distress by the criticism which takes away the fourth gospel as a trustworthy witness to the *ipsissima verba* of Jesus, and relinquishes any contribution he might himself make to the historical investigation of the New Testament, in order that he may busy himself with theological readjustment of the discoveries he has learned from his continental brothers with the creeds of Athanasius and the Fathers. The German presses the advance, while the Briton writes up the story of the losses.

The gracious, simple spirit of Professor Sanday is a lesson in piety. He has set for his life work the composition of a Life of Christ, and in lectures, essays, and encyclopædia articles, he is preparing the way for the accomplishment of his great task. The present volume is one of several reports of progress which he has thrown out, partly to register the results of his endeavors and to clarify his own thought, and partly to procure the benefit of criticism. His industry is praiseworthy and his scholarship exact. No one could ask for a fairer critic or a more generous opponent. But he is committed by temperament to a defence of a mild orthodoxy, which holds to the classic creeds as the truthful expression and necessary complement of the gospel of the New Testament. He

traces the divine influence "in the ultimate decisions, the fundamental decisions, of the Church of the Fathers." He continues: "It is to me incredible that God should intend the course of modern development to issue in direct opposition to them. If I find my own thought leading me into such opposition, I at once begin to suspect that there is something wrong, and I retrace my steps and begin again." He is seeking earnestly for some method of reconciling the results of criticism, to which he endeavors to do justice, with the orthodox belief, and he suggests that the psychological doctrine of the subliminal consciousness may help to retain the dogma of the two natures of Christ. The attempt is more interesting than satisfying.

Principal Forsyth is of a different temperament. He declares that his lectures have been ten years in preparation, but they read like the quick speech of a man in anger. He feels that a great religious treasure is threatened, and he hurls out questions and epigrams in impassioned defence. His pages tire one by their very eloquence and intensity. He also is learned in all the wisdom of the Germans, and he commands respect by the seriousness of his appreciation of the religious needs of humanity and the worth of the classic answers to them. But at the end, we have only the old doctrine of a *kenosis*, the self-emptying by a preexistent Christ of divine attributes in the act of incarnation, an idea founded upon a chance utterance of Paul, to which insuperable objections have obtained for many generations.

Mr. Durell was evidently shocked by reading Harnack's "Wesen des Christentums," and he has taken great pains on many pages to show that many texts in the epistles and the writings of John support a different interpretation of the Christian religion than that which Professor Harnack extracts from the synoptic gospels. His essay is quite naïve and is interesting for its revelation of the impression historical criticism makes upon minds which are not aware of its true force and meaning.

If one may judge from the essay of President King, the recent contributions of continental scholarship to the historical understanding of the New Testament have found more fruitful soil in America than in England. Without attempting argument for the criticism of the synoptic gospels now generally accepted, he draws out the moral teaching of Schmiedel's "Foundation-pillar" passages, some nine texts which, it is held, could not have been invented, and the "doubly-attested sayings" of Professor Burkitt, the *logia* which occur both in Mark and the common source used by Matthew and Luke. He analyzes also the ethical doctrine of this latter element of New Testament tradition as a whole, discusses the ethics of Mark and of other strata of early Christian tradition, and in this manner builds up the ethical teaching of Jesus according to the best historical use of the sources. It may be urged that he has accepted some results too readily, notably those of Harnack, but his account of the moral teachings of Christ as thus constructed will do much to allay the feeling that criticism has in any way attenuated the doctrines of the New Testament, or made the religion of Jesus less forceful or less worthy.

Simon Bolivar, "El Libertador": A life of the chief leader in the revolt against Spain in Venezuela, New Granada, and Peru. By F. Loraine Petre. New York: John Lane Co. $4 net.

It is astonishing, yet true, that one hundred years have passed since the beginning of the South American Wars of Emancipation without witnessing, until now, a single serious attempt to present in English an unprejudiced, comprehensive biography of the best known and most picturesque figure of that epoch. We are glad to say at once that the present volume is both impartial and, in so far as military history is concerned, comprehensive. Furthermore, Mr. Petre's attractive book is the most noteworthy contribution to the history of the South American republics that has appeared in English in the past six years, since the publication of Akers's "History of South America." It is no detraction to admit that this is not so much a biography as an account of the wars with which Bolivar was concerned, directly or indirectly. It is essentially a military history, with little regard for the constitutional, diplomatic, or economic sides of the epoch. The author has a marked preference for detailed stories of campaigns, with the true Britisher's instinct for writing with a map in one hand and a very powerful field glass in the other.

This being his task, Mr. Petre was unusually well fitted to perform it. He had already published three volumes on the campaigns of Napoleon, besides an account of a journey in Colombia, up the Magdalena to Bogotá. He seems to have a fairly good knowledge of Spanish, although it is not always idiomatic. For his facts, he has relied chiefly on the personal testimony of O'Leary and Larrazabal. He does not pretend to have used original documents to any extent. In fact, he does not appear to have been aware of the great collection made by Blanco; and there are other important omissions from his small bibliography. Nevertheless, there is much in this volume that has never appeared heretofore in English. No one has told so well the pathetic story of Bolivar's forlorn attempt to achieve the impossible by uniting under one central authority Venezuela, Colombia, Ecuador, and Peru. By all the laws of their Spanish inheritance they were bound to fly apart. And the tremendous geographical obstacles of the *paramos* of the Andes and the *pantanos* of the Llanos, served admirably to strengthen the racial tendency toward strong local governments.

For the general reader, the chief interest in the book is the estimate of Bolivar's ability as a general, judged by a friendly, fair-minded, military critic, already thoroughly familiar with the campaigns of Napoleon. Says Mr. Petre:

> Bolivar's military notions were exceedingly crude. The fact is, the whole struggle rarely rose above the level of guerrilla warfare, and it is ridiculous to compare the leader of guerrillas with Napoleon, or even with Washington. Bolivar was never opposed to a commander of the second, or even of the third, rank. Bolivar's great merit as a leader, under the peculiar circumstances in which he commanded, lies in his firmness and constancy in defeat. . . . Napoleon himself was hardly more successful in exacting from his men the uttermost farthing of exertion and devotion.

Mr. Petre is right in laying great stress on the fact that Bolivar's success was due chiefly to his marvellous ability to hold together jealous and warring factions among the "patriots." His tact and his personal charm were boundless. His character, in many ways extraordinarily typical of the highest class of Spanish Americans, appealed to their affectionate admiration. His personal influence was immense. To illustrate this, the panegyrical Larrazabal reports even Santander as saying of Bolivar:

> Such is his influence and such the secret power of his will, that I myself, on many occasions, have approached him in fury, and, merely on seeing and hearing him, have been disarmed, and have left his presence filled with admiration.

Even if this is apocryphal, it tells the secret of Bolivar's remarkable achievements.

Mr. Petre believes, quite naturally, that Bolivar's success in driving the Spaniards out of South America marks him out as the greatest man that that country has produced. Without entering into any discussion of the justice of this decision further than to remark that most impartial students would prefer to give that distinction to San Martin, it is reassuring to note that Mr. Petre makes no attempt to "whitewash" his hero. He neither pretends to exonerate him from his dastardly treachery to Miranda, nor seeks to excuse him for breaking the armistice of 1821. The latter act he justly characterizes as "a somewhat unscrupulous seizure of a favorable opportunity."

Mr. Petre's fairmindedness toward Bolivar does not apply, however, to the great Colombian general, Santander. In fact, the chief defect of the book, historically, is the oft-expressed animosity against

this able patriot, who was in many ways the superior of Bolivar. The error is a natural one for any writer to fall into, especially one who depends on Larrazabal, Baralt, and the other native historians. It is worthy of note that Dr. Gil Fortoul, the latest and best Venezuelan historian, although no traducer of Bolivar's fame, calls Santander "an eminent statesman, a scrupulous administrator, and, on all occasions, a patriot." Unfortunately, Fortoul's excellent work does not seem to have fallen under Mr. Petre's notice. Notwithstanding these and other defects, the present volume is a fairly satisfactory exposition of Bolivar's military career. A definitive and thoroughly comprehensive biography cannot be written until some patient historian shall have carefully explored the thousands of documents that are extant, both in print and in manuscript.

Kaskaskia Records (1778-1790). Edited by C. W. Alvord. In Collections of the Illinois State Historical Library. Vol. V. Virginia Series Vol. II.

The documents contained in this volume have in large part been inaccessible heretofore except in manuscript form. The Menard Collection, Mr. Alvord tells us, is printed almost completely, at least, so far as the documents touch this period (1778-1790). The rest of the letters are drawn from the Kaskaskia records (rediscovered by Mr. Alvord), the Haldimand papers, the Draper manuscripts, and the Continental Congress Papers. Although the chronological arrangement has in the main been adhered to, the editor has also resorted to an arrangement in chapters which reveals the general character of the documents contained. The first chapter concerns the relations of Thomas Bentley with George Rogers Clark. In the very scholarly introduction to the volume Mr. Alvord makes a critical examination of the vexed question whether "the conception of the occupation of the Northwest originated in the fertile brain of Thomas Bentley." After a well-reasoned investigation he concludes that it is still a subject for speculation, and that the fact is not established by unassailable proof. Later chapters have interesting material concerning "the rule of Virginia soldiers in Illinois" (1778-79), "the beginnings of civil government," "the court and the military," "the coming of the commissioners from Virginia," "the revolt of the French" (1787), and "the climax of anarchy." The final chapter contains a selection of letters concerning ecclesiastical subjects (1780-1792). Students of Illinois history will probably find this last chapter the most interesting. There is much human interest in all, for the material deals with a period when the villages of the Illinois country, neglected for twenty years by France and then by England, were drawn into war and politics. After the war the villages were left without provision for their government, and the local conditions became almost unendurable. The hopeless anarchy is portrayed in this slightly overdrawn picture by Father Gibault:

> There is no distinction from the greatest to the least except that of force; of the tongue pernicious, calumniatory, and slanderous; of crying very loud and giving forth all sorts of insults and oaths. Everybody is in poverty, which engenders theft and rapine. Wantonness and drunkenness pass here as elegances and amusements quite in style. Breaking of limbs, murder by means of a dagger, sabre, or sword (for he who wills carries one), are common, and pistols and guns are but toys in these regions. And who has one to fear but the strongest? No commandant, no troops, no prison, no hangman; always, as in small places, a crowd of relatives or allies who sustain each other; in a word, absolute impunity for these and ill luck for the stranger. . . . The most solemn feasts and Sundays are given up to dances and drunkenness, and consequently to quarrels and battles.

The book contains a valuable index, a list of documents, and a useful table of contents. Mr. Alvord's editing is of the high order he has led us to expect from him.

Vitæ Sanctorum Hiberniæ, Partim Hactenus Ineditæ, ad Fidem Codicum Manuscriptorum Recognovit, Prolegomenis Notis Indicibus Instruxit Carolus Plummer, A.M. Oxonii: E. Typographis Clarendonianis, MCMX.

Three distinct compilations of Latin lives of Irish saints are known to exist in manuscript. The first of these, preserved in the Codex Salmanticensis at Brussels, was published by the Bollandists in 1888; and it is the purpose of Mr. Plummer's work to make accessible the contents of the other two, which he designates respectively as MT (from two manuscripts in Dublin) and R (from two Rawlinson manuscripts, R1 and R2, in the Bodleian). Those lives in MT and R, which are merely duplicates or epitomes of lives in the Brussels collection, Mr. Plummer has not deemed it worth while to print, but he has included all the texts that have any independent value, and they constitute an extensive body of material. His completed work, of which only the first volume has yet reached us, will contain thirty-five lives and related documents, fourteen of them hitherto unprinted and the others published for the most part in books very difficult to obtain.

If Mr. Plummer had done nothing more than bring together trustworthy texts of all these new or inaccessible materials, he would have rendered a great service to the students of Celtic antiquities and ecclesiastical history. But he has been far more generous in interpreting his function as an editor, and his elaborate introduction discusses the documents in thorough fashion from almost every point of view. In the chapter on the separate lives he analyzes the texts one by one, and examines their relations, not only to the Latin lives in the Bollandist collection, but also to numerous versions in Irish and other languages. The Irish lives which he cites are in many cases unpublished, so that his remarks contribute information of value on the history of the vernacular literature. Incidentally, he takes up questions of general interest in literary or ecclesiastical history, such as the problem of pre-Patrician Christianity in Ireland (treated in connection with the lives of Ciaran and Declan) or the development of the famous cycle of stories about Brendan, the Navigator (discussed, with citation of new materials, on p. xxxvi). Then, in the later chapters of the introduction, a systematic account is given of the information yielded by the lives of the saints concerning the manners and customs, laws, institutions, and beliefs of the ancient Irish people. Here again Mr. Plummer has not confined himself to the texts in his own collection, but has made a thorough canvass, so far as possible, of the whole body of Irish hagiological literature. The evidence he has brought together is naturally abundant and much of it new, and his compact and scholarly analysis of it places his work among the best sources of information on the subject. His account of the Irish druids and their religion may be particularly recommended as an important supplement to what is said of Irish paganism in Professor Bury's "Life of St. Patrick"—the least adequate part, perhaps, of that very distinguished book.

It goes without saying that in a field of learning where so many subjects are obscure, and particularly in the interpretation of matters of mythology and religion, Mr. Plummer should now and then express opinions that are open to dispute. We should not be willing, for example, to go as far as he does in assuming the survival of Celtic divinities in the persons and functions of individual saints. The evidence of proper names, of poetic epithets, or "kennings," or even of commonplace exploits, seems to us to be often overworked in the interest of this method of interpretation. Without at all intending to deny the possibility or the fact of such survivals we, nevertheless, believe that every assumed instance should be examined with caution, and that the rough-and-ready application of the theory is as unsafe as some of the familiar processes of the school of Lachmann and Müllenhof in explaining the origin of popular epic. On the other hand, it should be said that when any scholar wishes to reexamine the validity of the theory, he

will find in Mr. Plummer's volumes a valuable collection of cases. And this remark applies, in principle, to much that Mr. Plummer says on other subjects and to a great deal of the best work that has been done on the origin and history of religion. Theories and modes of interpretation are bound to change from time to time, but the substance of such scholarly productions as Mr. Plummer's remains as a permanent acquisition of science.

Siena and Southern Tuscany. By Edward Hutton. With sixteen illustrations in color by O. F. M. Ward, and twelve other illustrations. New York: The Macmillan Co. $2 net.

Matthew Arnold once asserted that, "upon the breast of that huge Mississippi of falsehood called *history*, a foambell more or less is of no consequence"; and, in some of his earlier works, Mr. Hutton seemed to be of very much the same mind. He has reiterated again and again that he is not a scholar, but a man of letters whose books are meant to be read not for instruction, but "for delight"; and, even in so learned a work as his edition of Dennistoun, he expressed a horror of facts as inimical to art. Yet he had already proved the contrary in his "Sigismondo Pandolfo Malatesta, Lord of Rimini"; while, in his "Giovanni Boccaccio," he finally made good his title to be regarded not only as a scholar but as a very exact and painstaking scholar. Perhaps, however, this phase of Mr. Hutton's intellectual development is most clearly manifested in the series to which the volume before us belongs. That series opened, in 1905, with "The Cities of Umbria," a work in which the fact was obviously treated as entirely subsidiary to the right expression of what Mr. Hutton himself felt and saw. Then followed, in 1907, "Florence and Northern Tuscany," and, in 1909, "Rome," both of them showing a marked advance on "The Cities of Umbria"; while, to-day, in "Siena and Southern Tuscany," we have by far the best book of the series, since, with all his old charm of style, Mr. Hutton here displays a just appreciation of the necessity for accuracy in dealing with the facts of history. Not that the present volume is primarily an historical work. There is a good deal of history in it; but the keynote always remains a personal one, and the appeal is rather to the traveller of cultured tastes, the lover of art and of nature, than to the mere student. It is, in fact, written on the same delightful lines as were its predecessors. Moreover, Mr. Hutton leads us through a region which to most of us is a veritable *terra incognita*. Siena occupies a scant third of the volume, Arezzo and Borgo S. Sepolcro a single chapter. The rest is devoted to the little towns and villages of southern Tuscany: Buonconvento, in its tawny, up-tossed, sun-baked desert; Asciano, nestling among its tumbling hills; Montalcino, "the eagle's nest that the doves have occupied"; Rapolano, Serre, Lucignano, Pienza, S. Querico d'Orcia, Sarteano, Cetona, Chiusi. Their very names are beautiful. We can wish the reader no better fortune than to visit them with Mr. Hutton's book in his pocket.

Only do we regret that no chapters are devoted to Massa Marittima and to Piombino, each, in its day, an independent state, and that Mr. Hutton does not explore the Maremma with us. The Abbey of S. Galgano in the Val di Merse he is, we presume, reserving for his promised volume of "Country Walks about Siena."

The Stone and Bronze Ages in Italy and Sicily. By T. Eric Peet. New York: Henry Frowde. $5.25.

A scientific exposition of the prehistoric periods in Italy in the English language has long been hoped for by archæologists. Hitherto a student of that period has been almost entirely dependent upon Italian publications, such as Professor G. A. Colini's brochures on the palæolithic, eneolithic, and bronze ages in the *Bullettino di Paletnologia Italiana*, Pigorini's article "Le più antiche civiltà dell' Italia" in the same periodical, and a mass of scattered publications often difficult to obtain. Mr. Peet's book, therefore, fills a much felt need. Its object is set down as twofold: "firstly, to describe the prehistoric civilizations of Italy, and secondly, to determine their relations to those which flourished contemporaneously in the Ægean and the Mediterranean generally, and in Central Europe. Thus the book will be welcome not only to the student of prehistoric Italy, but to every Mediterranean archæologist who is interested in the connection of Italy with the Ægean and north Greece at so early a period. Moreover, special prominence has been given to the civilizations of Sicily, because here the connection with the Ægean seems to have been closest, and because this island was in many respects in advance of the Italian mainland.

The material is divided chronologically, beginning with a chapter on the palæolithic period, during which there is abundant evidence to show that Italy was inhabited by man in the quaternary period, though it is doubtful whether it was inhabited during the tertiary period. Then are described the neolithic cave-dwellings, hut-foundations, and burials; next the eneolithic dwellings and cemeteries, the rock-tombs and megalithic monuments, the early lake-dwellings, the Terremare, and the bronze age in Italy, Sicily, and Sardinia. Lastly, there are two interesting chapters on the Racial Problem and on Mycenæan Influence in Italy. The book is well arranged and is profusely illustrated.

Notes.

The books of the Chicago University Press are to be published and sold in England and the British colonies by the University Press of Cambridge.

Anatole France's book on Pierre Paul Prud'hon is soon to appear, and his new novel, whose subject is the angels, has just been handed to his publishers.

Frederick A. Stokes Co. promises shortly a limited edition of Peary's "The North Pole," also a special library edition of the same; "The Bird in the Box," a novel by Mary Mears; a specially illustrated issue of "The Merry Wives of Windsor," the same of "Hiawatha," and "Spain from Within," by Rafael Shaw.

"The Philosophy of Plato and Its Relation to Modern Life" is the title of a handbook by Edward Howard Griggs, announced for publication this season by B. W. Huebsch.

The Century Company will publish early in November "The Story of Spanish Painting," being the second in Charles H. Caffin's series of art books, of which "The Story of Dutch Painting" was the first. About the same time will appear Walter Camp's "Book of Football," and Helen Keller's "Song of the Stone Wall."

Autumn announcements of the Baker & Taylor Co. include: "Robin Hood" and "The Narrative Bible," both by Clifton Johnson; "Parlor Socialists," by Mrs. John Martin; the last volume of "The History of Architecture," by Prof. Arthur L. Frothingham; "A Guide to English History," by Prof. Henry W. Elson; "Tales Come True," by Margaret Coulson Walker, and "The Arabian Nights," by Anna Tweed (Mrs. Clifton Johnson).

Dr. Rudolf Steiner's "Theosophy" is to be translated from the German by E. D. Shields and brought out by Rand, McNally & Co.

Among Doubleday, Page & Co.'s forthcoming stories are "The Unforeseen," by Mary Stewart Cutting; "The Rules of the Game," by Stewart Edward White, and "The Coward of Thermopylæ," by Cara Dale-Owen Snedeker.

An "Index Geographicus" of the local names in Sabæan inscriptions and the work of early Arabian writers and travellers was in preparation by the English major-general James Stewart up to the time of his death, two weeks ago.

T. J. Wise's "Bibliography of Tennyson," which sometime since was privately printed, is now to be brought out by Hodder & Stoughton.

"A Papal Envoy during the Reign of Terror: being the Memoirs of Mgr. de Salamon, the Internuncio at Paris during the Revolution, 1790-1801," edited by the Abbé Bridier, and translated by Frances Jackson, is in the list of Sands & Co.'s announcements.

"Mr. Dooley Says" was wrongly attributed in our issue of last week to Harpers. It is published by Scribners.

In the list of autumn books announced by the J. B. Lippincott Co. are: "The Island of Stone Money, Uap of the Carolines," by William Henry Furness, 3d, M. D., F. R. G. S.; "China Under the Empress Dowager, Being the History of the Life and Times of Tzu Hsi," compiled from state papers and the private diary of the comptroller of her household, by J. O. P. Bland and E. Backhouse; "The Life and Public Services of J. Glancy Jones, chairman of the Committee of Ways and Means, United States minister to the Court of Austria, etc.," by Charles Henry Jones; "Sterne: A Study," by Walter Sichel, to which is added "The Journal to Eliza"; "Queer Things About Egypt," by Douglas Sladen; "To Abyssinia, Through an Unknown Land," by Capt. C. H. Stigand, F. R. G. S.; "New Guinea," by Beatrice Grimshaw; "The Regilding of the Crescent," by F. G. Aflalo, F. R. G. S.; new popular edition of "The Secrets of the Vatican, the Palace of the Popes," by Douglas Sladen; Poetry: "Pansies and Rosemary," by Eben E. Rexford, and "The Gold-Gated West," by Samuel L. Simpson; "The Little Singer," by Emily Sargent Lewis; "Steam Ships and Their Story," by R. A. Fletcher; new popular edition of "Through Savage Europe," by Henry De Windt, F. R. G. S.; "Portugal," by Ernest Oldmeadow; "The Romance of Tristram and Iseult," translated from the French of Joseph Bedier, by Florence Simmonds; "Rubaiyat of Omar Khâyyâm," translated by Edward FitzGerald; "Stories from the Operas," by Gladys Davidson; "Great Masters of Landscape Painting," from the French of Emile Michel; "A History of Japanese Color-Prints," by W. Von Seidlitz; "The Golden Heart," by Ralph Henry Barbour; a standard gift edition of "Legends of the Alhambra," by Washington Irving, with an introduction by Hamilton Wright Mabie; "Under the Open Sky, being a Year with Nature," by Samuel Christian Schmucker; John Reed Scott's "The Impostor;" "The Scales of Justice," by George L. Knapp; "The Path of Honor," by Burton E. Stevenson; David Potter's "The Lady of the Spur"; "A Dixie Rose," by Augusta Kortrecht; "The End of the Rainbow," by S. M. Düring; "Scots Dialect Dictionary," by Alex. Warrack; "The Origins and Meanings of Popular Phrases," by Basil Hargrave; "The Globe English-French Pocket Dictionary"; "Britain's Birds and Their Eggs," by A. Landsborough Thomson; "God's Heroes," a drama in five acts, by Laura Clifford Barney; "The Chauncey Giles Year Book," by Carrie Giles Carter; "Two Hundred Opera Plots," compiled by Alga Racster; "Mollie and the Unwiseman Abroad," by John Kendrick Bangs; "Norse Fairy Tales," selected and adapted from the translations by Sir George Webbe Dasent; "Bimbi Stories for Children," by "Ouida"; "The Swiss Family Robinson," edited by G. E. Mitton; "Mopsa, the Fairy," by Jean Ingelow; "Three Amateur Scouts," by Raymond Jacberns; "A Knight Errant and His Doughty Deeds," the story of Amadis of Gaul, edited by N. J. Davidson; "Teddy Lester's Chums" and "The Lone Patrol," by John Finnemore; "Sarah's School Friend," by May Baldwin; "Rosa Regina," by Laura T. Meade; "Poor Uncle Harry," by Raymond Jacberns; "The Little Tin Soldier," by Graham Mar; "The Little Torment," by Margaret Kilroy; "The Middy of the 'Blunderbore,'" by Lieut. Charles Gleig, R. N.; "The Phantom Battleship," by Rupert Chesterton; "Coo-ee!" by Robert Leighton; "Strong-Hand Saxon," by Christopher Beck; "Three Hundred Things a Bright Boy Can Do," by Many Hands; "Mars via the Moon," by Mark Wicks; "Kiddie of the Camp," by Robert Leighton; "Heroes of the Polar Seas," by J. Kennedy Maclean; "The Romance of the Ship," by E. Keble Chatterton; "The Romance of Modern Astronomy," by Hector Macpherson, jr.; "Adventures Among Red Indians," by H. W. G. Hyrst; "Heroes of Elizabethan England," by the Rev. Edward Gilliat, M. A.; "Missionary Heroes in Oceania," by John C. Lambert, M. A., D. D.; "The Wonders of the Insect World," by Edmund Selous; "The Wonders of the Modern Railway," by Archibald Williams.

Charles F. Warkwick contributes to the autumn list of George W. Jacobs & Company the fourth and last of a series of books he has been working upon for many years. The title of the present volume is "Napoleon and the End of the French Revolution." The other members of this series dealt separately with Mirabeau, Danton, and Robespierre. The American Crisis Biographies are this year advanced by the publication of volumes on William H. Seward, by Edward Everett Hale, jr.; on Stephen A. Douglas, by Prof. Henry Parker Willis; on William Lloyd Garrison, by Lindsey Swift, making sixteen volumes in all issued to date, seven additional books of the series being in active preparation. Jacobs also will issue about the first of next month a richly decorated book by Elizabeth McClellan, "Historic Dress in America," which carries forward its author's study to 1870. Over Jacobs's imprint also are to be noted: "With Gun and Guide," an account of moose and bear hunting in Maine, New Brunswick, and British Columbia, by Thomas Martindale; "The A. B. C. of Collecting Old Pottery," by J. F. Blacker, and "The A. B. C. About Collecting," by James Yoxall; "Prehistoric Rhodesia," by Richard N. Hall, with sixty illustrations and maps; "Oxford From Within," by Hugh de Selincourt, with twenty full-page illustrations, twelve of them in color; "From the Thames to the Seine," the narrative of a sketching cruise along the north coast of France, by Charles Pears, with forty full-page illustrations, twenty of them in color, and "A Japanese Artist in London," by Yoshio Markino, with twelve full-page illustrations by the author.

Duffield & Co. have issued an edition of Oscar Wilde's "Ballad of Reading Gaol," in gift-book style, with red borders about the pages. It is the truest thing that Wilde ever wrote.

We have already announced the Centenary Editions of Charles Dickens, which his original publishers, Chapman & Hall, have brought out. We are glad to see four volumes of this edition ("Sketches by Boz," 2 vols., "Oliver Twist," and "American Notes") with the New York imprint of Charles Scribner's Sons, and sold at the surprisingly low price of one dollar net the volume. The text is authoritative and definitive; the illustrations are, we believe, produced from original duplicates in the possession of Chapman & Hall, and have nothing of the dulness usually observable in old worn plates; the printing is fair. We shall follow this admirable edition with interest, and join ourselves to the many who will be led once more through Dickens's Utopia.

Doubleday, Page & Co. are issuing the "Presidential Addresses and State Papers of William Howard Taft," and in what they designate as "volume one" include the material of Mr. Taft's first year in the Presidency. Presumably three later volumes will gather up what is to come. As the present volume falls open at about the middle, the eye is caught by some words in the "Address at Orchestra Hall, Chicago" (September 16, 1909): "Of all the questions that are before the American people I regard no one as more important than this, to wit, the improvement of the administration of justice." The sobriety of his words, and his concern with facts and not passions, offer a curious contrast with the much-bruited words of his friend.

Those who care to spend their days and nights on the dinner wit and political gravity of Senator Depew may now obtain eight octavo volumes of his "Orations, Addresses, and Speeches," privately printed by Austin & Lipscomb of Union Square, New York. The works are edited by John Denison Champlin, and the Hon. Henry Cabot Lodge has, as a good brother Republican in the Senate, furnished a General Introduction. The books are handsomely printed, with photogravure frontispieces.

Edgecumbe Staley's "The Dogaressas of Venice" (Scribners) is a popular book on the wives of the Doges. It contains a great deal of interesting and curious information concerning Venetian domestic and social life from the earliest times. Mr. Staley seems to have collected the main facts, which are at best scanty, about the dogaressas, drawing his material from Molmenti and other well-known works. His illustrations are pertinent. His style is less flamboyant than it was in his "Tragedies of the Medici," but it still needs much toning down. The proofreading is very bad.

After the publication of Lord Broughton's "Recollections" and Richard Edgcumbe's "Byron: The Last Phase" (reviewed in the *Nation*, November 4, 1909), it was a pretty safe guess that Francis Gribble would immediately proceed to construct a book on "The Love Affairs of Lord Byron." At any rate such a book, stamped with Mr. Gribble's customary mark of cheerful and unabashed gossip, now comes to us from Scribners. Lord Broughton's "Recollections" contained in an appendix a document, written by Broughton (then John Cam Hobhouse) at the time, which proved conclusively and once for all that Lady Byron's charges of incest and unnatural vice were false. Mr. Gribble summarizes this document and adds his own confirmatory arguments, missing, however, in rather a curious way, one or two of Hobhouse's facts. Mr. Edgcumbe's book was largely concerned with an attempt to discredit the disgusting book "Astarte," in which Lord Lovelace, Byron's grandson, had raked up the old scandal, and to build up, on the contrary, a romantic story of Byron and Mary Chaworth, including the birth of a child which Mrs. Leigh adopted as her own under the name of Medora. Mr. Gribble accepts and retells this romance,

although he rejects the story of Medora. Those who desire to become acquainted with the latest form of the Byron legend will find it clearly and entertainingly set forth in this volume, though they might do better by going at once to Mr. Gribble's sources. For the rest, Mr. Gribble relates the other love affairs of Byron in rather a flighty manner, with an occasional quotation from a book with which even the well-informed Byronist may not be familiar.

"Sicilian Ways and Days" by Louise Caico (Appleton) is an intimate and fully illustrated account of the folkways in the town of Montedoro, Province of Caltanissetta. Weddings, funerals, religious festas, riding excursions to the sulphur mines, and remote hunting villas are the staple of the book. Mrs. Caico's observations on the queer, good-natured shiftlessness of Sicilian housekeeping and business bear the mark of truth. Perhaps the most interesting feature of the book is its translations of popular religious poetry and ritual. Very affecting is an entire *Novena*, narrating with affectionate homeliness the nine days ending with the birth of Christ. A cradle song of the Virgin is a gem of its kind. Mysterious St. Calogero of Girgenti naturally plays a large part in these pages. The reapers hail him at sunset, waving wisps of wheat in his honor. When his image is hurried in disorderly fashion through the streets, its iron head bruises the plaster on the house fronts, and the wound is healed and the house blessed by the application of the saint's picture. In his honor devotees under vow lick the pavement of his church from door to altar. This disgusting and filthy ordeal which prevails in southern Italy generally, should be prohibited by law. With her faithful escort Alessandro, featured like Dante and conversant with the great poets, the writer adventured to an estate of which the master had killed his man and, by repute, foregathered with brigands. The courtesy of the host was fully equal to this friendly intrusion. Whoever likes terse, clear, and unpretentious writing and the ways of humble folk, will like this book. Tragedy crosses its pages. The knife claims its victims. In the last chapter a young advocate is treacherously shot, and the curtain falls on the arrest of the mayor of the town for having "prepared" the crime.

Prof. Walter Raleigh of the University of Oxford, who uses the King's English with a sustained grace and power as rare in the academic world as elsewhere, contributed some five years ago a spirited introduction to Messrs. MacLehose's edition of "Hakluyt's Voyages." The substance of this introduction was revised, and reissued separately in 1906, and is now reprinted in an attractive little volume entitled "Early English Voyages," for which the Macmillan Company are the agents in this country. Sharing the imperialistic dream and ardor of his great namesake, Professor Raleigh outlines the explorations and semi-piratical cruises of the sixteenth century; dedicates a chapter to the memory of Richard Hakluyt, "Scholar, Bibliographer, and Editor," with "a threefold title to modesty and self-renunciation"; and discusses at some length the influence of the voyages on poetry and imagination. The book ends with a moral which should be acceptable to the political school of Mr. Kipling: "As a people—to borrow a phrase from the poetry of common speech—we follow the sea; it will be an ill day for us when the tides that wash the world run their ancient courses, and we may not follow."

Henry Rawle Wadleigh's "Munich: History, Monuments, and Art" (Frederick A. Stokes Co.) is a useful work for the stranger within the gates of the Bavarian capital who wishes historical information about this city, which is so entirely *sui generis* in Germany, and which bears so conspicuously the imprint of royal hands since the days of Ludwig I. Mr. Wadleigh writes in complete sympathy with the *genius loci* but is no indiscriminate admirer. After describing the growth of the various public buildings he gives an account of the contents of the museums and galleries. An appendix contains brief chapters on the environs of Munich, on Benjamin Thompson, Count Rumford, whose importance in Bavarian history is not limited to the laying out of the so-called English Garden, and on the passion play of Oberammergau. A good map, apparently taken from Baedeker, and eight illustrations of characteristic buildings and monuments accompany the text. The book suffers by comparison with such a volume as Weese's "München" in the lack of more numerous illustrations; but this lack would not be felt by a reader whose eye was on the object.

"Essays in Criticism: Third Series," by Matthew Arnold, is a title to wake any reviewer from lethargy, and, indeed, the volume thus entitled, published by the Ball Co. of Boston in form corresponding to the Eversley edition, is one of the precious things of the season. The opening and most important essay of the series is that "On the Modern Element in Literature," which was delivered as Arnold's inaugural in the Poetry Chair at Oxford, and, twelve years later, was printed in *Macmillan's Magazine*. It is a plea for Greek based on the modernness of spirit in Greek literature, and on its applicability to modern times. There follow essays on "Dante and Beatrice," "Obermann," "Sainte-Beuve," "Renan," "Johnson's Lives," "A 'Friend of God,'" and "An Eton Boy"—slight sketches in some cases, but all in the master's true vein, and all decidedly worthy of collection and preservation. We shall not attempt to expatiate on them, but shall leave them to speak for themselves. We could wish that the editor, Edward J. O'Brien, instead of prefixing his long introductory study of criticism, had taken pains to tell us from exactly what source each of the essays was gathered. Mr. O'Brien has something to say that is not negligible, but his elevation of the function of sympathy in criticism so far above that of judgment is quite out of place in an essay written ostensibly in praise of Matthew Arnold, and would, we fear, have caused Arnold, could he have read it, to retort in his best vein of irony. Mr. O'Brien's notion of criticism—"the identification, as far as possible, of the critic with the man whom he criticises," etc.—is not so original as he seems to think, but it certainly was not Arnold's. However, this Introduction does not diminish the value of a book for which every lover of letters will be most grateful.

With the ninth volume Gaillard Hunt completes his "Writings of James Madison" (Putnams). As the period covered by the letters extends from 1819 to 1836 great compression was necessary, and not a few important papers used by Rives have been omitted. Yet on the plan laid down by Mr. Hunt, this does not involve a serious defect. Madison must always stand as an interpreter of the national Constitution, and that is the particular activity which guided the editor in selecting his material. After Madison's retirement from the Presidency he occupied a kind of "chair" on the history of the Constitution. He held the only available record of debates, and his opinion was accepted as authority. In these later letters he expounds the nature of tne document, the procedure in the Convention of 1787, and the special application of its principles. But in this volume of 600 pages of text Mr. Hunt prints less than twenty letters not included in the compilation of 1865. A few are of a private character, asking to obtain a loan at the bank, or relating the meeting with Lafayette in 1824, or discussing the relation of Christianity to civil government, in which Madison takes strong ground against a state establishment. In these sixteen years the questions of slavery and nullification were coming to the front, and both troubled Madison because of his former acts. Opposing slavery, he favored the colonization movement. Yet he could not assert that Congress had Constitutional power to appropriate money for such a purpose. He found himself placed on the defensive when the Virginia and Kentucky resolutions of 1798 were used as the basis of nullification. Nor was that the only question on which his authority was injudiciously invoked. The chief advantage of Mr. Hunt's edition lies in its accuracy of text, for both Gilpin and Rives had not only allowed many errors to pass unnoticed, but had taken liberties with the material that were unpardonable. Mr. Hunt diligently located the originals and made a careful collation of text. Madison is still the "closet" statesman and "gentle hind" of Jefferson; but his writings must always be the great source of Constitutional doctrine. This new edition is authoritative in stating his position.

The six essays comprising Oscar Kuhns's little volume 'The Love of Books and Reading" (Holt) are so many garlands of apposite quotation and allusion connected by a text that evinces no great originality. There is in the book agreeable scholarship linked not quite congruously to a sort of placidly undiscriminating friendliness. The author knows the great writers well, but is no distinguisher of persons. Such a collocation of poets, for example, as Carducci, Wordsworth, Keats, William Watson, Richard Watson Gilder, and Henry Van Dyke simply ought not to be even when the bond is avowedly a superficial one. Professor Kuhns is a safe and solicitous but wholly unexciting guide to the heights of the greatest prose and poetry.

The art of John Burroughs is so demure and straightforward that sometimes one doubts if it is art at all. Nature fills him with a diffused happiness but apparently affords few isolated great moments. The romantic tang and pungency of Thoreau you must not look for in his accredited successor. "In the Catskills" (Houghton Mif-

film Co.) affords impressions of the snow, fox hunting, an ascent of Slide Mountain, camps and tramps at the headwaters of such famous trout streams as the Rondout, Neversink, and Beaverkill, recollections of older farm life. Birds and "porkupigs" are encountered, roofs are made of bark, and beds of boughs. All this will infallibly attract those who already love forest and mountain. Mr. Burroughs's chronicle is so evidently faithful that the knowing imagination readily supplies the glamour. The uninitiated will find dull stretches. The present writer has had his share of packing over forest trails and sleeping under the sky, but he confesses to feeling a certain tediousness in ramblings punctuated merely by the apparition of birds of odd favor. When Mr. Burroughs is fishing or climbing, when, in short, his essays have an objective, we cheerfully go with him, and could hardly imagine better company. Which only shows perhaps that your reviewer is not truly sealed of the cult of simple nature, and that John Burroughs, like his close analogue in the field of human nature, W. D. Howells, is in some respects a special taste. Clifton Johnson has made excellent photographs to accompany the text.

The substantial-looking volume which has just been issued by the University of Chicago Press with the title, "Bibliography of Economics for 1909," is a collection of the monthly lists, previously printed in the *Journal of Political Economy*, together with some additional matter. Books, and articles which have appeared in periodicals are placed in separate groups, and the alphabetical order of the monthly lists is replaced by a classification into subjects. Ninety-six journals have been indexed, and in all about 7,500 titles have been listed. Although the bibliography professes to be exhaustive, only publications in English, French, German, and Italian have been included. The typography is clear, but monotonous; nothing stands out. A considerate use of italics would have enlivened the page and emphasized such matters as the authors' names and references to journals. The failure to mention the country under which a government office belongs causes much uncertainty. Such a reference, for instance, as "S. doc. 85" is unintelligible, and no one but an American can probably guess what "H. rp. 1805" means. It would also have been well if biographies had been put in a group by themselves, listed under their subjects rather than under their authors. There is no general authors' index.

In "Wood Wanderings" (Boston: Small, Maynard & Co.) Winthrop Packard writes on a subject which clearly he understands and loves. The book is in the manner of Thoreau, not so precisely observant as to be termed scientific, nor so speculative as to fall in with the romantics. The author wanders aimlessly, it is true, but manages to have a busy time of it in a buoyant, active way, now "shinning" up to the very top of a hickory tree in good-natured pursuit of a gray squirrel, now trying vainly to get between a woodchuck and his hole. He picks up bats and caterpillars without squeamishness and is never fooled by a last year's bird's nest. Although no one season of the year receives more than its due, the autumn woods seem to have caught the author's particular relish:

> On such days I love to watch the pond shore and the reedy stretches of the meadow marsh, for to them come the first of the wild migrants of autumn, and in the northeaster you may exchange greetings with winter yellow-legs, just down from the Arctic shore. To-day I heard them, high in the invisible realms of the upper mists, whirling down to me—gray forms out of a gray sky that seemed to loose them as it later will loose snowflakes.

Those who like the challenge of the woods and who are stirred lightly to thought as they wander, will find this little volume very readable.

William Vaughn Moody, chiefly known as the author of "The Great Divide," died on Monday in Colorado Springs. He was born in 1869, at Spencer, Ind., was educated at Harvard, graduating in the class of 1893, and received a master's degree the following year. While a graduate student he assisted in English, and in 1895 became an instructor. In 1901 he was appointed assistant professor of English and rhetoric in the University of Chicago, with which institution he was actively connected until 1907. Besides his best known work, he wrote "The Masque of Judgment," "The Fire-Bringer," "The Faith Healer"—all plays—"Poems" "History of English Literature," and edited the Cambridge edition of Milton and other English classics.

Julia Ward Howe died on Monday at her summer home in Middletown, R. I., after a short illness, at the age of ninety-one. She was born in New York city in 1819, and was the fourth child of Samuel Ward and Julia Cutler Ward. At the age of seventeen she contributed anonymously to the *New York Magazine*, and early in life showed also a gift for music. In 1843 she married the eminent philanthropist, Dr. Samuel Gridley Howe, and developed at once an interest in public work, which she always retained. With him she conducted the Boston *Commonwealth*, which espoused the cause of anti-slavery prior to the civil war; later she became active in woman's suffrage, prison reform, and the cause of peace. Her fame as a writer rested mainly on "The Battle Hymn of the Republic," which was inspired by a visit to Washington in 1861, and which first appeared in the *Atlantic Monthly*. Her other writings include: "Passion Flowers," "Words for the Hour," "A Trip to Cuba," "The World's Own," "From the Oak to the Olive," "Later Lyrics," "Sex and Education," "Memoir of S. G. Howe," "Life of Margaret Fuller," "Modern Society," "Is Polite Society Polite?", "From Sunset Ridge," "Reminiscences," and "Sketches of Representative Women of New England."

Science.

The Face of the Earth. By Eduard Suess. Translated from the German by Hertha B. C. Sollas. Vol. IV. New York: Henry Frowde. $7.75.

The fourth volume of Prof. Eduard Suess's physiographic treatise concludes the *magnum opus* of a long life. Geologists all over the world may well feel moved to felicitate the venerable and greatly beloved author that he has carried to completion one of the most notable scientific contributions of the current twenty years. The first volume appeared in 1885, the second and third followed, respectively, in 1888 and 1901. English-speaking peoples are much indebted to Madame Sollas for the faithful translation which has now made this encyclopædia of physiography so accessible. The one thing still lacking is an index, which we may hope the publishers will issue, since the usefulness of so elaborate a work is much curtailed without it.

The fourth volume deals with those mountain ranges and areas which were not fully described in the first three. The so-called Altaides, or, in general, the mountains whose upheaval is pre-Permian in age, are first traced throughout Europe and then America and Africa. The Alps next receive a careful review, which, in concluding, touches on their extensions. The mountains of Lauretania, or the northern part of North America, occupy a chapter, as do also the great fractures and upheavals of Africa. The mountainous elevations which constitute the Pacific islands, or the Oceanides, are passed in review, and especially those which fringe the several continents as so-called "festoons." From the islands on the eastern side of the Pacific the author takes up the western mountains of the adjacent mainland of North America, and later of Central and South America. With these last the general survey is completed.

In summarizing this great treatise we may say that Professor Suess has looked abroad upon the face of the earth. He has taken up one by one its mountainous ridges, its plateaus, plains, oceanic shallows, and abysses. Patiently he has followed these individually from their inception to their completion. As each oceanic feature or land-form has come up for attention, he has read every available paper or report which deals with it. The many languages in which the data are recorded have not proved barriers, nor have the innumerable files of records, in which the papers are printed, stood in his way. The last words written on these subjects are no less familiar to Professor Suess than contributions of many years' standing. Sedimentation, eruptive outbreaks, and folding in the earlier geological periods are as real to him as those of the later and even of modern times. The erudition displayed is profound. Although the title, "The Face of the Earth," would imply the outlines of to-day, the treatment includes the development of the earth's lineaments virtually from birth. In a measure, the work is the stratigraphic history of the globe.

Several new geologic conceptions and new descriptive terms have become widely current as a result of Professor Suess's work. All geologists now speak of the great "shields" of Archæan rock

which are so prominently developed in Canada and in Scandinavia. Around these, which have been relatively firm since the opening of the Palæozoic era, sedimentation has gone on to the present. Elsewhere more limited buttresses called "horsts" have been established, and these have remained comparatively stable, while subsidence or folding proceeded around their borders. Great lines of disturbance and upheaval have developed mountain systems of a crescentic outline called "arcs"—another term now widely current.

The long and detailed survey completed, Professor Suess turns to certain general topics suggested by his work. He first endeavors to trace out systematic relations among the mountainous arcs. He notes the presence in the oceanic abysses of "foredeeps" which lie in front of the arcs of upheaval. "The outer border of the foredeep is the arcuate border of a subsidence of the lithosphere, and the inner border of the foredeep is the outer border of the folded range, which has advanced from the direction of the land over this deep" (p. 506). This slipping forward of a land-mass toward a deeply depressed area in the sea-bottom has been much discussed in latter years as a cause of thrust-faults and mountainous folds, and now gains additional importance from the emphasis which the author lays upon it. The relations of the folded arcs of the earth, their crossing, dying out, branching or virgation, transition into each other or linking, are outlined as well perhaps as may be, but the subject is so complicated when applied to the entire earth as to leave a reader not always convinced that the interpretation is the only one which might be applied.

Following this topic, Professor Suess takes up the discussion of the depths of the earth. Using the parallelism of meteorites as suggested many years ago by Daubrée, he assumes a core called Nife (*i. e.* nickel and iron), which outwardly is succeeded by a layer called Sima (*i. e.* silica-magnesia, or the basic igneous rocks characterized by the magnesian silicates), and farther out by another called Sal (*i. e.*, silica-alumina, or the feldspathic rocks). The Nife rarely breaks through to the surface, but is not unknown. The Sima is frequently represented, and the Sal is naturally most accessible of all to observation, but may not be of great thickness. Professor Suess follows out several trains of thought. He falls in with the latest of the writers on igneous ores; he discusses the derivation of gases and hot springs from the interior as "juvenile" products, and the production of the ocean itself from primeval volcanoes. Some features of the emission of gases lead him to suspect that rising from the depths they may themselves supply the heat which serves to melt overlying rocks and drive them out as lavas. With respect to the rise of batholiths, Professor Suess concludes that they melt their way upward by fusing and absorbing overlying rock. From the batholith, pegmatites radiate because deposited by emissions in branching fissures, a view that is the generally accepted one to-day. The connection of mineral veins and ore-deposits with these phenomena is supported, and in this conclusion Professor Suess allies himself with the current doctrines of the mining geologists. The Sima magmas also receive special attention under the general name of "the green rocks." They are believed to be chiefly dikes and sills, seldom, if ever, batholiths. Under the caption of "Phreatic Explosions" (or those believed to result from the uprising of juvenile or deep-seated hydrogen which leads to explosive outbreaks) volcanic necks, dikes, and other minor forms of eruptive rocks are treated in a very interesting manner.

The igneous phenomena of the earth suggest naturally the geological significance of the moon. By way of introducing the subject, the author describes what the earth would be like in case all the water were removed. The features of a waterless sphere such as the moon are then the more easily appreciated. Professor Suess has no doubts about the volcanic or igneous nature of the moon's craters, which he compares with great smelting furnaces. They are interpreted in the light of our knowledge of terrestrial volcanoes. In the end the question of the derivation of the moon from the earth and the phenomena attending its development as an individual sphere are passed in review. The distribution of the lighter and heavier masses of the earth with regard to continents and oceans; the variations in gravity and the contraction of the earth's body as affecting the explanation of its inequalities are summarized with a great fund of illustration.

The concluding chapter deals with life on the earth. Regarding its beginning the frank statement is made, "We know nothing of the origin of life," yet "little as we know as to the details of the beginning equally little do we know as to those of the end, although this end is inevitable." The distribution of living creatures largely turns on physiographic conditions, and these are discussed fully as bearing on the profounder questions of evolution. All receive illumination from the treatment of a master hand, although the suggestions are too numerous to be cited in this review. Finally, the last paragraph presents the sanguine philosophy of Professor Suess, and the reader understands why he is not less beloved for his personal charm than esteemed for his intellectual attainments:

> In face of these open questions let us rejoice in the sunshine, the starry firmament, and all the manifold diversity of the Face of our Earth, which has been produced by these very processes; recognizing at the same time to how great a degree life is controlled by the nature of the planet and its fortunes.

"A History of the Cavendish Laboratory, Cambridge," will be issued by Longmans in honor of the Sir J. J. Thompson's twenty-fifth year in the Cavendish chair of experimental physics. To the contributions by various writers Sir J. J. Thompson adds a general sketch.

Among the books announced by Whittaker & Co. are H. W. Pendry's "Elementary Telegraphy," "Elementary Aeronautics," by A. P. Thurston, and "Steam Turbines, Their Design and Construction," by Rankin Kennedy.

Science books in Lippincott's list of autumn announcements include: "Spirit and Matter Before the Bar of Modern Science," by Isaac W. Heysinger, M.A., M.D.; "The Laws of Life and Health," by Alexander Bryce, M. D.; "Chats on Photography," by W. Wallington; "Engineering of To-day," by Thomas W. Corbin; "The Autobiography of an Election," by Charles R. Gibson, F. R. S. E.; "North American Birds," by Robert Ridgway; "The Mineral Kingdom," by Dr. Reinhard Brauns; "The Racial Anatomy of the Philippine Islanders," by Robert Bennett Bean, M.D.; "Electrical Theory and the Problem of the Universe," by G. W. De Tunzelman; "Rolling Mills," translated from the German of J. Puppe; "Hydrographic Surveying," for the use of beginners, amateurs, and port and harbor masters, by Commander S. V. S. C. Messum, R. N.; new second edition revised throughout and rewritten of "The Steam Turbine," by Alexander Jude; "Elementary Text-Book on Mechanical Drawing," by John E. Jagger; "Lippincott's New Medical Dictionary," edited by Henry W. Cattell, M. D.; "Materia Medica and Therapeutics for Nurses," by J. Foote, M. D.; "The Harvey Lectures," delivered under the auspices of the Harvey Society of New York, fourth series—1908-1909; "Normal Histology," by George A. Piersol, M.D.; "Diseases of the Pancreas," by Eugene L. Opie, M.D.; "Fever Nursing," by J. C. Wilson, M.D., revised fifth edition.

In different vein from her previous books is Mrs. Sara Andrew Shafer's "A White Paper Garden" (McClurg). It describes an ideal garden, as imaged by a woman too busy to make her schemes real, and in twelve chapters divides the aspects and flowers of the year. The book contains much old-time sentiment, strengthened by keen observation, as in the remark on the peony: "Charming, well-dressed, graceful, generous, opulent, the peony is for robust health and natural enjoyment, not for sentiment." We could spare the first three adjectives, but the rest is well said. The spelling of peony is sensibly opposed to modern horticultural affectation—but "sweetpea" is an innovation unknown to the dictionaries and to such seedman's catalogues as Thorburn's. It is less justified even than "pæony," especially since it seems to require a new pronunciation. The book is charmingly illustrated from photo-

graphs. It should be read as it was written, when absent from the garden, and will make good winter reading for garden lovers.

Dr. Rudolph Chrobak, who died recently at the age of sixty-seven, had written extensively on obstetrics and had been for several years a professor in the University of Vienna.

The death is reported of Prof. Oscar Böttger, the German zoölogist, aged sixty-six. He was the son of Rudolph Christian Böttger, the inventor of gun cotton. He was connected with the zoölogical gardens of Frankfort, and was at the head of the section of reptiles and amphibia in the Senkenberg Museum.

Drama.

Mary Magdalene. By Maurice Maeterlinck. New York: Dodd, Mead & Co. $1.20 net.

It is not surprising that the various legends that have grown out of the simple and pathetic Biblical references to Mary Magdalene should have appealed to Maurice Maeterlinck. In a prefatory note to his new three-act play, of which this famous repentant sinner is the heroine, he acknowledges the adoption of two situations already used by Paul Heyse in his drama on the same subject, but in this he has, as he says, only availed himself of common property, and his work, in conception, development, and atmosphere is entirely independent and original. From beginning to end it is filled with his own peculiar power of fanciful invention, with delicate emotional insight, and with subtle suggestion, by the most realistic methods, of the grotesque or terrible. He has depicted the fierce struggle in a woman's heart between earthly love and spiritual devotion with extraordinary skill and dramatic significance; and several of the scenes would be solemnly impressive, if they could be fittingly presented upon the stage; but, in spite of its theatrical form, the piece is religious romance rather than drama. Moreover, only an actress of the highest rank could hope to realize, in all its complexity, the author's idea of the heroine.

If Mr. Maeterlinck has not fully succeeded in overcoming the difficulties of his self-imposed task, he has, at least, attacked them very cleverly. With the great figure of the Christ kept constantly in the background, as the dominant motive of his scheme, he has endeavored to show, in modern terms, the social and intellectual conditions with which the Nazarene was confronted. His first act opens in a Roman villa at Bethany (historical fact is not allowed to interfere with the necessities of fiction), where an ancient sage, Silanus, entertains his friends with discussions of pagan philosophy. Among them are Verus, a sturdy soldier, commander of the Roman forces in Jerusalem; Appius, a cynical patrician, and Mary Magdalene herself, the splendid courtesan, half in love with Verus, but now in a mood of strange unrest. Her house has been robbed and she suspects the rabble who follow Christ of the deed. Silanus defends them, and says that the Galilean is a somewhat interesting personage. Appius tells how the latter recently opened the eyes of a blind man, and Verus contemptuously points out that jugglery of that sort is common enough in the East, which is full of all sorts of quacks and cheats. But Mary is interested, and when she hears the cries of a great multitude without, insists upon going herself to see the miracle worker. Presently, in a sudden silence, the words of the Sermon on the Mount fall upon her ears, and, fascinated, she ventures, notwithstanding the entreaties of her friends, to join the throng without. As soon as she is recognized, she is pursued with execrations and threatened with stoning. She is in imminent peril of death when the Galilean utters the famous "Let him that is without sin," etc., and the first act closes upon a striking tableau of her rescue.

In the second act, Mary, upon whom the Christ has but gazed, has accepted him as her master. She experiences a strange exaltation. To Verus, rejoicing in her new sense of emancipation, she vows eternal love, but excites his jealousy when she demands that he exert all his influence in behalf of the Galilean, whom he has been ordered to arrest at the instigation of the Jewish priests. As she tries—in a striking scene—to allay his suspicion and explain the strange influences at work within her, Appius and Silanus enter and in vivid fashion tell how they have witnessed Lazarus, at the bidding of Christ, leave the grave in which he had for four days lain dead. Immediately afterward, while they are still discussing the event, Lazarus himself, still with the pallor of the grave upon him, approaches and summons Mary to the Master. Here again the curtain falls upon a most effective tableau.

But it is in the third act that the imaginative power and dramatic instinct of Maeterlinck are shown at their best. Christ has been tried and condemned, and a handful of his worshippers and beneficiaries are assembled, in dread, in the house of Joseph of Arimathea. Here the descriptive ability of the poet is displayed in a pessimistic picture of human cowardice, selfishness, and ingratitude. Only Mary Magdalene, still inspired by her last meeting with the Master, is unshaken in her fidelity. Her sole hope now lies in Verus, but he, when he appears, bluntly says that his one price for saving the man whom he regards as his rival is her instant and complete surrender. This, she replies, now that she—and, as it seems, she alone—has learned the true meaning of Christ's mission, is no longer possible. The scene is elaborated with notable eloquence and analytical skill. As Verus sees the situation it is a strife "between two madnesses," his own—which would sacrifice life and honor for the gratification of a passion—and Mary's—which is driving her to hopeless and irremediable despair. To the spiritual infamy of the renunciation which he would exact, he is, of course, utterly blind, and the manner in which the dramatist brings this frenzied strife of natural and spiritual forces to a poignant climax is masterly.

Regarded simply as drama, the work is defective in many respects. It is fragmentary, disconnected, episodical. All the incidents that form the backbone of the story are related, not shown. This condition, it need scarcely be said, is the result of deliberate design, but is nevertheless a positive weakness. On the other hand, the characterization is excellent and the dialogue pregnant and illuminative. As literature it is well worthy of the author's reputation, while as a study in the ennoblement of a woman's soul by spiritual ecstasy it is an intellectual achievement of a high order.

James Bernard Fagan's play, "The Earth," which had a long run in London a year or so ago, has now been published in book form (Duffield & Co.). As is well known to the readers of this journal, it is a vigorous, and, in many respects, an extremely able attack upon the sensational press. Read in print, it reveals literary abilities of no mean order, while the first three acts are put together with uncommon constructive skill and with a keen sense of dramatic effect. The fourth act is weaker in every way, the outcome of it suggesting that the author d'd not dare to risk a tragic or semi-tragic ending. The device by which, at the last moment, his hero and heroine are enabled to escape from the logical consequences of their own wrongdoing and to defeat the unscrupulous editor whose power for evil is supposed to be so tremendous, is not at all plausible. Such a man as Janion is described to be would not be disconcerted in the least by the threatened exposure of an action which he could declare to have been undertaken solely in the interests of the public. He would see in it only the chance of a valuable advertisement. Mr. Fagan robs his spectre of all horror by showing how easily it may be exorcised.

The translation of Henri Bataille's play "The Scandal," which had a great run in Paris, proved a disappointment in the Garrick Theatre here on Monday evening. Much of the literary flavor of the dialogue had evaporated, doubtless, and the English acting certainly was inferior to the French, but the main trouble lay in the unsympathetic and futile character of the piece itself. Professedly a plea for equal-handed justice in the treatment of male and female offenders against the marriage law, and for the pardon of an ordinarily good woman, who may have lapsed from virtue

in some sudden access of madness or folly, it offers by way of supporting argument an instance in which the woman virtually puts herself out of court by her own conduct. A happy wife and proud mother, she yields easily to the first advances of a reckless young gamester, who takes not only her honor but her purse. Throughout she practises the most odious deceptions with all the skill of an old campaigner. In the end she is exceedingly remorseful, and exhibits all the usual stage signs of intense mental torture, but it is not until she has been detected that she ceases lying. Her affectionate and generous husband, remembering his own infirmities, agrees to forgive and, so far as he can, forget; but the scandal has already become public property, and it is plain that in shielding her he will have to share in her disgrace. Actually the play defeats its own chief purpose, but it affords opportunities for some rarely good acting by Kyrle Bellew, who enacts the wronged husband with pathetic earnestness and simplicity and no little dramatic power.

Henry W. Savage has extended permission to Sarah Bernhardt to play in this country the part of the distressed mother in "Madame X," a part originally designed for her by M. Bisson, and it will be added to her repertory on her approaching visit.

Jerome K. Jerome's play, "The Passing of the Third Floor Back," is to be published by Hurst & Blackett.

A new comedy from the pen of H. H. Davies will be seen in London within the next few days. It is called "A Single Man," and will enlist the services of Cyril Maude, Hilda Travelyan, and others.

Laurence Housman continues to attack George Redford, the British licenser of plays, in the public print. In a letter to the London *Times* he declares that his suppressed play, "Pains and Penalties," contains no detailed reference to the character and conduct of George IV, except in one passage of the first act, and throughout the trial scene in the House of Lords, where the words are taken literally and without addition from the published records of the time.

Frederick Whelen, who is well known in connection with certain progressive stage movements in England, takes a more cheerful view than some other observers of theatrical conditions in the old country. Replying to the recent complaint of a writer that "there are no new men and no new plays," he remarks:

> This abandonment of such new writers as Rudolf Besier, Arnold Bennett, John Masefield, Charles McEvoy, Hamilton Fyfe, "George Paston," J. B. Fagan, and George Calderon, to mention only a few of the men who have had plays produced during the last three years successfully in London, is somewhat sweeping. And he ignores completely the many new dramatists who are rising in the provincial cities as a consequence of the new opportunities of getting plays presented. The first of these new theatres, the Abbey Theatre, in Dublin, has already been responsible for the addition to modern literature of the works of the late J. M. Synge, who has enriched the drama with some of the finest works of our time. But he is not the only dramatist from that Irish theatre, and the annual visits to London of the Irish National Theatre Society are making larger and larger audiences for the plays of such writers as Lady Gregory, W. B. Yeats, Padraic Colum, and others. In Manchester, at the Repertory Theatre of that city, founded by Miss Horniman in 1907, several successful local authors have arisen. I may mention Harold Brighouse, J. Sackville Martin, Stanley Houghton, and Allan Munkhouse.

The annual Shakespearean revival in the Queen's Theatre, Manchester, will be "The Winter's Tale." Nora Lancaster has been specially engaged to play Hermione.

C. M. S. McLellan is working upon an English adaptation of a new German military comedy, entitled "Kasernenluft," which is reported to have made a phenomenal hit at the Neues Theater in Berlin.

Henry Arthur Jones has been engaged recently in putting the finishing touches to the new play which is to be seen before long in New York. Rumor says that in its general character it is somewhat akin to "Mrs. Dane's Defence," although it contains a larger proportion of the comic element.

Gertrude Kingston has a variety of novelties for her Little Theatre in London. These include a comedy called "The Green Baize Door," in which she will play the part of a country house spinster—a sort of social makeweight—in search of a husband; a tragedy of Beaumont and Fletcher, and a farce called "The Green Elephant," a story of feminine extravagance ending in a detective mystery.

Music.

Through the Year With Sousa. By John Philip Sousa. New York: Thomas Y. Crowell & Co. $1 net.

The Player-Pianist. By William Braid White. New York: Edward Lyman Bill.

As Austria is proud of being the native land of the "Waltz King," so the United States can boast of having given to the world one who is known on every continent as the "March King." John Philip Sousa is as racy of the American soil as a bunch of Delaware grapes; you will find nothing just like him in any other country—a fact which those who write about a lack of distinctiveness in American music have too often overlooked. He has written no works in the largest forms, but, as he aptly remarks, he would "rather be a composer of an inspirational march than of a manufactured symphony"; and he calls attention to the fact that in Europe "men like Johann Strauss, Offenbach, Suppé, Millöcker, and others are the darlings of their respective nations, because they have accomplished that which is most meritorious in some special line."

Unlike most American composers, Mr. Sousa has had the inestimable advantage of being able to bring his compositions before the public, at home and abroad. For thirty years he has conducted a band and travelled with it to nearly every country on earth. Many, as a matter of course, have been the interesting and amusing experiences on these journeys which he has noted in his diaries. Excerpts from these, and from letters, poems (he often writes the words as well as the music of his songs), magazine articles, and his two novels, "Pipedown Sandy" and "The Fifth String," which have become almost as popular as his marches, make up his new volume, interspersed with facsimiles of the themes of his best marches. On the subject of march composing Mr. Sousa speaks as an authority. He expresses the opinion that one reason why so few of the great composers have written successful marches is that they lived in an atmosphere of peace. When he is ready to compose a march he turns his imagination loose among scenes of barbaric splendor. "I picture to myself the glitter of the gun and swords, the tread of the feet to the drum beat, and all that is grand and glorious in military scenes." Then the musical ideas come—how, is an utter mystery to him.

Not the least interesting paragraphs in this volume are those which contain glimpses of the bandmaster's life. As a lad he longed to be a musician; besides a fiddle, he owned nothing but an enormous ambition, which, apparently, he did not inherit from his father, whom he quotes as having once said to his mother (who objected to his siesta habit): "Remember, the day is for rest and the night for sleep." By his eleventh year John Philip was a professional; his first public appearance as a violinist he spoiled by playing baseball all the afternoon preceding. Success came to him slowly; some of the marches with which publishers earned fortunes he sold for from $5 to $50. Later he enjoyed the advantages of popularity, but also the disadvantages. On one occasion he had to write his name on the caps of several hundred girls. He began with John Philip Sousa, then put John P. Sousa, then J. P. Sousa, and finally Sousa. The legends concerning his name are also dealt with. The story that S. O. represented the initials of his name and U. S. A. his country, was originated by his press agent, and proved the best advertisement he ever had. To the present day "it makes its pilgrimage around the globe once every three years."

That his band has not only served to drive dull care away, but to promote musical culture, is Mr. Sousa's firm conviction. Indeed, he goes so far as to claim that the influence of the band in the art development of the world is perhaps greater than that of any other musical force, for the reason that everywhere and always bands have been part of the military establishment, and have given the masses abundant chances to hear good music free of cost. That the masses like the best music if they can get it is another of this bandmaster's convictions. He declares that to the people at large Wagner is to-day less of a myth than Shakespeare, and that this

has been chiefly accomplished by the efforts of the military bands. "If I were sent forth," he writes, "to educate a brand-new public in music, my text-book would be Wagner. . . . Wagner's works are the works for the missionary." He has played this music "until it has come to be as popular as ragtime."

One development of music that Mr. Sousa does not like is the mechanical and semi-automatic instruments of the day. A few years ago he wrote a scathing article on "canned music," and the present volume contains sarcastic allusions to the subject. But that sort of music, for better or worse, continues to be produced at a rate compared with which his own concerts are but a grain of sand on the beach. As a matter of fact, much of this "machine music" is not to be sneered at; as an educational factor it is invaluable; it arouses an interest in music throughout the land. Nor is it altogether mechanical, at least in its best manifestations. It is as true of the piano-players and player-pianos as of the piano itself, that the better a musician the man or woman who sits at it, the more musical are the results. Anyone can run an instrument of the pianola type after an hour's practice; but to play it as well as it can be played requires months of study. Mr. White's volume contains full directions for such study; after answering the question, "Is the player piano an art instrument?" he analyzes its technic and gives detailed directions regarding the management of the expression devices which control the pace, loudness, accent, and phrasing. He also gives helpful hints regarding the structure of musical works, with remarks on some composers who are popular as well as great.

Victor Herbert, more than two years ago, undertook to write a grand opera, at the request of Oscar Hammerstein. Now that Mr. Hammerstein is no longer in the field, Mr. Dippel has secured it for his Philadelphia season. The name of the opera is "Natoma."

It is not yet announced whether Gustav Mahler will conduct his colossal eighth symphony, involving 1,000 performers, (which had such a sensational success in Munich last month) at one of the Philharmonic concerts in Carnegie Hall this season. His fourth, however, is already promised. Among other symphonies definitely decided upon are: The Schubert in C minor, Tchaikovsky No. 5, Brahms in C major, Schumann in C minor, and the tone-poems, Rimsky-Korsakov's "Scheherezade," and Charpentier's "L'Impressions d'Italie." The list of soloists already engaged includes: Johanna Gadski, Kirkby-Lunn, Schumann-Heink, Corinne Rider-Kelsey, David Bispham, Edmond Clement, Josef Hofmann, Xaver Scharwenka, Edouard Dethier, Francis MacMillen, Maud Powell, Theodore Spiering, Ernest Hutcheson, George Hamlin, Leo Schultz, and Henry Schmidt. There will be sixteen pairs in the week-day series, falling on Tuesday nights and Friday afternoons respectively. There will also be a series of eight Sunday afternoon concerts. In Brooklyn five Sunday afternoon concerts will be given in the Academy of Music. The first pair of the New York series will fall during the first week of November, the opening concert being scheduled for Tuesday evening, November 1.

One of the most intimate friends and vigorous champions of Liszt and Wagner, Karl Klindworth, celebrated his eightieth birthday on September 24. After studying with Liszt he taught in London (1854-1868), where his advanced ideas involved him in many difficulties. From 1868 to 1884 he was professor at the Moscow Conservatory. Then he went to Berlin, where he opened a piano school. He was there the centre of the progressive party, while the conservatives flocked around Joachim. As an orchestral conductor he was the first to produce the Bruckner symphonies in Berlin. He also composed some pieces, but the works by which he will be best remembered are the vocal scores of Wagner's four Niebelung operas. His editions of Chopin, Bach, and Beethoven are also valuable.

Charles Gilibert, the eminent operatic baritone, died last week of an abscess in the ear, a few days after his arrival in New York. He was born thirty-eight years ago, and was a great favorite in France and Belgium when Mr. Grau first brought him to America. He left the Metropolitan when, after the impresario's death, French opera fell into neglect, and sang under the management of Oscar Hammerstein for four years. His most famous impersonation was that of the father in "Louise." His Monterone in "Rigoletto," and his Boniface in "The Juggler of Notre Dame," were also great achievements. He was to have appeared in one of the novelties of the coming season, "The Girl of the Golden West." Although he sang Italian and German music well, he was essentially French, and there was nothing in French music that he was not able to interpret in his wonderful combination of a strong naïve nature and a widespread education and culture. He has endeared French folksongs and bergerettes to us, the grandeur of Gluck, the dainty rococo spirit of Grétry and Monsigny, the most modern products of Charpentier and Debussy.

Art.

THE EXHIBITION OF MOHAMMEDAN ART AT MUNICH.

The loan exhibition of masterpieces of Mohammedan art at Munich is the largest and most important of its kind ever brought together. Many of the pieces exhibited, notably those from Russian and Turkish collections, have been there accessible to the general public for the first time. This exhibition deserves attention not only on account of the artistic excellence of the objects shown, but also for the success achieved in their installation, and for the advance in scholarship made possible by the arrangement side by side of so many different but related branches of the art of the Nearer Orient.

Mohammedan peoples have produced few works of sculpture or painting, but, contrary to the prevailing opinion, figure representation has appeared at one time or another in all Mohammedan countries. Their decorative art is unsurpassed in design and color, and has played its part in the development of European art. Their buildings are found in Spain, North Africa, Egypt, Turkey, Persia, Central Asia, and India. The period of finest production roughly corresponds in time to the great art period of Western Europe, the Middle Ages and the Renaissance.

Eighty rooms in all, surrounding an open garden court, contain the exhibition at Munich. In their treatment Mohammedan architecture is suggested, but never actually imitated. In one of the large rooms there are rows of columns, connected by wooden beams above the capitals in the manner of the early mosques, with carpets on the floor between them. In many rooms a diffused light is obtained by means of ceilings of stretched thin white cloth. Nowhere is there confusion or overcrowding.

An important part of the exhibition is the section of early Persian ceramics, of the eleventh to fourteenth centuries, the product of the excavations of the last ten years. The artistic worth of these bowls, plates, and bottles depends on subtle variations of body color, of lustre, and of color combinations. Many have long been buried and have an accidental iridescence. Thus the beauty of any one piece is due to its own qualities rather than to the type to which it belongs. Dr. Friedrich Sarre, however, in the catalogue of the exhibition, attempts a classification of these types. Early Syrian pottery is divided into two classes; the pottery with bold and rather primitive ornament is included in the Rakka group, while Sultanabad is divided into four classes, and Rhages, the most complicated of all, into five classes. There are also divisions for lustre tiles, Persian pottery of the seventeenth century, and architectural fragments, some of them from Bokhara and Samarkand.

Other potteries represented are: yellow and brown Egyptian; Daghestan with its blue glaze and black patterns; Kubatcha with its ivory crackle ground and rather careless drawing; Turkestan with its red, blue, violet, and green patterns; and Turkish with its white ground and colored decoration of wild hyacinths, tulips, carnations, and feather-like leaves, better known by the name Rhodian. The only marked piece of Malaga pottery known, and therefore the standard for its class, is seen in the Spanish section. The outside of this fourteenth century bowl is gray-blue with black patterns, inside it is white with strap-like interlacings and arabesques in yellow lustre.

The problems presented by Mohammedan metal work are most difficult. The classification of Dr. Ernst Kühnel—tentative in some respects—is influenced in part by the many objects, hitherto imperfectly known, sent from the great Russian collections. The earliest metal work includes Sassanian silver bowls, before the seventh century, belonging to the Czar of Russia, and a series of metal ewers, some of them in animal form. In this ancient Persian art, related to that of Assyria and Greece, are found many well-known motifs of later Persian art: the king on horseback killing a lion, a tiger in front of a tree, a lion springing upon a wild ox, a throned king surrounded by servants, fabulous animals, two animals symmetrical and face to face or back to back, as well as ornamental foliage and palmettes.

A series of inlaid bronze mortars and large kettles with decoration in relief are probably from West Turkestan, and other mortars and smaller decorated metal pots with handles come from the Caucasus region. A number of brass pitchers with rows of lions or birds in relief around the upper edge of the body, many of them the property of Count Bobrinskoy of St. Petersburg, are assigned to Armenia, twelfth century. From these the transition is easy to the beautiful inlaid work of Mesopotamia, the exquisite bronze ewers, candlesticks, and bowls inlaid with silver and copper in medallions and bands, with figures of horsemen, musicians, animals, and inscriptions with human heads. They belong to the late twelfth and to the thirteenth century, and many of them are fortunately dated and signed. They were made at Mosul, but the artists often went to other places, some as far as Syria and Egypt. This technique was continued in the fourteenth and fifteenth centuries, the pattern of fishes seeming to be characteristic of Syria, while pieces with large dedicatory inscriptions were often made for a Mameluke Sultan of Egypt.

To many persons, the miniatures and illuminated books of the Nearer Orient make the most direct appeal. Though there is in these a frank use of figure representation, the principal aim is not the imitation of nature nor is it the use of composition and perspective as we understand it. The figure-drawing seems to obey a law of lines and pattern. There is little modelling, and color is put on in flat tones. Animals are represented with surprising truth, but the silhouette and the action are the ends sought and attained. Details of clothes and accessories are often minutely executed. The earliest miniatures with figures shown at Munich, many of them loaned by Dr. F. R. Martin of Stockholm, are Mesopotamian of the late twelfth and the thirteenth century; their drawing is like the figures on contemporary metal work and Rhages pottery. The finest Persian miniatures begin in the fifteenth century and are Mongolian in character. In the sixteenth century they are more distinctly Persian: illustrations for the Persian national epic, the "Shah Nameh," and for manuscripts of the famous Persian poets. The wide margins of many of these manuscripts are decorated with animals and plants in green gold and yellow gold, resembling the drawing in contemporary carpets. To decide whether a given miniature is Persian or Turkish is often difficult, since Persian miniaturists worked at the Turkish court where Persian art and culture were the fashion. Persian miniatures usually exhibit most minute workmanship and are flawless in details of ornament, whereas Turkish work when looked at closely often seems slighted and careless. On the other hand Turkish miniatures possess a bold decorative quality and a striking color effect when seen from a little distance, and they do not need to be observed so closely as Persian work. This is also true of Turkish textiles and pottery. Special mention must be made of the portrait of Timour, fifteenth century; the portrait of a Dervish of Bagdad, about 1500, by Behzad, the most famous of all Persian miniaturists; and the portrait of a Turkish prince, also by Behzad, said to be a Persian copy of the miniature by Gentile Bellini, now owned by Mrs. J. L. Gardner of Boston. Among the Indian miniatures there is one showing the Mogul Emperor Akbar surrounded by his court, sixty-seven portraits, all on one page.

The Oriental carpets at Munich number about 200. The finest Persian carpets are remarkable for the beauty of their drawing, their figures, their flowing lines, and floral patterns. The drawing is often symmetrical according to different plans, while the colors, which never attempt to imitate nature, are interchanged and differently chosen each time the same drawing appears. This produces an effect of variety in unity, and a symmetry which is somewhat elusive and never rigid. Among Persian figure carpets of the sixteenth century at Munich, the first place must be given to the very large silk and silver Ispahan hunting carpet belonging to the Emperor of Austro-Hungary. On the salmon-colored field around the centre medallion there are mounted horsemen slaying desert animals. On the rich red ground of the border appear recurring pairs of winged genii, one seated facing front, and the other in profile, holding a dish of offerings. The conventional patterns seen in the Armenian carpets of the sixteenth and seventeenth centuries, which rudely imitate Persian animal and tree forms, are still further developed in the old Asia Minor or Ushak carpets. The motifs here are usually derived from the Chinese and reflect dragon and cloud forms, while the solid patches of color, in the open spaces free from pattern, produce good decorative effects. A rare carpet placed in this class at Munich resembles nothing so much as American autumn leaves of different sizes and shapes set out in rows on a dark ground. It belongs to the Ottoman Museum, Constantinople, and comes from a mosque in Stambul. The Turkish silk carpets with floral patterns seem to have as their only defect a too obvious symmetrical balance of pattern.

The collection of arms and armor is extensive and contains many pieces of great historical interest. A conical jewelled helmet once belonged to the Siberian Khan Koutschum, and afterward to the Czar Michael Theodorovitch Romanoff, and later came into the possession of Peter the Great. A small curved sword inscribed with the name of the Turkish Sultan, Solomon the Magnificent, and dated 1528, is perhaps the most beautiful Persian piece in the collection, with its gold inlay of Persian verses and its ivory handle covered in two planes with Persian arabesques in gold.

Not the least interesting part of the Munich exhibition is the large number of objects of European make, showing Mohammedan influence: pottery and porcelain, Venetian metal work and book bindings, Spanish tiles, Sicilian textiles, as well as engravings and paintings of Turkish subjects, portraits, scenes, and embassies. A number of rooms are devoted to the display of the plates of monumental works on Mohammedan art and archæology, and there is also a library where all important books on these subjects may be consulted. During the coming winter an elaborate publication with many plates is to be issued as a memorial of the exhibition. G. M. B.

Turner's Sketches and Drawings. By A. J. Finberg, with 100 illustrations. Charles Scribner's Sons. $4 net.

Mr. Finberg has recently catalogued all the Turner sketches in the National Gallery, and has thus acquired the most intimate acquaintance with the materials of the present study. He divides Turner's activity into seven periods. After seven years of apprenticeship, and three of topographical drawing, the painter, from 1797 to 1802, under Wilson's influence, occupies himself, none too successfully, with the conventionally sublime. His power first fully appears in the sea paintings, the most important of which antedate 1809. There follows until 1813 a happy interlude, marked by the best of the "Liber" prints. The period of full mastery, from 1813 to 1830, displays a certain hardening in his gift, a lesser spontaneity. It is followed by fifteen years of what our author roundly calls "mental and physical de-

cay," during which the so-called impressionistic studies were made.

This view of Turner's last phase, though by no means novel, has never been more ably presented. Mr. Finberg scouts the older theory that merely the painter's eyesight was at fault, and holds that his artistic vision had lost its lucidity. He indulged in partial reveries which admitted of no complete transcription. He dealt in intimations of experiences essentially inchoate and inexpressible. Into an issue involving the entire antithesis of the classic and romantic ideals we naturally cannot now enter. We may only express a conviction that the undeniable splendor of Turner's latest work is the splendor not of new growth, but of decay.

At many points Mr. Finberg passes beyond his immediate theme to the discussion of artistic creation generally, and he seldom fails to illuminate this obscure matter. He raises the paradox that, while the elaborate and accomplished sketches made in Italy in 1812 were rarely converted into pictures, the merest pencil scrawls were sometimes after many years transformed into the complete designs for the "Liber," the "Southern Coast," etc. One might almost maintain the position that Turner's sketches were pictorially useful to him in direct ratio to their slightness. A capital instance of this is afforded in plate lv where we have together the pencil sketch of the port of Wachet and the engraving published nine years later in "The Southern Coast." Nothing could better show how inventive Turner was, how little to be classed as a realist; nothing could better offset the extravagances of Ruskin's cult of imitation.

It would be a pleasure to dwell upon Mr. Finberg's closing chapter which reaches critical conclusions of real importance. An extract or two may suggest the drift.

When we talk of art as representing nature, it is evident that we must be careful to distinguish exactly what we mean by such an expression. If we take it to mean that art does or can or ought to give us a copy of the given actual world apart from what Mr. Ruskin calls the meddling action of man's intelligence, then it is obvious that we have fallen into a very serious error. Apart from the action of his intellect, an artist could not possibly make the external world an object of his thought, he could not, therefore, represent it on paper or canvas; and even if we suppose these difficulties overcome, and the copy of bare, unadulterated reality fixed on the canvas, nobody could possibly recognize it or know that it was there.

This statement cuts to the heart of the most prevalent fallacies concerning artistic vision. Any thorough-going realism or impressionism is pyschologically impossible. On the literary side Mr. Finberg's work is uneven. He often attains eloquence and then lapses into a crabbed academic jargon. His definition of a work of pictorial art exhibits both the vigor of his thinking and the difficulty of his manner.

Strictly speaking, a work of art is a symbol, and a symbol is not a copy or imitation of the meaning it stands for. The meaning of pictorial art is then always some connected circle of psychical states with their representation and emotional contents. These contents may refer to the common physical world of ordinary experience, or they may refer to a dream world that has no existence except as an element of human consciousness; and this reference is determined in each case by the nature of the contents themselves. . . . I will define a work of pictorial art as an arrangement of spatial symbols embodying an individualized psychical content present to the mind of the artist, and intended to call up always the same ideas and emotions in the minds of others.

For the student of Turner this well-made book, with more than eighty plates, containing many inedited drawings, is a necessary aid. It should also be read by all who approach the graphic arts in a philosophic spirit.

Montross has opened his handsome new gallery with an exhibition of selected paintings by American artists. Most of the pictures have been seen before, but they are all of a quality that makes further acquaintance a pleasure. The Mowing Lot, by Arthur Wesley Dow, where the moon rises over a hayfield dotted with queen's lace, and, while throwing two apple trees into shadow, spreads its soft light over field and background, is new to us. It is in strong contrast to the Incandescent Sun of Elliott Daingerfield. This has rich color in the sky, which dark trees and mountain tops emerging from the mist emphasize. But in this picture, as in many another by Mr. Daingerfield, the artist has treated his subject too theatrically. The Moonlit Cove exercises a strange fascination, when once its meaning is caught. A boat, scarcely discernible at first, lies in the cove; gradually all its lines unfold themselves before your eyes, and you realize the spaciousness of the cove. With quaint conceit, Mr. Ryder has made the moon with the features of the man in it distinctly marked, showing through a long white cloud that takes the shape of a ghostly being wrapped in a sheet, with one long arm stretching behind the cliffs. Two of Edward J. Steichen's silvery-gray landscapes, in silvered frames, Beyond the Trees—Spring Evening, and the Little White Cottage, are very different from his style of last season. Horatio Walker's Oxen Drinking is one of those scenes of French Canadian farm life in which the artist is so much at home. Willard L. Metcalf's The White Veil of Falling Snow still holds its own. Among other pictures are W. L. Lathrop's delightful The Canal, Late Afternoon; J. Alden Weir's Pan and Wolf; a decorative piece, Sappho, of much brilliant color, by Hugo Ballin, and two early sketches, The Hod Carrier and Tea Roses, by Childe Hassam.

The Kaiser and Dr. Bode are evidently determined not to give in about the Lucas wax bust in the Kaiser Friedrich Museum, although Prof. Adolph Hildebrand has joined the big army of its assailants, and called it "a bad piece of work, poor and lifeless." In the general guide to the entire collection of the museum, published last year, and sold in the museum, one reads this of the Flora:

In piquant contrast to their (bronze statuettes) clear-cut style, as also to their dark coloring, stands the painted wax bust of Flora, which is very near akin to the manner of Leonardo da Vinci, and perhaps may indeed have been his own work. . . . It recalls most of the plastic work of the Renaissance period in Upper Italy and Florence, and the smile, as the face is seen in profile from the left side, is quite Leonardesque. So, too, is the charm of its placid expression, which closely corresponds to the style of 1510, and should not be overlooked.

The important excavations made last year on the Janiculum in Rome have been followed up this year by the discovery of a sanctuary with niches for the statues of deities worshipped there, and a triangular altar, made of brick. In the same vicinity were also found a fragment of a statuette of Jupiter, a statue of Bacchus, a statue of Egyptian type, and three skeletons.

The *Journal du Caire* reports an interesting archæological discovery from Upper Egypt. A wooden panel has been unearthed bearing a Latin inscription of fifty lines, of which thirty-five are perfectly legible. The text makes allusion to the Siege of Jerusalem by Vespasian and Titus and constitutes the first authentic record obtained of that event. The inscription confirms the narrative of Josephus and other historians. Apart from the tablets found at Pompeii, this is the finest specimen of Latin writing that has been discovered.

Finance.

AN OCTOBER MARKET.

In the middle of last summer it was a matter of common Wall Street prediction that three unpleasant possibilities were to be apprehended in October's markets—tight money at New York, financial disturbance at London, and a "political scare," ascribed to the outlook for Democratic victories in November, on all the American stock exchanges. Events in the field of finance, which every one has expected, are always apt not to come to pass; but it is not very often that things happen in a way so exactly opposite to prediction as they have happened this October. There has been no tight money at New York; 3¾ per cent. has thus far been the month's highest rate on the Wall Street call loan market, whereas a 6 per cent. rate was touched even in October, 1909, and very much higher rates in the same month of years like 1906 and 1905.

London's markets have not been demoralized. In spite of the reasonably high Bank of England rate, and in spite, also, of such incidental shocks as the Portuguese revolution and the French railway strike, the English stock exchanges have moved favorably; recovery in prices being noteworthy in the very de-

partment where the worst was feared—rubber and rubber company shares. As for the American stock markets, they have entered, during October, into a period of unmistakable activity and rising prices. Having refused in September to decline, as had been expected, in response to the Democratic weather-signs in Vermont and Maine, active stocks at New York this week reached prices 6 to 8 points above their prices of October 1, and daily transactions on the Stock Exchange, which in September repeatedly fell below 200,000 shares, have twice this week run close to the million-share mark.

Perhaps the most curious aspect of these various October results is that the special conditions, on which the midsummer prophecies were predicated, have appeared in much the same shape as had been looked for. The New York bank position has not been favorable. An October deficit in reserves was prevented only by the expedient, familiar in former tight-money years, of "shifting" loans to other institutions; and even with very extensive reduction of bank liabilities through this process, loans have in three weeks risen $25,500,000 above deposits, and surplus reserves, despite their considerable increase over October 1, were lower last Saturday even than they were in the highly unsettled situation of a year ago.

London's financial market, similarly, has ignored not only a Lombard Street money rate higher than a year ago, but a money stringency at Berlin, so severe as to send the short-loan rate to 6½ per cent. and to elicit, from the president of the Imperial Bank of Germany, the public warning that "we are confronted by a prolonged expansion of credit and a continuous stiffening of rates," such as required that bankers should "draw the reins more tightly and counteract the exaggerated demands on credit." Meantime, at New York, a singular spectacle is presented. The Wall Street community is this week assigning, as the reason for the rise in stocks, the very reason which it assigned in August for its prediction of an October break. Two months ago, Democratic victory and a Democratic Congress were supposed to be matters of grave disquietude for Wall Street; to-day, even the protectionist Pittsburgh market is proclaiming that it will be better satisfied with an Opposition House, which might blockade extreme measures of an Administration Senate. As a natural corollary to all this, comes the seeming discovery that New York business men are this year likely to vote the Democratic ticket, and the adoption by Mr. Roosevelt of attacks on Wall Street as the principal theme of his campaign speeches.

Exactly how permanent the present month's situation in the home and foreign stock exchanges is destined to be, it is perhaps as yet too early to conjecture. Very probably, the somewhat spectacular rise in this month's prices had its immediate origin in the urgent protecting of their position by speculators who had "sold short" in confident expectation of an October money squeeze, or of a very bad showing for the crops, or of stock market demoralization as the political uproar increased. Such expectations take the shape, on Wall Street, of speculative sales of stocks; and none of the predictions has come true.

But when such a probability is frankly conceded it must be said that the stock market of this month only adds force to the very prevalent idea that the financial community, as a whole, is groping. That we are passing through some sort of change in the financial and industrial position, and that every observant financier is watching for the moment when his foot will again be on solid ground, are facts in the situation which every one will concede. But nobody professes confidence that the end of the journey is at hand.

Its end may be nearer than many people think; but positive judgment to that effect is certainly hard to get. Nothing seems to move exactly as had been expected. The actual bearing of the political situation on finance is inscrutable. The wheat market goes down faster than any one had foreseen, and in spite of support by strong trade interests. The cotton market goes up as fast, in the face of realizing sales by the manipulators themselves, and of incredulity on the usually excited Southern markets. The bank position is abnormally strong in September and abnormally weak in October; a new theory to explain its alternations has to be contrived almost every week. Perhaps the conclusion of the whole matter is that, although undoubtedly things are very much better than there was lately reason to expect, nevertheless all the markets are really in the dark, so that even an excited and impulsive movement cannot be regarded otherwise than as an experiment to discover the easiest way out.

BOOKS OF THE WEEK.

Altsheler, J. A. The Horsemen of the Plains. Macmillan. $1.50.

American Antiquarian Society: Proceedings at the Semi-Annual Meeting Held in Boston, April, 1910. Worcester, Mass.: The Society.

HENRY HOLT & COMPANY

34 West 33d St. NEW YORK

PUBLISH THIS WEEK

Inez Haynes Gillmore's Phoebe and Ernest

With some thirty illustrations by R. F. SCHABELITZ. A complete chronicle of a delightful, thoroughly American boy and girl, an equally delightful American father and mother, and a typical American home. Phoebe and Ernest lately created much enthusiasm among the readers of the *American Magazine*. $1.50.

Martin Schutze's Judith

A drama in verse which brings these ancient people near to our sympathies, and displays Holofernes as a truly great man. The *Independent* said of the author's *Hero and Leander*, "Here is, indeed, a beautiful talent of the greatest promise." $1.25 *net*, postage, 10c.

S. Carlton Jones's Out of Drowning Valley

A lively tale of love, fighting and treasure hunting. The heroine is decidedly resourceful and the remarkable climax literally justifies the book's title. $1.50.

Cooper's The Last of the Mohicans

Young people's library edition illustrated in color and line by E. BOYD SMITH. $1.35 *net*, postage, 16c.

R. W. Doane's Insects and Disease

A Popular Account of the Way in Which Insects May Spread or Cause Some of Our Common Diseases. With many original illustrations from photographs, and an annotated bibliography. (*American Nature Series.*) $1.50 *net*, postage, 9c.

A FEW OTHER NOTEWORTHY RECENT BOOKS

De Morgan's An Affair of Dishonor
A romance in a new vein, by the author of "Joseph Vance." $1.75. "An artistic triumph."—*Boston Transcript.*

Walsh's Mirage of the Many
A romance of a later Chicago in the hands of the Socialists. $1.50.

Oscar Kuhn's The Love of Books and Reading
A delightful commentary, including the best tributes of great men to great writers. $1.25 *net.*

J. A. Thompson's Darwinism and Human Life
By the Professor, Thompson of Aberdeen. *Net*, $1.50.

Logan G. McPherson's Transportation in Europe
(by water as well as rail). By the author of "Railroad Freight Rates in Relation to the Industry and Commerce of the United States," etc. *Net*, $1.50.

David Starr Jordan's The Fate of Iciodorum
A brilliant satire on protectionism. 90c. *net.*

De Alva S. Alexander's Political History of the State of New York
"Very useful . . . most entertaining" (*Nation*). Vols. I and II (to 1861). *Net*, $5.00, carriage 40c. additional. Vol. III (to 1882), $2.50 *net*, carriage, 28c.

INTERESTING BOOKS FROM MR. HUEBSCH'S FALL LIST

WILD OATS By James Oppenheim
With a Foreword by Edward Bok ($1.20 *net; by mail*, $1.30)

The author of "Dr. Rast" has written a bold and powerful novel whose theme is The Great Black Plague, the most glaring danger of society. **Judge Ben B. Lindsey** says: "I wish every parent and teacher especially could read 'Wild Oats.' The public conscience of this country needs to be aroused on this important subject, and 'Wild Oats' is a positive factor in that direction. I trust it will have a wide circulation."

HEALTH AND SUGGESTION: The Dietetics of the Mind
By Ernest von Feuchtersleben ($1.00 *net; by mail*, $1.08)

Now that this book has been made accessible to Americans there is little doubt that it will achieve here the same recognition that has been accorded it for generations in Germany. Its peculiar value is a recognition of the importance of the will in therapeutics, not by a priest, but by a scientist. Dr. Elwood Worcester endorses it highly.

B. W. HUEBSCH, Publisher, 225 Fifth avenue, New York

JUST PUBLISHED

The First Duke and Duchess of Newcastle-upon-Tyne

By the Author of "A Life of Sir Kenelm Digby," "The Life of a Prig," etc. With Photogravure Portrait and other Illustrations. 8vo. $3.50 net.

LONGMANS, GREEN, & CO., New York

TITLES OF SPECIAL INTEREST TO LOVERS OF ART.

Landscape and Figure Composition

By SADAKICHI HARTMANN. (SIDNEY ALLAN)

8vo, 120 pages, nearly 100 illustrations, cloth, full gilt

Net, $3.00. Postage 25 cents.

A book for the artist, the amateur, the photographer and the student of art. The illustration is exceptional in fulness and interpretative quality.

Color Printing and Color Printers

By R. M. BURCH

8vo, about 300 pages, 23 colored prints, 10 black-and-white illustrations. Net, $3.00.

Covers the history of the art of color printing. Invaluable to the collector or amateur.

Photographing in Old England

By W. I. LINCOLN ADAMS

Large 8vo, 142 pages, full gilt, with many illustrations, boxed. Net, $2.50. Postage, 25 cents.

A beautiful book, especially interesting to professional and amateur photographers.

Whistler's The Lime-Burner

Reduced illustration from the Golden Age of Engraving.

Complete lists of the Baker & Taylor Co.'s Fall Books will be sent on request—also Portrait Catalogue containing 33 portraits of authors.

Special descriptive lists of Art Books: School and Library Books. The Guide Series, etc., etc., free on request.

The Golden Age of Engraving

By FREDERICK KEPPEL

8vo, 550 pages, 263 illustrations, cloth, $3.50 net, postage 26 cents. Edition de Luxe, full boards, paper label, $7.00 net.

This volume brings together the results of Mr. Keppel's life-long study of engraving and etching. It ranges over the whole field from Dürer's work to Pennell's and offers a wealth of comment, counsel, suggestion and instruction such as no other book on the subject contains. The illustration is no less rich and varied, consisting of examples of the work of nearly every great engraver and etcher from Dürer down, and in most cases showing the peculiar style and excellence of the artist.

Mothers and Fathers

By JULIET WILBOR TOMPKINS. Author of "The Top of the Morning," "Dr. Ellen," "Open House."

THE BAKER & TAYLOR CO., 33 EAST 17TH STREET, NEW YORK

NAPOLEON IN CARICATURE By A. M. BROADLEY.
Introductory Essay by J. Holland Rose. 2 vols. Profusely Illus. $12.50 net. Post. 50 cts.
Limited Edition of 50 Copies Printed on Hand-Made Paper and Signed by the Author. $50.00 net.

It is computed that over 3,000 caricatures of Napoleon are in existence, of which nearly all were published between the years 1795 and 1815. Although the majority of these satiric prints are specially valuable and interesting as sidelights on Napoleon's history, no work on the subject as a whole has before appeared. This book will be invaluable to every public and private library and to all interested in Napoleon.

PETER THE CRUEL IN LOVE AND WAR
By EDWARD STORER 8vo. Profusely Illustrated. $4.00 net Post. 20 cts.
This is a life of the notorious Don Pedro of Spain, who was one of the most remarkable characters of the fourteenth century.

THE SPEAKERS OF THE HOUSE OF COMMONS
By ARTHUR IRWIN DASENT 8vo. Illustrated. $6.50 net Post. 25 cts.
Covers the constitutional changes in England during seven centuries, and contains a topographical description of Westminster at various epochs. There are also reproductions of all the known portraits of Speakers. A book which no student of English history can afford to ignore.

WILLIAM HARRISON AINSWORTH AND HIS FRIENDS
By S. M. ELLIS 8vo. Profusely Illustrated. 2 vols. $10.00 net Post. 50 cts.
This biography of one of the most popular novelists cannot fail in appeal. The author has given an interesting account of Ainsworth's family and the various activities of his career.

John Brown: A Biography. Fifty Years After

By OSWALD GARRISON VILLARD

Thomas Wentworth Higginson

"It may be safely said that there now remain very few of the personal friends of John Brown of Osawatomie who will not be surprised and deeply impressed by Mr. Oswald Garrison Villard's large and mature memoir of him It is, as the author calls it, 'A Biography Fifty Years After,' and I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

John T. Morse, *Editor of American Statesmen Series.*

"The story has the movement of a Greek tragedy, with its simple beginning, then its creation of the sense of personal nearness, then its vague foreboding of terrible disaster, and finally its grand and fatal close. Perhaps in thus dramatically fashioning his volume Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

Fully illustrated with portraits, and other illustrations.
With copious notes and bibliography. $5.00 *net;* postage 26 cents.

Illustrated List of The Century Co.'s publications, including new books for children, etc., sent free on request.

THE CENTURY CO. - NEW YORK

BURLINGAME PUBLIC LIB

The Office of a Publisher

LL good literature uplifts and draws out the best that is in humanity. The office of the Publisher should be to further that aim.

Seventy-two years ago John Cassell came to London with three half-pence in his pocket, but with high ideals.

In 1848 he founded the House of Cassell. Travelling widely through England he realized the cruelty of all taxes on knowledge. "You can never be low," he said, "unless you make yourself so by ignorance and vice."

He made up his mind that knowledge should be placed within reach of the people. "Let the people read and think; let them have good and cheap books."

Fifty-eight years ago John Cassell's National System of Education became famous. When the Great Exhibition of 1851 opened, the Cassell Library of History, Biography and Science was issued at seven pence a volume. That same year he popularized Art by publishing "The Magazine of Art," which became famous for notable editors like the late W. E. Henley and Mr. M. H. Spielmann.

As a publisher, John Cassell's chief joy was in his work. His forthright sincerity of purpose beat down all obstacles. Endowed with strong common sense, he wasted no words on rhetoric; a saving sense of humor helped him to avoid cranks. That the name of Cassell appears on many books which have now become classics is an earnest of his literary judgment.

A broad-minded man withal—the world was his country. The friend of Louis Kossuth, he was on visiting terms with Lurette and Hachette, the French publishers. There was one thing he would not suffer gladly: the morbid and superficial in literature. What he demanded of a book was that it should be clean, sound, and honest literature.

The House of Cassell to-day aims to carry on that tradition. It aspires to purvey wholesome literature which shall be informing as well as entertaining. To this House the word "literature" has a wide significance. It means not only supplying literary entertainment which is meant to amuse in the higher sense, fiction that bears the mark of good-humored sanity throughout, but educational works written by those best reputed to instruct—in a phrase, every activity of the human family calculated to cultivate the best that is in them, "the utmost for the highest." The House to-day provides the sanest, soundest, and most wholesome of literary fare for all English-speaking readers.

The sale, within two years, of 1,250,000 volumes of their "People's Library" of 120 complete classics of fiction and literature, printed from a new and specially designed type and published at 25 cents per volume in cloth, and 60 cents in leather, represents a recent enterprise in keeping with the best traditions of the House.

The leading booksellers throughout the United States stock the "Cassell" publications. Ask to see them. They comprise the best recent works by the best authors in the field of History, Fiction, Art, and general literature. A catalogue will be sent on request. Address Cassell & Company, Limited, 43-45 East 19th Street, New York.

HOUGHTON MIFFLIN COMPANY'S LATEST BOOKS

Our House and the People in It

By ELIZABETH ROBINS PENNELL

Intimate, kindly descriptions of artistic life in London, with poignant, humorous "cross-sections" of the household's love affairs. Mrs. Pennell, whose work as the biographer of Charles Godfrey Leland and the co-biographer of Whistler is well known, is seen to particular advantage in this new venture. *$1.25 net. Postage, 12 cents.*

In the Footprints of Heine

By HENRY JAMES FORMAN

A mingled flavor of life and letters, of wayside adventure and poetic speculation, gives to this story of a walking trip through the Harz forest that flavor which in such books as Irving's "Sketch-Book," Heine's "Harz Reise," and Stevenson's "Travels with a Donkey," has never failed to give a permanent pleasure. It will make one of the most attractive travel books of the fall season. *With 10 full-page illustrations. $2.00 net. Postage, 18 cents.*

The Battle of the Wilderness

By GENERAL MORRIS SCHAFF

Brt. Maj.-Gen. A. S. Webb says: "The book is of intense interest—would that there were more of it. . . . He has not disappointed his admirers, and he has produced a volume of absorbing interest and of great historical value. Great-hearted and kind-hearted, but truthful above all, with a rare capacity for descriptive writing, he has delighted the searchers for light on a confused period." *With maps. $2.00 net. Postage, 16 cents.*

Old People

By HARRIET E. PAINE

A book of mellow wisdom for readers past middle life. The book is full of a sane and cheery optimism firmly grounded upon experience. It will bring comfort and inspiration to many a reader. *$1.25 net. Postage, 12 cents.*

Jeanne D'Arc, the Maid of France

By MARY ROGERS BANGS

The story of Joan of Arc told simply, directly, and with great dramatic force. Extremes of interpretation have been avoided as well as anything that could offend the most delicate religious susceptibilities. The author's power of vivid description and her vigorous, attractive style will appeal particularly to younger people. *With frontispiece in color. $1.25 net. Postage, 12 cents.*

READY SHORTLY

The Digressions of V

By ELIHU VEDDER

A mine of good reading and artistic pleasure. It is one of the most entertaining of books, and is lavishly illustrated from hundreds of reproductions of Mr. Vedder's paintings and sketches. *(Ready November 5.) $6.00 net. Postage, 26 cents.*

Among Friends

By SAMUEL H. CROTHERS

The unusual view point is the charm of these sparkling essays on such topics as "The Hundred Worst Books," "The Merry Devil of Education," "In Praise of Politicians," etc. *(Ready November 5.) $1.25 net. Postage, 12 cents.*

The Spirit of Democracy

By LYMAN ABBOTT

A searching and inspiring discussion of democracy. Dr. Abbott's wide knowledge of economic conditions and vigorous idealism have never been found more notable. *(Ready November 12.) $1.50 net. Postage, 12 cents.*

The Essence of Religion

By BORDEN P. BOWNE

This volume deals in a stimulating way with Righteousness as the Essence of Religion, the true relation of Salvation and Belief, the Law of Successful Living, etc., etc. *(Ready November 12.) $1.50 net. Postage, 13 cents.*

Records of a Lifelong Friendship

Edited by HORACE H. FURNESS

This correspondence between Ralph Waldo Emerson and William Henry Furness forms a rare bit of biographical literature. The letters show the affectionate side of Emerson's temperament, while the variety of subject and the play of temperament on both sides make them delightful reading. *Limited to 750 numbered copies. With unpublished portraits and facsimiles. (Ready November 12.) $5.00 net. Postpaid.*

The Winter Queen

By MARIE HAY

The sad story of Elizabeth of Bohemia, daughter of James I and VI, told in the form of a romance, the details of which are confirmed by authority and researches of the author. *(Ready November 12.) Illustrated. $1.00 net. Postage, 20 cents.*

20 Vesey St., New York City

THE UNIVERSITY OF CHICAGO PRESS

RECENT BOOKS

THE EDUCATION OF WOMEN. By MARION TALBOT.

A book which treats of the increasing influence of women during the nineteenth century; their advent into industrial and commercial spheres; their admission to colleges and universities; their development along civic, philanthropic, domestic, and social lines; with a study of the educational machinery affecting women and suggestions for changes in academic training, hygienic education, social and domestic life, with special reference to the college period. 266 pp., 8vo, cloth; postpaid $1.37.

PETRARCH'S LETTERS TO CLASSICAL AUTHORS. By MARIO E. COSENZA.

The reader who wishes to enjoy Petrarch for his own sake will find in Professor Cosenza's translation much of the beauty of the original. The translation will be useful also to the student and the literary investigator. The author's notes at the end of every letter are comprehensive and eminently readable, comprising a discussion of the merits of each letter, its arrangement and object, and a valuation of previous translations. The book gives a vivid picture of the intellectual world of the Renaissance, which will prove of interest to all lovers of literature. 224 pp., 12mo, cloth; postpaid $1.09.

QUESTIONS ON SHAKESPEARE. A Plan of Study Intended to Develop the Student's Personal Judgment on Shakespeare. By ALBERT H. TOLMAN.

"I have had time only to look hastily through them, but no haste can countervail the manifest and manifold proofs of your unsparing labor and thorough scholarship. It is fairly astonishing what a deal of information in all departments of Shakespearian study you have compiled, and set forth alluringly—no small consideration where young people are concerned—within so small a space."—Dr. Horace Howard Furness, Editor of the *New Variorum Shakespeare*.

Part I, Introduction. 220 pp., 16mo, cloth; postpaid 81c.

Part II, First Histories, Poems, and Comedies. 364 pp., 16mo, cloth; postpaid $1.09.

SECTIONALISM IN VIRGINIA. By CHARLES H. AMBLER.

A strict regard for historical accuracy marks the pages of *Sectionalism in Virginia*. Mr. Ambler has divided his material into three periods, the first beginning with Colonial times and ending with Bacon's rebellion; the second including the emigration into the Piedmont, the Revolution, and the Constitutional Convention of 1829-30; and the third beginning with the demand of the Trans-Alleghany section for a greater voice in the state government, which led to dismemberment just before the Civil War. 376 pp., 12mo, cloth; postpaid $1.64.

OUTLINES OF GEOLOGIC HISTORY WITH ESPECIAL REFERENCE TO NORTH AMERICA. A Series of Essays involving a Discussion of Geologic Correlation, Originally Presented before Section E of the American Association for the Advancement of Science. Symposium Organized by BAILEY WILLIS. Compilation Edited by ROLLIN D. SALISBURY.

The book formulates the principles of correlation as applied to the formations of the various geologic periods. The evolution of floras and faunas has been traced with especial attention to environment and correlation. As originally presented, the papers excited much interest and discussion. They embody the present state of knowledge and opinion concerning many of the fundamental problems of North American geology, and form an admirable supplement to earlier treatises and manuals. 316 pp., 8vo, cloth; postpaid $1.66.

MORPHOLOGY OF GYMNOSPERMS. By JOHN M. COULTER and CHARLES J. CHAMBERLAIN.

Each of the seven great groups is here presented in detail, and a final chapter discusses the problem of phylogeny and points out the evolutionary tendencies. The extinct groups, notably the primitive "seed ferns," are now included for the first time; and vascular anatomy is fully recognized as a morphological subject of first importance. The entire presentation is thoroughly and systematically organized and arranged with a view to the greatest possible clearness. The illustrations are numerous and in large part original. 470 pp., 462 illustrations, 8vo, cloth; postpaid $4.22.

New Scientific Books

THE PRINCIPLES OF GYNAECOLOGY

By W. BLAIR BELL, B.S., M.D., Assistant Gynæcological Surgeon, Royal Infirmary, Liverpool. With 7 Colored Plates and over 350 other illustrations. 8vo. $6.00 *net.*

This book is specially intended for the Student and General Practitioner, and aims to present in practical and interesting form a complete and modern survey of the foundations on which gyuæcology is established. The illustrations, which are very numerous, are nearly all original, and it is hoped they will be regarded by the profession as a specially attractive feature of the book.

GLAUCOMA. An Inquiry into the Physiology and Pathology of the Intro-Ocular Pressure

By THOMSON HENDERSON, M.D., Surgeon, Nottingham and Midland Eye Infirmary, Ophthalmic Surgeon, Midland Institute for the Blind. Illustrated. 8vo. $3.00 *net.*

The aim of the present work is to bring forward sufficient cumulative evidence to establish the circulatory nature of the intro-ocular pressure, and thus to correlate the conditions in the eye with those already proved by Leonard Hill as existing in the brain. The task, at the outset a difficult one, is made still more so by the fact that such a conception of the intro-ocular pressure is totally opposed to current views, thereby making the field to be covered so extensive that there is considerable danger of obscuring, in a wearisome infinity of details, the underlying and all important physiological principles.

HEREDITARY CHARACTERS AND THEIR MODES OF TRANSMISSION

By CHARLES EDWARD WALKER, M.Sc., M.R.C.S., Director of Research in the Glasgow Cancer Hospital, etc. 8vo. $2.40 *net.*

In this volume the author has endeavored to apply recent discoveries as well as experimental work upon cells to some problems in heredity. It is believed that he has arrived at a satisfactory harmonizing of the results of the Mendelian experiments with the observations of the Biometricians.

Other New Books

THE FIRST DUKE AND DUCHESS OF NEWCASTLE-UPON-TYNE

By the Author of "A Life of Sir Kenelm Digby," "The Life of a Prig," etc. With Photogravure Portrait and other Illustrations. 8vo. $3.50 *net.*

A QUAKER POST-BAG

Selected and Edited by MRS. GODFREY LOCKER LAMPSON. With a Preface by AUGUSTINE BIRRELL. With 6 Illustrations. 8vo. $2.50 *net.*

CONTENTS — Preface—Introductory Note—Letter, William Penn to Sir John Rodes, 1693—Letter, William Penn to Sir John Rodes, 1694—Letter, William Penn to John Gratton, 1695—Letter, William Penn to Sir John Rodes, 1697—Letter, William Penn to John Gratton, 1699—Letters of Lady Rodes to her Son, 1690-1713—Letters of Henry Gouldney, 1690-1725—Letters of John Tomkins, 1694-1703—Letters of Silvanus Bevan, 1719-1742.

A SOLDIER'S RECOLLECTIONS

LEAVES FROM THE DIARY OF A YOUNG CONFEDERATE, WITH AN ORATION ON THE MOTIVES AND AIMS OF THE SOLDIERS OF THE SOUTH

By RANDOLPH H McKIM, late 1st Lieutenant and A. D. C., 3rd Brigade, Johnston's Division, Army of Northern Virginia. 8vo. $2.00 *net*; by mail, $2.18.

Dr. McKim was first a private in "Stonewall" Jackson's army, then a staff-officer under Robert E. Lee, and finally a chaplain in General Fitzhugh Lee's cavalry brigade. His narrative begins at the outbreak of the war, and ends at Appomattox. It might be characterized as a series of pen and ink sketches designed to illustrate the life of the Confederate Soldier, on the march, by camp-fire, and on field of battle. It has the personal touch throughout—having been prepared by the aid of the author's diaries, containing incidents and opinions jotted down on the roadside or in the company mess, or in the quiescent intervals of battle.

THE DIARY OF A MODERNIST

By WILLIAM SCOTT PALMER, Author of "The Church and Modern Men," "An Agnostic's Progress," etc. Crown 8vo. $1.40 *net.*

It is full of variety, yet has the unity due to one purpose strongly held and clearly conceived. A rare sincerity and a fine power of expression characterize the book. If there are any leaders in the great movement to which the author is more indebted than he is to the movement itself, they are the late Father George Tyrrell (to whom the book is dedicated), and Baron Friedrick von Hügel.

4th Avenue and 30th St. **Longmans, Green, & Co.** NEW YORK

SOME BRILLIANT NEW FALL BOOKS

From Page's List

W. D. WATTLES' *fascinating tale*

Hell-fire Harrison

A story of "Merrie England" in the times of George III in the days of the "Hell-fire Clubs." Brilliant, stirring, intensely dramatic. A thrilling tale reminding one not a little of the charming "Monsieur Beaucaire." With many illustrations and decorations in color by Frank T. Merrill.

Cloth, 12mo, $1.00

PROF. WILL S. MONROE'S *account of*

Bohemia and the Čechs

The geography, history, people, institutions and cities of the Austrian kingdom, together with accounts of Moravia and Silesia.

"This is the best book we know relative to the people of northwestern Austria. Mr. Monroe's style is picturesque, his information copious."—*The Literary Digest.*

Profusely illustrated, cloth, boxed, $3.00

NEVIN O. WINTER'S *new book on*

Brazil and Her People of Today

"A welcome contribution to our knowledge of South American countries. There is a timely quality in the work and the spice of personal observation enters in everywhere."—*Boston Herald.*

Attractively illustrated, cloth, boxed, $3.00

NATHAN GALLIZIER'S *new Italian romance*

The Court of Lucifer

A brilliant historical romance woven around the famous and notorious Borgia family and completing Mr. Gallizier's Italian trilogy of which "Castel del Monte" and "The Sorceress of Rome" have already been published. *With four illustrations in full color by the Kinneys.* *Cloth, 12mo, $1.50*

FORBES LINDSAY'S *timely volume*

Panama and the Canal Today

A volume of intense interest and of real moment to the American public. An unbiased, unprejudiced story of the country Panama and the vast undertaking in which every American is so interested. *Profusely illustrated, cloth, boxed, $3.00*

SADAKICHI HARTMANN'S *new work*

"The Whistler Book"

A monograph of the life and position in art of James McNeil Whistler. The first comprehensive and authoritative book issued at a moderate price which adequately covers the work of the greatest painter of modern times.

With fifty-seven reproductions in duogravures of Whistler's most important works. *Boxed, $2.50.*

The Nation.

NEW YORK, THURSDAY, OCTOBER 27, 1910.

The Week.

That Roosevelt is "for Taft's renomination," and is acting on the belief that he "would do Taft more good by not praising him too much now and postponing this until later," is a bit of information that is presented to the public by the Washington *Star*, upon the authority, apparently, of one of the Colonel's most intimate friends. That Mr. Roosevelt is conscientiously carrying out the profound policy of helping Taft by "not praising him too much" is not to be denied; and the task of "postponing this until later" is evidently not straining his power of self-control to the breaking point. However, there are doubtless some—and Mr. Taft may be among them—who think that the Colonel carries the thing a little too far:

Perhaps it was right to dissemble your love,
But why did you kick me downstairs?

Figures won't lie, even for political platforms. The New York Republican tariff plank, which Mr. Roosevelt did not write, and which the *Outlook* says that he could not have beaten even if he had fought it (was that the reason he didn't fight it?), declares that the Payne-Aldrich bill has "turned a national deficit into a surplus." In that case, somebody with a big or a little stick ought to get after the Secretary of the Treasury to ask him what has become of the money, for in the official statements he reports a deficit steadily increasing. To date in this fiscal year the shortage is about $25,000,000, this month's excess of expenditures over receipts being thus far fully $4,000,000, or just about what it was in October of 1908, before the Payne-Aldrich bill was heard of. The political figurers, we know, deduct the outlay on the Panama Canal from the ordinary expenditures. But even so, it has to be paid out of current receipts, and does not help the bookkeeping. And, besides, the outgo on that score has been less than $12,000,000 for the fiscal year, so that, even with that sum taken out, the deficit would be about $13,000,000. It is a sad thing that the party platform should thus be in conflict with the official figures, but there can be no doubt which is wrong.

What is there in a political campaign which leads lawyers to tell tales out of school and generally conduct themselves in a way which ordinarily would be called unprofessional? Just at present this State is echoing with charges and taunts addressed by lawyers of one party to lawyers of the other. And these accusations, be it noted, are not political, but relate to professional ethics. The sort of stories which the rival counsel in an important case meet at night to chaff each other about, or are made the subject of good-natured gossip at the club or in a law library, we are now hearing in political addresses. It seems to be thought that this professional backbiting can be elevated into a great public issue. But nothing can be more ineffective than such attacks and recriminations as are now wildly flying between lawyers in opposite political camps. "You used the knowledge gained as district attorney in order to make a lot of money as special counsel." "Nothing of the kind, but what about yourself taking a big fee from the Sugar Trust and then losing your case?" "Your firm was retained by the very banker whom you first took money from and then prosecuted criminally." All this can only be compared to small boys making faces at each other. It cannot make or change a single vote for any candidate. The only ones hurt by it are the lawyers who stoop to it. Some one of them ought to sue out an injunction on the whole process. The writ might be asked for on the ground that irreparable damage will be done, not only to the personal dignity of the disputants, but to their entire profession, unless it is issued.

In President Taft's visit to Ellis Island there was much to touch the imagination and to awaken emotions both humane and patriotic. Any such incident is sure to stimulate, both in the mind of the President himself and in that of the public, a fuller realization of what this great tide of immigration means both to millions of human beings aspiring to better conditions of life and to our own country as a whole. And there is one specific matter connected with our immigration system in regard to which there is reason to hope that the President's visit may prove to have a definite and beneficial result. From time to time, public attention is drawn to some case of peculiar hardship in the way of the actual or threatened separation of a child from its parents or a wife from her husband, owing to the application of hard-and-fast rules of exclusion. There should be a regular provision for the prevention of any such cruel result of general regulations. The regulations themselves may be entirely necessary, but the country's interests do not in the least require any such violation of the first principles of humanity as is involved in the cases we refer to. President Taft has interested himself in the question, and it is stated that a method for preventing their occurrence in the future is being devised.

Postmaster-General Hitchcock may well pride himself upon his administrative achievement in cutting down the postal deficit from $17,600,000 to $6,100,000, without, he states, any impairment of the efficiency of the service. This was done despite the opening of 1,500 new post offices and the establishment of 515 new rural delivery routes, the employment of several thousand additional clerks and carriers, and heavy increases in wages. The secret is that Mr. Hitchcock has been eliminating waste; and his success gives rise to the hope that another year may even see the department paying its way. At any rate, Mr. Hitchcock has earned the name of being the hardest working Cabinet official in Washington and of being genuinely devoted to his administrative tasks. Certainly, the opportunity in his department to make a record is of the best. Besides the proposed inclusion of the fourth-class postmasters within the civil service rules agreed to by Mr. Taft there are doubtless other similar reforms which would make for better financial returns. Then Mr. Hitchcock has had the courage to assail the abuse of Congressional franking, and has demanded that at least a special stamp be used by those who have the franking privilege. Who knows but he may compel Congress to decide the question of a parcels post

on its merits and without deference to the existing express companies?

The United States Civil Service Commission has issued an order, which is regarded as the most drastic ever put out by that body, forbidding active participation in political affairs by Government employees. In New York the Association to Prevent Corrupt Practices at Elections has issued an open letter addressed to chairmen, treasurers, members, and agents of political committees, and to candidates for election, reminding them of the provisions of the Corrupt Practices act, and warning them of the necessity of carefully reading the law and noting its requirements. Especially, it calls their attention to the fact that, in pursuance of the efforts of the Association, an amendment to that act was passed by the recent Legislature striking out the five-dollar limitation, so that every payment, large or small, to a worker, watcher, or messenger must be accounted for in the statement to be filed by committees and candidates. We are making progress toward a condition in which the safeguarding of elections against the corrupt use of money will be effective and thorough.

John K. Tener, the Republican candidate for Governor, after being called for the last twelve days a swindler and an associate of swindlers, has finally mustered up courage enough to swear out a warrant for the arrest, on the charge of criminal libel, of the editor of the Philadelphia *North American*, E. A. Van Valkenburgh. This Mr. Van Valkenburgh welcomes. He was ready to go into court on Monday, but Tener, being on the stump, asked that the hearing might be set for Friday. The candidate has issued another long but inconclusive rejoinder to the attacks upon him, and offers to pay back to any person who went into the Utilities Company because he was president, the amount of his investment. Tener also asserts that "certain interests are striving to induce some one to be the tool to issue for political effect a warrant for my arrest." All of this lends color to the Harrisburg rumor that Tener will find it necessary to withdraw. He ought to be compelled to withdraw. Whether his personal actions have or have not been beyond criticism, he has been shown to be the business associate of men of bad reputation, swindlers, and ex-convicts, and as such he is either too conscienceless or too innocent to be Governor of Pennsylvania. From reports that are now coming from Pennsylvania, it should appear that the voters have about made up their minds to this effect.

Among the eleven names which have just been added to the Hall of Fame the one which is likely to excite the most comment is that of Edgar Allan Poe. Some may still question his right to the honored place; but the great majority of thinking people will, we believe, sigh with relief that he has at length received his due. The fact is that only recently has discussion concerning Poe straightened itself into a clear issue. Estimates of his writings have been clouded by the thought of his strange life; and a desire to look charitably at irregularities of conduct has been checked by the haunting morbidity of his works. Fortunately, the celebration of the centenary of his birth did much to clear the air, when it was discovered that, strange though his manner of existence was, the very uncertainty of our knowledge of it has served to magnify faults; and, in the second place, that Poe's work had suffered undue censure largely because it did not fall in readily with the trend of other American literature. He was un-American, it is true, but within his narrow range he was preëminent.

The dedication and opening in New York of the new "meeting-house" of the Society for Ethical Culture form an event of civic importance not to be overlooked. It is not merely that a society devoted to ethical ideals and held together without a ritual, or an elaborate religious creed or an altar, finds itself, after nearly thirty-three years of existence, able to erect a home for itself. That it could have done, had it so chosen, years ago; as Dr. Felix Adler, its founder and head, stated at the dedication, funds for a temple of ethics were offered shortly after the Society was founded. It chose instead to spend of its means for other things than bricks and mortar, until it should have demonstrated that its teachings did fulfil the spiritual needs of its members, and that it was really to be a part of the higher life of the city. That was easily demonstrable; long ago the Society proved that it had other reasons for existence than the example and the eloquence of its founder. For his teachings have spread through the country, not with the amazing speed and rapid accumulation of wealth that marked the development of Mary Baker Eddy's private religious enterprise, but with that soberer, surer growth inevitable when the appeal is to reason rather than to emotion or passion.

The Ethical Society was early aware of its duty and responsibility to the city of New York, and in its school, which adjoins the building dedicated on Monday, it has given not only an example of a true democracy among its children —those of the rich and the very poor of all races sit side by side—but has carried moral teaching to an extent little dreamed of hitherto. It has brought to its service a rare corps of men and women who are dedicating their lives to an educational undertaking, no longer an experiment, the value of which cannot readily be over-estimated. It was only natural, therefore, that when the new meeting-house was planned, the directors of the Society should have thought of it from two points of view: as a tabernacle for their Sunday services, and as a civic centre. Hence it is that at the formal exercises of the meeting-house (an admirable name, admirably applied) there was a representative of the Mayor to help dedicate the structure to its civic purposes. It is to be, in brief, an up-town Cooper Union, a gathering-place, at slight cost, for groups of all kinds, a temple of the people. Men and women of all races are to be welcome here without question, we take it, save as to their honesty of purpose and devotion to the public welfare, with due regard to the primary character of the hall. Who would dare say how many a good cause will originate within its walls; what future Lincoln will there deliver his message from the West to the East as "Father Abraham" did in Cooper Union?

"Theatre evenings" are announced for Chicago business girls—they object to being known as "working girls"—by which several hundred of them in association will have the chance of seeing a play once a month from a good seat at a cost of from one-half to three-fourths of the regular rate. Arrange-

ments have been made with three of the city's playhouses for reserving seats for the first Tuesday evening of each month. While, in the present state of the stage, such an opportunity is not so valuable as might be desired, it certainly points in the right direction. The worst sufferers from high prices are, of course, those who have neither poverty nor riches, and for whom it is difficult in consequence to do anything. That the difficulty can, however, be greatly lessened by a tithe of the attention that is given to the less intelligent and self-sustaining, creates a social responsibility that we are surely going to hear more and more about, and not least in connection with cultural opportunities. The cost of living cannot always absorb attention that should go to the cost of life, nor the trials of professed poverty obscure the hardships of those who are concealing poverty.

The importance of laughter can hardly be overrated, but we confess to a lack of the inclination as we read the Chicago *Evening Post's* announcement of its "big broadside of sure-fire laughbringers every evening." Is real fun impossible apart from situations that produce only guffaws or disgust, depending on the kind of spectator? Is there no humor in incidents of the ordinarily refined home? But the real demoralization in such "wit" is that it is intended for the impressionable minds of children—we assume that they may be so called still. That at which one laughs is part of his culture. And even the poor argument of realism cannot be made for these mere burlesquings of life. If we seem to be taking such humor seriously, it is because it cannot be taken any other way. It is not amusing, but only one more labored attempt to create a laugh. When will arise a picture-maker whose reward will be a smile? And, finally, we cannot help wondering whether the "broadside" is the first significant result of the Chicago paper's reduction in price. We hope not.

Great political events seem to be preparing in England. Parliament is not in session, but the conference between Liberal and Conservative leaders has resumed its sittings, and the air is filled with rumors of mighty changes impending. It is quite clear that the conference committee has got beyond the mere question of the veto power of the House of Lords. Upon that matter alone it might not be possible to reach an agreement; yet if it were reckoned with as part of a larger scheme, the parties might come to an understanding. And the broad intimation is given that this more comprehensive plan has taken the form of a vast project for devolution of power—that is, for a system of home rule, not only for Ireland, but for Scotland and Wales as well—together with the possibility of an Imperial Federation in which the self-governing colonies may be represented.

That all this is not mere gossip many significant occurrences show. The Chancellor of the Exchequer, for example, had been announced to make an address before the Welsh Liberal Conference on "Federal Home Rule for Wales." But that engagement was suddenly cancelled. The inference was at once drawn, and it seems unavoidable, that the committee of conference desired to handle the question on which Mr. Lloyd George was to speak, without being embarrassed by what he might say in advance. Predictions as to what the conference will recommend are numerous. One is that a Royal Commission to look into the whole matter will be urged; but that would surely revive Salisbury's sarcasm about getting rid of difficult questions by referring them to Royal Commissions. Whatever the final official announcement of the findings of the conference, its tenor and reception will show whether there is to be a pause and a truce for constructive legislation, or a renewal of English party warfare more bitter than before.

A curious politico-financial scandal is looming up in Berlin. The Tempelhof Field, a well-known military parade-ground on the outskirts of the Prussian capital, has been sold by the Prussian War Department to the adjoining suburb of Tempelhof, in the face of the earnest protest of the city of Berlin, which offered to pay the same price, and wishes to preserve a great part of the field as a park. Real estate speculation and financial interests are suspected to be at the bottom of the matter, and it is stated that the press of the whole country is condemning the action of the War Department, and that the Prussian Minister of War may lose his official head as a consequence of the affair. Dishonesty or crookedness in public office is so rare in Germany that a scandal of this kind has a peculiar interest, apart from the particular matter involved. It will be extremely interesting to learn whether the thing is simply a case of vulgar every-day graft or is to be explained in other ways. The curious suggestion is made that the War Department was influenced, in refusing to deal with the Berlin City Council, by the fact that that body is controlled by the Radicals and Social Democrats, "to whom the existing order felt it could not afford to make anything savoring of concessions." A truly Junker-like idea of political wisdom; cut off the people's breathing space, and thus teach the Radicals and Social Democrats their place!

Reports that the European Powers are now planning to recognize simultaneously the republic in Portugal speak well for the impression of stability made by the new régime. It is a case where foreign governments are under no obligation to act with haste, yet neither should they delay so unduly as to warrant a suspicion of unfriendliness. The republican government at Lisbon is certainly *de facto* now, and whatever diplomatic business has to be transacted there is done with it. Formal recognition should soon follow, and in it we make no doubt that the United States will heartily join. Portugal under a republic must still be regarded as an experiment, but the Portuguese people are entitled to try it out under the most favorable conditions, and in them we must include official recognition of the new order by other nations. Events across the Spanish frontier are still carefully watched to see if the republican upheaval in Portugal will have an echo in Catalonia. Thus far there has been no outbreak except one of talk, but there are many who think that the two countries will in the end have common institutions. This is an old idea. So long ago as 1820 Robert Southey wrote of the then revolution in Portugal, that his uncle thought it would "end in annexing that country to Spain." Southey himself added: "This, I think, can only be accomplished by the further revolution of abolishing monarchy in both countries."

REPELLING INTELLIGENT VOTERS.

One of the remarkable features of this year's elections is the open desertion of their party by Republicans. It is not confined to New York city. The *Tribune's* correspondence from up the State is frank enough to admit that some life-long Republicans are nearly everywhere to be found who will vote for Dix. Nor is the thing to be seen in this State alone. In Massachusetts and Connecticut and Ohio the same phenomenon is encountered. It is most notable in New Jersey. There the nomination of Woodrow Wilson by the Democrats, with his brilliant campaigning, has confessedly detached thousands of Republican votes.

What is most striking about the matter is that these temporarily alienated Republicans peculiarly represent that intelligence for which it has been the boast of their party preëminently to stand. They are professional men, college men, leaders in their community. Mr. Roosevelt—rather boldly plagiarizing Mr. Bryan in this, too—declares that no business man opposes him unless from a desire to do crooked business. But the facts are notoriously otherwise. A multitude of steady-going, conservative merchants and bankers and manufacturers, who are of the precise kind which the Republican party has been proudest to point to in its membership, are this year going either not to vote or to support the Democratic ticket. Not since 1884 has anything like it been seen. The defection in his party caused by Blaine may have included more men feeling intensely on the moral issue involved than are forsaking the Republicans to-day, but all appearances indicate that the numbers of those now turning their back on their party are far greater. The whole is certainly a political occurrence of first-class importance.

The question is, how are the Republican managers proposing to meet this? In New Jersey there is no secret about their plans. They admit that a perfect avalanche of intelligent Republican and independent votes will be cast for Wilson, but they significantly say that there are ways of making up the desertion. The meaning is plain. Senator John Kean, who is fighting for reëlection, and the Republican organization can readily put their hands upon a large campaign fund. Their purpose is scarcely concealed to work upon approachable or venal Democrats. Nothing else can really be meant by their confident assertion that "there will be many Democratic votes for Lewis." To make good the loss of intelligent Republicans, Democrats of the baser sort will be enlisted. We do not know that such a scheme will be attempted in other States, though in them, also, the Republican orators make light of the driving away of men known for intellectual ability and high character. President Stryker of Hamilton College announces that he will vote for Dix as a protest against Rooseveltism, whereupon Mr. Roosevelt sneers at the opposition of "the worthy Stryker." The same orator's readiness to break with eminent men appeared in his speech of last Saturday, wherein he attacked Judge Baldwin of Connecticut, the Democratic candidate for Governor. Now, Judge Baldwin is in some respects the leading American jurist. We are informed that no American lawyer's work is better known abroad or his name held there in higher honor. And it is a startling thing that the man who aspires to lead the "party of intelligence" should be willing to utter hasty words against one of his country's intellectual ornaments, while at the same time snapping his fingers at, or grossly abusing, the college men, the lawyers, the men of the professions, the sober representatives of our best citizenship, whom his course is repelling from the Republican party.

Quite apart from the moral and patriotic aspects of the matter, a huge party blunder would be involved in this attitude, if persisted in. What we mean is that the Republican party cannot hope to make shouting take the place of ideas, cannot replace brains with appetites, cannot light-heartedly speed the departure of thinking and conscientious members in the confidence that their places will be more than occupied by those who have neither thoughts nor convictions. It is a general rule, illustrated again and again in the political history of England and of this country, that the conservative party—and such the Republican party has been for years—is not able to make up by enlargement at the bottom for losses at the top. All of Disraeli's cultivation of the "Young England" idea, and Lord Randolph Churchill's hot advocacy of a "Tory Democracy," came to as little as the attempt in the United States to balance conscientious Republicans by "Blaine Irishmen." The radical party, with an immense hold upon the common people, can manage to live on and show wonderful recuperative power even if, for a time, its leadership becomes contemptible and its proposals alarming. So we have seen the English Liberals keep up their organization and their spirit during long years of adversity and of exile, and return triumphant to power. So we have seen what is really the political marvel of the Democratic party retaining its hold upon millions of workingmen through a long period of disaster due to bad leadership and mistaken policies, and swift to seize the opportunity to reinstate itself. But this is not possible for a party such as the Republican has been. It is bound to strive to retain the respect of its best, or it will fall into defeat and decay. A party that makes especial appeal to the intellect cannot flout intellectual men except on pain of death. It may succeed for a time; it may survive under the old name though with the old spirit gone out of it; but the soul will be fled, and men will walk backward with averted gaze, as in the presence of great hopes brought low.

THE SQUARE DEAL.

Mr. Roosevelt's chief contribution to the New York campaign thus far has been his accusation, in a speech several days ago, that Mr. Dix, while professing opposition to monopolies and Trusts, was himself connected with a monopolistic Trust of the most odious kind, the Continental Wall Paper Company. To place the brand upon him effectually, he incorporated in his speech the words in which Judge Lurton, then a member of the Circuit Court of Appeals, expressed his condemnation of the character and objects of that company, as a device for suppressing competition. Nobody has come forward to defend the Continental Wall Paper Company, but in reply to a series of questions put to him by a lawyer on the Republican side, Mr. Dix published on Sunday morning a very clear and concise statement to the effect that he had had no connection with the Continental Company, nor any knowledge of its doings.

Nevertheless, in these things there may be something beneath the surface; a denial may be true in the letter, but

false in the spirit. It would, therefore, have been perfectly proper for Mr. Roosevelt to go deeper into the case if he thought fit; to set competent persons to work sifting it to the bottom, and after this had been done, if the results justified it, to repeat his accusation, accompanied with damning proof. But what did he actually do? He immediately reiterated the charge. "The statement of Mr. Dix is completely misleading," he declared; "either he knows nothing about what the company of which he is a director has been doing, or he is not frank in his answer." Mr. Dix had said in his statement, "I became a stockholder and a director of the Standard Wall Paper Company on June 17, 1907," and "I know nothing whatever about the Continental Wall Paper Company"; but this does not satisfy Mr. Roosevelt, in spite of the fact that the suit decided by Judge Lurton referred to transactions that took place in 1898 or 1899, and that the decision itself was rendered in 1905. The suit, says Mr. Roosevelt, "was prosecuted through by the Trust to the final decision by the Supreme Court in 1909, over a year and a half after Mr. Dix became a director of the Standard." And he goes on to use very contemptuous language about a man who "could for eighteen months be so wholly ignorant of what his partners were doing in his own private business."

Had Mr. Roosevelt not been so addicted to the custom of putting down all men as liars whom it was convenient for him to dispose of in that simple way, he would have waited till he knew something about the matter before declaring that Mr. Dix's first brief statement had been a cover for falsehood. Mr. Dix's full and detailed answer to the second attack leaves it without a leg to stand upon, and puts Roosevelt once more in the position of a reckless slanderer. The Standard Wall Paper Company, in which Mr. Dix is a small stockholder and a director, was formed in 1903, the company of the same name which had had relations with the Continental Wall Paper Company having gone out of existence. The new company "bought among other properties the plants and manufactured goods of the old Standard Company." In the first company—the one that was concerned in the Lurton decision—Mr. Dix never had any interest whatsoever; and "this second Standard Wall Paper Company," he goes on to state, "has never had any connection of any kind, direct or indirect, with any other company or any Trust; has carried on its business in open competition with all other manufacturers in the same line of business . . . without alliance, understanding, or agreement with any other company, any firm, or any individual." And he now demands, "as one American citizen of another," that Mr. Roosevelt make "the apology which one gentleman owes to another for even involuntary misrepresentation."

We hardly imagine that Mr. Dix entertains any expectation that Mr. Roosevelt will comply with this demand; at least, out of the scores of violent and reckless attacks he has made upon individuals of every kind, we cannot recall one instance in which he has felt moved to make reparation. In the matter of Judge Baldwin, which is just now also demanding the Colonel's attention, the result may be different; for here it is no general apology that is demanded, but the disavowal of a palpable misstatement as to Judge Baldwin's judicial views, occurring in the report of one of Roosevelt's speeches in New Hampshire. Now, there is nothing to which Mr. Roosevelt makes so clamorous a claim of exclusive ownership as to the doctrine of the square deal. And yet it is precisely the violation of that doctrine in his own personal dealings that is continually coming up to trouble him. Surely no man of high public station in our time has had a tithe of the number of ugly affairs of this kind to his account. One thinks immediately of the Panama *coup*, of the alliance with the Democratic Senators in the railway bill, of the Harriman campaign contribution affair, of the Bellamy Storer business, of the Brownsville ukase, of the Henry M. Whitney matter. Who can make out the list—and who can match it?

The truth is that in Mr. Roosevelt's crusade of the square deal, regarded as a moral agitation, there has all along been one vital deficiency. It has been essentially a stirring up of people to indignation over the sins of other people, not to contrition over their own. The one way to make up for this deficiency—the one way to give the movement depth as well as sweep, to make it a real awakening and not a mere commotion—Mr. Roosevelt has never seen fit to adopt. Whatever he may have done to enforce the square deal upon others, he has never shown that he felt it binding upon himself. Who can point to a case in which the stern application of the doctrine of the square deal was inconvenient to himself, and yet he did not flinch? It is others who must rigorously apply the law in the case of their own friends and adherents; his Paul Morton must not be touched. It is others who must refrain from making false charges and whose least inaccuracies place upon them the brand of Ananias; he must be left free to charge what he pleases and to repudiate or deny any oral utterance that it does not suit him to acknowledge. Be his motives and ideals as lofty as the most enthusiastic of his votaries believe, his methods are such as we have described. But the square deal is not a matter of motives and ideals; it is a matter of a man's specific actions day after day, or it is nothing.

"THE LIBERTY TO STARVE."

One of the great facts of life which the Socialist always fails to understand, or never fails to misconstrue, is that liberty, like everything else worth having, has its perils and its penalties. "That is not true liberty," says he, "which may mean, and sometimes does mean, merely the liberty to starve." But no other conception of liberty is possible. It always and everywhere means liberty to starve or to suffer worse evils. Liberty to travel sometimes means the liberty to get smashed in a wreck; liberty to eat what one likes sometimes means liberty to get indigestion; liberty to start in business for one's self sometimes means the liberty to become bankrupt. The only way to prevent these evils is to forbid men to travel, to supervise their diet, and dictate to them the occupations they shall enter and direct them in those occupations. But such regulations would be subversive of liberty, and no person could, with a straight face, maintain that they were not. Any scheme of regulation which would prevent poverty would be equally subversive of liberty.

No socialistic scheme has ever been evolved, even on paper, which could leave consumers free to spend their money or labor checks or other purchasing power as they liked, and at the same time leave producers free to en-

ter such occupations as they chose. The problem of adjusting supply to demand has never been solved by any Socialist, possibly for the reason that no Socialist has seen that there was such a problem to be solved. As a matter of fact, there are only two ways of adjusting supply to demand and of distributing workers among the different occupations. One is to leave men to choose for themselves what they will produce, or what occupations they will enter, knowing that if they misjudge the demand and make the wrong choice it means failure, while if they make the right choice it means success. Under this arrangement the penalty for the wrong or the reward for the right choice goes to the one who makes it. The one most interested is therefore made to feel the consequences. If too many men go into one occupation and too few into another, it is a bad distribution, and therefore a waste, of human energy. The penalizing of those who have gone into the overcrowded, and the rewarding of those who have gone into the undercrowded, occupation tends to bring about a redistribution, and therefore a greater economy, of human energy.

The line of rational and effective social reform is to render it as easy as possible for men to make this transfer, to redistribute themselves, to get out of the poorly-paid and into the well-paid occupations. This can be done most effectively by placing before our growing youths all possible educational opportunities whereby they may acquire the training and skill which will fit them for those occupations where men are scarce and well paid. But even then, if there is to be anything resembling liberty, a certain number will refuse to avail themselves of these opportunities, and they must pay the penalty. Such is liberty, and such is justice.

The other method is to determine production and distribute men among the different occupations by authority: to say to this man, work here; to that man, work there. Whatever the name of the supervising agency, it would, in reality, be our boss. It would have to determine whether men were distributing themselves in such a way as to meet the demand, and if it found that they were not, it would have to redistribute them by sheer authority. Otherwise, it would have to determine whether consumers were demanding things in the proportions in which the producers preferred to supply them, and, if it found that they were not, force them to change their consumption. If they wanted more than was to be had of a certain product, it would be easy to say to them, "You can't have any more"; but if they did not want as much of another as was actually being produced, it would not be so easy to manage. The authority might lighten the work, or reduce the hours of the workers in this particular field, but that would only aggravate the evil by making it more attractive, and leading men to desert other fields where they were needed more. Another method would be to lengthen the hours of those who were working when too much was being produced, and thus make that field of production so unattractive as to induce men to desert it. This might be effective, but it would look awkward to say to a group of men, "You are producing more than is needed; therefore, you must work harder and longer." If a political campaign were waged on that issue it is not difficult to predict the result. The final result of all such methods of adjustment would be, if men were left free to choose their own occupations, that the authority would be compelled by decree to penalize those occupations which seemed to be attracting too many men, by reducing their wages and correspondingly increasing the rewards where more men were needed. But that is the very thing which is done under competition, and the workers would say, "Away with Socialism. It is no better than the competitive system."

What would the Socialist do then? There would be only one thing for him to do: that is, to redistribute men by authority. Since every man's position under Socialism would be a public position, the men against whom this authority would be wielded would always be those commanding the least political influence, or in the position of being able to make the least political fuss.

Such a scheme might effectually prevent poverty, as it might prevent dyspepsia by enforcing scientific dietetics; but it would destroy anything even resembling liberty. It is not likely that any considerable part of the world will ever choose, knowingly, to give up liberty, even though by so doing they might eliminate poverty, for liberty is, to most men, a holy thing. However, it is doubtful if there is anything truly holy which has not something of the terrible in it. Liberty is the holiest, and, at the same time, the most terrible thing in the world.

A WRITER OF NEW ENGLAND.

Sarah Orne Jewett's tales and novels have been issued in seven peculiarly neat little volumes, which seem to reflect the delicate charm of the writer's work. These collected editions of an author that one has been reading for years in the magazines have sometimes a pleasant way of confirming and clarifying an opinion that has been floating vaguely in the mind. What was before ephemeral in the very nature of things, now appears to the eye as if dressed for an age of endurance. In external form at least it is not different from the eternal books, and one looks into it a little more seriously for its meaning.

Now, one has always felt that Miss Jewett's characteristic note was the spirit of "Cranford," modified a little by New England weather, and the reading together of five of these new volumes (so far, good type has lured us over old paths) has strengthened this feeling, and added certain questions. Why is this Cranfordian manner so much more successfully followed in the two longish novels, "Deephaven" and "Country of the Pointed Firs," than in the short tales? And why is the third novel, "A Country Doctor," so much less interesting than the other two? A half-way answer to both questions has come to us with the questions themselves as we have read these volumes. It is the curious inability shared by Miss Jewett with the Brahmin writers of New England fiction generally to make passion or action real and vital. States of mind they can describe; the conscience of an individual or of a people they can analyze; characters petrified into some tragic or exquisitely pathetic or tender reminiscence they can make real; an aspect of nature they can portray as delicately as the human mood of which it seems a shadow; but in passion and action they have almost always failed. So one thinks of the twilight of passive reflection that broods over Whittier's "Leaves from Margaret Smith's Journal"; of the mistiness of grief in Longfellow's European tales and the remoteness, as of a

holiday remembered from boyhood, of "Kavanagh"; of the amateurishness of Oliver Wendell Holmes's novels; of the magical glamour of Hawthorne, which to some readers conveys his world of people into a land where morality is only a sombre reminiscence and to others seems only inhumanity and bloodlessness; of the idyllic beauty of the first chapters of Donald G. Mitchell's "Dr. Johns" and the sad inefficiency of the closing chapters when a breath of the rude, passionate world breaks into the pastor's life. Always we have the idyllic beauty of a scene that is petrified into motionlessness, and human moods in which the active passions remain as an echo from a remote distance.

And so in "Deephaven" and the "Country of the Pointed Firs," which attempt no story in the proper sense of the word, but portray the very soul of fading villages on the sea and the life of people who move as if the motive fire in their hearts had long ago been covered over with ashes, Miss Jewett has almost rivalled the charm of "Cranford," would quite have rivalled that charm, one feels, if she had only Mrs. Gaskell's constructive genius. On the other hand, in "A Country Doctor," as soon as we get beyond first idyllic chapters and enter into the struggles and ambitions of the heroine, there is a flagging of interest and a sense of half-life; the passion and the action are unreal, almost as if imagined in the study of a school-girl. And this same lack mars many of the short stories. Even when these attempt to convey only a mood or a glimpse into dream-life, they are less successful than the longer idyls. They lack at once the point and dramatic situation needed in the short story and the cumulative friendliness, so to speak, of long association.

Why should this be? New England in actual life has certainly not been wanting in efficiency, from the days when the settlers hewed the forests and subdued the Indians. Whittier, whose novel is the least vital, the grayest, of all, was himself an actor in one of the great dramas of the world, and played no ignoble dreamer's part. Even Hawthorne showed himself, when he tried, capable of filling the office of consul in a busy port and of plotting to make out of the place all there was in it. There is some curious psychological point here, a question in answer to our questions, in good Yankee fashion, which other readers may find less tantalizing than we have found it. Some philosopher may tell us the meaning of these things.

Meanwhile, in her own world, what rare and exquisite entertainment Miss Jewett has provided. Perhaps only one who has himself been baptized in the still waters of New England faith can feel the perfect fascination of these people that move about so pathetically and speak with so subtle a humor in the village of "Deephaven" and in the towns and fields and islands of the "Country of the Pointed Firs." Who is so immersed in the passionate game of life that he cannot for a while give his heart to Mrs. Todd, the quaint herb-woman and philosopher of the flowers, and to her mother and brother, the brave and beautiful hermits of Green Island?—

Cras amet qui nunquam amavit.

If the lives of these people seem very still, they are able somehow to arouse a strange warmth of friendship.

SCANDINAVIAN BOOKS.

BERGEN, Norway, October 12.

The well-known Norwegian novelist, Johan Bojer, has published a new drama called "Kjærlighetens öine" (The Eyes of Love), which has attracted a good deal of attention. Opinions about it have been greatly divided, however; some Danish authors have not found words strong enough to express their admiration, whereas other critics give it only meagre appreciation. The drama is founded on the theme of an old fairy-story. A young and beautiful princess, the loveliest maiden in all the world, spreads sunshine around her and is loved by everybody; then, by an accident, she loses her beauty and loveliness, and everybody hates her—except one, and he is blind and remembers her as she was before. He loves her as he always did, and his love gives her back her beauty, while her love restores him to sight. So far the fairy-story. In my opinion, the author has succeeded in creating from this tale a drama which ranks high in the literature of the northern countries. It may be true that the work has many, and even serious, shortcomings, as, for instance, the introduction of several superfluous and tedious characters; it is true, also, that the language is often inconsistent and awkward; nevertheless the drama contains so many strong and beautiful scenes and the chief persons are so vividly drawn, that it leaves on the mind an impression not easily obliterated. The play is shortly to be performed at the theatres in Norway and Denmark.

Knut Hamsun, the author of "Sult" (translated into English under the title of "Hunger"), recently celebrated his fiftieth anniversary and on that occasion was greeted by native and foreign critics as the foremost Norwegian literary man of the present day. The Austrian critic, Carl Morburger, composed an essay on the poet which was translated into Norwegian and attracted widespread interest. It is written in an easy style, and deals less with the facts of Hamsun's life than with an analysis of his ideas and criticism of his literary methods. Of particular interest is the critic's mention of Hamsun's unpublished drama, "Livet ivold" (In the Power of Life), which appears early in November and is to be performed at the principal theatres of Norway, Denmark, Russia, and Germany immediately after the publication. Mr. Morburger has read the drama and is filled with admiration for the work. "Hamsun has here seized a world-comprising problem," he says, "men's fight against life and life's far more terrible fight against men. This impersonal thing, life that fights, he has seized in all its appalling splendor." Since the death of Björnson Hamsun is regarded as the great chieftain of Norwegian literature, and the publication of his new drama this autumn will probably prove one of the most interesting events of a literary character which has occurred in this country for a good many years.

In connection with the mention of Hamsun's forthcoming dramatic work it may be proper to call attention to a new drama by another prominent Norwegian writer, Gunnar Heiberg. The title is "I frihetens bur" (In the Cage of Liberty), and the work will be published some time in the autumn. Mr. Heiberg has not written anything since 1904, when his three-act drama, "Kjærlighedens tragedie" (The Tragedy of Love) made such a deep impression both in reading and on the stage.

The famous Swedish poet, Gustaf Fröding, recently celebrated his fiftieth birthday, and as in the case of Hamsun, the event gave rise to the writing of a short study of his life and work. The author's name is Ruben G. Berg, and the essay is one in the series called "Svenskar" (Swedes), published by the firm of Bonniers, at Stockholm. It is written in an interesting manner and is filled with admiration for Fröding's literary talent. Gustaf Fröding is one of the finest lyric poets Sweden has ever produced, and his songs from Vermland are among the most exquisite productions of the world's poetry. His greatest gifts are his easy and musical rhythm and his skill in creating original and harmonious verbal combinations. He has also a pronounced vein of humor. Among his works there are some, however, dealing with social and psychological problems, which at one time met with severe disapproval on the ground of

indecency. This criticism was later found to be absolutely absurd, and all now agree in praising his deeper and more serious writings for their thought and beauty. Fröding has not written anything for a number of years, as an inherited mental disease has almost completely darkened his mind. He lives in a little country house in the immediate neighborhood of Stockholm; he has laid down his pen, probably forever, but his lyrics are sung and loved by all who bear the Swedish name. The biographical essay by Berg gives a clear portrait of the poet, and may be recommended to everybody who desires a fuller knowledge of Fröding's life and work. The price of the volumes of this series is only kr. 1.50 (about 40 cents). Other biographies in the series are: Carl von Linné, Selma Lagerlöf, Verner von Heidenstam, Ellen Key, Karl XIV Johan, etc.

Another Swedish biography of interest is Paul Meijer-Grangvist's life of the famous Swedish king, "Carl X Gustaf." It is written in pleasant and easy style and displays a great deal of enthusiasm for the king who, by his victorious wars in Russia and Denmark, added so many fertile and valuable provinces to the Sweden of his day. The essay does not count more than 140 pages, but the author succeeds in giving very complete information concerning King Carl's life and personality, and his importance to Sweden.

ARNE KILDAL.

NEWS FOR BIBLIOPHILES.

The twenty-fourth annual volume of J. H. Slater's "Book-Prices Current," recording prices paid for books at English auctions from October, 1909, to July, 1910, is just published (London: Eliot Stock). The season has been a rather commonplace one in London, no library or collection which could be called a first-class one having come into the auction room for dispersal, and the average price of the selection of 9,584 lots deemed worthy of inclusion in the record being £2 9s. 1d. This is the lowest average since 1896 (excepting 1900, when it was £2 6s. 2d.). The average of last year kept up by the Amherst sale was £3 11s. 10d. The highest average was that of 1907, £4 4s. 2d. for each lot recorded. We do not know the exact system followed by Mr. Slater in calculating this average price. Autograph letters with a few exceptions are not included. In two or three cases, though not fully described, they are mentioned, the most notable one being the sale on April 25 last of a collection made up of correspondence, chiefly addressed to W. Blathwayt, Secretary of State and Commissioner for Trade and Plantations, relative to the colonies during the last quarter of the seventeenth century, which brought as one lot £8,650. This great sum, probably the largest price ever paid at public sale for a single lot in the book auction room, would have gone far towards keeping up the average had it been included. In the same sale a collection of maps, partly manuscript, brought £690. This is described in extenso, and was undoubtedly included by Mr. Slater in the total used for calculating his average.

We notice that the manuscript of Sheridan's "School for Scandal," which sold for the low price of £75 on June 16, is described as in Sheridan's own autograph, although it was admitted at the time of sale to be a transcript by some unknown hand.

"The Production of the Printed Catalogue" is the title of a little volume by Alex. J. Philip, just published by Robert Atkinson, London. Although it treats primarily and principally of the catalogue of the public or circulating library, it contains suggestions which will be found useful to the owner or librarian of a private library who is preparing a catalogue, whether to be printed or kept in manuscript. It is the first of a contemplated series of Library Technical Manuals. The second, in preparation, will be "The Business of Bookbinding."

The James T. Mitchell collection of prints seems to be without limit. Part x of the catalogue, describing his collection of engraved portraits of beautiful women, actors, musicians, etc. (1,219 lots), is sent out by Stan. V. Henkels, Philadelphia. It contains a number of fine reproductions, including a frontispiece printed in colors. The sale will take place November 4 and 5.

On November 1 and 2 the Anderson Auction Company will sell the library collected by John and William Waddle of Chillicothe, O. The larger portion relates to the history of Ohio and the Northwest Territory. Some notable Western books included are: M'Afee's "History of the Late War in the Western Country" (Lexington, Ken., 1816), Metcalf's "Narratives of Indian Warfare" (Lexington, 1821), Harris's "Journal of a Tour Northwest of the Alleghany Mountains" (Boston, 1805), Carver's "Travels," first edition (London, 1778), and Wither's "Chronicles of Border Warfare" (Clarksburgh, Va., 1831).

On November 1 and 2 the Merwin-Clayton Sales Company will sell a collection of Americana, including sections on the American Revolution, John Brown, California, the Early West, Indians, Lincoln, New York, and the War of 1812. On November 3 they offer a collection of first editions of English and American authors, among them Richard Jefferies, Andrew Lang, Thoreau, Henry James, Joel Chandler Harris, and others. On November 4 they sell a miscellaneous collection.

On November 2 and 3 C. F. Libbie & Co. in Boston will hold a sale of miscellaneous books, including American periodicals, civil war literature, etc.

Correspondence.

ROOSEVELT AND THE AVERAGE MAN.

TO THE EDITOR OF THE NATION:

SIR: I do not wish to reply to all of Mr. Franklin T. Hammond's article on Rooseveltism in your issue of September 29, but there is a question put by him which I should like to answer. He asks:

> May not the fact that Mr. Roosevelt's hold on the "people" is so strong be itself significant to prove that the Rooseveltian views are really and vitally, and not apparently, entertained by the "average American"?

To answer this question yes or no, depends on one's estimation of Mr. Roosevelt. My knowledge of history and of Mr. Roosevelt's figure therein compels me to answer no. The people—the average Frenchman, to adopt what utility may repose in Mr. Hammond's phrase—of Napoleon's country believed in him and doubtless thought he had an eye single to their welfare, when they made him Consul for life. (Parenthetically, no one now believes that Mr. Roosevelt craves kingly power.) Yet Bourrienne, who saw more of Napoleon during the first twelve years of his career than any other person, not excepting Napoleon's wife, says that the "Little Corporal" had his eye on the throne all the while, and was merely playing the part of a Republican, and that all his public acts were done after deliberate calculation of what effect each would have on his prospects of attaining the kingly station.

Average Americans will likely consider the man behind the policies they are asked to adopt. And while "we all grow," as Mr. Hammond observes as a seemingly intended palliation of Mr. Roosevelt's inconsistencies, yet the many books I have opened on Lincoln have not shown me that he had either stated things to be as they were not or had been accused of so doing and then, to raise a self-shielding cloud, had vociferated the "short and ugly word" at his accuser.

If Mr. Hammond will quit the company, for a brief span, of those who "smell of fried things," he can ascertain that many discerning persons have recently entirely reconstructed their opinions of Rooseveltism. He will find the "deadly parallel" column is appearing all over the land. On his jaunt in the open Mr. Hammond can also learn that the people—the lovely common people—are fast coming to believe that Taft is right, that he has the dignity needed in the Presidency, is fully possessed of the ability, and will do things, if the hysterically obsessed will support his pilotage of the ship of state instead of scurrying fore and aft to interpret the movements of an acrobatic politician. Let Mr. Hammond do what his average American is doing—compare what President Taft has accomplished during the short time he has had office with what any other President accomplished in a like period.

If the good book is right in saying, In the multitude of counsellors there is safety, then the man who habitually spurns counsel can hardly be called safe—though he may be sane.

S. ROSS PARKER.

Seattle, Wash., October 19.

PROBABILISM AND THE JESUITS.

TO THE EDITOR OF THE NATION:

SIR: In his letter, which appears in your issue of October 13, "S. D." states that "Rome consistently condemned the teaching [Tutiorism] that there is an obligation under pain of sin to take the so-called safer course when the law, which alone creates the obligation of conscience, has no certain application in the case." This is the truth, but not the whole truth. There are laws which bind to the safer course, *v. g.*, the obligation of receiving the sacraments. Perhaps the most notable instance in recent times was that of Cardinal Newman, whose Anglican orders were looked upon as of doubtful validity and who there-

fore received Catholic orders conditionally. This, too, in spite of Tract xc. Day after day Pius X follows the *partem tutiorem* in handling the modernists. The chance—aye even the hope—that the person under suspicion will be faithful to the church counts for nothing. The name of such persons is legion. The latest instance is that of the historian Duchesne, president of the French School at Rome, and recently elected a member of the Institute. As long as his history of the ancient church was in French, Rome overlooked it. But when an Italian translation is announced, Duchesne becomes suspect, his orthodoxy questioned, and himself cited to appear before—whom? The Jesuit Billot, one of the writers of the Encyclical on Modernism, who boasted that he had taught theology for twenty years and his students knew not that there was a Biblical question. Surely, in Duchesne's case we have the safer course, with a vengeance. Again in Tyrrell's case the Jesuits followed the safer course. No doubt Tyrrell would have lived and died a Jesuit if left alone.

Further, "S. D." writes: "The only weight which casuists attach in uncertainties of conscience to the 'opinion endorsed by one learned teacher' or by many, is the probability added to the original reasonableness of the opinion," etc. This, too, is true, but it is not the whole truth. There are casuists and casuists, from the professed theologian to the child first kneeling in the confessional. Now, Pius IX decreed that every opinion of Liguori may be safely followed, and that by every person interested. One may walk after the founder of the Redemptorists contrary even to his own conviction. But he must use a "reflex judgment," as theologians term it. Now, this may result from the weight of Liguori's name without even the remotest thought of "the original reasonableness of the opinion." Again, a person may count heads. For example, a question of conscience is up: four theologians teach that a given course is permissible, while three deny it; a probabilist will follow the majority, led by the force of numbers alone. Even if six were opposed, and but one in favor, the party interested may follow that one, as Jesuit theologians, notably Ballerini, teach.

If, as "S. D." writes, it be an historical commonplace that Jansenist rigor led to the French Revolution, Orestes Brownson, the greatest of all American Catholic writers, laid it at the door of the Jesuits. And "S. D." to the contrary notwithstanding, Liguori, as far as Moral Theology goes, must be counted with the Jesuits; for his work is a copious commentary of the Moral Theology of the Jesuit Busenbaum, whose text he reprinted and marked off by inverted commas.

The history of probabilism is yet to be written. It is my own conviction that probabilism has in great measure created among the Latin races that hatred of the church, specially towards monks, friars, including Jesuits, and nuns, which is so widespread. By a deft use of probabilism, nearly everything is condoned. When, age after age, this practice is inoculated into a people, it must leave consequences, of which one seems to be contempt for its teachers. In conclusion, we are inclined to think that probabilism had its formal beginnings in the procedure of the Roman courts. J. R. S.

New York, October 17.

THE EXCAVATION OF CYRENE.

To the Editor of The Nation:

Sir: Some months ago the Ottoman Government granted to the Archæological Institute of America a firman for the excavation of Cyrene. The project had received the authorization of the Council of the Institute at the meeting in Baltimore in December, 1909; and the prompt issue of the firman seemed to augur well for the undertaking. A preliminary reconnaissance was made in May and June, 1910. This was fruitful in results, and it is expected that within a month the work of excavation will be commenced. A cablegram received today from Malta brings word that the first installment of supplies for the expedition has been successfully landed. As there is no good harbor in the vicinity of the site, Mr. Allison V. Armour placed his yacht at the service of the undertaking for the transportation of supplies as well as of the staff; a landing can be made in calm weather by means of small boats.

The excavation of Cyrene was proposed by Charles Eliot Norton, the first president of the Institute, among the earliest projects, but until recently conditions have not been favorable. To defray the cost of the work in its earlier stages the sum of fifteen thousand dollars a year for three years has been subscribed or pledged by members of the Institute; one-third of the whole amount was contributed by Mr. James Loeb. The direction of the undertaking was placed in the hands of a commission consisting of Mr. A. V. Armour, New York; Mr. Arthur Fairbanks of the Museum of Fine Arts, Boston; and Mr. D. G. Hogarth of the Ashmolean Museum, Oxford. The Commission appointed Mr. Richard Norton director of the field operations. The commissioners recently met in Paris to pass upon the last questions of policy before the work should commence.

The site of Cyrene lies at the edge of a high plateau in the northern part of the province of Barca, between Tripoli and Egypt. The ruins are covered with soil to only a moderate depth. Since the devastation of the region the site has been protected by its inaccessibility; it has been without permanent inhabitants for centuries. According to all evidence now available, the excavation of few Greek cities might be expected to yield more of value and human interest.

Francis W. Kelsey.

Ann Arbor, Mich., October 14.

To the Editor of The Nation:

Sir: The expedition undertaken by the Archæological Institute of America for the excavation of ancient Cyrene has already born fruit in the discovery of important Greek ruins which apparently mark the site of an offshoot from Cyrene itself. When in Bengazi last May, the director of the expedition, Mr. Richard Norton, was informed by Arabs that ruins existed at a place called Messa, not noted on any map. When the party reached Merdj, a guide was procured, who professed to know the way to Messa from Sheriz, a station on the Derna-Merdj-Bengazi telegraph line. On June 14 the party left Sheriz, following a wooded gorge three miles to the east, then proceeding northeast two miles up hill and four miles farther over rolling country to Messa.

On this site Mr. Norton reports as follows:

The ruins of Messa lie at the edge of the same plateau as those of Cyrene. The most important spring is in a hollow, surrounded by quantities of square-cut blocks and traces of buildings. The extensive ruins on the high ground west, north, and east of the spring include quarries, in which are many rock-cut tombs, large free-standing sarcophagi and built tombs, and platforms of buildings. Of the two clearly marked roads one leads north toward the sea, the second leads eastward toward the Sawiya Beda, the Marabout of Sidi Raffa, and so on to Cyrene, which it enters from the southeast. The distance from Messa to the fountain of Cyrene is about fifteen miles, and for the greater part of the way the road is clearly marked either by tombs and buildings at the sides or by the presence of the actual road bed. There can be no doubt that this was a main highway from Cyrene to the west, and that Messa was an important offshoot of Cyrene. The character of the remains indicates that Messa was a Greek city, and inhabited at least as early as the fourth century B. C.

Messa was visited in 1909 by representatives of the Jewish Territorial Organization, but the published report makes no reference to the nature of the remains. The outline map and the photographs obtained by Mr. Norton, as well as the description already quoted, indicate the importance of the site; and it is to be hoped that the Archæological Institute may procure the right to excavate it in connection with the work at Cyrene itself. Arthur Fairbanks.

Berlin, October 3.

POE'S BALLOON HOAX.

To the Editor of The Nation:

Sir: In view of the interest excited by Walter Wellman's recent attempt to cross the Atlantic in a dirigible balloon, Edgar Allan Poe's famous "balloon hoax" deserves some notice. In that remarkable canard, which first appeared in the New York *Sun* of April 13, 1844, Poe announced the arrival near Charleston, S. C., of a party of English aeronauts who had crossed the Atlantic in a dirigible balloon in the short space of seventy-five hours.

With all of Poe's well-known scientific interest, it is not surprising that he was interested in aerostation, as it was then generally called, but the extent of his knowledge and use of the aeronautical literature of his time has, I believe, never been carefully investigated. In 1844 and thereabouts there was great interest in aeronautics, and several aeronauts, especially Charles Green and John Wise, the most prominent balloonists in England and America, respectively, had proposed to try crossing the Atlantic.

Poe, however, in narrating the voyage of his party of aeronauts, depended chiefly upon the account by Monck Mason of an actual balloon trip made by Charles Green, Monck Mason, and Robert Holland in November, 1836. These three started from Vauxhall, London, on November 7, and landed the next day near Weilburg, in the German duchy of Nassau. Soon after the trip, Monck Mason published his narrative: "Account of the late Aeronautical Expedition from London to Weilburg, accomplished by Robert Holland, Esq., Monck Mason, Esq., and Charles Green, Aeronaut." It was first published in London in 1836 by F. C. Westley, and was reprinted in New York in 1837

by "Theodore Foster, Easement Rooms corner of Pine-Street and Broadway." The American edition is the only one I have been able to examine, but it was probably Poe's source. His mistake in giving the date of the trip from London to Weilburg as 1837 may be due to confusion with the date of the imprint.

Poe's use of the account is shown by a comparison of certain passages in the two accounts, the references being to the American edition of Mason and to Harrison's Virginia edition of Poe, volume five. In speaking of the use of coal gas for inflation, instead of the hydrogen gas formerly employed, they say:

Up to the period of that discovery, the process of inflation was one, the expense of which was only to be equalled by its uncertainty; two and sometimes three days of watchful anxiety have been expended in the vain endeavours to procure a sufficiency of hydrogen to fill a balloon, from which, on account of its peculiar affinities, it continued to escape. . . . I allude to the superior facility with which the latter (coal gas) is retained in the balloon, owing to the greater subtlety of the particles of hydrogen, and the strong affinity which they exhibit for those of the surrounding atmosphere. *In a balloon sufficiently perfect to retain its contents of coal gas unaltered in quality or amount for* the space of *six months, an equal quantity of hydrogen could not be maintained in equal purity* for an equal number of weeks.—Mason, p. 7 and note.	Up to his discovery, the process of inflation was not only exceedingly expensive, but uncertain. Two, and even three days, have frequently been wasted in futile attempts to procure a sufficiency of hydrogen to fill a balloon, from which it had great tendency to escape, owing to its extreme subtlety, and its affinity for the surrounding atmosphere. *In a balloon sufficiently perfect to retain its contents of coal gas unaltered, in quality or amount, for six months, an equal quantity of hydrogen could not be maintained in equal purity* for six weeks.—Poe, pp. 229. 230.

In the description of the guide rope or equilibrator, a device Mason, Poe, and Wellman all united in using, there is equal similarity:

The progress of the guide rope being delayed to a certain extent by its motion over the more solid plane of the earth's surface, while the movement of the balloon is as freely as ever controlled by the propelling motion of the wind, it is evident that the direction of the latter when in progress, must ever be in advance of the former; a comparison therefore of the relative positions of these two objects by means of the compass, must at all times indicate the exact direction of her course; while with equal certainty, an estimate can at once be obtained of the velocity with which she is proceeding, by observing the angle formed by the guide rope, and the vertical axis of the machine. . . . When the rope is dependent perpendicularly, no angle of course is formed, and the machine can be considered as perfectly stationary, or at least endowed with a rate of motion too insignificant to be either appreciable or important.—Mason, p. 10, note.	The rope drags, either on sea or land, while the balloon is free; the latter, consequently, is always in advance, when any progress whatever is made: a comparison, therefore, by means of the compass, of the relative positions of the two objects, will always indicate the course. In the same way, the angle formed by the rope with the vertical axis of the machine, indicates the velocity. When there is no angle—in other words, when the rope hangs perpendicularly, the whole apparatus is stationary; but the larger the angle, that is to say, the farther the balloon precedes the end of the rope, the greater the velocity; and the converse.—Poe, p. 232.

Other similarities between the two accounts are in the various contrivances carried, particularly a coffee warmer using slacked lime; the carrying of passports directed to all parts of the continent of Europe, and the sudden explosions during the trip, caused, as each explain, by the changes in temperature. Everything, indeed, indicates that Poe depended very largely on Mason's narrative, even retaining at times some of his very phrases.

WALTER B. NORRIS.

U. S. Naval Academy, October 21.

ANCIENT COLLEGE LIFE IN THE ARGENTINE.

To the Editor of The Nation:

Sir: Judging by the recent discussions relating to the work done by college students, one might suppose that the students of the present day were peculiarly prone to neglect the pursuit of learning. We condemn athletics, particularly intercollegiate athletics, because they attract the student's mind from his work. We condemn members of the faculty because they make his work too hard or too dull. We search heaven and earth to find out why it is that our present methods of teaching are not successful. And we continually imply that the problem before us is a new one, due to the distractions of life in the twentieth century.

It may comfort some distressed instructors to read what Professor Moses wrote a year or two ago regarding one of the most ancient universities in America, the University of Cordova, in the Argentine. The period under discussion is the seventeenth century:

> The students gave little or no attention to any subjects except those on which they were to be examined for their degrees. They passed from one course to another with a very imperfect knowledge of the subjects supposed to constitute a necessary introduction to the course before them. When they found themselves near the final examination, a few undertook to repair their deficiencies by assiduous effort, but the majority found that the career of a scholar had not the attractions they fancied, and turned away to other pursuits. The evil of this state of things clearly demanded correction, and this was attempted, in 1680, by lengthening the course to ten months, and insisting on attendance. Annual examinations were established three years later, and it became necessary to pass them with approval in order to be advanced to the succeeding courses. This tightening of the lines of discipline led to acts of insubordination on the part of the students. That in an institution of learning they should be required to listen to lectures and pass examinations seemed to them an interference with their rights as students, and they instituted a rebellion. The *claustro*, however, firmly supported the other authorities, and the two leaders of the rebellion were expelled and order restored.

There is something painfully familiar about all this. Can it be that we are witnessing in these early twentieth century days a reincarnation of seventeenth century Argentina? Anyhow, it is pleasant to think those old Jesuit fathers had the courage of their convictions. One reason for their temerity may have been that the boys' mothers were not likely to rush into print with a wholesale condemnation of university methods.

Literature.

CIVIL WAR STUDIES.

The War of Secession, 1861-1862: Bull Run to Malvern Hill. Special Campaign Series. No. XI. By Major G. W. Redway. New York: The Macmillan Co. $1.60.

The author, an officer of the British army, is known to American students of the civil war through his study of the battle of Fredericksburg, which was published as number iii of the same series. The present volume and numerous other recent books on the civil war by Englishmen, in which are evident original research and fresh treatment of the theme, seem to indicate that more interest is taken in that war just now in England than in this country. The convincing analysis of Grant's 1864 campaign by Lieut. C. F. Atkinson of the British army was at once recognized as a work of superlative merit, which no student of military history could afford to overlook. Major Redway's volume also compels attention because of its originality and frank, impartial criticism. The author's conclusions express the belief that most of the latter-day problems of defence were practically solved by the events of 1861-1862.

The difficulty of maintaining the armies on both sides and of repairing the large losses leads the author to point out that as late as the Boer war England had not profited by this experience. In the first flush of war excitement and patriotic fervor, volunteering can be depended upon to supply the raw material for armies, but the wearing quality of that system is poor. The bounty plan proves to be most unsatisfactory, and a rigid draft does great harm to the industries which must supply the means to wage the war. The question how best to maintain an army in a democracy remains for the present unanswered.

In the chapter on Policy and Strategy the author relieves McDowell of all blame for the battle of Bull Run, and condemns McClellan for his campaign of 1862. He declares that it is futile for a general to-day to ask for absolute power, but suggests that he should decline command until the just demands of strategy are satisfied by the government. It might be noted that if this had been done in the civil war, the Army of the Potomac would have been without a commander for a considerable part of the time. Reynolds did decline that command; Meade would have promptly resigned when in 1863 his government refused him permission to abandon the difficult Orange and Alexandria railway and take his position at Spottsylvania.

Of the military situation in 1861 on

both sides Major Redway says, "The conceit of ignorance, the fatuity of enthusiasm, and the machinations of political partisanship combined to produce a phantasmagoria of war which is almost without a parallel." Accepting the claim of the Southerner as to the right of his State to secede, the author does not spare criticism in dealing with Southern strategy and tactics. Jefferson Davis and "Stonewall" Jackson fare no better in this respect than do Abraham Lincoln and his military advisers. The true policy of the South, it is pointed out, should have been to retire slowly before the Northern advance, making the enemy's line as long and as difficult as possible, then to concentrate far to the rear and fight it out in one decisive battle. Compared to the desirable results of such a battle, the fall of Richmond and the impoverishment of Virginia and North Carolina, it is suggested, would have been of slight consequence. On the one side, the secondary operations in the Mississippi Valley drained the strength of the Eastern armies, and gave to the war, in the author's view, its peculiar character of costly inconclusiveness; whereas, the decisive point being east of the Alleghanies, a Union army at Hagerstown would have menaced the flank of any attack on Washington, while the manhood of a population of 20,000,000 would have been available for operations against the Confederate army rooted in front of Richmond. But for this concentration of interest upon Vicksburg to the exclusion of what was about to take place at Gettysburg, in spite of many preliminary warnings, it is within the bounds of military probabilities that an auxiliary army thrown upon Lee's line of retreat would have ended the war in 1863.

For the Confederates, says Major Redway, Virginia as a theatre of defensive war was the worst possible, because it offered to the "Federals" an easy foothold at their very doors. The war, he declares elsewhere, was waged by committees; "the policy was parochial in character and the partial successes of a few able generals blinded the world then to the true military situation, as they have done ever since." To Gen. Patterson is accorded a full measure of censure for his share in the Bull Run fiasco, but it may be well to recall that so competent a soldier as Gen. George H. Thomas thought Patterson had done all that could fairly have been expected of him under his instructions. "Stonewall" Jackson, the author says, was a man of character, a fine soldier, and, in certain situations, a skilful general; but he could only with difficulty be induced to play his part loyally as a corps leader, as one of a team; nor had he apparently the higher gift of leadership, that of persuading abler men to do his bidding. Jackson's treatment of Longstreet after Bull Run is declared to have been neither soldierly nor patriotic:

> He was singularly fortunate in being able to operate for nearly two years over familiar ground against generals to whom the population was hostile; and for an ally he might almost have claimed President Lincoln himself, for Lincoln it was who supplanted Rosecrans and appointed Fremont to command in West Virginia, who selected Banks to be his factotum in the Valley and caused Shields to oscillate between McDowell and Banks under the eyes of Confederate scouts. None of these generals was first rate, but lest they should perchance gain some military insight or develop such a quality as initiative, and so give Jackson some trouble, the telegraph was continually bearing orders and counter-orders from Washington until, individually and collectively, the Federal detachment leaders became incapable of distinguishing good from evil in a military sense.

This criticism seems the more notable from the fact that the author accepts the Southern view of the right to secede, adopts the Confederate names of battles, calls the Union troops "Federals," a Confederate term rejected by the troops of the North, and, although using the United States Government map based on Gen. Michler's surveys, calls it a map of the battlefields of the Army of Northern Virginia.

Certain American writers have declared that Lincoln was the ablest general in the North; Major Redway, on the other hand, thinks it was Lincoln who repaired the error of Jackson at Kernstown and robbed Shields of the fruits of his victory; and he declares that it was Lincoln, not Jackson, who detained the "Federals" in the valley; and that Lincoln's conduct may be regarded either as a manifestation of "pure foolishness" or of a desire to figure in history as another Washington by baiting Jackson with weak detachments of Union forces in the hope that these could be reinforced in good time. In contrasting McClellan and Grant, the author expresses the idea that the man of strong character achieved more than the man with great ability. Lee was "hardly inferior to McClellan as an organizer," but the latter failed as a commander—which, after all, perhaps best accounts for Gen. Grant's opinion that if McClellan had begun as a brigade commander and learned the business of war by practice in a modest station, as all the successful generals did, he would have gone as far as any of them. The concluding chapter is given to Grant's successful operations in the West at Forts Donelson and Henry and at Shiloh. Fourteen loose maps are contained in a cover-pocket.

CURRENT FICTION.

Other Main-Travelled Roads. By Hamlin Garland. New York: Harper & Bros.

In one who has repeatedly detected himself in the ungracious act of greeting a new book by Mr. Garland with elegiac mention of "Main-Travelled Roads," the present volume must have excited uncommon interest. Here at last (could it be in any measure due to one's own persistent coaching?) was to be a return to the real thing, the product for which Mr. Garland's name is destined to stand. The title virtually implied the old material; would it be treated in the old mood or interpreted in the changed light of "twenty years after"? A glance at the preface disposes of one's best hope. The stories are not new, but "compiled from other volumes which now go out of print." They were written, says Mr. Garland, "at the same time and under the same impulse as those which compose its companion volume, 'Main-Travelled Roads'—and the entire series was the result of a summer-vacation visit to my old home in Iowa, to my father's farm in Dakota, and, last of all, to my birthplace in Wisconsin." This revisiting of old scenes took place in 1887, and in the two or three following years all the stories were written which are contained in this collection, and in its recently revised companion volume.

It must be said the stories now collected pretty plainly represent a second gleaning from that early field. Three or four of them might well have deserved to be added to the half-dozen which made up the original volume. "Lucretia Burns" and "Before the Low Green Door" echo most strongly the sombre note of "Up the Coulé" and "Mrs. Ripley's Trip." The privations and squalor of the farmer's life—a life in which the writer himself had played his painful boyish part—had overwhelmingly impressed the young man on his return from the East. Cherished platitudes about the return to nature, the beauty of contact with the soil, had become a mockery in his ears, and these tales express an almost fierce recoil. He has no notion of recanting at this day: "For the hired man and the renter farm life in the West is still a stern round of drudgery. My pages present it, not as the summer boarder or the young lady novelist sees it, but as the working farmer endures it." This life Mr. Garland does not picture as altogether unvisited by romance; but visited, at best, by a romance of escape. A down-trodden wife escapes her damning drudgery by flight or death; a girl is snatched away by some strong man, translated bodily to some happier air. A man goes somewhere else, does something else; and returns, perhaps, to torment the eyes of the luckless ones who

have remained "close to the soil." Of the devotion of the born farmer to his work, the compensations he enjoys for his undeniable lack of city distractions and luxuries, Mr. Garland has nothing to say. Nevertheless, more and more people are leaving their shops and offices for the farm.

Once Upon a Time. By Richard Harding Davis. New York: Charles Scribner's Sons.

Under a title that may mean almost anything, from a regret that every author has his day to an honest confession that here is nothing so new, are collected a number of stories which have appeared from time to time in the magazines. Ranging with easy familiarity from Wall Street to London, from the Congo to Central America, from Massachusetts to the Philippines, writer and reader become for the nonce magnanimous cosmopolites, now standing manfully beneath the unbearable sun of an East African coast town, now feeling thoroughly at home in the sweet-smelling Massachusetts countryside, which is the scene of a mimic war. Strangely enough, the reader, whoever he is, probably enjoys the experience almost as much as the author; and the reason for it undoubtedly is that Mr. Davis, with all his nonsense, has a real gift for seeing things dramatically and humanly.

The Doomed City. By John R. Carling. New York: Edward J. Clode.

Not Rome or Cathage, but Jerusalem, is the doomed city of this narrative. The destruction of the temple is the culminating event. The hero is a young Roman, Crispus, identified with that "certain soldier" who, says Josephus, "moved by a divine impulse, seized a blazing torch, and set fire to a golden window of the temple"—the act which resulted in its destruction. Other exploits, named by Josephus or invented by the present author, are attributed to this able young man. Such incidents the story-teller renders with good-humored facility, as who should say, "This is the kind of thing you have to put into an historical romance, so here goes." This element apart, the tale is told with uncommon force and reality. It is clear that the actors in the story have lived and moved in the imagination of the writer; in consequence they do not simply stalk and mouth through his pages. Especially grateful is their freedom from the bombastic and artificial dialect which passes for speech with the ordinary historical romancer. No doubt, Scott had something to do with the invention of this lingo. It cannot be said that the speech he puts into the mouth of Ivanhoe, or Quentin Durward, or Ellen of the Lake, is strictly according to the tongue of men or of angels. But their heightened vocabulary and elaborated syntax, if not according to the habit of Scott's day, was quite according to its tastes. Not even in "Rienzi," or "Uarda," or "Thaddeus of Warsaw" does that elevated lingo seem altogether out of place: it survives, of course, upon our melodramatic stage. But it would be well if the heroes and heroines of the historical romance of to-day might be freed from what has become mere sound and fury. Not a few current novelists in this kind, feeling for a live speech, yet not altogether able to forget the traditions, have produced a medley of Georgian fustian and modern slang. Mr. Carling has mustered a speech which is dignified without being archaic or unpleasantly conventional; and his occasional lapses into modern vernacular are not of the ridiculous sort.

The Lead of Honour. By Norval Richardson. Boston: L. C. Page & Co.

Mr. Sargent Everett is a Yankee schoolmaster who goes South in ante-bellum days, and eventually makes himself a power in that strange land. He begins his career there as tutor to a beautiful little girl of twelve summers. When she goes North to complete her education they pledge themselves to wait for each other, she in childish fancy, he in unreasonable earnest. He is already a member of the bar, and during the years which intervene before the girl's return to her own home, he becomes a more than local celebrity. He is the silver-tongued orator of the old school, and his greatness consists, as one of his eulogists ingenuously declares, in ability to "take all a feller's idees away and make him think jest like he does." His special mission is to defend criminals. If his creed seems a bit muddled, we are to understand that it is all very noble in his own mind. With the enforcement of the law he has nothing to do; his business is to get men off—give them another chance. "The greater the crime," as he puts it, "the greater seems my inspiration, for out of the depths of the deed I see the man's awakening, his regeneration, his approach toward God—for it is only through suffering that we attain the heights." So he utters himself to the girl of his choice, who has come back only for the purpose of being married in the house of her fathers. Her betrothed is an ordinary young man from the North, who gets into a row at cards on his wedding day, kills his man, and is successfully championed by the magnanimous ex-schoolmaster.

At the Villa Rose. By A. E. W. Mason. New York: Charles Scribner's Sons.

That the murder which gave pause to even the hectic life of Aix-les-Bains should have been committed by Celia Harland, herself so full of the joy of living, the victim her benefactress, too, readers would be loath to believe, even though all signs should point to her; which is not saying that they do, actually. Otherwise, be sure, M. Hanaud would not have taken the case. The story is made unusually baffling by an old, unexpected device akin to that of hiding one's silver in the vestibule. The choice of the spiritualistic séance chamber for the scene of the murder gives the utmost spur to the reader's speculation. The Dr. Watson of the story is a middle-aged bachelor of Major Pendennis's sort who invests this foil-rôle with no little individuality.

CARDINAL POLE.

The Life of Reginald Pole. By Martin Haile. New York: Longmans, Green, & Co. $5.25 net.

The story of the life of Reginald Pole and of the ruin of his illustrious family will always remain one of the most interesting and characteristic episodes of the English Reformation. It is intimately connected with the fortunes and policies, internal and foreign, lay and ecclesiastical, of three Tudor sovereigns; it exhibits Henry VIII in his most ruthless and brutal moods, and reveals the pitiful sadness, loneliness, and tragedy of the life of his daughter, Mary. An object of suspicion from his early manhood, partly because of his strong claim by descent to the English throne, and still more because of his loyalty to the Pope, Pole was forced to remain an exile on the Continent during the crucial years of the reign of Henry VIII and during the entire rule of Edward VI, while his relatives were barbarously executed at home, and while he himself was frequently pursued by hired assassins. In the reign of Mary he returned for a brief moment of triumph and reconciled England to Rome, only to see his cherished plans fail because of the disastrous results of the Spanish marriage, and the religious and political developments which accompanied it. English history contains no more pathetic figures than the Cardinal Archbishop and the barren Queen to the maintenance of whose rights he had devoted his life.

The present biography makes no effort to conceal the frankly Catholic standpoint from which it is written. It was begun by the late Rev. Ethelred Taunton, and completed from his notes, with considerable additional research, by Mr. Haile. It proclaims that it is "based not only upon already recorded facts, but upon the vast treasure revealed by the diligent students of the archives of Europe"; it abounds in quotations from the original sources, or at least from the summaries in the calendars, and it shows a somewhat inexplicable disregard of the vast majority of recent scientific works on Tudor

England. So far as the reviewer is able to observe, it adds nothing to our knowledge of Cardinal Pole, and indeed contains very little that is new in any way, save a number of rather startling characterizations of the great figures of the time.

If Mr. Haile finds it necessary to tell us that Martin Luther died "drinking and joking to the end," he ought not in all decency to leave his readers with the impression that this was the sum total of Luther's life; nor do such epithets as "adventurer," "the artful and astute author of Queen Katherine's divorce," etc., etc., give us a fair idea of Thomas Cranmer. And one cannot help smiling when Francis I, of all men, is described as "filled with horror" at "such atrocity and sacrilege" as the trial and burning of the bones of St. Thomas of Canterbury. Furthermore, the author takes unwarrantable liberties with the documents that he assumes to quote. His treatment of Cromwell's letter to Michael Throgmorton (pp. 224-5) is a case in point. Whole clauses and sentences are left out without the slightest indication of their omission, and the general effect of the letter (which, though malevolent and abusive to a degree, is a masterpiece of sixteenth-century style) is thus utterly lost. "Apeynement" should be "apeyrement." There are a number of minor errors and misprints which it would be useless to notice here. And it is extremely confusing to find "Pole's book" indiscriminately referred to as "Pro Unitatis Ecclesiasticæ," "De Unitate," "De Unitate Ecclesiastica," and "Pro Ecclesiasticæ Unitatis Defensione."

It is perhaps unfair to judge such a book as this from the standpoint of serious history, and the reviewer would have gladly refrained from doing so, had not the author virtually demanded such consideration in his preface. The fact is that another life of the Cardinal was scarcely needed when this book was begun. "Each century since that which saw the birth and death of Pole has seen his life and character brought before the judgment of the world," as the author rightly confesses. His biography has been written by Beccatelli, Phillips, and Zimmermann, not to mention F. G. Lee and Dr. Gairdner in the Dictionary of National Biography; and his lettters have been published by Cardinal Quirini. Mr. Haile justifies the appearance of his "twentieth-century biography" chiefly on the ground that Quirini and Zimmermann are untranslated, and Phillips tedious and irrelevant. Doubtless the English-speaking world will be rendered more familiar with an already familiar figure than if this book had not seen the light, and we thoroughly concur in the author's estimate of his hero, whose learning, simple-mindedness, and piety will always be praised by all fair-minded persons, whether Protestant or Catholic. But the reader should be warned that Mr. Haile's estimates of most of Pole's contemporaries, their aims and their policies, and of the general movements of the period as a whole are far less trustworthy, and that though he writes attractively, he is too partisan in his standpoint and too unscientific in his methods to deserve the same measure of respect that is accorded to the unprejudiced historian.

The Fourth Gospel in Research and Debate. By Benjamin Wisner Bacon, D.D., LL.D. New York: Moffat, Yard & Co. $4.

This volume is perhaps the most important American contribution to the study of the Fourth Gospel since the days of Ezra Abbot. Wide learning, historical imagination, ingenuity in framing hypotheses from few and perplexing data, are everywhere manifest. Though the temper is often controversial, the purpose is constructive. The writer does not claim to have discovered any new documentary evidence, but is confident, after having examined diligently all accessible data, that the author of the Fourth Gospel is not the Son of Zebedee, but some Hellenistic Jew living and writing in Asia at the end of the first century and the opening decades of the second century.

The early literary history of this anonymous gospel is difficult to trace. Dr. Bacon, however, is convinced that the gospel, as we now have it, shows signs not of structural unity, but of growth and revision. The chief reviser, it is contended, was a Roman, a contemporary of Papias and Justin, whose aim was to adjust the gospel "to rival forms of the evangelic tradition" and to procure for it "the apostolic authority of the John of Revelation, without detriment to the dominant authority of Peter, by a cautiously suggested identification of 'the disciple whom Jesus loved' with the Son of Zebedee" (p. 224). This reviser, in adding Ch. xxi to the gospel about 150 A. D., shares, it should seem, the view of authorship later expressed by Irenæus, but "instead of plain statement, shelters himself behind purposed ambiguity." But why do we have from the reviser even this cautious suggestion that the author of the Fourth Gospel is the Son of Zebedee? In passing it is to be remembered that the Gospel in its original form is, like the Epistles ascribed to John, anonymous; that Papias corroborates the suggestion of Mark x:39 in stating that John, like his brother James, was murdered by the Jews; and that evidently the Son of Zebedee had never been in Ephesus. Why, then, does it occur to the reviser to connect the Gospel with the Son of Zebedee? The answer is to be sought, not in the fact that there is other and excellent tradition for the Ephesian residence of the Son of Zebedee, but that Papias and Justin accepted Revelation as originating from John. This endorsement of John, however, does not of necessity involve the assumption that the Son of Zebedee had ever been in Ephesus, unless Papias had in mind a temporary sojourn in Patmos; nor does it prove that John is the author of Revelation. For this book is at its core a Palestinian product which later on was revised in Ephesus, at which time the name of John was introduced into the Ephesian envelope (Ch. i-iii, xxii: 8-21) in order that the churches of Asia might accept Revelation as of apostolic authority. The apostolic name of John thus introduced, it was natural to ascribe the Gospel and the Epistles to the same author. The reviser who inserted the appendix into the Gospel accepts this tradition of authorship, though, as we have seen, somewhat hesitatingly. Is it conceivable, we might ask, that the Roman reviser wondered why such an important document as the Fourth Gospel, revealing as it does a man with a strong religious personality, should be ascribed to an apostle who had never been in Asia, who had, in fact, gone to the martyr's grave years ago? Is it possible that the reviser, though a Roman, had his doubts that Rev. Ch. i-iii is really an Ephesian intrusion into the Apocalypse? Dr. Bacon's reading of the evidence cannot countenance such inquiries. On the contrary, the true starting-point of the legend that connects the Son of Zebedee with the so-called Johannine Writings is precisely the "literary fiction by which the Ephesian editor of the Palestinian book of 'prophecy' sought to give it currency and canonicity among the churches of Asia" (p. 183). What this Ephesian editor of Revelation began, the Roman reviser of the Fourth Gospel continued, and Irenæus ended.

To the reader familiar with Ezra Abbot, Lightfoot, Drummond, and Sanday, it is evident that this reading of the early literary history of the Johannine writings involves a thorough discrediting of the testimony of Irenæus, a rigorous insistence upon the silence of Ignatius and Polycarp, and a definite theory as to the origin of the Apocalypse in its present form. This necessary task Dr. Bacon performs with a thoroughness and brilliancy impossible to picture in a brief review. The hypothesis which connects the Son of Zebedee with the Fourth Gospel, even if that connection be no closer than that of Matthew with the First Gospel, accounts rather better for the tradition voiced by Irenæus than the hypothesis of a literary fiction. But apart from the rightness or wrongness of the conclusion, it must be emphasized that Dr. Bacon's treatise is indispensable to students of early Christian literature. It is not easy reading, and the

better the reader is acquainted with contemporary discussion, the more important will the book become.

What's Wrong With the World? By G. K. Chesterton. New York: Dodd, Mead & Co. $1.50.

It will probably be conceded that when Mr. Chesterton sat down to compose this book he was undertaking a rather large order. Indeed, he himself admits that it a little tasked his ability thoroughly to illumine and ventilate the present malady of the world. When he came to consider the matter more narrowly, he seems to have stumbled upon the discovery that society is afflicted with no one isolable affection, but with an intricate and unruly complication of diseases. It is evidence of this paradoxer's triumphant virtue, his powerful common sense, that his diagnosis of the world's ailments is entirely lacking in the simplicity, unity, and rigid coherence to which we have been accustomed by the trenchant treatises of our sociologists.

To distrust the plausible simplicity of words, and smash resolutely through them to the variegated and disorderly facts which they conceal, is at least a beginning in fruitful social criticism. And Mr. Chesterton, as he goes about his passionate vocation of turning words upside down and inside out, dislodges, besides an abundance of excellent jokes, much matter of serious import. That the Feminist is "one who dislikes the chief feminine characteristics" may perhaps be regarded in either light. The parable of the umbrella stand is undeniably serious. We condense the argument as follows:

> A Socialist means a man who thinks a walking-stick is like an umbrella, because they both go into an umbrella stand. Yet they are as different as a battle-axe and a bootjack. . . . . The whole Collectivist error consists in saying that because two men can share an umbrella, therefore two men can share a walking-stick. Umbrellas might possibly be replaced by some kind of common awnings covering certain streets from particular showers. But there is nothing but nonsense in the notion of swinging a communal stick; it is as if one spoke of twirling a communal moustache. It will be said that . . . no sociologists suggest such follies. . . . At least sixty Socialists out of a hundred, when they have spoken of common laundries, will go on at once to speak of common kitchens. . . . Kitchens and washhouses are both large rooms, full of heat, and damp, and steam. But the soul and function of the two things are utterly opposite. There is only one way of washing a shirt; that is, there is only one right way. There is no taste and fancy in tattered shirts. Nobody says, "Tomkins likes five holes in his shirt, but I must say, give me the good old four holes." Nobody says, "This washerwoman rips up the left leg of my pajamas; now, if there is one thing I insist on, it is the *right* leg ripped up." The ideal washing is simply to send a thing back washed. But it is by no means true that the ideal cooking is simply to send a thing back cooked.

The trouble with the modern world, according to Mr. Chesterton, is that the modern reformers, the Socialists, the Feminists, the new educators, ignore what the people want. In their projects for a golden age in the future they assume a kind of man and woman that has never existed. What the people want, he believes, is what they have *always* wanted. The way to make them happy is to help them fulfil the ideals which they have cherished from the morning of time. Reform must be based not on human nature as presented in the romances of H. G. Wells and the scientific Utopians, but upon human nature as revealed in the history of the race. The history of the race reveals the fact, for example, that man has always wanted a hearth and home—not a share in a communal bed-chamber or kitchen. Begin, therefore, with man in a home and reconstruct society to conform to that ideal, instead of beginning with a communal kitchen and reconstructing man to conform to that ideal. Begin with anything you please, except the theory of a sociological quack. Begin with an order that the hair of all poor schoolgirls shall be cut off for the purpose of cleanliness:

> With the red hair of one she-urchin in the gutter I will set fire to all modern civilization. Because a girl should have long hair, she should have clean hair; because she should have clean hair, she should not have an unclean home; because she should not have an unclean home, she should have a free and leisured mother; because she should have a free mother, she should not have an usurious landlord; because there should not be an usurious landlord, there should be a redistribution of property; because there should be a redistribution of property, there shall be a revolution.

The parable of the red hair sounds distinctly radical; Mr. Chesterton would doubtless assert that, on the contrary, it is distinctly conservative. It is designed to conserve the red hair; it is designed to conserve the world. Mr. Chesterton calls himself a Liberal; within a few years he will probably be publicly thanking God when men call him a reactionary. For at heart he is a kind of philosophical Tory—a twentieth century disciple of the school of Thomas Carlyle. "What's Wrong With the World?" is "Past and Present" modified by the time-spirit. The two prophets, so incongruously assorted in temper, are at one in their diatribes on game-preservers, in their distrust of systematizers, in their hostility to "philosophical radicalism," in their fundamental dogmatism, in their respect for a somewhat remote past, and in their sense of something fixed and eternal in the needs and nature of man. The irony of the comparison is in the differences. Carlyle thought help should come from the House of Lords; Chesterton turns his back upon the lords and calls upon the Commons. Carlyle released his thunder upon democracy; Chesterton embraces democracy and trains his guns upon Socialism. Carlyle derided manhood suffrage; Chesterton swears by manhood suffrage and makes a laughing-stock of votes for women. What will be the conservatism of 1950?

Notes.

Admiral Alfred T. Mahan is publishing with Little, Brown, & Co. "The Interest of America in International Conditions."

Another volume of the "Descriptive Sociology" will soon be issued by the trustees of Herbert Spencer. It deals with the civilization of the Chinese, information concerning which has been collected and arranged by the British consul at Foochow, E. T. C. Werner.

A document newly discovered by Ernest Law in the Record Office forms the basis of a book by that well-known historian of Hampton Court, to be published by Bell. In it some statements usually made concerning Shakespeare's life are tested anew.

"An Account of the English Colony in New South Wales," by David Collins, sometime judge-advocate and secretary of the colony, and edited with Introduction and Notes by James Collier, is reprinted by Whitcombe & Tombs of Melbourne.

The eighth part of Dr. Edwin Abbott's "Diatessarica," entitled "The Son of Man; or Contributions to the Study of the Thoughts of Jesus," is promised by the Cambridge University Press for November 1.

"The Green Helmet, and other Poems" is the title of a new volume of verse by W. B. Yeats, which the Cuala Press of Dublin, will shortly have ready. Besides eighteen new lyrics, the volume will contain a poetical drama.

"Porphyry's Letter to His Wife Marcella," being the only English version of the letter, which after a number of centuries was rediscovered in 1816, is to be published, as a revised edition of Alice Zimmern's translation, by Mayle of the Priory Press, Hampstead. It will be in the form of a shilling booklet.

Alexander Murray of Aberdeen announces for immediate publication "The Teacher's Complete Text-Book of Physical Exercises," by Isabel Murray.

"Pleasant Pages," written by Arthur Guiterman and composed and manufactured under the direction of J. H. Nash, typographer, is in the press of Paul Elder & Co. It is a catalogue of the books and cards suitable especially for the Christmas holidays.

In the list of Brentano's autumn announcements are: "D'Orsay; or The Complete Dandy," by W. Teignmouth Shore; "Storm and Treasure," an historical romance of French life, by H. C. Bailey; "The Merry Past," by Ralph Nevill; "Popular

Drugs," by Sidney Hiller, M. D.; "Mad Majesties; or Raving Rulers and Submissive Subjects," by Dr. Angelo S. Rappoport; "Chats About Wine," by C. E. Hawker; "The Second Elopement," by Herbert Flowerdew, and "Ninon de L'Enclos and Her Century," by Mary C. Rowsell.

The *Revue de l'Orient Chrétien* is printing in instalments, together with a French translation by Sylvain Grébaut, an Ethiopic pseudo-Clementine book, wherein Dr. M. R. James has found embedded a large part of the ancient Apocalypse of Peter.

In the military geographical department of *Petermann's Mitteilungen* for August there is an interesting discussion of the problems presented by western Russia in case of a war with Germany. Another article treats of the southern Tunisian frontier question between France and Turkey from a military point of view. Dr. G. Meyer contributes an instructive account of the geographical spread of the sleeping sickness, with a map.

"The Land of the Incas," in Peru and Bolivia, judging from a paper read by Sir C. R. Markham before the Royal Geographical Society, and the discussion which followed it, published in the *Geographical Journal* for October, is one of the most interesting places on the face of the earth. No other region possesses such a variety of climates, geographical features, and products, and, though now virtually a *terra incognita*, it was formerly one of the most civilized parts of the world. Several thousands of years ago it was inhabited by an artistic, sensitive people, as is shown by their pottery, than which nothing finer, according to experts, has been seen from the days of ancient Greece to the present; a people who wore elaborate clothing, were well governed, and law-abiding. Abundant evidence is also given to show that since man came there has been an elevation of the region a thousand feet. Mountain slopes, where now cultivation is impossible on account of the high level, are covered with terraced fields, the terraces built up with massive masonry—showing cultivation through long series of years. A map prepared by the society accompanies the paper, which not only covers some hitherto unmapped territory, but also shows for the first time correctly the boundary between Peru and Bolivia as settled by the Argentine arbitration and modified by a subsequent agreement between the two republics.

J. B. Elwell has added to his manuals of Bridge a handy volume containing "The Principles, Rules, and Laws of Auction Bridge" (Scribners). The book presupposes—and properly—a knowledge of simpler Bridge.

Worth Brehm has made a number of illustrations for "The Adventures of Tom Sawyer," which express the spirit of the book with admirable zest. They are, too, well reproduced by the publishers, Harper & Bros. If any criticism were to be made of this holiday edition, it would be that the volume is rather heavy for a child to hold; but this heaviness is compensated for by large margins and good type, and "Tom Sawyer" is a good deal more than a boy's book.

We need only record the appearance of Hardy's "A Pair of Blue Eyes" in Harper's thin-paper edition of the novels.

Two new volumes, the fifth and sixth, of Scribner's Centenary Edition of Dickens contain the "Pickwick Papers," with a whole sheaf of Prefaces. The illustrations by Phiz are clearly and sharply printed.

A little volume, issued by T. M. Caldwell Co., contains a few of the "Letters of Lady Mary Wortley Montagu." The selection offers one a glimpse into the strange courtship of Lady Mary and Mr. Wortley Montagu, and affords a fairly complete view of her interesting life at Constantinople. Nothing is given from her years of retirement in France and Italy, from 1739 to 1761.

"My Mark Twain" (Harper) is perfectly named. Its first and, we gladly add, longer part is W. D. Howells's memories of the great humorist; the second part is a collection of the same critic's reviews of his books, beginning with that of "The Innocents Abroad," in the *Atlantic Monthly* in 1869. The genial spirit of the immortal fun-maker himself has touched the hundred pages of reminiscence with characteristic gayety, and it is a vivid picture one gets, not simply of "the Lincoln of our literature," but of a rare friendship between two richly endowed natures. The record has, of course, a charming anecdotal interest. There is Matthew Arnold's astonished query, upon being informed, on his arriving in Boston, that Mr. Howells was not at home to receive his introduction owing to his having gone to see Mark Twain: "Oh, but he doesn't like that sort of thing, does he?" There is, naturally, much of comment and characterizing. Clemens was "almost aggressively truthful. He could lie, of course, and did to save others from grief or harm; he was not stupidly truthful; but his first impulse was to say out the thing and everything that was in him." Religiously, or at least theologically, "he never went back to anything like faith in the Christian theology, or in the notion of life after death, or in a conscious divinity." For him there were but two medicines for loss by death: time and sleep. The delicacy that mingled so strangely with the better-known ribaldry of the man, came out finely in his instinct of "never putting his hands on you" even while he was caressing you with his pity. Elemental to the core, he could not fail to be puzzled by the fact that three such personages as Emerson, Longfellow, and Holmes found no amusement in a burlesque upon themselves. Mr. Howells's acquaintance with him began as a consequence of the review of "The Innocents Abroad," and this review opens the second part of the present book. The chronological order of these critiques emphasizes their interest as revealing Mr. Howells's own development quite as much as Mark Twain's. Both men had good ground for felicitation in the critic's early recognition of the humorist's genius. But, while the criticism is usually admirable in its analysis of Mark Twain's humor, the reader will more frequently turn to the first part of the book for its pictures of a humorist who was primarily a man.

The tenth volume (but the eighth to appear, two intermediate volumes being still to come) of Macmillan's new edition of Pater's Works brings the sheaf of reviews gathered from the *Guardian*. It is Pater at his thinnest, with occasionally a page of extraordinarily clumsy sentences. It shows, too, by its uncertainty of judgment when dealing with contemporary books, that Pater was not in the true sense a critic, but a philosopher who at his best could insinuate his own views of life with the finest audacity and the most seductive language into various writers and movements. This lack of real critical insight (or honesty, one hardly knows which) might have been gathered equally from Pater's interpretation of Plato (who said that the last dishonor of the soul is to place beauty above truth) as an epicurean æsthete, and from his portrayal of early Christianity (in "Marius") as a delicate appeal to the senses. Occasionally, but not often, the true and alluring Pater speaks in these "Essays from the *Guardian*."

The issue of the second part of Vol. I of Thomas Hughes's "History of the Society of Jesus in North America" (Burrows Brothers) completes the work, and includes the "documents" from 1773 to 1836. The suppression of the society in 1773 was followed by a period of inactivity except so far as concerned the management of the property it had held in Maryland, and after a decade John Carroll became the leading spirit. A missionary body still, possessing funds of its own, and recognized by the state, the Jesuits were under the direction of the bishop, and extended their labors in the North and West. The college at Georgetown for the education of the clergy derived some benefit eventually from this Jesuit property, but the long contest for control, and the measures taken by the Jesuits to secure their claims, left an unfavorable impression of their methods. That they received what was their due cannot be proved; neither can it be shown that they did not lay claim to lands of doubtful ownership. The disputes were virtually ended in 1826, but in such a way that the Jesuits no longer continued to exist as a body. Mr. Hughes's style is involved and the arrangement of the documents leaves much to be desired, but the series of volumes offers a store of valuable material, drawn from many sources.

M. P. Rooseboom, the author of "The Scottish Staple in the Netherlands" (The Hague: M. Nijhoff), has been somewhat unfortunate in the fact that between the completion and publication of his work another volume on the same subject, "The Scottish Staple at Veere," was put forth by the late Prof. John Davidson and Alexander Gray. As the story which both books tell was summarized in the *Nation* for July 22, 1909, it seems scarcely worth while to repeat it here. Mr. Rooseboom's method of treating it, however, varies widely from that of his predecessors in two important respects. In the first place, he approaches his subject strictly from the historical and chronological standpoint, while that of the earlier work was rather economic and topical. In the second place the sources of Mr. Rooseboom's book are for the most part manuscripts and unpublished documents, while his predecessors relied largely on printed works. Indeed, the greatest value of the present volume lies in the two hundred and forty-odd pages of hitherto unpublished material, carefully collected and transcribed in different national and municipal archives in Scotland and the Nether-

lands, which the author has appended to the more original part of his work. His book shows careful and thorough scholarship throughout, and deserves the same measure of consideration which was accorded to its predecessor.

A. G. Bradley's latest addition to the popular color books is "The Avon and Shakespeare's Country" (Dutton). This facile and always agreeable writer pursues a more discursive course than usual, dilating on the old agriculture and the new, comparing English scenery with American, in general bringing a considerable contribution of rustic customs and humors. The lower Avon and especially Tewksbury is Mr. Bradley's preference, though for Americans he admits and even recommends Warwickshire. Shakespeareans may note the hint that the park-like Warwickshire of to-day is by no means what Shakespeare saw. It was an unkempt pasture region probably without loveliness of any sort. The remarks on Shakespeare's gentility are pertinent as is the reminder that rank in England has ever depended on material success and outward state. From Tewkshury to Rughy, where Mr. Bradley leaves us with recollection of an incorrigible youth, one Walter Savage Landor, one is led pleasantly, hut A. R. Quinton's thirty color sketches are a rather feehle auxiliary to the text.

The current curiosity as to the relation of literature to life is responsible for Charles S. Olcott's "George Eliot, Scenes and People in her Novels" (Crowell). With a high esteem for the lady's hooks, a desire to write a hook of his own, and some leisure on his hands, Mr. Olcott has apparently travelled through Warwickshire, collecting photographs, interviewing "old inhahitants," and relatives of the novelist, and picking up "local color." In preparation for his chapter on "Romola" he has also visited Florence, and looked into the picture galleries and read Florentine history. The refection set before us is light and harmless—the afternoon tea of literary research. He gives twenty-five pictures of places and people connected with George Eliot. He gives us a list of identifications of the characters in "Scenes of Clerical Life," made hy a former resident of Nuneaton. Mr. Franklin's grandson "told the writer that George Eliot must have meant his grandfather when she pictured Rufus Lyon, 'although,' he said, *'my grandfather had blue eyes, and not brown, as she describes him'"* (our italics). Sir Epicure Mammon in the "Alchemist"—to speak of another curious point—had a treatise on Alchemy written hy Adam in High Dutch, "which proves," quoth Sir Epicure, "it was the primitive tongue." Mr. Olcott has seen with his own eyes a stone-tahle and a yew-tree walk mentioned in "Middlemarch"; but, on the whole, as we have perhaps intimated, his contribution to our knowledge of the life-stuff in the novels is not very grave.

The Czar has at last given permission for the publication of the reports written hy the Russian general staff on the Russo-Japanese war, and the first volume has appeared. It hrings us only to the outhreak of the war, so that the complete series, added to the reports of the German and British attachés already published, and to the other works issued in connection with the conflict, will fill a large library. From the historical point of view the Russian work promises badly, and in all prohability it will not be frank, though necessarily it will throw some new light on the campaign. According to this first volume, it seems that just before the outhreak the Russian government was well informed hy its military attaché in Tokio of all Japan's preparations. The diplomatists in St. Petershurg and Port Arthur persisted in helieving, however, that the government at Tokio was only "hluffing." On January 28 the Russian attaché wired, "Rumored internal loan one hundred millions"; on January 29, "Eighty-six transports"; on January 30, "Thirty steamers for the fleet, thirty for transport of troops hy water." Thus, no hlame falls upon the Russian embassy in Tokio. It seems, however, that the Japanese were afraid ahout this time that the Russians would strike some sudden hlow. On January 4 at 4:25 P. M. (How did the Russian get these particulars so exactly?) the Japanese consul in Chefu telegraphed to Tokio that most of the Russian fleet had left Port Arthur on an unknown mission. The Japanese agents at Yingkow, Chefu, and Vladivostok also told of Russian preparations, but apparently the Russians knew the contents of their letters hefore the Japanese general staff. The Russians even knew that the Mikado had called a council and that this council had decided on war.

The Russian story of the war contains several accusations against Japan. They all relate to the detention of telegrams. The Japanese, it is said, detained at Nagasaki or Tokio an important telegram from Count Lamsdorff to Baron Rosen. This telegram was sent on Fehruary 4, hut was not delivered to the Russian minister until Fehruary 7 at 7 A. M. At 2 P. M. on February 6 Baron Rosen was, we are told, invited hy the Japanese Minister of Foreign Affairs to call upon him. The Japanese Minister then told the Baron that Japan had decided to hreak off diplomatic relations with Russia and requested the haron to leave the country. Five hours hefore this (at 9 A. M., Fehruary 6) the Japanese had seized the volunteer fleet steamer Ekaterinoslav, three miles north of Fusan. While Baron Rosen was in Count Komura's room, the Japanese fleet was seizing the S.S. Mukden of the Chinese Eastern Railway.

Prof. Carlo Malagola, palæographer and director of the State Archives at Venice, took his life last Sunday as a result of criticism passed upon his method of keeping the archives; it appeared that some had heen damaged and others had heen lost.

Science.

Soil Fertility and Permanent Agriculture. By Cyril G. Hopkins, Ph.D. Boston: Ginn & Co. $2.75.

Many years ago, Professor Johnson of Yale issued two small treatises, entitled, "How Crops Grow," and "How Crops Feed," giving in a convenient form the chief facts in regard to soil which were then available for practical use by farmers. It was humiliating to see how small a part in those two works was played by the studies of American agriculturists, whereas the pages were filled with citations from the results obtained in the laboratories of the experiment stations of Europe, then just beginning to attract deserved attention. Within a few years, however, after the appearance of Professor Johnson's treatises, and perhaps largely due to their stimulating influence, many laboratories were established in the United States, and excellent work was done. Soon our agricultural colleges and experiment stations were founded, and coördination of results began. The Department of Agriculture assumed its rightful place as a coöperative factor in this work, and from that time on the achievements in progressive agriculture in our country have been a matter of great pride to all who are familiar with them. To give the gist of these achievements, and to correlate them with the results elsewhere obtained, so far as they refer to soil and its enrichment, has been the task to which Professor Hopkins has addressed himself, and with marked success. He has given us an admirable compilation of first-hand facts, well-arranged, accurately stated, and presented in good perspective. But his treatise is far more than a mere compilation; it comprises also an original exposition of the essential facts which concern the relations of plants to the soil and air. In simple language, the author has restated the fundamental facts in chemistry and plant-physiology, omitting virtually nothing needful, and adding nothing for mere rhetorical effect. Such a method inspires confidence and lends attractiveness, even where the subject matter is not in itself particularly interesting. Those readers who were delighted with Johnson's "How Crops Feed," in any of its numerous re-issues, will be more than pleased by "Soil Fertility," a book fully abreast of the times, and showing by inevitable contrast the vast advance which has been made in agriculture during the last decades.

It is easy to see that Professor Hopkins has enjoyed the preparation of this book, for he now and then becomes rather familiar with the reader, somewhat after the manner of a friendly teacher who can let the strain of the classroom relax a little. For instance, he places in a table the initials, or symbols, of the ten essential elements of plant-food, C, H, O, P, K, N, S, Ca, Fe, Mg., and these the reader "is earnestly advised to learn by groups," but he is aided by the hint given in a note, "The author consents to the students' memory key: C. Hopk'ns' CaFe, Mg. if Mg. stands for Mighty Good, and the omission of I for modesty." This is a useful mnemotechnic device. Another device, capable of wide application, is the employment of round numbers wherever this has been possible, thus placing a large number of com-

parative statistics within the grasp of the reader. Thus, the ingredients in certain soils are given in units of soil (two million pounds in one acre, six and two-thirds inches deep), and speedily the reader becomes accustomed to make his own contrasts. Another thing which serves an excellent purpose is the freshness of citations, bringing the whole treatise up to the date of the issue.

The author makes rightly the distinction between the substances which can be added to a soil for a temporary purpose, and those which contribute to definite and permanent results. Concerning the three important factors in what he terms permanent agriculture, it is worth while to cite the following:

> For practically all of the normal soils of the United States, and especially for those of the Central States, there are only three constituents that must be supplied, in order to adopt systems of farming that, if continued, will increase or at least permanently maintain, the productive power of the soil. These are limestone, phosphorus, and organic matter. The limestone must be used to correct acidity, where it now exists or where it may develop. The phosphorus is needed solely for its plant-food value. The supply of organic matter must be renewed to provide nitrogen from its decomposition and to make available the potassium and other essential elements contained in the soil in abundance, as well as to liberate phosphorus from the raw mineral phosphate naturally contained in or applied to the soil.

The practical management of these three important factors is given in a masterly manner, adapted to substantially all conditions which are likely to be met with in our country. It is seldom that so much judicious counsel is given in a work strictly scientific throughout.

One of the most interesting portions of the treatise is that devoted to an account of the famous Rothamsted experimental grounds, which have been used for something like three-quarters of a century for the specific purpose of testing theoretical views regarding the nutrition of plants. The studies have been in the hands of skilled chemists, who have made faithful records of their results. This private enterprise has become a public benefaction to science, of the highest order. It is difficult to overestimate the value of investigations which cover such a period of time. The results are comparable with those of long-established observatories. Think of asking the soil what it will yield year after year, from wheat sown without any addition of enriching material, and let this question be put for a quarter or half a century, or even more. Plainly, the results of experiments and cultures in all possible directions for so long a time, and under the influence of advancing science, are simply incalculable as guides in practice. From the vast accumulation of acquired results, Professor Hopkins has made a good selection and out of it all has constructed an extremely interesting story. It is not often that so attractive a treatise as this can so nearly approach the character of a cyclopædia. It has not failed to give every important fact, and its explanations are as full as can be presented in the existing state of science.

Henry Holt & Co. will publish October 29 "Leading American Men of Science," by leading men of science.

Exploration for petroleum has now become world-wide, and has revealed new sources of supply in many parts of the earth which are remote from old centres of production. The Dutch East Indies, Japan, Peru, Mexico, and Rumania all number the pumping and refining of oil among their important industries, while elsewhere the possession of "oil-sign" or of a favorable geological structure will in time start the drill. The author, therefore, of "Petroleum Mining and Oil-Field Development," A. Beeby Thompson (D. Van Nostrand), appeals to a widely distributed constituency. His book is based upon extended travel and experience, is very readable, and on the whole excellent, although in some respects it is not abreast of the latest practice in America. The topics treated embrace the following: the geographical distribution of petroleum; the connection of geological structure with the pools; indications; origin and treatment; the general technology of drilling; care of wells; pumping; power-plants; oil as fuel; the natural gas industry. While the work is rather well provided with illustrations, the reader misses maps of distribution. Greater care in statistics is desirable. Thus, it is hardly fair to lump together under Kansas the product of this State, which in recent years has been one to two and a half million barrels, with Oklahoma's forty-three to forty-six millions (p. 10). On pp. 44—46, in the discussion of origin and source, more might have been said of the modern view that seaweeds or algæ are of great importance. Much force has been given to these views by Potonié of Berlin. One or two minor misprints, such as appear in the footnote of p. 104, and in lines 28 and 29, p. 161, may be corrected in a later edition.

The friends and associates of Prof. Frederic Ward Putnam of Harvard University have expressed, in a graceful and becoming manner, the great esteem in which they hold him. On the occasion of Professor Putnam's seventieth birthday he was presented with a work of notable scientific merit, entitled the "Putnam Anniversary Volume of Anthropological Essays" (G. E. Stechert & Company). In the pages of this volume have been assembled contributions from those who have been immediately associated with Professor Putnam in the work of research or instruction, from those who are continuing investigations instituted by him, and from friends who have shared his intimate friendship for years. The book was presented by a wide circle of friends as an acknowledgment of their debt of gratitude, and as an expression, however inadequate, of the vital force Professor Putnam has been in the advancement of anthropology in all parts of the United States. The volume is prefaced by a dedicatory letter to which is affixed the name of Professor Boas of Columbia University, the chairman of the editorial committee. "It has been the wish of your friends," writes Professor Boas, "to bear testimony to the power and gentle charm of your personality that have made you our leader." And further, "By creating and fostering public interest in science, by organizing the work of societies and institutions, and by your own contributions to knowledge, you have liberally contributed to the development of scientific activity in our country." The essays are, without an exception, eminently scholarly, and the majority of them are of so specialized a character that none but a trained anthropologist could intelligently read them. Among the contributions possessing an interest for the general reader are: The Fish in Ancient Peruvian Art, Notes on Religious Ceremonials of the Navaho, Primitive Industries as a Normal College Course, and A Visit to the German Solomon Islands. The volume contains a striking photogravure of Professor Putnam and a bibliography of his scientific writings. His remarkable achievements in the realm of science may be instanced by the fact that twenty-five pages are required for the mere enumeration of the titles of his works, which cover a period of fifty-four years, from 1855 till 1909. In addition to its scientific value the volume possesses a charm in its external details.

Carl Svante N. Hallberg, professor of pharmacy of the University of Illinois and a member of the commission for revision of the national formulary, 1886, 1895, and 1906, died at his home in Chicago last Saturday, aged fifty-four. In 1885 he organized the National Institute of Pharmacology.

The death is reported from Berlin of Prof. Ernest von Leyden at the age of seventy-eight. Having served as a surgeon in the Franco-Prussian war, he was later offered the chair of pathology and therapeutics at Königsberg, from which he went to the University of Berlin, being for twelve years the head of the chief medical clinic. He wrote a number of important works, including: "Klinik der Rückenmarkskrankheiten" and "Die graue Degeneration der hinteren Rückenmarksstränge."

Professor Thiele, whose death occurred about a month ago, was director of the Copenhagen Observatory from 1875 to 1908. Devoting himself chiefly to astronomy, he calculated the orbits of several planets, investigated the conditions of double stars, and wrote one book—in English—on the "Theory of Observations." At the time of his death he was seventy-two years of age.

Drama.

Anathema. By Leonid Andreyev. New York: The Macmillan Co. $1.25 net.

Herman Bernstein has written an English version of "Anathema," the tragedy in seven scenes by the Russian dramatist Leonid Andreyev, which has attracted considerable attention in Eu-

rope by its passionate spirit of revolt. The translation is neither smooth nor idiomatic, but bears internal evidence of strict fidelity and sufficiently proves the imaginative power of an impressive, gloomy, and unprofitable work. For actual theatrical representation it is unfitted by its great length, its subject, its unmanageable details, its unmitigated bitterness, and its indefinite conclusion; but it will provide a strong if not altogether wholesome fascination for many readers in its illustrations borrowed from Biblical personages and incidents, its cynical presentment of the great problems of faith, life, and eternity, and its vivid pictures of conditions in southern Russia.

Anathema is the Devil, a curious compound of the Miltonic Satan, the tempter of Job, and some serio-comic fiend of mediæval legend. In the prologue—a scene of bold and striking imagination—he approaches the Gates of Eternity and calls upon the Guardian to grant but a glimpse of the hidden mysteries, to illumine, however dimly, the way in which the Devil and men alike are groping in darkness. No sign being vouchsafed, Anathema cries that the earth has now become the abode of death, that it is the throne of the Prince of Darkness, and that he will make man himself the expounder of his fate.

The drama proper shows how Anathema, in the guise of a lawyer, seeks out a pious old Jew, David Leiter—slowly dying of misery in a Russian town, but righteous in word and deed—and bestows upon him a fortune of millions. David, unspoiled and untempted, insists upon distributing all to the poor, whereupon Anathema summons all the outcasts of the earth, who speedily strip David of his last kopek and then stone him to death, because he cannot feed and clothe them by miracle. The perplexities of David in his desire to do his whole duty to his fellow-man, his vain appeals to Heaven for guidance and help, his anguish, his patience, his unwavering faith in the face of the grossest injustice and cruelty, and the remorseless cunning of Anathema, are set forth with extraordinary insight into human nature, mastery of pathetic detail, and rare descriptive power. Then Anathema, once more, in an epilogue, approaches the Eternal Gates and challenges the Guardian to say whether David—the embodiment of perfect love and self-sacrifice—did not by his life and death manifest the powerlessness of love, and indirectly cause great evil by provoking strife and bloodshed. The Guardian replies in effect that David has attained immortality, that he will live forever in the deathlessness of fire—whatever that means—but that the secret of goodness and life will be impenetrable to Anathema forever. Anathema replies with blasphemous defiance.

As a manifestation of intellectual revolt against social and religious conditions in southern Russia, and a cry of despair, the piece has great significance and is indisputably a work of positive but undisciplined genius. As an illustration of the folly of indiscriminate charity—whether intentionally or not—it is economically and socially sound. Its spiritual drift, if it has any, is too vague to be worth discussion. Anathema, apparently meant to be the symbol of the most advanced skepticism, is simply a professed agnostic, who cringes before the authority he denies. The play has fatal artistic defects. It lacks consistency and the courage of conviction.

Björnson's comedy, "A Lesson in Marriage; or the Newlyweds," translated by Grace Isabel Colbron, will be brought out next month by Brandu's Publishing Co. This will be the first English version of the play.

John Galsworthy's four-act tragedy "Justice," which has just been published (Scribners), is certainly well worthy of the dignity of print. Drab as is the story, and unlovely as are the characters, it is a work that grips the reader from first to last As a specific instance of the substantial wrong that may be done by enforcing the strict letter of the British criminal law, without reference to extenuating circumstances, it is a most impressive, if terribly gloomy, drama, but as an arraignment of the courts, or the law, it is neither logical nor conclusive. Actually, in spite of its realistic form and manner, it is a bit of sentimental special pleading in which the rights of the innocent are forgotten in the woes of the guilty. Mr. Galsworthy has a weak case, but has handled it with so much skill and power that he sometimes almost succeeds in making it appear a strong one.

The new American comedy, "Keeping Up Appearances," by Butler Davenport, which has just been produced in the Comedy Theatre, may or may not prove a popular success, but it has intrinsic merits which deserve a special word of recognition. In the first place it is a genuine comedy, a study of contemporary life and manners, veracious, sane, humorous, and wholesome, which never degenerates into the extravagance of melodrama or the absurdity of broad farce. If, in its attempted portrayal of an ideal wife and mother, loyal, tender, patient, and self-sacrificing, it comes perilously near the edge of sentimentality and theatricalism—overlooking the social and moral chaos that might result from an excessive liberality—it does present a fine and possible type of noble womanhood, and, by practical and practicable illustration of the efficiency of the golden rule, drives home, without any preaching, a salutary lesson applicable to every-day experience. The fact that the theme is old does not detract from its value in the least. The treatment of it, if it be somewhat crude from the purely technical point of view, is at least fresh and direct. The characters introduced are singularly real and the satirical exposure of the ingratitude, folly, cruelty, and contemptible meanness that are the almost inevitable ingredients of social pretence is as effective as it is abominably true. Undoubtedly the play is compounded of old materials, imperfectly patched together, but its structural defects, which are obviously those of inexperience, are inconsiderable in comparison with its entertaining and instructive truthfulness.

The appearance of Edward Terry and his wife, Julia Neilson, in "The Scarlet Pimpernel," in the Knickerbocker Theatre, is a cheerful incident in the theatrical season. It is a romantic drama, adapted from a novel of the Baroness Orczy, by the author herself and Montague Barstow, and deals with the adventures of a dare-devil Englishman and his associates in rescuing a number of aristocrats from the clutches of the French Terror. Into the details of the play it is not necessary to go. It is not a particularly good specimen of its kind, being somewhat clumsy in construction, while the continuity of the action, of vital importance in all pieces of this sort, is often broken. But it is, on the whole, a good stirring entertainment, not without merit as a work of imagination, and absolutely free from all taint of unwholesomeness. In respect of interest it is at least equal to most of our modern emotional dramas, while it is superior to the majority of them as it leaves no bad flavor behind it. Fred Terry, never an ideal romantic actor in his earlier days, now plays a character part with notable address, variety, humor, and spirit. His portrayal of a man of daring who, for purposes of disguise, assumes the airs of sluggardly, cynical indifference, is clever. Miss Neilson does not appear to have grown much artistically, although she retains her power of emotional expression, and her superb personal beauty. The play, which was admirably mounted and efficiently acted—though some of the reputed Frenchmen showed an amazing unfamiliarity with their own language—was received with great cordiality.

The third production of the New Theatre this season will be "The Thunderbolt" of Sir A. W. Pinero, of which a full account was given in this journal when the piece was first presented in London at the Haymarket Theatre. Here Albert Bruning will be Stephen Mortimore; A. E. Anson, Thaddeus Mortimore; Miss Thais Lawton, the wife of Thaddeus; Ferdinand Gottschalk, Colonel Ponting; Miss Olive Oliver, the wife of Colonel Ponting; Miss Olive Wyndham, Helen Thornhill; Frank Gillmore, the Rev. George Trist; Ben Johnson, the solicitor Vallance, and E. M. Holland, the solicitor Elkin. Mrs. Harriet Otis Dellenbaugh will appear as the wife of James Mortimore, and Mrs. Sol Smith as the wife of Stephen Mortimore.

Robert Mantell has added "The O'Flynn" to his repertory, and will appear in due course as the Irish hero of Justin H. McCarthy's romantic drama, the part created by Sir Herbert Tree in London. Mr. Mantell has no idea, of course, of abandoning his Shakespearean impersonations. His O'Flynn is an addition, not a substitute.

Hubert Henry Davies's new play, "A Single Man," which will be produced in London next month, is a four-act comedy. It deals with English country life and is said to have a particularly strong love interest.

The members of the Incorporated Stage Society of London have selected for their first production this season John Masefield's play, "Pompey the Great," already known in its published form to the reading public.

Both Mr. Asquith, prime minister of England, and Mr. Balfour, the leader of the opposition, attended the opening of Gertrude Kingston's "The Little Theatre," in London, the other evening. The attraction was an English adaptation of the "Lysistrata" of Aristophanes, in which a good many liberties had been taken with the text, in the way of modifications, additions, and elisions. The audience, which was of a very special character, appeared to be entertained, but there was not much in the entertainment for the ordinary unclassical theatre-goer.

Oscar Asche and Lily Brayton, after a succession of triumphs in Australia, are back in London, as already announced, and playing in "Count Hannibal" at the New Theatre. They expect the piece to run to the end of the year, but contemplate a series of special Thursday matinées. These are to be devoted mainly to Shakespearean revivals, among the pieces selected being "The Taming of the Shrew," "Othello," "As You Like It," "The Merry Wives of Windsor," and "The Merchant of Venice." With these may possibly be bracketed Rudolf Besier's poetical play, "The Virgin Goddess." In Australia the part of Mistress Quickly in "The Merry Wives" was played with such emphatic success by Miss Bessie Major that Mr. Asche persuaded that actress to return to England with him in order to reappear in the character. In January the probabilities are that Mr. Asche will visit the United States. This is to be followed by a return trip to Australia, where he will play for forty-eight weeks.

Music.

Piano Lyrics and Shorter Compositions of Edvard Grieg. Edited by Bertha Feiring Tapper. Boston: Oliver Ditson Co. $1.50.

From the Southland. Piano sketches by H. T. Burleigh. New York: William Maxwell Co. $1.

Negro Minstrel Melodies. Edited by H. T. Burleigh. New York: G. Schirmer. 50 cents.

The Musicians' Library of the Oliver Ditson Co. is one of the most praiseworthy exhibits of the American publishing business. The fifty-five volumes so far issued comprise most of the best songs and pianoforte pieces in existence, beautifully printed, and intelligently edited by authorities. Among the volumes of piano music there are three containing selections from Liszt's pieces, edited by August Spanuth; two of Bach's, edited by Ebenezer Prout, and two of Chopin's, edited by James Huneker. Two of the greatest living pianists, Joseffy and D'Albert, prepared the Brahms and Beethoven volumes; the late Carl Reinecke, chief of Mozart specialists, chose and commented on what he considered the best twenty Mozart pieces for piano; and Xaver Scharwenka did the same service for Haydn and Schumann. Thirty Mendelssohn pieces are edited by Percy Goetschius; Otto Singer arranged selections from Wagner's operas; while Isidor Philipp and M Esposito contribute anthologies of French and Italian music for the same instrument. The editors were in each case chosen not only for their eminence, but for their enthusiastic devotion to the composers assigned to them.

To Bertha Feiring Tapper fell the agreeable task of selecting from Grieg's pianoforte works pieces to fill two volumes. One, devoted to his concerto and others of his larger compositions, appeared a year or so ago, and to this is now added a second, containing some of his lyrical pieces and other short compositions. It is to be regretted that she included in her collection so many of the earliest compositions, written before Grieg's genius had begun to manifest its original traits. Thus, of the first fourteen numbers, only four are really Griegish: No. 3 of the "Tone Pictures," "The Watchman's Song," and "Album Leaf" of opus 1, and the "Album Leaf" of opus 28. For the other ten it would have been infinitely better to substitute "In My Native Country" of opus 43; "Valse Impromptu," "Album Leaf," and "Melodie" of opus 47; "Shepherd's Boy" and "Norwegian Peasant March" of opus 54; "Sylphe" and "Gratitude of opus 62; "Peasant's Song" of opus 65, and "Peace of the Woods" of opus 71. It surely cannot be that these delightful pieces were omitted because of the bold, novel, and unique dissonances which characterize most of them. In these days of the Debussyan cult most hearers would find them almost orthodox and "classical."

For these gems the amateur will have to be referred, now as before, to the volume of sixty-six lyric pieces published by Peters. By way of atoning for their omission, Mrs. Tapper has included in her volume Grieg's own arrangements of some of his favorite songs, and of three numbers of the "Peer Gynt" score, besides some miscellaneous works for piano. An introductory essay of seven pages by Samuel Swift is devoted chiefly to comments on the pieces here presented, sympathetic and adequate for the most part, although in the case of the pathetic "Cradle Song" (op. 41) something surely should have been said about the text to guide the pianist to a correct interpretation, the name alone, without the text, being cruelly misleading, for the babe in the cradle is dead.

Grieg's pieces are the best written for pianoforte since Chopin and Liszt, unless we agree with those—and there are good judges among them—who place those of Edward MacDowell a notch higher. This foremost of American composers was deeply influenced by Grieg, and in turn he has exerted a surprisingly wide influence on the younger composers of our country, which would be better understood if their pieces were more frequently played in public. One of these younger men is the negro baritone, Harry T. Burleigh. His declaration that his six piano sketches, "From the Southland," were suggested by MacDowell's "Woodland Sketches" is borne out by internal evidence. They are all interesting, and bear witness to the fact that he profited by his opportunity to learn how to compose, under Dr. Dvorák, at the National Conservatory in this city. When this great Bohemian was studying negro and plantation music with a view to reproducing its moods in his "New World" symphony, Mr. Burleigh gave him the benefit of his thorough knowledge of the subject. Actual melodies from the old plantation songs are introduced in three of his own "sketches" (Nos. 2, 5, 6), and in all of them there is a successful attempt at local coloring. They are the most musicianly pieces ever composed by an American of his race.

That the Schirmer Company should have chosen Mr. Burleigh as editor of their collection of Negro Minstrel Melodies was almost inevitable. As a matter of course he shows a predilection for the songs of Stephen Foster, who is responsible for nine of the twenty-five in the volume. In the entertaining preface W. J. Henderson declares that Foster's melodies are not folksongs; but why not? Is it the peasants alone who can create folk music? To be sure, in the case of most European folksongs, the creator's name is not known; but that is a distinction without a difference, so far as the style and quality of the music are concerned. These songs of Foster's will live forever, while the negro minstrelsy, which first gave them vogue, and which made many think they were real negro songs, has virtually passed away. The modern minstrel moves in a higher sphere.

Liszt centenary festivals will be in order next year. Berlin will lead with one in which Busoni will take part.

Fritz Kreisler will play the new violin concerto of Elgar, not only at the first of the season's Philharmonic concerts, but also at the second, and once again in the new year with the London Symphony Orchestra. The programmes of this orchestra will include an American composition, "The Mystic Trumpeter," by Frederick S. Converse. Regarding the Elgar concerto, a writer in the London *Telegraph*, who heard it privately, makes the following remarks:

I believe that Elgar has succeeded in a very high degree in revivifying the once moribund concerto form, and I believe that that will be the universal verdict on November 10. The music is thoroughly characteristic of the composer of the first symphony; it is permeated with his individuality, and, indeed, it reflects now and then, if only idiomatically, the spirit of the sym-

phony. Melodically it has many a moment of sheer loveliness—my mind goes back to an exquisite little episode in the first movement, and I have been haunted for a month by the song-like theme of the andante.

Chicago now has its own grand opera, and performances begin on November 3. Mr. Dippel's prospectus is extremely inviting, the indications being that the season will be brilliantly successful. The repertory will include many of the best French, Italian, and German operas, and the list of singers is most tempting. To name some of the sopranos alone, there are Johanna Gadski, Mary Garden, Nellie Melba, Carmen Melis, Alice Nielsen, and Marguerite Sylva, besides Geraldine Farrar, who will be one of the five visiting artists from the Metropolitan, the other four being Caruso, Jadlowker, Slézak, and Scotti. During the season of eleven weeks in Philadelphia the Chicago Grand Opera Company will visit New York every Tuesday night for ten performances at the Metropolitan Opera House. The repertory here will consist solely of the works of the foremost French composers, for which there is a special subscription, now open, in two series of five each. At these performances opera-goers will be able to see and hear again the chief successes of the four seasons of opera at the Manhattan—"Thaïs," "Le Jongleur de Notre Dame," "Pelléas et Mélisande," "Louise," "Les Contes d'Hoffmann," and "Samson and Delila," under the direction of the incomparable Campanini, and with the same artists that made them popular, among them Maurice Renaud, Mary Garden, and Charles Dalmores. Baltimore and Washington will also have opportunities to hear Mr. Dippel's forces.

Art.

AUSTRALIAN PAINTING.

SYDNEY, October 5.

If it be the case that the art of painting has developed along the same lines as science, and risen, step by step, from the delineation of the inorganic to the organic, and thence to the psychical and the social, then we must say that Australian painting is still on the lower rungs of the ladder. Almost exactly two-thirds of the oils and nine-tenths of the water-colors in this year's exhibition of the Royal Art Society consist of landscapes. Even in those where the organic elements—trees, shrubs, grasses, and wild flowers—form the most conspicuous part of the picture, it is still the action of inorganic agents on these that is the real theme. The effects of light in particular are the main concern of many of the artists. They may well be. Hardly Greece (and who that has voyaged in the Ionian Sea is likely to forget how the splendor of the sunset or the brilliancy of moon and stars is there heightened by the limpid air?) surpasses Australia in this.

Australian painters have been slow to realize their chief asset. The earlier painters knew nothing of it. These, it is true, were birds of passage, and foreigners at that. The pictures of Chevalier and Von Guérard are said to have no atmosphere—at least, the luminous Australian atmosphere is conspicuously absent. The trees, the mountains, the plains, even the skies, are painted heavy and dark, which they seldom are. The Bush is "stern and funereal," as it was to the first novelists and the first poets—Marcus Clarke and Charles Harpur, whereas, in literal truth it is commonly flooded with sunshine. Homesick exiles, they had missed its characteristic note. The Swiss Buvelot, a disciple of Corot, mediated the transition to a greater veracity. As so often happens with poets and even with men of science, his more ambitious works, his oils, were the least true to their objects, while his less considered water-colors more truly depicted the landscapes he really saw. His Bush in oils was Swiss or French; in waters, it was genuinely Australian.

Landscapes and seascapes crowd the annual exhibition. Mr. Salvana has deserted the shy and secret places of the Blue Mountains, which he alone knew, or at least painted, for the more garish aspects of the plains. That is an Australian river, almost arrested in its course by drought, slender enough now, but its height in flood is shown by the bared depths of its reddish sides. The yellows of the difficult foliage, the pale green of the banks, the lovely pale blue of the stream, show the same high key of light and color that is the characteristic note of Australian landscape. It is again mainly a striking series of effects of light that we observe in Evening in Rose Bay. Few finer or richer scenes are to be found than in this portion of far-famed Sydney Harbor, but here nature and art are inseparably joined to form a prospect of striking beauty. The evening sun shines through the whole, lighting up the near stream and its more remote banks, the distant hills and the Bush trees. Perhaps there are some crudeness of coloring and a lack of perfect harmony, but we feel that painting in Australia is travelling from the scenes of wild nature where it has hitherto luxuriated to urban scenes that put the powers of the artist to their severest test.

Return we to our sheep, with Gil Blas, or at least to pictures that represent the Type of a Coming Nation and a Land of Cattle and Sheep. Neither sheep nor cattle are there, it is true, in the picture so named. Only a grizzled bushman, standing beside his horse and dog, and gazing at the vast expanse of sun-browned herbage. There is little in the picture, it may seem, and Darwin, seventy years ago, found little in the scene. Yet on those brown pastures are reared 115 million sheep, and out of them it comes that Sydney is the greatest wool mart in the world. The painting (by a young artist) is remarkable for its lightness of touch and bright coloring.

The president solves a problem that practitioners pronounced insoluble. One of our more famous artists has said that a Northern tree, like the willow, cannot be introduced into an Australian landscape without disturbing its harmony. Mr. Lister's best water-color is a fine study of a willow tree, overhanging a creek. It stands out in relief, assuredly, but not over-boldly; it is not assertive, but pathetic; it is not crude or out of tone, but tender and harmonious. And yet it is a true delineation of an Australian pastoral scene.

Not only is the land not quite the same as in other countries; the sea, too, or rather the ocean, which laves the stones of most Australian cities, has a movement and a complexion of its own. It would be hard to render in a canvas of moderate dimensions "the long wash of Australasian seas," but Julian Ashton (a rebel who does not exhibit with the Royal Art Society) has caught the swell and the hues of the Pacific, and others of the clan (for there are several Ashtons) have shown that in their seascapes they find their truest expression. In a dozen pictures by Will Ashton, almost all of them seascapes, the characteristic Australian color scheme is worked out. One of them shows a stretch of green-blue sea breaking on the rocks of the shore, and the breakers are dazzlingly lighted up, we are reminded of Hook, but if there is less strength in the yet virile South Australian artist, there is greater brightness than in the seas the academician painted so robustly. Perhaps, too, there is something specially Australian in a large and massive painting (by A. J. Burgess) of the moon breaking through clouds and pouring on the sea "a beauteous calm of beams." It is a sombre theme, but the deep blue of the limitless expanse of ocean is typical. Alone among the seascapes, though these are numerous and often admirable, this impressive canvas seems to embody an idea. Are we fanciful in imagining that the flood of silvery light breaking on the billows of the sleeping sea under its dark cloudy sky represents some such idea as Greek mythology embodied in the myth of Zeus pouring a wealth of golden sunbeams into the lap of Danaë? It was in the sea that life began, and it may have been begotten of the contact of light with water.

As is to be expected in a young country, where art must pass through the same stages as it traversed in older countries, the annual Australian exhibitions are still weak in *genre* painting and portrait. The specimens of these on the walls are few, and they are not always good. The really successful delineations of typical physiognomies, as in the procession of human Derelicts—the defeated in life's battle—are the

work of a Neapolitan, an adopted member of the Sydney artist community, Signor Dattilo Rubbo.

Nevertheless, *genre* painting has been successfully achieved by some of the more eminent Australian painters. The *genre* pictures of Tom Roberts are understood to be his most characteristic work, and they render various aspects of Bush life with truth and energy. He is still largely inorganic, or, if animal and human, at best muscular, as when he depicts the effects of heat on a dusty road, the rush of a flock of thirsty sheep to a water hole, or the strenuous activity of sheep-shearing. Fred McCubbin has delineated, with a pathos that reminds us of Millet, the hard struggles of the pioneer with Nature.

If, by such interpretations of Bush life and such revealings of Australian landscape, Australian artists have not established a new school of painting, as they once claimed, or even laid its foundations, as is now asserted, they have at least set up a happy variant on English landscape and *genre* painting. The great legislator of English painting, Sir Joshua Reynolds, laid an authoritative ban on blues, yellows, and yellowy reds or whites. Wilkie commended Raeburn for abandoning his Prussian blues and Neapolitan yellows. The Australian school inherits the French color scheme, its reds generally excepted. Yellow and blue are dominant colors in its pictures, because they are dominant colors in the scenes that it paints. The rich and sombre coloring still to be seen in some of the older Australian pictures stamps them as more English than Australian. J. C.

Messrs. MacLehose promise "The Roman Wall from the Clyde to the Forth," by Dr. George MacDonald.

A book on the French line engravings of the late eighteenth century, by Basil Dighton and H. W. Lawrence, containing eighty-two plates, will be published about a fortnight hence by Lawrence S. Jellicoe in an edition limited to a thousand copies.

Interesting articles in the *Rassegna d'Arte Umbra* for August are an "Unknown Painting by Perugino," being a small half-length version of the Madonna, in the National Gallery, London; "Notices of the Beginnings of Perugian Art," with new documents of thirteenth century date, and a "Study of Fiorenzo di Lorenzo," fixing the year of his death, which was unascertained, as 1522. Among the plates that which depicts the new Perugino, formerly in the Sedelmeyer collection, is naturally most important.

"The English Home" (Scribners), by Banister F. Fletcher and H. Phillips Fletcher, is one of the rapidly growing class which concerns itself with the modern country house of moderate cost. It contains a complete and concise description of contemporary English methods of planning, construction, heating, ventilating, and drainage—few of which are in advance of current American practice. The latter half consists of numerous reproductions of photographs and drawings of recent work by the authors' firm and by others of the best known English architects who specialize in domestic building. The plans are well chosen and less intricate than the common run; but the more interesting of them have already been fully described and illustrated in the architectural journals and elsewhere.

Francis Bond's "Misericords" (Henry Frowde) is the first of four volumes to be devoted to the Woodcarvings in English Churches. The misericord, it may be recalled, was a merciful projection from the upturned choir seat against which ancient and infirm officiants who were forbidden to sit during service, might yet lean. These ledges are carved in the most playful spirit; the subjects include the monsters of the Bestiary, sacred and profane legends, domestic scenes, parodies and satires—in short, something like a repertory of the themes that captured plain artisans during the Middle Ages. Mr. Bond has made his text with his customary scholarship and charm, illustrating the carvings freely from contemporary literature and church teaching. There are scores of cuts clear enough almost to reconcile one to the halftone process. Not merely for artists and decorators, but for all students of mediæval art and culture, this collection is a valuable resource.

A monument is to be erected at Zutphen by the Dutch and the English in memory of Sir Philip Sidney.

Frescoes of the late fifteenth century and belonging to the school of Mantegna have been discovered in the Church of Pieve di Coriano, near Mantua. Buffalmacco's frescoes have also come to light in Florence. A discussion of the latter will be found in the *Cicerone*.

Finance.

BANK OF ENGLAND AND WALL STREET.

On Thursday of last week, there were two interesting occurrences in the financial markets. The Bank of England advanced its official discount rate to 5 per cent.—a step which money markets, the world over, at once interpreted as a sign of stringency. News of the Bank's action reached Wall Street before the opening of Thursday's market. It was greeted on the Stock Exchange, not by a fall in prices such as usually follows unfavorable news, but by a violent advance: Steel common shares advancing 2½ points from the day before, Union Pacific 3, and Reading 2¼. These stocks had been the focus of an excited speculation which had already pushed up their prices 5 to 10 points in the two preceding weeks, and Thursday's advance was continued during the next two days.

A 5 per cent. rate at the Bank of England is very high. During the past thirty years it has been exceeded in the third week of October only once—in 1906, when the strain on the whole world's capital reserve had reached the breaking-point. It has been equalled at this date in only three other years in the two past decades, and those were interesting occasions—1909, when the Bank of England, as the whole financial world is now aware, was putting a quietus on New York's rash speculation in the Steel shares; 1899, when the Boer war had just begun and South Africa's gold fields were blockaded, and 1890, barely two weeks before the Baring crisis broke on the London market.

The Bank of England's actual position, at the time of its statement of last Thursday, was peculiar. Its gold holdings were lower than at the corresponding date in any year but one of the decade past, that one year being 1906; on the other hand, Thursday's percentage of reserve to liability was well above that of the corresponding week in 1906, or 1905, or 1903, or 1902, or 1900. But the question of real importance is the rapidity of the outflow of gold in the past eight weeks. This, in round figures, is the amount by which the Bank's stock of gold has been reduced in each of the past half-dozen years, between September 1 and October 20:

	Loss.		Loss.
1910.....	£8,000,000	1907.....	£3,400,000
1909.....	7,200,000	1906.....	8,800,000
1908.....	1,700,000	1905.....	4,500,000

These comparisons make it plain enough that the Bank's immediate purpose, in fixing a higher London rate for money, was to protect its own gold reserve against this swift depletion. Since the gold which the Bank has lately lost has gone in the main to India and Egypt, it should seem that the 5 per cent. rate was not aimed at Wall Street speculation, and at Wall Street borrowers, in the same degree as was the 5 per cent. rate of a year ago last week. But what the bank directors do appear to have had in mind is something which concerns the American market as well as London. Taking along with one another the very recent uncertainties of London's financial situation, the grave public warning addressed to the international markets, three weeks ago, by the president of the Bank of Germany, and this week's procedure by the Bank of England, no one can possibly say that the world-wide money market is in a comfortable position.

Its position, six or eight months ago, we now know to have been extremely bad. But it had been hoped that the Stock Exchange liquidation, here and in Europe, with the simultaneous slackening of trade activity and the pause in creation of new securities, had effectively mended matters. The most that can now be said, in the light of the recent events in Europe's markets, is that equilibrium has not yet been restored. We are still in a period when demand on capital, to sustain the structure of high-priced commodity markets, expanded

trade, and public and private extravagance, seems to be out of proportion to the accumulation of new wealth. As an economic problem, this is exceedingly obscure. It at least suggests to thoughtful men, however, the question whether the state of things is not partly a sequel to the absence of any genuine readjustment of prices in the broader sense, since the break-down of 1907.

But what of Thursday's rapid advance on the New York Stock Exchange, in response to this not altogether pleasant news? Perhaps the simplest way to characterize the episode is to say that when the one thing happened which ought, in the sane and natural order of things, to have called a halt in the speculation of the week, Wall Street to a man predicted that prices would be jacked up faster than ever. The prediction was correct, and it was based on implicit recognition of the fact that the conductors of the speculation had no regard for actual things. That feeling was not inspired by belief, such as Wall Street used to entertain nine or ten years ago, that the Stock Exchange movement had so intrinsically powerful a basis that nothing whatever could shake it. On the contrary, the Wall Street judgment on last week's affair was altogether cynical; it probably went too far in the way of describing the whole speculation as a hollow pretence. The presumption seemed to be that some one with access to great stores of credit, and with entire indifference to anything but a gambling chance, was playing again the familiar game of 1905, and of 1906, and of October, 1909.

This judgment may have been unfair. But a Wall Street which in 1905 had seen two or three stocks, controlled by powerful capitalists, put up ten points or so on news of a deficit in New York bank reserves; which had witnessed the same achievement in the face of a critical strain on capital in 1906, and which had watched, a year ago this week, the process then described as "snapping the market's fingers at the Bank of England"—could not be wholly blamed for cynicism.

Not the least interesting aspect of Thursday's episode was its evidence of progressive development in the indifference of speculators to the realities. A year ago, when the Bank of England raised the bars of a 5 per cent. discount rate, there was at least an outcry from the leaders of the Wall Street speculation. The Bank of England was a financial power, but it had done a senseless thing. Its directors were hysterical; they were dreamers; they were tradesmen; in any case, their interference was impertinent. When the same barrier was raised by the Bank last Thursday, nothing of the sort was heard. The action of Lombard Street was simply ignored. Like the Senator from Ohio in the celebrated free-coinage debate of 1878, the conductors of the Wall Street demonstration might have retorted, "What have we got to do with 'abroad'?" Theirs was a New Finance, which was as much a law to itself in the money market as any one else's New Nationalism could be in politics.

Either from a financial or an historical point of view, the thing is interesting. It is certainly not less so, from the fact that in every one of these clashes of opinion with the speculative powers of Wall Street, the sequel has proved the Bank of England to be right. When the bank rate rose to 6 per cent. in the face of the autumn "Union Pacific boom" of 1906, less than six months were needed to show who had read the future best—Mr. Harriman or Threadneedle Street. When the rate went from 2½ to 5 in the "Steel common boom" of October, 1909, the verdict of events, as between the foresight of the Bank and the foresight of the boomers, was equally swift and unmistakable. In the olden time, financial markets used to learn their lessons and shape their policies from just such episodes in financial history. That, more than any other aspect of the matter, is what makes the Wall Street incident of last week a psychological curiosity.

BOOKS OF THE WEEK.

Andreyev, L. Anathema. Translated by H. Bernstein. Macmillan. $1.25 net.
Armbruster, C H. Initia Amharica. Part II. Putnam.
Arnold, R. F. Allgemeine Bücherkunde, Lemcke & Buechner.
Bacon, E. M. The Boy's Drake. Scribner. $1.50 net.
Barry, R., Habberton, J., and others. The Runaway Flying-Machine, and Other Stories. Harper. 60 cents.

Ready this Week

Leading American Men of Science

David Starr Jordan, *Editor.* In the "Leading Americans" series, W. P. Trent, General Editor. With portraits. $1.75 net.

Each biography in this volume is by an authority;—often the author has been an intimate personal associate of his subject.

There are biographies and critical estimates of the work of *Benjamin Thompson*, by E. E. Slosson; *Alexander Wilson*, by W. Stone; *J. J. Audubon*, by W. Stone; *Benjamin Silliman*, by D. C. Gilman; *Joseph Henry*, by S. Newcomb; *Louis Agassiz*, by C. F. Holder; *Jeffries Wyman*, by B. G. Wilder; *Asa Gray*, by J. M. Coulter; *J. D. Dana*, by W. N. Rice; *S. F. Baird*, by C. F. Holder; *O. C. Marsh*, by G. B. Grinnell; *E. D. Cope*, by M. Benjamin; *J. W. Gibbs*, by E. E. Slosson; *S. Newcomb*, by M. Benjamin; *G. B. Goode*, by D. S. Jordan; *H. A. Rowland*, by Ira Remsen; *W. K. Brooks*, by E. A. Andrews.

***Earlier volumes in this series are: R. M. Johnston's *"Leading American Soldiers,"* John Erskine's *"Leading American Novelists,"* and W. M. Payne's *"Leading American Essayists."*

Published last Week

Gilmore's Phoebe and Ernest
With some thirty illustrations by R. F. SCHABELITZ. Phoebe and Ernest lately created much enthusiasm among the readers of the *American Magazine*. $1.50.

Martin Schutze's Judith
A drama in verse. The *Independent* said of the author's *Hero and Leander*, "Here is, indeed, a beautiful talent of the greatest promise." $1.25 *net*, postage, 10c.

Jones's Out of Drowning Valley
A lively tale of love, fighting and treasure-hunting. $1.50.

Cooper's The Last of the Mohicans
Illustrated in color and line by E. BOYD SMITH. $1.35 *net*.

Doane's Insects and Disease
A Popular Account of the Way in Which Insects May Spread or Cause Some of Our Common Diseases. (*American Nature Series.*) $1.50 *net*.

HENRY HOLT AND COMPANY, 34 W. 33d St. NEW YORK

MR. OWEN JOHNSON'S
Lawrenceville Stories

The Varmint
"It's a wonder. . . . And the joyful pathos of the last installment choked me all up—it was so true, and generally and specifically bully."—Booth Tarkington.
12mo, 396 pages. Illustrated by Gruger. $1.50.

The Humming Bird
One of the most amusing baseball slang stories ever written. 12mo, illustrated. 50c.

The Prodigious Hickey
Originally published as "The Eternal Boy." The First Lawrenceville Story. 12mo. Illustrated. $1.50.

THE BAKER & TAYLOR CO., NEW YORK

George Sand
SOME ASPECTS OF HER LIFE AND WORK
By RENE DOUMIC
Author of "Studies in French Literature," etc
Translated by Alys Hallard.
8vo. With 19 Illustrations. $2.75 net.

This finely sensitive exercise in creative criticism first took the form of a series of lectures, delivered before the Société des Conférences, in Paris, during the course of last year. M. René Doumic, of the Académie Française, is peculiarly qualified to estimate the work, and to interpret the life of this diverse and elusive genius, and his study will be found to be full of subtlety and sympathetic intuition. There are several portraits of interest, some of them of a rare order.

Some Autumn "Torch" Books

Joseph Fort Newton's
Lincoln and Herndon 8vo. photogravures. $3.00 (postpaid $3.18)
New facts in life of both Lincoln and Herndon with particular reference to the latter. A critic has appropriately styled the volume "Mr. Lincoln's Herndon." Some of the chapters are startling in their conclusions and the book contains the hitherto unpublished Herndon and Parker correspondence.
Ready Oct. 8.

William Glyde Wilkins'
Early American Editions of Dickens 8vo, facsimiles. $2.00 (postpaid $2.10)
A check list and Bibliography for the collector and Dickens enthusiast.

Henry Watterson's
Old London Town 16mo, boards, 60c. (postpaid 65c.)
Intimate sketches of London and a continental trip. Ready Oct. 1.

Frederick H. Dyer's
A Compendium of the War of the Rebellion thick 4to, half morocco, $10.00 (delivered free)
The greatest contribution toward a statistical history of the Civil War ever attempted. The life work of a close student and expert. Circular on request.

Frank B. Sanborn's
John Brown—Life and Letters 12mo, illustrated, $1.50 (postpaid $1.68)
A new edition—the 4th—of this standard work with a new foreword. It is improbable that any later volume will take the place of Mr. Sanborn's.

Ready Shortly.

VOL. XCI.—NO. 2366 THURSDAY, NOVEMBER 3, 1910. Reg. U. S. Pat. Office. PRICE TEN CENTS.

From the Scribner Autumn List

A Painter's Progress

By WILL H. LOW.

With 16 full-page illustrations. $1.50 net. Postpaid, $1.65.

Mr. Low succeeded the late Russell Sturgis and Mr. John La Farge as Seammon Lecturer at the Chicago Art Institute, and the six lectures which compose this volume were the most popularly successful so far delivered. The book records the writer's artistic life so far as this may illuminate the artistic record of past and present in this country, and is full of entertaining reminiscences as well as of instructive data and suggestive commentary.

What Is Art?

Studies in the Technique and Criticism of Painting

By JOHN C. VAN DYKE.

$1.00 net. Postpaid, $1.10.

This book expounds the painter's point of view as distinct from that of the connoisseur, the collector, or the museum director, which, he thinks, has, for the past twenty years, monopolized discussion among us, to such an extent as to obscure the consideration of art as art, in considering it as a curiosity or commodity.

The Town Down the River

A Book of Poems

By EDWIN ARLINGTON ROBINSON.

12mo, $1.25 net. Postpaid, $1.35.

This volume is made up of new poems, now first collected, by the author of that remarkable volume, "The Children of the Night," published a few years ago. It shows a distinct advance in poetic insight, and in that unusual ironic view, based on a deep philosophy, which has not appeared in modern verse since Browning.

New Books that must henceforth be reckoned as high authorities on the subjects each one deals with.

The Intimate Life of Alexander Hamilton

By Dr. ALLAN McLANE HAMILTON

HIS GRANDSON.

With 25 full-page illustrations. 8vo, $3.50 net. Postpaid, $3.72.

Dr. Hamilton has used many letters of Hamilton which have never before been published, and also his expense books and records of cases, etc., as well as many letters written to him by Martha Washington, Angelica Church—his sister-in-law—General Schuyler, and others.

He gives withal a notion of the life, social and political, in this country, but particularly in New York, which has hardly ever been equalled in intimacy and accuracy.

"He confines himself, rather, to the characterization of his grandfather through a series of chapters on those matters which bring him closer to us as a man. This is an 'intimate' portrait, and as such it has engaging simplicity, sincerity and vividness."—*N. Y. Tribune.*

Molière: His Life and His Works

By BRANDER MATTHEWS

Professor of Dramatic Literature in Columbia University. Illustrated, 8vo, $3.00 net. Postpaid, $3.20.

He sets forth the facts of Moliere's life stripped of all the legends that have gathered about them. At the same time he gives a striking picture of the period in which Moliere lived, and of his relation to it.

"This is a new and illuminating biography and ought to be read by every one who is interested in the drama, practically or esthetically."—*Jeannette L. Gilder, in Chicago Tribune.*

The French Revolution

A Political History

By A. AULARD

Professor of Letters at the University of Paris.

Translated from the French of the Third Edition, with a Preface, Notes and Historical Summaries, by Bernard Miall. In four volumes. The set, $8.00 net.

"M. Aulard, with his vast, minute, unrivalled knowledge of the French Revolution, is now available in our own language to remove from us the danger of misunderstanding the Revolution, and to explain the greatest event which has happened in the social and political progress of the modern world."—*London Spectator.*

FICTION

Tales of Men and Ghosts

By EDITH WHARTON.

$1.50.

This book includes all of Mrs. Wharton's short stories that have appeared in the last two or three years.

Rest Harrow

By MAURICE HEWLETT.

Illus. $1.50.

"Unique love story in an out-of-door atmosphere as radiant as that of a Monet picture, and as cool and fresh and vivifying as that which gives a soft mystery to the English landscape."—*The Outlook.*

The Finer Grain

By HENRY JAMES.

$1.25 net. Postpaid, $1.35.

Contains five of his latest stories—"The Velvet Glove," "Nora Montravers," "A Round of Visits," "Crapy Cornelia," and "The Bench of Desolation."

Celt and Saxon

By GEORGE MEREDITH.

$1.50.

"It is more brilliant than 'The Egoist' for a corresponding distance into its bulk. Its style is more elastic than that of 'Lord Ormont and His Aminta.'"—*Transcript.*

The Blue Arch

By ALICE DUER MILLER.

$1.20 net. Postpaid, $1.35.

A brilliant story of life and love to-day that shows how one girl justified her college education without losing any of her feminine charm.

Says the *New York Tribune:* "The book is delightful reading."

Joan of Arc—French Composition
30 cents
By H. A. Guerber, Author of "Contes et Legendes," etc.

Based on the principle that the best work can be done through the use of material that is interesting and consecutive. The account of the life and exploits of Joan of Arc is adapted to the purpose in view, and is provided with copious footnotes indicating by rearrangement of the English words the equivalent French construction. A full vocabulary is appended.

Letters and Memorials
OF
Wendell Phillips Garrison
Editor of The Nation 1865–1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

Price, $1.50 net, postpaid

BOSTON NEW YORK

A SELECTION FROM THE LIST OF

D. APPLETON & COMPANY

29-35 West 32nd Street, New York City

Reminiscences of Rosa Bonheur

By THEODORE STANTON

This book consists of the intimate letters written by members of the great animal painter's family to her, those of her close friends, and her own replies thereto, together with the opinions and recollections expressed by those friends concerning the artist and her work. Compiled, as it is, from sources of information hitherto inaccessible, it is, perhaps, the most intimate picture of Rosa Bonheur's character yet given to the public.

Illustrated with 24 pages of half-tone reproductions of paintings, etc., and with many sketches in the text. 8vo, cloth, $3.00 net.

Descriptive Meteorology

By WILLIS L. MOORE

Chief U. S. Weather Bureau

A book that brings the essentials of meteorology up to date, in an available form. The fact that meteorology may be an entirely new subject to the reader has constantly been kept in mind. An effort, too, has been made by the inclusion of a chapter on forecasting, to show the practical uses to which the science of meteorology is every day being put. Chapter IX is especially of interest to those engaged in the navigation of the air.

Many charts and illustrations. Cloth, $3.00 net.

A FALL ANNOUNCEMENT

Educational Problems

By G. STANLEY HALL, Ph.D., LL.D.

President of Clark University, Author of "Adolescence," etc.

These volumes contain the ripened results of twenty-five years of teaching education as an academic subject. The matter treated is brought up to date, and comprises not only the chief topics of present interest in education, but attempts to strike out in the lines of various reforms that seem now impending.

2 volumes, 8vo, gilt top, rough-cut edges, in a box, $7.50 net.

Romanticism and the Romantic School in Germany

By ROBERT M. WERNAER, Ph.D.

Formerly Instructor in Harvard University

An historical exposition and a comprehensive study of the writings of the Romantic School in Germany. The style of the book is never heavy or technical, but is sufficiently popular to make the work appeal to the general reader as well as to the student. The subjects covered are such as Romanticism, Classicism, Humanism, the Romantic Mission, Romanticism and Symbolism, the Romantic Mood, Romantic Irony, Romantic Conception of Love and Marriage, the Renaissance, etc.

8vo, cloth, gilt top, uncut edges, $2.00 net.

Problems of the Elementary School

By ARTHUR C. PERRY, Jr., Ph.D.

A book which cannot fail to interest not only superintendents, principals, and teachers, but the lay reader and the student of education as well. The first of its two parts deals with the general problem of the elementary school—its organization and the relation thereto of the curriculum and moral training. The second treats of certain specific problems in method and management; it offers solutions of these growing out of the author's personal experience in the school and class-room.

12mo, cloth, $1.25 net.

American Corporations:

THE LEGAL RULES GOVERNING CORPORATE ORGANIZATION AND MANAGEMENT. WITH FORMS AND ILLUSTRATIONS.

By J. J. SULLIVAN, A.M., LL.B.

Instructor in Business Law, University of Pennsylvania, author of "American Business Law"

This volume combines a scientific treatment of corporation law with a mass of practical information which must usually be sought through a number of different books. In addition, the subject is handled in an interesting way, so that the casual reader may find entertainment as well as instruction.

Large 12mo, cloth, $2.00 net.

Race Distinctions in American Law

By GILBERT T. STEPHENSON, A.M., LL.B.

(Harvard), Member North Carolina Bar

This publication is the result of a careful study of much important legal data bearing upon race distinction. A thorough examination has been made of all the constitutions, statutes, and court reports of the various states and territories between 1865 and the present time. Such subjects as Jim Crow Legislation, Separation of Schools, Theatres, Restaurants and Hotels, the Suffrage Distinctions, Civil Rights, and all similar topics have been thoroughly discussed with many references to authorities.

12mo, cloth, $1.50 net.

Corporation Finance

By EDWARD S. MEADE

Author of "Trust Finance" and the "Story of Gold," etc.

Corporation Finance is intended for a text-book for use in colleges and high schools of commerce. It can also be read with profit by any person who is interested in corporation matters. The book contains a large amount of concrete material in addition to the theoretical considerations.

12mo, cloth, $2.00 net.

"A Biological Classic"

Intracellular Pangenesis by Hugo De Vries

$3.00. 300 pages.

PRIMITIVE PSYCHO-THERAPY AND QUACKERY

BY

ROBERT MEANS LAWRENCE, M.D.

AUTHOR OF "THE MAGIC OF THE HORSESHOE," ETC.

A HISTORICAL survey of the so-called "magical remedies" of olden times—such as medical amulets and charms—showing that they are in reality the forerunners of modern psychical medicine. Dr. Lawrence has sought to emphasize the fact that the efficiency of many primitive therapeutic methods, and the success of charlatanry, are to be attributed to mental influence.

8vo. $2.00 net. Postage, 17 cents.

THOMAS Y. CROWELL & CO. - NEW YORK

An Important Work
On a Profoundly Interesting Subject

The Hygiene of the Soul

By GUSTAV POLLAK

"A few years ago Mr. Gustav Pollak enriched American literature by an important work on the greatest dramatic poet of German Austria, Franz Grillparzer. By now introducing to us another famous countryman of his, the philosopher, poet and physician, Ernst Baron von Feuchtersleben, he has performed another great service to American literature. The particular merit of Mr. Pollak's work consists in the fact that he gives us no mere translation of the 'Hygiene of the Soul,' but a profound study of the life and deeds of Feuchtersleben, which is the result of his perfect familiarity with the entire literature of German Austria. This great erudition is shown in the numerous interesting and instructive quotations and foot-notes."—*New York Staats-Zeitung.*

"Mr. Gustav Pollak attempts to render the 'Hygiene of the Soul' in his own language and to make that work intelligible to us by placing before us the intellectual atmosphere from which it sprung. He has, in our opinion, been eminently successful in his task. . . . The English-speaking world has never heard such eloquent and convincing praise of pre-revolutionary Vienna."—*Vienna Neue Freie Presse.*

"Mr. Pollak's skill as an adapter and translator is well known. In these days of 'mental healing' it is good service to offer in so attractive a form the wisdom of a healthy mind."—*The Nation.*

The Nation.

NEW YORK, THURSDAY, NOVEMBER 3, 1910.

The Week.

Senator Cummins recently made the valiant remark: "There is nothing which appeals to me as being so absurd as a Republican trying to elect a Democrat to Congress because he is dissatisfied with the tariff bill." It is, indeed, as absurd as a Republican trying to elect an insurgent for the same foolish reason. Is it the mark of a Progressive to denounce the Payne-Aldrich bill as so bad that one must break with a President, if necessary, in order to vote against it, but to explain that it is not bad enough to justify voting against a member of Congress who voted for it, if that would mean voting for a Democrat? The Senator should have made his position clearer during the fight in the Senate, where his language was not suggestive of such delicate discrimination.

It is both amusing and significant to see how unanimous the supporters of the Payne-Aldrich tariff are in the claim that it made heavy reductions in rates and large additions to the free list. It is as if the churches should boast that their operations for the year had resulted in large diminutions in their actual membership and great loss of zeal on the part of many still upon the rolls. A protectionist with real faith in his work ought to be heralding from the housetops the large number of articles around which he had thrown the ramparts of protection and pointing with peculiar pride to the extreme height and solidity of the tariff walls which he had helped to build. If he has voted for a duty of 137 per cent. upon some article which outsiders would like to provide for us at half the present market price, he ought to be printing that fact on a poster bearing his photograph and circulating it all over the land, instead of raking the *Congressional Record* for some roll-call in which he was not present to vote with the standpatters, and pledging himself not to vote for Cannon in the Republican caucus. If our protectionist friends are not careful, they will arouse the suspicion that the only part of their work they are not at heart ashamed of is that in which they were frightened into making concessions to the other side.

In his latest letter to Judge Baldwin, Mr. Roosevelt runs away entirely from his original charge. That was perfectly specific, and met with a specific denial from Judge Baldwin. But without withdrawal or apology, Mr. Roosevelt drops all that and passes on to the discussion of certain judicial decisions of Judge Baldwin which the Colonel declares to have been sadly retrogressive. It never occurs to him, however, to ask whether Judge Baldwin was deciding, not what his own individual opinion might be, but what the law was. In his own letter Mr. Roosevelt confesses that the Federal law had to be changed on the subject of employers' liability and the doctrine of fellow-servant, before the courts could depart from the established precedents; yet he speaks of Judge Baldwin as "Bourbon and reactionary" because he would not, on the bench, make up the law out of his own head.

In Massachusetts the Democrats are begging for more Roosevelt speeches. The one he made there, with his reckless and unfounded attack upon Mr. Foss as a stock gambler, is estimated by the Boston *Transcript*, which is supporting the Republican ticket, to have cost that party 15,000 votes. Mr. Foss is displaying all those qualities as a campaigner which led to his election to Congress, and with unerring instinct he is laying all his emphasis upon the tariff, and demanding that the taxes on foodstuffs be removed. His appeal for freer trade with Canada is awakening many an echo. There, too, the Republicans are falling back in their distress and confusion upon personal attacks. Lieut.-Gov. Frothingham insists that Mr. Foss is but a tool of the Fitzgerald and Curley Boston machine—the Boston Tammany. That issue seems to be taking just as little in Massachusetts as in New York. The result is that Republican confidence in a walk-over has completely disappeared, as have the odds on Draper, and the leaders admit that, impossible as it seemed two weeks ago, they are now fighting for their political lives.

Republican candidates in Cook County are finding it necessary to request the support of so regular a stand-by as the *Inter Ocean*, but in reply that usually certain voice wavers. Its unequivocal announcement in former years would have been that it would support every Republican on the ticket. Now it will support any Republican on the county ticket who publicly will take in good faith a pledge repudiating "the Busse thieves at the City Hall." Even this one might understand, despite the silence of the other Chicago newspapers on the Mayor's thievery. But the declaration does not stop here. "And until such pledge is publicly and unreservedly given, we will support the Democratic opponents of the Republican candidates who have accepted and are accepting the favor and sponsorship of the Busse thieves at the City Hall, and of their allies in the county and State governments." It will be a pity if this fine display of morality and independence does not compel a more equable division of the spoils.

The New York campaign has its asperities and commotions, but it is as tranquil as a summer lake in comparison with the goings on in Ohio. There they have an irrepressible Foraker—or at least a Foraker who wouldn't be repressed until he had fired his shot at Roosevelt; and, naturally enough, Mr. Garfield took up the cudgels for the Roosevelt side. He declared that the party must choose between him and Foraker; that he would not continue on the stump unless Foraker were muzzled. The first consequence was that Foraker announced that he would retire into his shell. But later, Mr. Harding, the Republican candidate, succeeded in inducing the two men to lay down their arms —until after the election. Yet they continue to glower at each other. Gov. Harmon, however, suggests a joint debate between Foraker and Roosevelt as the most interesting thing that could be put before the Ohio voters; but he is probably satisfied with the situation as it is, without the addition of any such feature to the Republican happy-family show.

It is a duller campaign than the pres-

ent one in which the experienced political orator cannot present "issues" that appeal to the noblest sentiments. In Indiana, one of Senator Beveridge's young supporters is "an evangel of liberty," Gifford Pinchot "has the blood of the Huguenots in his veins," and, as the Senator himself says, it is the fireside and the altar which progressive Republicanism is trying to save from desecration. Tennessee does almost as well. The supporters of the fusion candidate for Governor, with his acquiescence, have been presenting to the voters a pretty romance of his early life in an orphanage, his study of law with hard-earned money that scarcely sufficed to buy him clothes, and his carving out of his own fortune. The stupid facts seem to be that at the age of three years he was adopted into the family of one of the wealthiest citizens of the State, and that he was at no time an inmate of an orphanage. How far this unfortunate defect of his childhood will affect the general opinion of his qualifications for the Governorship is uncertain, but there ought to be no uncertainty about the effect of such attempts at deception. Although the line between sentiment and sentimentality is hazier than that between the sublime and the ridiculous, campaign speakers evince a decided instinct for getting on the lower side of it.

The scheme for modifying the second-class postage rate on magazines and periodicals which it is said may be recommended by the President in his coming annual message, is worth consideration. The proposed plan is to continue the present one-cent-a-pound rate so far as regards reading matter, but to charge a higher rate on the advertising. The amount to be paid would, of course, be ascertained by the examination of sample copies, the publishers being required to pay on the whole output in the proportions thus determined. The scheme would seem to be quite feasible, and as to its justice, it may be said that it would be tantamount simply to withdrawing from the advertising a portion of that preferential rate which is granted to periodicals on the express ground of the desirability of encouraging the dissemination of periodical literature. As for the necessity of any such step, and as to the business facts underlying the matter, there has been no little controversy; but Postmaster-General Hitchcock has given to the subject a great deal of attention and caused it to be thoroughly investigated, so that there is at least a strong presumption in favor of his views. If we had—as we may have in the near future—a permanent administrative officer of high class as the practical head of the Post Office Department, questions of this kind would be settled much more rapidly, because the statements and the recommendations of such an officer would be accepted, by the public and by Congress, as authoritative in a degree that is impossible under the present system.

Discussing "Economics in the College Course," in the current number of the *Educational Review*, Prof. H. D. Mussey of Columbia admirably expresses, in one of his statements, a function that this study ought to perform. "A science," he says, "that teaches a student to pick out essential and underlying causes, and at the same time give due weight to temporary disturbing influences, may fairly claim high rank as a means of developing scientific temper and habits of work." The remark is peculiarly interesting at the present time, because of the vast amount of talk about high prices and the cost of living that is going on all over the world, and the extremely small amount of scientific temper and habits of thought that is being exhibited even in the higher intellectual strata, not to speak of the general mass and the shallow appeals made to it. That there is not a greater body of really intelligent thought on the subject is, we feel sure, largely attributable to the comparative neglect into which the first half of what Professor Mussey refers to has fallen in the past generation—the concentration of attention upon essential and underlying causes. Fifty years ago the trouble was doubtless of the opposite kind—the tendency was to exploit a simple and fundamental formula as adequate to the solution of the most complex problems; but nowadays the pendulum has swung so far the other way that the most pressing duty of the economic teacher and writer is to insist that there are some things which are fundamental, and that he who fails to appreciate these is simply unfitted to discuss economic questions at all.

The law should be no respecter of persons, and we hesitate to say a word that might look like criticism of an action in that line. But even in so solemn a business as the enforcement of the customs laws at the port of New York, there is a point at which the sense of humor should step in to mitigate the heroics. When it comes to holding up a private collector who enters a seventeenth-century crucifix as exempt from duty on account of age, because it is possible that the crucifix may be a newly-manufactured counterfeit, we get the sort of thing that is calculated to bring the law into ridicule. One defence of this action of the custom-house inspectors may indeed be suggested, and if this is the ground on which they really acted we have, of course, nothing to say. If it was actually the purpose of the law to protect American makers of counterfeit antiques against the pauper labor of European counterfeiters, no precaution should be omitted to effect this patriotic object. Even if there was only one chance in a thousand that the bringing in of Miss Morgan's crucifix would deprive some home manufacturer of bogus antiques of the easy market to which he is entitled, that would be sufficient justification for the most severe measures. A square deal for the American laboring man must be insisted on at all hazards.

The Supreme Court of Oklahoma has upheld the negro-disfranchising Constitutional amendment adopted August second last. Under it all negroes whose grandfathers were slaves must submit to an educational test, and so must all naturalized citizens from countries where they did not have the right to ballot, as well as all blanket Indians. But the Supreme Court holds that the Cherokees, Creeks, Choctaws, Chickasaws, Seminoles, and Osages who form ninety per cent. of Oklahoma's Indian population shall not have to submit to an educational test, as there was an electoral form of government over them prior to 1866. Naturally, the negroes are very indignant at the plight they find themselves in—not because they are afraid of the educational test, but because they know that the test will be applied so as to pass every white man, foreign-born or otherwise, while they will be defrauded of a part in the government—through the Indians' vote—by

subterfuge, by trickery, or open lawlessness. So bitter is the feeling among the colored people that, fearing riots at the polls, the State militia is to be held in readiness on election day. To the credit of the Republicans be it said that they have no part in this fraud, and that their candidate for Governor denounces it.

Mr. Edward Robinson's accession to the directorship of the Metropolitan Museum is the natural result of his intelligent service in that institution, as first lieutenant under Sir Purdon Clarke, and will give general satisfaction. In addition to his special attainments, which won him reputation with scholars while he was in the administration of the Boston Museum of Fine Arts, Mr. Robinson has the personal qualities requisite in his new position at the Metropolitan. He has, for example, the artistic conscientiousness which would make him insist upon exhibits being absolutely authentic, or, if not, labelled for exactly what they are. This scientific love of truth has, of course, been a ruling passion in the Metropolitan during recent years, but the intrusion of a different spirit has always to be guarded against, and we may be sure that it will be totally barred out while Mr. Robinson is Director. For the rest, we are confident that he will bring to his new duties the most enlightened conceptions of museum administration, and especially that he will do everything possible to make the art treasures of the Metropolitan fully available in the education of the popular taste.

The review by the Hague Tribunal of the Barge award in the Orinoco steamship case is a victory for the United States in its contention of the substantial injustice of that decision. The Tribunal, in thus reopening the case, establishes itself as a court of appeal, although such appeal cannot be taken, of course, without the agreement of the parties in controversy. One of the next steps in the development of the Tribunal ought to be its power as a court of review, to which any aggrieved nation could carry an award for final settlement. In this case the Barge finding was declared null on four points, the remaining American contentions being rejected. The rejection of these four resulted in increasing the money award to the American company, but only slightly as compared with their claim of above a million dollars damages. Nevertheless, the decision settles a long-standing dispute in a way that should be fruitful of international juridic progress.

Prime Minister Briand's success, not only in ending the railway strike, but in securing an overwhelming endorsement in the Chamber, shows once more how strong is the conservative instinct in the French people. They really yield to none in their firm purpose to establish law and order, and to support the rulers who insist upon doing it. The great masses of the population want industry to go on in peace, and every artisan and peasant to have a chance to do his work and make his savings undisturbed; and they are ready to stand by a government which puts down with a hard hand reckless agitators who would break up the whole social order. Hence, the otherwise surprising transformation which comes over Socialists like Clemenceau and Briand when they attain power. They may remain in sympathy with their old views, but when faced in office by lawless outbreaks, or strikes that savor of anarchy, the whole tradition of the government as well as the demand of the sober citizenship leads them to exhaust, if necessary, all the resources of the nation to make head against the danger.

What the London *Times* calls "a necessary change in the British attitude towards the Persian question" is signalized by the presentation of a note at Teheran announcing the determination of the English government to assume the policing of the southern trade routes unless Persia restores their old security within three months. The cost of such policing, if it proves necessary, is to be met by a 10 per cent. surcharge upon the Persian Gulf customs, which are already heavily pledged to British interests. The hypothesis that lack of funds is responsible for the lack of order is only partly correct, as, "with or without funds, the Persian government seems wholly unable to maintain its control over its distant provinces. Even in Teheran itself its authority is constantly called in question, and rival politicians sway the situation from day to day." At the same time, the article is careful to state that the settled policy of the British government, "so far as is possible, to leave Persia to work out her own salvation," remains unaltered by the threat in the note. There is no dream of annexing territory in Persia. The sufficiently heavy burden of the Indian Empire is cited as evidence that "it is quite misleading to discern vast possibilities in a simple and provisional measure of police." All this sounds very much like an anticipation of criticism and objection, despite the presumption "that the note was presented with the cognizance of Russia." The affair has attracted much attention in Germany and France, and is causing misgivings in England. The Manchester *Guardian* remarks that "intervention would mean the virtual destruction of Persian independence which we solemnly promised in 1907 to uphold."

The prompt adoption by the advisory Assembly of China of a memorial to the throne for the early calling of a real Parliament, is not surprising. One way not to placate a people, or the intelligent section of a people, which has begun to demand some hold upon the reins of government, is to give it merely an opportunity to talk. That will only increase the desire for power to legislate. Western sympathy will go out to representative institutions for China; but there is force in the remark of the North China *Herald*, that "one strong personality with progressive ideas and breadth of vision at the head of things is required for her rehabilitation." This personality the *Herald* finds in Yuan Shih-kai, dismissed from office nearly two years ago at the inauguration of the policy of removing strong men from the path of the Prince Regent. If he returns to power, it is likely to be at the solicitation of the Government rather than as a result of intrigue, but the *Herald* hopes it will be only under conditions of absolute freedom from court and official hostility, and upon an offer of the Metropolitan Vice-Royalty, with a seat in the Grand Council. If, however, the report is true that the Prince Regent resists the demand for a Parliament with more than advisory power only because of the attitude of the Grand Councillors, there is a greater opportunity for strong men in the government than there was when he thought himself all-sufficient.

ROOT ON ROOSEVELT.

It is reported that Mr. Roosevelt is not pleased with Senator Root's speech of last Friday. One can easily believe this. Mr. Roosevelt's mind is direct. He cannot readily wind himself into the sinuosities of special pleading, nor understand the Senator's argument that a tremendous blow delivered at Roosevelt in 1910 will make him inevitable and invincible in 1912. They do not reason that way at Oyster Bay. There they are prepared for Democratic victories in Ohio and New Jersey and Indiana, and have a notion that if they could point to New York as the one spared monument, Roosevelt could step forward modestly with the claim that he alone did it, and that he was the only one that could do it in 1912. It is stated, too, that the Colonel is not happy over Mr. Root's assertion that, if defeated this year, the Republicans "might go to Mr. Roosevelt, or they might go to one of the far more radical leaders who are now looming up on the political horizon in North and Middle West." The offence here is two-fold: it is implied that Mr. Roosevelt is very radical, which is injudicious at this moment and in this State; and it is also implied that he could be beaten by somebody more radical than himself, and that is both absurd and insulting.

As little does the Senator's effort to relieve the Colonel from the charge of disrespect for the courts appear to have gratified the friend he was trying to help. Mr. Root sought to pass the whole thing off as simply Mr. Roosevelt's way of "grumbling about decisions of the courts that he does not like," and of doing it "out loud and in public, according to his temperament and habits." This is too bad, and we fear that Mr. Root will soon find himself joined to Mr. Taft and the other former friends who have proved recreant and who can no longer be mentioned.

Of course, Senator Root went on to deny that Mr. Roosevelt contemplates an "attack" upon our judicial system, "or that it is in danger from him or any one else." The assertions to the contrary he declared to be "purely fanciful and devised for campaign purposes only." It may be for more than campaign purposes only that Mr. Root spoke in this way, though we should think it impossible for him, in touch with so many lawyers and judges as he is, to doubt the seriousness of their fear of Mr. Roosevelt. However that may be, if the Senator had been present at the dedication of Kent Hall at Columbia University on Saturday, he would have got some striking evidence on this point. President Butler made a direct reference to Mr. Root's speech of the night before, and said with great earnestness that he was much afraid that the Senator had "underestimated the persistency, the greatness of the malice and the cunning of those who would war against the courts." He added: "It is one thing to analyze and discuss the opinions of a great court; it is another thing to pour ridicule upon its membership and bring discredit upon its capacity and intelligence in the presence of the shouting mob." The audience instantly saw the point, and the hall, which was filled with eminent lawyers and judges—most of them Republicans, as is President Butler himself—rang with applause.

These men knew how vain it is to deny that Roosevelt is the chief issue in this State campaign. He has made himself such, and there is no escaping, so long as he refuses to undo what he has done. Herein lies the pathetic ineffectiveness of Senator Root's speech. It was a great lawyer's argument, full of subtleties and paradoxical reasoning, designed to prove by sheer dexterity what could be proved, if it were true, by producing the client himself. But that was not done. The Senator disclaimed authority to speak of Mr. Roosevelt's intentions for 1912. But that very fact left him very much in the attitude of a counsel who should plead with a jury not to convict a defendant against whom a vast amount of circumstantial evidence had been piled up, but whom he had refused to put in the witness-box to give his testimony and be cross-examined. Mr. Root must not complain if, these things being so, people are a little impatient at his refinements of inference about Mr. Roosevelt, and are anxious for that gentleman to take the stand in his own behalf.

Some despairing Republicans still hope, we know, that Mr. Roosevelt will yet definitely take himself out of the campaign. He can be made to understand, they say, how damaging to his party has been the injection of his personality, and how more and more impossible he is making the election of Stimson, and will patriotically declare that he has no further political ambitions and will never again be a candidate for office. But this is a hope rather than an expectation. Even if Mr. Roosevelt were to do such a thing at the eleventh hour, it would probably be too late to have much effect. That is one reason why Mr. Roosevelt will not now do it, and the other reason is that it would be too humiliating. He cannot be blind to the fact that he is driving thousands of steady-going Republicans, who never saw Wall Street, to vote for Dix—indeed, he rails at these "crooks" every day—but what Mr. Root calls his "temperament and habits" will always prevent him from doing anything which might look like a sacrifice of himself for the good of his party.

AN INSPIRING CAMPAIGNER.

No such display of ability in political speaking has been seen in this country for many years as Woodrow Wilson is showing in New Jersey. He is as direct and vigorous as even Gov. Hughes, while he has much more grace of manner and felicity of phrase. Those who knew him best have been astonished at the unfailing pungency of his speeches, together with their remarkable freshness in handling old topics, and their variety of approach and attack. To turn from the repetition of stale calumnies which has been the mark of the New York campaign, to the addresses of Woodrow Wilson, is to pass to intellectual stimulus and a gentlemanly and chivalrous bearing. It is more and more evident that, in bringing Mr. Wilson to the front, New Jersey happily pitched upon what Disraeli termed "that commodity called a man."

Scornful Jersey Republicans gave Mr. Wilson ten days to speak before "blowing up." He was to make a few academic discourses, and then have nothing more to say. But it is that opinion which has blown up. Wilson has gone on from strength to strength. His grasp on his subjects and his grip on his audiences have been surer from day to day. Always courteous, but always absolutely frank and direct, he has met every issue of the campaign with the utmost fairness. The other day he gave out his replies to a series of questions put to him by Mr. G. L. Record, a "New-Idea" Republican of Jersey City. We presume that the questions were fram-

ed in the thought that they would prove embarrassing to Mr. Wilson, but he made of the difficulty a triumph. His answers would alone stamp him as a man of uncommon force and courage. Without a single quibble or once hedging, he went directly to the point in each instance; while the questions that were expected to be peculiarly awkward for him, he utilized for the expression of some of the soundest political doctrine that has been heard in many a day.

Nineteen questions were asked. To those to which a direct "yes," or a blunt "no," could be given, Mr. Wilson replied with those monosyllables. This is as delightful as it is unheard of in a public man. Without ifs or buts, or a glittering "as it may appear best," Mr. Wilson was as sharp and precise as a business man answering a correspondent. "Do you think that the Public Utilities Commission should have full power to fix just and reasonable rates?" "Yes." "Should United States Senators be elected by popular vote?" "Yes." "Does the Democratic platform declare for the choice of candidates for all elective offices by the direct vote system?" "I so understand it. If it does not, I do." "Will you call upon candidates for the Legislature to pledge themselves in writing in favor of the reforms you favor?" "I will not. That is the function of the voters."

These examples of Wilson's refreshing frankness are fine, but the finest remains. He was artfully questioned about certain Democratic bosses—Smith, Nugent, and Davis. The possible control of Wilson by these men has been bruited abroad by the Republicans, and is really their last despairing argument. But Wilson met the questions without the slightest suspicion of dodging, and couched his replies in plain and unmistakable words. The Democratic bosses, he said, "are not and cannot be in control of the government of the State if the present Democratic ticket is elected." Would he not consult with those men? Wilson's reply was that he should welcome advice and suggestions from any citizen, but he should not "submit to the dictation of any person or persons, special interest or organization." He added, in words that are in themselves half-battles: "I should deem myself forever disgraced should I in even the slightest degree coöperate in any such system or any such transactions as you describe in your characterization of the 'boss' system."

It is the simple truth to say that the New Jersey campaign has revealed, not only to that State, but to the whole country, a first-class political leader. Woodrow Wilson has again reminded us of our unsuspected and undeveloped resources of statesmanship. Of course, Mr. Wilson is no accident. What he is now giving out with such impressive power is the product of long and close thinking. He is not a university man suddenly taking to politics; he is, rather, a man of great political capacity who has happened to engage in university work. But his emergence into public life and the high level of character and the inspiring discussion which he has exhibited there are cause for congratulation, and for fresh courage, on the part of the entire nation.

CRIME AND THE LAW.

The contrast presented by the swift, decent, and orderly process of the English criminal law in the Crippen case, as compared with what we are accustomed to in similar trials in this country, has aroused general attention. Of unfavorable comment on the English procedure we doubt whether there has been a single word. Everywhere it has been recognized that there is not the slightest ground for supposing that the right of the accused to a fair trial was in any respect abridged. Nobody imagines that he is being "railroaded" to the scaffold. The speedy acquittal of Ethel Le Neve, charged with being his accomplice, only served to emphasize the moral of his prompt conviction. Even the motion for an appeal, which has now been made, tells the same kind of story. Appeals in criminal cases are a new feature in English jurisprudence; but, judging from the report concerning this one, there is no inclination there to make of them that clog upon the wheels of justice which they have so widely proved to be in this country. It is possible, say the dispatches, that the hearing of the appeal may cause a postponement of the date of the execution—which had been set for November 8, hardly three weeks from the day of the impanelling of the jury!

Now, the reason we all feel so impressed with the propriety and the soundness of this mode of dealing with a case like Crippen's is that it truly corresponds to the realities of the case. Everybody knows that all the real light that can be thrown upon such a question can be thrown upon it in a very limited time; that days spent in prolonging the trial would be spent not in making it more probable that the final result was in accordance with the truth, but only in affording exercise for legal ingenuity and in furnishing to the public a subject of morbid and demoralizing interest. Nor is that all. If there is anything at all in the deterrent efficacy of legal punishment, prompt and impressive disposal of criminal cases—in so far as it is compatible with the ascertainment of the truth—is of the essence of the matter. Of every hundred men who, reading of the Crippen case in England, had borne in upon them the solemn and terrible connection between crime and punishment, scarcely one would have been impressed in that way if the result had been merely the final outcome of a long-drawn-out trial of skill between prosecution and defence. It is upon the instinctive feelings of men, not upon a mere cold-blooded calculation of chances, that the impression must be made. A brutal murderer like Crippen sternly and decently disposed of in four days, a swindling promoter like Whitaker Wright swiftly tried and sentenced—these are the things that sink deep into men's minds, and erect in the hearts of the weak and vicious a barrier against their base or criminal impulses.

There is, indeed, nowadays, a more or less firmly held conviction in the minds of many who have devoted their lives to the cause of prison reform, that legal punishment is not a deterrent of crime at all. In the current issue of one of our high-class magazines, the sweeping statement is made that "students of criminology are unanimously agreed that punishment is not a deterrent." That this is a gross overstatement, we need hardly insist; of course, no such unqualified opinion is held "unanimously" by students of criminology. In the abstracts of the papers presented by very advanced criminologists at the recent International Prison Congress at Washington, the idea of deterrence as one of the objects of the penal law is admitted again and again. But what we assert is that, even in the case of those who deny it in form, the idea is admitted in fact, in a score of ways. In the parole system, in the working of "golden-rule" methods under

Chief Kohler—in any of the hundred confrontations of humanitarian theory with the immediate demands of things as they are—the idea of punishment as a deterrent is constantly, though perhaps only tacitly, admitted.

As for the supposed inductive basis of the doctrine, it is astonishing how often the same—and a most inconclusive—argument is used in its support. "It is susceptible of very easy proof," says the magazine from which we have already quoted, "that in countries where and in days when penalties for crime are most severe and are most dramatically executed, then and there crimes most abound. When England, little more than a century ago, punished 125 crimes with death, English was a hundred times as criminal as it is to-day." That this argument, as a basis for the general doctrine that "punishment is not a deterrent," is soaked through with fallacy, is obvious. In the first place, it is one thing to prove that there is no efficacy in punishment so savage and undiscriminating as to lose all moral sanction and to brutalize the population familiarized with it; it is quite another to prove that a penal system tempered by humanity and guided by earnest study is likewise futile. And, secondly, there have taken place in England other changes besides those in the penal law—among them, not only general education and sanitation, but also effective policing everywhere, and abundant illumination of city streets, which a hundred years ago were pitch dark. Most grateful must we be for the work of those who have forced the world to recognize the possibilities of reformation and humane treatment; but neither must we lose sight of the fundamental truth which, in spite of all the abuses of the past or present, underlies the whole system of penal justice.

THE TEACHING OF GREEK.

The announcement that no prize was given this year at Yale for the best entrance examination in Greek because none of the papers came up to the required standard, might mean only that this is an off-year. But with the position of Greek fairly unstable of late in our educational system, every sign is scrutinized for its cumulative effect. An even more striking symptom was the recent recommendation of the highest advisory council at Oxford that Greek should be made optional in the work leading to the B.A. degree. Fortunately, a recommendation of this sort, before becoming effective, must be approved by a large percentage of Oxford graduates, who, we believe, are not ready to cleave asunder long-standing traditions.

Now, it is no secret that in this country the teachers of Greek have partly brought upon themselves the attacks which are proving so troublesome. There is a time to dance, there is a time to laugh, and there is a time to settle "hoti's business." But to give too much time to the last was clearly unwise. Yet grubbing for roots became so perpetual a process that it has taken years of hostile criticism to make any alteration. Not that the consideration of parts of speech is in itself an unworthy employment. Browning's Grammarian "was a man born with thy face and throat, lyric Apollo." That, no doubt, was a time when the discovery of roots meant the winning of new means to search a wonderful, forgotten world; knowledge of language was to bring knowledge of life and of "the glory that was Greece." Yet even to-day he who can look down the long vistas of word development, watching the color of meaning come and go and subtly change, may still feel many a thrill of wonder. The fault lies not in linguistic investigation itself, but in its usurpation of the whole field, and in the transfer of the so-called scientific methods of philology to the study of literature. When the study of literature is made a mere subsidiary to philology, it becomes by definition divorced from life, which is nothing of the sort. The excuse for such error in modern times is the less because of the melancholy examples furnished by the ancient grammarians of Greece. Those who have sought amid their futile work for the gems of lyric poetry, there embedded and and employed solely as instances of metrical or grammatical usage, might, it should seem, have learned their lessons. At least, they have learned it none too well; and many a student alert for stimulating ideas has been repelled and shocked to find the leading scholars of the country still wrestling with the enclitic *de*, when they are supposed to be teaching Plato or Sophocles. The elements of the language should obviously be taught in the secondary schools and matters of higher import in college.

Of late—very lately—there has been some improvement. And here is one instance, at any rate, where the elective system has largely availed. The great majority of undergraduates, if uncompelled, were not going to take Greek under the old conditions. Finally, the shrinkage in numbers, especially in the ranks of really interesting fellows, gave instructors serious pause, and reaction set in. To-day, you may hear professors, with the most severe previous records, talking jauntily about Pindar and Greek athletics. The release from the old bondage has begun; and however humorous at times is the change, for every chain broken there will be much gratitude and probably an increase of attending students. For it ought not to be difficult to interest men in this rich past. In the whole range of human expression Greek language and literature show great qualities which have been unsurpassed elsewhere—above all, infinite adaptability coupled with an unfailing freshness of approach. Some educators, we know, disgusted by features of modern systems, have believed the wisest preparation for present needs to be solely an immersion in the Greek life of the past. Extreme though this view may be, there is a modicum of truth in it.

In some colleges where reform has recently begun in teaching Greek, there has been an embarrassing scramble to import exceptional men. The fact is recognized that the ideal instructor of Greek should be acquainted with pretty much everything else. Such has been the influence of Greece and so numerous are the chances for stirring comparisons. Indeed, it has been found almost necessary to approach ancient times by the less remote, Greek tragedy by Shakespeare, for instance. If amid all its strangeness of expression and of stage device, "Œdipus" can be shown to contain much the same human problem as "Lear," a student will explore the older drama often with the real excitement of discovery. The Greek lyric, too, though expressed in its peculiar outward forms, becomes tremendously vital if seen to manipulate virtually all the themes which have occupied lyric poetry since. And to study Aristotle without observing the manner and times of his influence—the fusion of his ethics and logic all through the Middle Ages with the doctrines of the Christian Church; his theory of poetry and fine art accepted as the final author-

ity at the early Renaissance, and his rules of tragedy converted into a tyranny in the seventeenth and eighteenth centuries—is to take but a small portion of him. And so with every type of Greek literature.

The ideal instructor in such an opulent literature as Greek is, of course, not to be found, for he should possess critical sensibilities of the finest sort and vast intelligence. But if the study of dead forms is replaced by that of ideas we make no doubt that Greek will hold its own even in elective systems. That Greek literature should be held by students too dull to risk is a serious commentary upon either students or instructors—possibly upon both.

PERPETUATING PRIVATE LIBRARIES.

The College of the City of New York is fortunate in having acquired the library of the late Prof. Simon Newcomb. It comes as the gift of an alumnus, who added care to his generosity by providing also a complete catalogue of the books, as well as the shelves to hold them. If it might seem, at first sight, that the City College is not the best possible repository for the highly technical works on mathematics and astronomy which Professor Newcomb collected in his lifetime, two considerations suggest themselves to counteract that feeling. In the first place, the volumes will be accessible not only to the students of the College but to all the specialists in the city who may desire to consult them. It is not at all as if they were placed in some remote library. And there is, moreover, a peculiar fitness in the preservation of Professor Newcomb's books in a broadly democratic institution of learning. For he was a typical democrat himself, in having struggled up to the highest eminence and world-wide fame from humble beginnings, not to speak of his warm sympathy with every forward movement in popular government. It is easy to believe that he would have been pleased at the thought of having his name and life-work perpetuated in the college of a great municipality, free to the children of all its citizens.

No memorial to a scholar or literary worker could be more congruous or significant than the keeping intact of the books with which he had labored and which he had come to love. They are far more than the tools of his trade. Even if they were merely that, they would have acquired personal associations which might well be valued; but there is something special and intimate in the relation which comes to be established between a great student or investigator or writer and his books. As one sees them kept together after he is gone, they seem to be almost a part of himself—certainly a part of his work. His gathering of them year by year; his constant use of them till deepening familiarity made him conscious of each cover and the part of the page on which favorite passages appear; possibly his annotations here and there, at any rate the certainty that he had pored over them and found in many of them the precious life-blood of a master spirit—all this is fitted to evoke a kind of reverence in the presence of such a private library preserved *en bloc*, and to make of it a singularly well-chosen form of commemorating names that we delight to honor.

From the practical side, it is true, difficulties often arise in adding extensive private collections of books to existing libraries. When it is not a case of great rarities, but merely of a working library, the trouble of duplications will arise. Funds for the purchase of books are not so abundant that library authorities may be careless of the fact that one-third or one-half of the volumes of a collection which it is proposed that they should acquire are already on their shelves, in one edition or another. Then there is always the vexed question of housing. Not every one is able to do what Mr. Gladstone did—build a St. Deniols to shelter his books and give both building and contents to the public. When private libraries come into the possession of public libraries, it is usually on such terms of bequest or gift that the volumes cannot be merged with the general stock, but must be kept in a section by themselves. This evidently has its inconveniences sometimes, from the side of space and library administration. Yet sacrifices on either score are well worth while when it is a question, not merely of adding books which have value in themselves, but of erecting a suitable memorial to some athletic scholar or great writer or profound genius, in the shape of his private library kept as a whole for all time. No Boston taxpayer, for example, would grudge the space given up by the Public Library to preserving the books of Prescott. Many of these, of course, are highly valuable in themselves, but there is a peculiar fitness in massing the whole of them in honor of one whose work was an honor to his city, and whose feeling for his own books was really a personal affection. It will not be forgotten that Prescott left directions that his body, before being taken away for burial, should be allowed to repose for a time among the books which had been his prized companions.

Nor should we forget the benefit to the living in thinking of the tribute to the dead. In gazing upon and handling the books of famous men, there may easily come quickening as well as veneration into the minds of young students. With the signs of labor and mastery thus visible before them, their own scholarly ambitions may be stimulated, and their resolves to do honest work made firmer. We do not say that numerous students of the City College will become distinguished astronomers or mathematicians by mere impulse gained from Professor Newcomb's books, but we do say that the very presence of his library, with freedom to use it, may serve to stir the intellectual life and make more intense the moral strivings of many a youth.

THE CENTENARY OF THE UNIVERSITY OF BERLIN.

BERLIN, October 14.

The University of Berlin, next to Bonn the youngest in Germany, is a living memorial of the patriotic idealism and untiring energy which placed Prussia in the lead of the German States, and which found classical expression in the words of Frederick William III in reply to the petition of the University of Halle to be transferred to Berlin: "Das ist recht, das ist brav! Der Staat muss durch geistige Kräfte ersetzen, was er an physischen verloren hat." Berlin was well prepared to become a university town. Since 1700 the Societät der Wissenschaften, organized by Leibnitz and reorganized as the Academie der Wissenschaften by Frederick the Great in 1744, had drawn scholars together in the Prussian capital. The residence of Voltaire at Sanssouci as literary mentor of Frederick the Great, and the king's interest in the advancement of enlightened learning, had lifted the standards of culture in Berlin. The romantic movement, with its wide interest in foreign literatures, philosophy, and art, had awakened a cosmopolitan

spirit, and the lectures of Fichte and A. W. Schlegel had quickened the public interest and taste, making the Spree a literary centre rivalling the Pleisse and the Ilm. In the course of the four decades preceding the founding of the university, a number of scientific institutions had sprung up in Berlin.

Like the other great German universities, Berlin had a specific *raison d'être*. While Prague had been founded as the pioneer to bear the learning of Paris and Bologna to German lands, Heidelberg to lay the foundations of humanistic culture in the Rhineland, Leipzig as a refuge for the revolting professors and students of Prague, Wittenberg and the other Protestant universities to foster the humanistic culture of the Reformation, Göttingen as a centre of the new enlightenment of the early eighteenth century; Berlin was to be the academic centre of the patriotic spirit and scientific inquiry stimulated by Fichte's "Addresses to the German Nation," Schleiermacher's "Essays on Religion," and Alexander von Humboldt's scientific expeditions, and was to unite the scattered educational institutions of the city in a modern and more cosmopolitan university. With this new academic foundation began a new epoch in German national science and politics, which was to banish the old particularism and provincialism into the background of the German past. The plan of the university began to assume definite form as early as 1807 in the writings of Fichte, who gave special emphasis to philology and history; and of Schleiermacher ("Gelegentliche Gedanken über Universitäten"), who emphasized the importance of science. The actual organizer of the university was Wilhelm von Humboldt, the new Minister of Instruction, who in a notable essay ("Über die innere und äussere Organization der höheren wissenschaftlichen Anstalten in Berlin") gave expression to that memorable principle of public instruction which should be written over the portal of every university:—"That the State is always a hindrance as soon as it interferes with university affairs." This splendid plea for university liberty, both in learning and teaching, has brought forth golden fruit in the state education of Germany during the century just passed.

The jubilee commemorating the centennial of the university began October 10 at 6 P. M. in the Cathedral, with a sermon by Dr. Kaftan, dean of the Theological Faculty, from the text, "Now there are diversities of gifts, but the same Spirit" (1 Cor. xii: 4), in which the preacher made a strong plea for the integrity of university instruction. This was followed by a supper to the delegates in the university building, and a torchlight procession in which some three thousand students, representing the several student societies, participated, affording a splendid spectacle as they marched down Unter den Linden and formed in front of the university, singing the stirring old song, "Gaudeamus Igitur." A delegation of five was sent to greet the rector, who made an address in reply.

On the following morning, October 11, at ten o'clock, the first public function took place in the new Aula, in that part of the old palace formerly occupied by the Royal Library. This was the most important of all the official functions. After the army and navy officers and the diplomatic corps had found their places in the centre of the Aula, the academic senate and faculties on the left and the foreign delegates on the right, the Emperor and his court, with the Crown Prince of Bavaria as the royal guest, entered and occupied the seats in front of the rostrum. The Rector, Prof. Dr. Erich Schmidt, the great Germanist, opened the ceremonies with an address of welcome, at the close of which his Majesty the Emperor ascended the rostrum and delivered a memorable address on the achievements of the university and the significance of academic research, making a strong appeal to the wealthy friends of the university for donations in the interest of science, and enforcing this appeal by the announcement of gifts already received for the founding of new institutes of research. These gifts aggregate some eight million marks ($2,000,000). This feature of the Imperial address was particularly interesting and familiar to the Americans present. The Rector responded, concluding his words of thanks with the famous words from "Götz von Berlichingen": "Es lebe die Freiheit" and "Es lebe der Kaiser!" The assembly joined in the salute by rising and singing: "Heil Dir in Siegerkranz." The new Minister of Public Instruction, Von Trott zu Solz, congratulated the university in the name of the state, and presented as the jubilee gift of the state the remodelled Frederician Library, with the new Aula, to the university for academic purposes, and emphasized the importance of the university as a foster-centre of patriotism. The Chief Burgomaster of Berlin then delivered an address of greeting on behalf of the Prussian capital, to which, as to the previous addresses, the Rector made a fitting reply.

There followed the addresses of the speakers of the several delegations in the order given below. Each delegation filed in after its speaker, presented an engrossed address from its university, bowed to the Emperor, and shook hands with the Rector, who announced the name of the place represented. The delegations passed in the following order: Prussia, the other states of the German Empire, Austria-Hungary, Switzerland, the Romanic group, Great Britain and colonies, the Netherlands, the Scandinavian group, the Slavic group, Greece, the United States of America, Japan. After these university delegations came the technical universities, the Royal Prussian Academy of Science, the other academies and learned societies, the Gymnasia and other schools of Berlin. The function closed with the announcement of donations and addresses by the Pro-Rector, a closing address by the Rector, and "Gaudeamus Igitur" sung by the assembly.

At three o'clock in the afternoon the jubilee dinner (Festmahl) was served to six hundred guests in the Exposition Park. Among the many notable points in the addresses given at this dinner, a few may be mentioned. The speech of the Imperial Chancellor contrasted the gloomy days of Prussia in 1810 with the triumphant German nation of to-day. "He that strives in any field toward intellectual progress takes a political part in the greatness of the nation." The Minister of Public Instruction exhibited his familiarity with the history of the university by recalling the great names on the faculty roll, which stand out as landmarks in the history of research. After dinner the guests adjourned to the Royal Play-House to witness the performance of Mozart's opera, "Die Hochzeit des Figaro," which was given at the command of the Emperor, who sat in the royal box.

The second official function began at ten o'clock on the 12th of October in the new Aula. The programme included the historical address by Professor Lenz, and the conferring of honorary degrees. The most notable name among the honorary doctors was that of his Majesty the Emperor, who accepted the degree of Doctor of Laws. The recipients of honorary degrees were seventy in number, fifteen in the Theological Faculty, seventeen in the Law Faculty, thirteen in the Medical Faculty, and twenty-five in the Philosophical Faculty. Among this number were five Americans, two in the Law Faculty, one in the Medical Faculty, and two in the Philosophical Faculty.

In the afternoon the garden festival was held in the Exposition Park. An interesting feature of the programme was the historical floats, representing the life of the students and of the city of Berlin in 1810. Some ten thousand tickets were issued for this festival. In the evening the great Kommers was given in the halls of the Zoölogical Garden. Some eight thousand students, old and young, participated in the festivities, while several hundred spectators looked on from the gallery. Addresses were made by Cand. Phil. Deiters and Biller, and by Prof. Dr. Roethe, dean of the Philosophical Faculty.

The closing function of the jubilee, not printed on the official programme, was the dinner given by the Emperor in

the White Hall of the Castle in Berlin to some two hundred guests, including representatives of various universities and academies. The Emperor and the Empress, with ten members and guests of the royal family, occupied the centre of the great rectangular table, while the two hundred guests were arranged on both sides. The Imperial Chancellor was seated opposite their majesties, with the Minister of Public Instruction on his right and the Rector of the University on his left. Thus closed the university's first century as it had begun a hundred years before, with a royal act, but this time with Prussia's king no longer trembling before the Corsican, but triumphing as the German Emperor, and still the generous patron of liberal learning.

As one reads the roll of the great names of Berlin professors, and considers the growth of the number of students from 256 in 1810 to 9,242 in 1910, and attempts to compass the manifold activities in the various institutes of the university, one must feel that the words of Clemens Brentano's Festkantate dedicated to the university have been amply fulfilled:

> Der Ganzheit, Allheit, Einheit,
> Der Allgemeinheit
> Gelehrter Weisheit,
> Des Wissens Freiheit
> Gehört dies königliche Haus!
> So leg' ich auch die goldenen Worte aus:
> *Universitati Litterariæ.*

The jubilee also called forth a great mass of literature relating to the university. The two works issued under the auspices of the university are "Geschichte der Königlichen Friedrich-Wilhelms- Universität zu Berlin," by Max Lenz (in two volumes), and "Berlin in Wissenschaft und Kunst," by Prof. Dr. Wilhelm Paszkowski. These works, and a bronze medal struck off in honor of the jubilee, with an equestrian statue of Emperor William II, were presented to the delegates by the university authorities.

MARION DEXTER LEARNED.

NEWS FOR BIBLIOPHILES.

The most important collection of books from the press of Benjamin Franklin which has appeared in the auction room since the sale of the first part of Gov. Pennypacker's library will be offered in Philadelphia by Stan. V. Henkels on November 11 and 12. It forms a part of the library of the late William Fisher Lewis, which includes also a perfect copy of the "Altkin" Bible (Philadelphia, 1781), the first Bible in the English language printed in America; Thomas's "Pennsylvania and West New Jersey" (1698); William Penn's "Some Account of the Province of Pennsilvania in America" (1681); "The Frame of the Government of the Province of Pennsylvania" (1682), and his "Letter to the Committee of the Free Society of Traders" (1683); two of the exceedingly rare Army Lists of Officers serving under Sir William Howe, 1777 and 1778, printed in New York by Macdonald and Cameron; a number of Revolutionary tracts, etc. Among the books printed by Franklin are three of the very rare "Treatics with the Indians of the Six Nations," being the Treaties held at Philadelphia in July, 1742, at Albany in October, 1745, and at Lancaster, in August, 1762. The last of these seems to have been unknown to Hildebrun, who records five others—Philadelphia, June, 1748; Philadelpbia, November, 1747; Lancaster, July, 1748; and Carlisle, October, 1753—all printed by Franklin, besides two or three more printed by Andrew Bradford. These thin folio pamphlets must have been printed in a small number. Gov. Pennypacker did not have a single specimen. Bishop Hurst had two and one duplicate.

Several books printed by William Bradford are included in the Lewis collection; one, Daniel Leeds's "News of a Trumpet Sounding in the Wilderness" (New York, 1697), is of excessive rarity, no copy having appeared, apparently, in the auction room since Brinley's, which brought $185 in 1880. There is a copy in the library of the Pennsylvania Historical Society, one in the E. D. Church collection, and two in the Lenox Library. One of the latter, evidently intended for the English market, is the identical book, except for the title, which begins "A Trumpet Sounded Out of the Wilderness of America," and has the date 1699 instead of 1697.

Another portion of the library of the late E. B. Holden, being his books relating to the Fine Arts, will be sold by the Anderson Auction Co. on November 9, afternoon and evening. Smith's "British Mezzotinto Portraits," 5 vols., and portfolio of plates; Beraldi's "Graveurs du XIXe Siècle," 12 vols., and other important reference books are included. Besides his art works there are several books containing specimens of early American engraving, a collection of almanacs and several rare eighteenth-century New York pamphlets.

On November 10 and 11, the Anderson Co. sells a large collection of books on natural history including Blanco's "Flora de Filipinas," 5 vols., with 477 colored plates; Johnson's "Ferns of Great Britain," 2 vols.; Pratt's "Flowering Plants of Great Britain," 6 vols.; Seebohm's "Monograph of the Turdidae or Family of Thrushes," 2 vols., folio, with 149 colored plates; R. Bowdler Sharpe's "Monograph of the Paradiseidae or Birds of Paradise," parts i-vi only, with 60 colored plates; and several hundred less notable though valuable works on birds, plants, shells, etc.

On November 7 and 9, the Merwin-Clayton Sales Co. will sell a collection containing Lincolniana; a long series of magazines containing articles by E. A. Poe, and books about him; books on the West, etc. On November 10 and 11 they offer a collection of miscellaneous books.

In Boston, on November 15, 16, and 17, C. F. Libbie & Co. will sell the libraries of the late Dr. William Everett of Quincy, Massachusetts, and of his father, the Honorable Edward Everett. The most notable book in the sale, and the most notable to appear in the auction room this season, is a perfect copy of the first edition of Eliot's Indian Bible, printed at Cambridge by Samuel Green and Marmaduke Johnson, the New Testament being finished in 1661, the Old Testament in 1663. Except that, for some unknown reason, the diamond-shaped printer's ornament has been cut from the New Testament, the copy is fine and perfect. It has the Indian title-page and is one of the copies printed for the use of the Indians. Being a thick and heavy book and subject to hard usage by the Indian students, copies are almost always imperfect. No such copy as this has appeared in the auction room for many years. It is one of the most famous of American books and may be expected to bring a high price.

Among the other rare Americana in the Everett library are some of the standard State Histories such as Haywood's Tennessee, both series (1823); Marshall's Kentucky (1824); Martin's Louisiana (1827); Martin's North Carolina (1829); and Proud's Pennsylvania (1797-98). Mather's "Magnalia Christi Americana," first edition (1702); John de Laet's "Novus Orbis" (1633); and Ramusio's "Navigatione et Viaggi" (1554-65) are important books of earlier date. Audubon's "Birds of America," 7 vols. (1840-44); Michaux and Nuttall's "North American Sylva" (1854), and Wilson and Bonaparte's "American Ornithology," 13 vols. (1808-33), are important natural history books, with colored plates.

Correspondence.

PRIZE POETRY.

TO THE EDITOR OF THE NATION:

SIR: I for one am weary of the charge that the students of our universities are unintellectual. If meant relatively it is unjust, for those who make it forget that many of our boys belong to a class which never until this generation has been so much as interested in higher education. If meant absolutely it is nonsense. Intellectual and æsthetic powers make less noise in the college world than physical ones, partly because they are less noisy. They exact more from the circle that admires them, and, consequently, that circle is small. But they are more frequent and more highly estimated in college than the superficial observer suspects. I know no better evidence of this than the series of Yale prize poems, which, by annual award, has this year reached the number of thirteen.

Since the competition was established in 1898 by Prof. Albert S. Cook, seven undergraduates and six graduate students, one of them a woman, have won the prize. On the committee of award have been such poets and critics as Gilder, Woodberry, Johnson, Perry, and More, with professors of English from many universities. As many as seventy manuscripts have been submitted in a single competition, and the winning poems have been regularly published in like format. Two have been five-act dramas, three have been collections of sonnets, one a romantic narrative, two dramatic dialogues, three dramatic lyrics, and two of them collections of lyrics grouped about central themes. Some of these are much above mediocrity, none below it. When assembled, they make up a volume of recent American verse so varied and so indicative of mind and imagination that a reviewer cannot regard them merely as poetical exercises, of value for youth; he must see in this series a vigorous attempt to express

tho poetry which lies in an American university.

As such, they deserve a reading which shall be as respectful and more sympathetic than would be given to an equivalent amount of professional verse, for it is our young men who should see tho visions of which tho next great poetry will be made. After such a reading, after a labor to reduce their dissimilarities of style and merit to a unity which might be called a Yale prize poem, I find sincere admiration and a vague disappointment as the two incongruous results.

The admiration is sincere. It would be difficult, I believe, to select as much verse from thirteen numbers of a standard magazine and find there more dignity than in these college productions. It would be still more difficult to bring together from such a source so much evidence of poetical labor nobly attempted and honestly done. In felicity of expression, in the manipulation of metre and of form, the comparison would be less favorable, but it is precisely in such matters of technique that we can afford to wait until a greater maturity than prize poetry permits of. If one may use "worthy" of poetry as one uses it of men, then in worthiness this verse takes rank with work of a much greater pretentiousness. The critic who seeks evidence of intelleetual power among students will find it here. And yet to be really critical one must set one's ideal of college verse higher than a difficult intelleetual task well done.

How much in these poems is there of the flame of poetry that should flicker or blaze in all youthful hearts? It is when we ask this question that vague disappointment creeps in. Such a disappointment is not new. It has often accompanied the reading of selected poems which some industrious reviewer has chosen from the books of the year. But with college verse, if no more natural, it is more poignant. For you know both throng and singer. You have felt, though dumb, what he must feel; crude and uninterpreted as were your own eollege days, you think that by a more expressive heart they might be interpreted. Out of those blind hopes, those painful uncertainties, those shocks, thrills, and ardors, passion, you believe, might find a way to expression, especially if gifted with elear verse such as these authors possess. But passion and these fruits of passion the prize poems most lack. I must speak with qualification, for what is wholly true of most is searcely true of some; yet certainly I find, again and again, correetness, calm, or at most a timid romance, in place of the daring self-expression, the warm sensuousness, the impetuous liberty which were associated, in the last great poetie period, with youth.

I do not wish to be misunderstood. It is not *Sturm und Drang*, not emotionalism or sentimentality that I seek. Young men of our generation neither weep nor rave—even in private; why then should they do so in verse? But the peculiarly intense relations of youth with the world are no less vivid in the experience because, outwardly at least, we take them more calmly. In many respects we are more impressionable at twenty-one than were our great-grandfathers. Such things as beauty, heroism, the inspiration of great books, friendship, and love must move us, as them, strongly in the time of youth. And therefore in reading these poems one is more surprised that intensity is ever absent than impressed by an occasional passionate appeal. Has budding love so little color that a young poet can afford to write with coldness on other themes? Or, if the old fires have lost their heat, has the death-struggle of our faith little significance, for of it—except for an exeellent sermon in verse—one hears only a few weak and wandering cries! Does the grip upon power mean little for a youth entering upon a world where there was never before so much to conquer? It is well enough to say, "I cannot compare with an old man" in skill, in poise, in restraint; but if youth writes poetry at all it should spring from passion. It should express his mind if he has one; it should at all eosts speak for his burning heart.

Some will object that it is not a lack of passion which is at the root of the difficulty, so much as a powerlessness to give form to the intensities, which burn themselves away into the ashes of a correet but passionless verse. Is not this an unjustifiable inversion of the truth? Will not the poet, when worthily inspired, find out some way whieh, even through crudities, will let the fire be seen? Can any student of technique equal for an instant him who passionately desires to express? I am borne out in this by the evidence of the poems themselves. The technique is not worst, but best, where feeling is the strongest, and many a colder poem shows more skill than is needed to give some hint at least of a soaring imagination or a tumultuous heart.

And yet there is one technical difficulty which has impeded, though it could not prevent, the flow of emotion into this prize poetry. It is a difficulty, or better, a misfortune, which belongs to all contemporary poetry, but by the young poet is it most keenly felt. I mean the laek of a style for poetry of our period, the eclecticism in our choiee of models which makes our poetio literature a sample book of all the ages. In turning over these prize poems one passes from Shakespeare to Stephen Phillips, from Sophocles to Browning, from the twentieth century to mediævalism. It is like walking down a new residence street in an American eity, where architects have tried their hands at all the styles that have been and some that never will be—save that there is nothing so monstrous in this poetry as are half the houses in a city block.

One is willing to be *laudator temporis acti* after such a perusal; would almost welcome back the easy days of the eighteenth century, when a young poet could see his first steps marked out before him in the heroic couplet, and know what he first must learn. I am not proposing that future prize poets should write in couplets, nor do I dare to name a style for the twentieth century upon which they should form their work, although I am sure that if there were one we should have better poetry from our young poets. And yet the very medley of these poems suggests that, in default of a modern style, any tried and proven mode of expression is an aid and a relief. And, indeed, the very best of these Yale poems are unquestionably those which are written in a style and often with a model that one can name. They are imitative; the author treads where greater men have trod; but this has kept his feet more sure, has freed his faculties for self-expression. For an apparent loss of originality there has been a real gain in freedom and in power. If he has chosen to write, like one poet of this series, in a measure used by Hood of a story such as Poe used, he has known his medium from the start, and, like the Greek sculptor, has been able to add his own individuality to the type. If I were writing of rhetorieal exercises instead of prize poems, I should say that this imitation of a well-defined style was the only way to begin. As it is, in spite of the dangers of slavishness and heterogeneity, it is the best and safest way, and may result in all but the most original poetry. Tennyson, and many another great name, is warrant for asserting that it may lead even to that. Yet those who adopt it should follow their leaders consciously, and not, as often in this series and out of it, half unawares. It will not do to eatch at the form and miss the spirit, or seize upon the subject-matter and fail to master the form. To imitate the mannerisms of a great poet, and to write in his style, are two different things; it is the latter, naturally, that I advocate.

A sincere attempt to choose and learn a style would prevent some lamentable encounters with literary forms too difficult for the writer. The drama, for instance: no half-hearted imitation of the Elizabethans will make narrative dramatic. A deeper consideration of the masters of the five-act form, or of the nature of a romantic story, would, perhaps, have been profitable for two authors in this series; might have led them to believe that one thing at a time is enough, especially when dramaturgy is one and poetry the other. Or the sonnet—the sonnet in a sense is a style; perhaps that is one cause of its irresistible fascination for young poets. But its difficulty need not be reëmphasized here. Only one of the three groups of sonnets among the prize poems is really successful, and there it is a passionate reverence for the strong figures of the Odyssey whieh beats the verse into form.

Perhaps the most thoroughly poetical of the Yale poems is a fiery dramatic lyric of Ixion, lover of Juno, bound to his wheel, and turning eternally in endless pain. There is no difficulty in naming the style of this poem, for it is written in that modification of Keats and Tennyson which Stephen Phillips made popular in the nineties, and will bear comparison with the original. But here there is a new element of success. "Ixion" suggests our own imagination and our own time in a fashion not common in this poetry. It makes one wonder whether contemporaneousness for our college writers is not a possible alternative to the choice of a classic style. The author of "Ixion" owes some of his success to his imitation of a practised poet, and to the comparative freshness of that poet's style; and yet a further reading of the prize poems strengthens the conclusion that if he had relied upon contemporaneousness alone he would still have gone far. For instance, there is one poem whieh is excelled only by the best of those imitative in style, a poem on a mediæval theme, yet thoroughly modern in its feeling for the mystical charms of faith. "Passio XL Martyrum" is the title. A dramatized martyrdom of a Roman centurion and the thirty-nine Christians he renounces all to join, it has the studied simplicity, the some-

what too mediæval *naïveté*, the throbbing undercurrent of significance which Maeterlinck and Hauptmann, for example, have taught us to expect in such a tale. It lacks glory of language, in fact it can scarcely be said to have a style, and so far fails perhaps of complete effectiveness, but it grips the imagination nevertheless, and partly, I am sure, because it touches an imagination which is specifically of our day. If I am right, any poetical effort which sprang from a feeling for our problems, our loves, our aspirations, and our hates would have the same effect. The task is difficult, for it is hard to find the poetry at the heart of this generation, and it is still harder to extract it from the brief and artificial period embraced in the few years of college life. But one feels, nevertheless, that if our college poets can be contemporary, which does not mean, of course, to write of football and Young Men's Christian Association work; if they can be expressive of the subtle emotions which are moving their own or the greater world, they may succeed greatly in spite of the unhappy lack of a modern style.

Nothing is more dangerous than to generalize upon the virtues and defects of thirteen poems and groups of poems written in as many years, and by authors who had in common only the environment of university life. The delicacy and the difficulty of the task may excuse the lack of more specific criticism in this review. And yet the conclusions I have outlined above do seem to rise inevitably to the surface of this eddy in Hippocrene. One feels convinced, to repeat, that young poets are most effective when they choose a style with as much sincerity as good architects must use. Or, if they wish to be free from the shackles of precedent, if they wish to strike out boldly for themselves, that they are most sure of success when they link themselves determinedly with the world that is their own, our own, and no earlier age's. By such means their hearts and our own may be unlocked, the pulse of the young men felt beating.

And yet, though these aids to inspiration seem to have been truly helpful in the case of these Yale poems, should we not, even in proposing them, ask first for more frankness and for more passion from the college poet? Surely until there is passion flinging from the heart it is scarcely time to give counsel as to subject or form. There *is* such passion in Americans, though, save for Whitman, we have been so ignorant of ourselves, or so heavy of speech, that it has seldom found vent. Much of this fire of our life burns in our universities. It spurts with jets of passing flame in many quaint and many excellent fashions—at the games, in friendship, in loyalty to the college which gave us our social and intellectual birth. But the American in college is shy in the presence of his emotions and reticent beyond the reticence of a none too expressive world outside. All forms of sentiment but the athletic he distrusts, and hides æsthetic speculation with his prayers and his mother's picture in his inmost chamber. He reads far more poetry than he confesses; he thinks far more, but seldom dares declare it his own. It is for the poet to give this frozen world relief. It is for the poet to speak out with passion if there is fire at the heart of our colleges. He may blunder, but if his need to speak is strong the proper means of expression will be grasped by him more readily than by another. I for one would be sure of finding, sooner or later, sufficient technique, if we could count upon intensity in the writers of our prize poems.

PRONOUNCING SPANISH.

TO THE EDITOR OF THE NATION:

SIR: A correspondent (the *Nation*, October 20) regrets that misinformed travellers speak slightingly of the language used in Spanish America; as if it were on a level with pidgin English, whereas, he says, it is good Castilian, and he refers to authorities. Inasmuch as Spanish-America has produced writers who have commanded the respectful attention of Spain's literary circles, he is correct, but the emphasis should not be on Castilian. Even uneducated Spanish-Americans speak their language with far more grammatical correctness than Americans speak English after several years in school, but the Castilian pronunciation is not used, just as it is not used in Andalusia, whence so many emigrated to the New World.

"Castilian" is not a language, but a particular way of pronouncing a language. Thus, in Spanish, pica type is called *cicero;* the Castilian pronounces it *thithero,* while the Andalusian and the Spanish-American pronounce it *sisero.* The most marked difference is in the sound given to soft c and to z. The Andalusians did not bring along and perpetuate the pronunciation used in their province by the ignorant, which consists chiefly of dropping the final s or substituting for it the guttural j. As some Americans affect "English" English, and succeed quite well if they speak slowly, and repeat the word now and then, so sometimes an Andalusian or a Spanish-American may mouth after the Castilian fashion and succeed quite well, provided he does not become excited. He may write *cizaña* and say *thithaña;* but if his temper rises, whatever he may write, he will drop the mushy Castilian and say *sisaña.*

UNIVERSITY ADVERTISING.

TO THE EDITOR OF THE NATION:

SIR: In these latter days of university advertising, when rumors are abroad that a Western institution is about to employ even the moving picture machine to flash its alluring university "life" before the wondering gaze of the prospective freshman, it may be of interest to your readers to see the very first recorded attempt to advertise a university.

In the spring of the year 1229 a very serious town and gown riot in Paris occasioned a temporary break-up of the great French university. Masters and students left Paris and dispersed to other old seats of learning, or established new ones. Many came to Toulouse in southern France and laid the foundation of a new university, which soon was recognized and privileged by the Pope. Towards the end of the year 1229, the masters of Toulouse sent out the following circular letter to advertise the newly founded institution. A copy of the original Latin letter was found appended to the fifth book of the "De triumphis ecclesiæ libri octo" of John of Garland, an Englishman, who was a professor of grammar, and had come from Paris to Toulouse in 1229. In all probability John of Garland was the author of the letter. This supposition is strengthened by the numerous classical allusions in the letter. By 1229 interest in the classics had almost died out at universities, but this very John of Garland stands out as virtually the sole humanist among university professors of his age.

The following is a translation of the circular letter, with some minor omissions:

To all the faithful in Christ, and especially to the masters and students wheresoever they may be studying, who see this letter, the whole body of masters and students of the University of Toulouse, which is just being established, wish a long life of happiness and a blessed death.

No undertaking has a solid foundation which is not established firmly in Christ, the foundation of Holy Mother Church. With this in mind, we have made the greatest effort to lay, in Christ, the durable foundation of a philosophic university at Toulouse, upon which, along with us, let others build, and may their good intention to do so be illuminated by the shining rays of the Holy Spirit. . . .

In order that the difficulty of beginning such work may not deter you, we have prepared the way, we have done the first irksome tasks, we unfurl before you the banner of security, so that with us preceding as your armorbearers, you, as soldiers of philosophy, may be strong to fight more securely by means of the art of Mercury, the shafts of Phœbus, the lance of Minerva. Moreover, that you may have confidence in the stability of the new institution, we have taken up this work with the authority of the church. For our Moses, the lord cardinal legate in the kingdom of France, next to God and the lord Pope, our leader and protector and founder, was so eager to get things started that he decreed that all studying at Toulouse, both masters and students, should obtain full pardon for all their sins. Therefore, on this account, and because of the regularity of lectures and disputations which the masters engage in more diligently and more frequently than they did at Paris, many students pour into Toulouse, seeing that the flowers have already appeared in our land and the time for pruning of trees is at hand. Hence, let no Deidamia delay our modern Achilles, champion of philosophy, from going up to another Troy, of which some modern Statius of Toulouse again might say:

Omnis honos illic, illic ingentia certant
Nomina; vix timidæ matres aut agmina cessant
Virginea; hic multum steriles damnatus in annos
Invisusque Deo, si quem hæc nova gloria segnem
Præterit.

Therefore, let each worthy individual assume the part of bold Achilles, lest the timid Thersites obtain the laurel promised to the noble Ajax, so that, now that the war is over, he may at least admire this school of soldiers and this school of philosophers. In order that students may better appreciate the splendor of Toulouse even apart from its university, they should know that this is a second land of promise, flowing with milk and honey, where the abundant pastures are green, where groves of fruit trees are in leaf, where Bacchus reigns in the vineyards, where Ceres is supreme in the fields, where the agreeable climate was preferred by ancient philosophers to that of all the lands of the earth. . . .

In order that you may not bring your mattocks to unfruitful and uncultivated fields, the masters teaching at Toulouse have removed the thistles of rustic ignorance, the thorns of rough unfruitfulness, and other obstacles. For here theologians from their pulpits instruct the students, and on the crossroads they preach to the common people; logicians in the liberal

arts teach the beginners in Aristotle; grammarians fashion the tongues of the stammering children to the analogies of language; organists soothe the ears of the populace with the honey-throated organ; teachers of law praise the Justinian code, while near by the teachers of medicine vaunt Galen. Here the books on natural history, which have been prohibited at Paris, may be heard by all who wish to investigate thoroughly the innermost recesses of nature. What, therefore, will you lack? Scholastic liberty? By no means; for you will enjoy your own liberty subject to the control of no one. Perhaps you fear the hostility of a violent people or the tyranny of an unjust lord? Have no fear, for the liberality of the count of Toulouse has given us adequate security, both concerning our salary and our servants going to or from Toulouse. If, however, they should suffer loss of goods at the hands of robbers in the dominion of the count, he will pursue the criminals to our satisfaction, by means of the civic police, just as he does for citizens of Toulouse. . . .

We must not fail to dwell upon the urbanity of the citizens of Toulouse. It even seems as if urban wit had here made a compact with the soldiery, as well as with the clergy. Therefore, if you should wish to marvel at even more good things than we have foretold, leave the paternal roof, sling your wallets on your backs, so that you may learn the meaning of this moral of Seneca: "I shall regard all lands as mine, and mine as belonging to all, because I shall live as though I realized that I was known of all men; for it is noble in man to attempt lofty things, and to plan even greater things."

Our boldest modern institutions might learn a lesson from this mediæval master of advertising.

LOUIS J. PAETOW.

Urbana, Ill., October 20.

"BACK OF."

TO THE EDITOR OF THE NATION:

SIR: In the "Minutes of the Commissioners for Detecting and Defeating Conspiracies in the State of New York," recently published at Albany, I find this sentence in an entry dated November 9, 1780:

Col. Anthony Van Bergen appeared before the board and informed us that a number of disaffected persons have of late associated back of Cooksakie.

"At the back of" is standard English, but "back of," for "behind," I have always regarded as a comparatively modern Americanism. Does any one know how early it came into usage?

C. M. ANDREWS.

New Haven, Conn., October 27.

Literature.

PEARY'S GREAT ADVENTURE.

The North Pole: Its Discovery in 1909, under the Auspices of the Peary Arctic Club. By Robert E. Peary. With an Introduction by Theodore Roosevelt, and a Foreword by Gilbert H. Grosvenor, Director and Editor, National Geographic Society; with numerous illustrations, including eight full-page reproductions of photographic enlargements colored by hand. New York: The Frederick H. Stokes Co. $5 net.

It would be hard to give a satisfactory rational explanation of the interest which mankind has taken in the search for the North Pole. The time was when polar exploration gained something from the accessory idea of a "northwest passage," practicable for commerce; but that idea had its life finally chilled away, and polar exploration went on. No appeal to human greed, no likelihood of rich prizes to tempt the lust for gold and land, lies behind the sacrifice of time and energy and comfort and life which at last reached its goal in the voyage described in the volume before us. And how easily one might belittle it all, if so disposed. A United States flag sticking in a mound of snow, gradually to be whipped to pieces by the chill winds, and by it a bottle containing, over the discoverer's signature, these words:

I have to-day hoisted the national ensign of the United States of America at this place, which my observations indicate to be the North Polar axis of the earth, and have formally taken possession of the entire region, and adjacent, for and in the name of the President of the United States of America. I leave this record and the United States flag in possession.

Passing beyond the point determined to be the Pole and then back again, the discoverer reflects that he is treading a trail "which none had ever seen before or would ever see again." Though various phenomena indicate the presence of a large body of land, or at least shoals, somewhere in the yet untraversed Arctic wastes, yet the soundings nearest the pole have shown deep water, and it seems established that the "polar pack" of ice on which our record of discovery and possession stands is itself not stationary in position. Clearly, the only material gain in sight from "our new possessions" (the Philippines are, of course, dislodged from that title) consists in the millions which we shall save from the impossibility of their fortification.

And yet if it were only as a demonstration of human persistence in the search for knowledge, only as a display of the hold which an *idea*, with no promise of material gain, can maintain upon the human imagination, from century to century, the adventure would be worth the cost. That there is something more than this, something of positive scientific value to be deduced from the observations of Peary and his assistants, we may, of course, take for granted, though sufficient time for the careful analysis and evaluation of such material has not as yet elapsed. In the present volume we have simply the story of the voyage related for the general reader, and it is a story of intense interest, effectively told. "I knew it was my last game upon the great Arctic chess-board," says the author in his opening chapter. He was fifty-three years of age, a point beyond which no one, perhaps, with the exception of Sir John Franklin, has ever attempted the rigors of Arctic exploration. It was success now, or final defeat in the effort to which nearly a quarter-century of his strong manhood had been devoted. Each succeeding failure had been carefully studied for its record of avoidable mistakes, until he felt that all that human foresight and intelligence could contribute to success in this closing venture had been done. But there was one untoward possibility not capable of elimination. Again, as in the trial of 1905-1906, a season of violent and continued winds might disrupt the polar pack and leave him separated from his supporting parties, to face the alternative of retreat or starvation. As it turned out, the forces of nature withheld their dreaded veto, and human skill and persistence, schooled by the well-studied lessons of previous failure, at last won the day. After reading the whole story one cannot fail to realize how exceedingly slim is the possibility that any mere Arctic adventurer, devoid of scientific training and of scant experience in such work, with no trained assistants and no carefully detailed preparations, should by any lucky combination of circumstances beyond his own control ever attain to the goal which it took Peary such long years of well-directed effort to reach. "Fortitude and endurance alone," says Peary, "are not enough in themselves to carry a man to the North Pole. Only with years of experience in travelling in those regions, only with the aid of a large party, also experienced in that character of work, only with the knowledge of Arctic detail and the equipment necessary to prepare himself and his party for any and every emergency, is it possible for a man to reach that long-sought goal and return."

Of course, the fact of a successful outcome does not make the record of sledging experiences, crossing fresh leads, battling with pressure ridges, building igloos, killing weak dogs to feed to their more fortunate survivors, etc., essentially different from that of previous expeditions. It merely gives an added zest to the reader, which no amount of quotation could carry through the medium of a brief review. We have already said that the story as such is effectively told, and it is hardly necessary to say more on that point. An interesting side discussion deals with the question how nearly the location of the Pole can be determined. The character of the instruments, the personal accuracy of the observer, and the number of observations taken, are all involved. All thought of a mathematically exact determination Peary demolishes in one brief sentence: "If there were land at the Pole, and powerful instruments of great precision, such as are used in the world's great observatories, were mounted there on suitable foundations and

used by practised observers for repeated observations extending over years, then it would be possible to determine the position of the Pole with great precision." An ordinary single observation at sea, we are told, with sextant and natural horizon, as taken by ship masters, is assumed to give the observer's position within about a mile. But that is within the latitude of ordinary navigation. The special difficulties of observation in high latitudes, due to the extreme cold, are usually overestimated, Peary thinks. The difficulties to the observer himself he does not regard as great if the weather is calm and the temperature not exceeding 40 degrees below zero Fahrenheit. Yet he admits that there is room for discussion and decided difference of opinion as to the amount and character of error which may creep into such observations from the effect of the cold upon the instrument. As for the observer, the great difficulty is with the eyes, subjected as they have necessarily been to days and weeks of unremitting daylight, much of it brilliant sunlight upon ice and snow, and strained by the task of continually setting the course with the compass. After all this, "the taking of a series of observations is usually a nightmare; and the strain of focussing, of getting precise contact of the sun's images, and of reading the vernier, all in the blinding light of which only those who have taken observations in bright sunlight on an unbroken snow expanse in the Arctic regions can form any conception, usually leaves the eyes bloodshot and smarting for hours afterward." He readily admits that during a series of observations under such conditions the eyes become "extremely tired, and at times uncertain," but he is personally inclined to think that an allowance of five miles for error due to all these causes is equitable. With that in mind, he crossed and recrossed, in various directions, the area within a five-mile radius of the spot which his observations indicated as the Pole, and set his face toward home again convinced that "no one except the most ignorant will have any doubt but what, at some time, I had passed close to the precise point, and had, perhaps, actually passed over it."

The author has subjected himself to a wise restraint as to the episode which set the civilized world by the ears a little more than a year ago. It is not difficult to pick out passages here and there which might have been expressed differently, or left out altogether, if the claims of Dr. Cook had never been put forth; but his name is mentioned only once or twice, and then in no controversial relation. If so many thousands of intelligent people all over the world had not lost their heads to some extent during those weeks, one might find it in his heart to censure the successful explorer because he did not show the calmness of temper to which his knowledge of the facts entitled him, and which would have insured to him a far richer harvest of the possible fruits of his victory than it has been his lot to reap. As it is, the attitude of every right thinking man must be one of thankfulness to Peary that he has kept his pages free from any revival of the controversy and of ardent desire that the unhappy fiasco may pass out of the public consciousness as soon as possible.

The introduction, by Theodore Roosevelt, is merely a personal tribute to Commander Peary, embodying an inferential denial of the possibility that the claim of another to the discovery could be true. That this is only inferential, and not a tremendous thwacking with the linguistic club, proves the possibility of wise self-restraint even in quarters where it is not usually manifested. The "foreword," by Dr. Grosvenor of the National Geographic Society, is a brief sketch of polar exploration, from the time of Henry VIII of England to Peary's successful voyage. He pays to Peary a high compliment for unusually good care of his men, as shown by the fact that of the hundreds whom he has taken into the perils of the Arctic ice, he has brought back safe and sound all but two, and the lives of these two were lost in accidents for which the commander was in no way responsible. Of the several appendices, the most important is by R. A. Harris of the Coast and Geodetic Survey, and deals chiefly with the soundings and tidal observations of Peary and others as bearing upon the probability of the existence of a large tract of still undiscovered land, somewhere in the Arctic basin. The conclusion is:

> Taking various facts into consideration it would seem that an obstruction (land, islands, or shoals) containing nearly half a million square statute miles probably exists. That one corner lies north of Bennett Island; another, north of Point Barrow; another, near Banks Land and Prince Patrick Island; and another, at or near Crocker Land.

In its material makeup the book is worthy of its place as the record of the triumph of polar research. The subject has in it the possibility of only one successful competitor of Commander Peary's volume. That prize will fall to the man who can write an adequate history of the "North Pole Idea" in the human imagination.

CURRENT FICTION.

Whirligigs. By O. Henry. New York: Doubleday, Page & Co.

The knowledge that O. Henry has told his last story, and shaken the ashes from his pipe, and gone home to rest makes one linger over this book with a distinct sense of regret. A definite and positive personality has withdrawn from the little circle of those who break up the tedium of contemporary fiction. He sometimes raised a doubt as to the quality of the pleasure he imparted, but he always made an incisive attack upon the attention—there was a magnetic masculinity in him. His irreverence for linguistic purity we may deplore, but should not censure apart from its purpose; like the stylistic insolence of the later cantos of "Don Juan," it is an indispensable means to a proposed end. It was a part of his relish that he combined brilliant technical skill with a business man's contempt for the girlish graces and solemn gravities and decorums of art. "Get your effect," was his maxim, "and with God—or the critics—be the rest." Why pour out ink like water to suggest a summer evening in the country when you can accomplish your object with "katydids and moonlight and long drinks and things out on the front porch"? His effort to attain a speech both rich and curt may be fairly related to his master characteristic: he seems to have combined an omnivorous appetite for the colors and forms and sensual surfaces of the actors with an experienced and fundamental contempt for the show.

"Whirligigs" is half-derisive journalese for what the tragic novelist of Wessex would call life's little ironies—men and their affairs are here presented as serio-comic playthings gyrating unaccountably in the winds of chance. That the unexpected always happens is the essence of the plot, because it is the essence of that informal philosophy of "the people" which underlies the author's work, and gives a point and value even to his most trivial illustrations. Most of the twenty-four stories in this collection, many of indifferent merit, turn on the unforeseen influences of propinquity and environment, and on the tricky perversities of human nature. A man and a woman in an island exile, believing themselves murderers, are drawn by a curious sympathy to the brink of marriage; suddenly discovering themselves technically guiltless, they flee from each other as with the wings of a dove. Don Señor Johnny Armstrong, gold-hunter, rescues an opera singer from the Indians high in the Andes; near the snow line he sees himself and the woman invested with spiritual qualities answering to the grandeur of mountain heights; after a descent of three days they commune agreeably, but at the moral level of the foot-hills; at the sea level she is singing "coon-songs" and he is playing billiards. A Cumberland mountaineer and his old wife spend their last five-dollar bill to procure a divorce; as soon as it is granted they experience a change of heart; the divorced husband in disguise robs the justice-of-peace of the sundering bill and later restores it to him as a fee for tying the knot again. This,

the most complete whirligig, is a little masterpiece: perfectly symmetrical, intensely poignant and vital, incredibly brief.

The Other Side: Being Certain Passages in the Life of a Genius. By Horace Annesley Vachell. New York: George H. Doran Co.

This is not Mr. Vachell's first study of the "artistic temperament," but it is decidedly his best. In one respect it differs strikingly from all other studies of the kind with which we are acquainted. Its action, physical or spiritual, turns in no wise upon the "other woman" consideration. David Archdale goes the way of most of the world by marrying a girl who is much too good for him, so far as moral stability is concerned; but her rival with him is the world, and not at all the flesh or the devil. His genius is for music. He has been trained in an austere school by his adopted father, organist in a provincial Abbey. He becomes a man and a married man without having been diverted, or even strongly tempted, from his serious ambition to compose an oratorio. The great work is begun, but its progress is arrested by the discovery that it is unlikely to find a publisher or producer. On the other hand, the greatest music-publisher in England discovers in Archdale a facile talent for melody which promises a golden harvest. He becomes a famous composer of popular songs and musical comedies. He despises this work, and intends to make it a mere stepping stone to independence and the opportunity to work as he pleases. But the city life and the cheap success get hold of him, so that when the time of his revolt comes, he is no longer able to compose in the lofty strain. His mind is full of the melodious tinklings which have brought him fame of a sort. His wife dies, virtually a sacrifice upon the altar of his worldliness.

From this point the story strikes deeper. The married pair have agreed that whichever dies first shall return, if possible, to the survivor. Archdale waits in vain for some sign from "the other side." Years pass: his popular success and his worldly habits increase upon him. His only daughter grows up petted and neglected by him. Then he is smashed up in a motor accident, picked up for dead by two French peasants, and pronounced dead by medical authority. Thereupon follows his experience of "the other side." He finds himself confined to a sort of limbo, unable to find the spirit of his dead wife, or to leave the region of earth. At last his human pride is broken, and the voice of his wife sends him back to earth to fulfil his mission. On his return to consciousness, a return regarded as miraculous, he mistakes that mission. Peace comes to him only when he finally recognizes it as a matter of simple human duty, and not of more or less selfish ambition. Fiction has made repeated attempts of late to deal with the adventures of the soul immediately after the death of the body. Most of them have seemed fantastic or even whimsical. Mr. Vachell's interpretation is impressive in its simplicity and dignity.

Cumner's Son. By Gilbert Parker. New York: Harper & Bros.

Upon the evidence of these tales, the rill of Sir Gilbert Parker's talent would seem to have become a slender trickle indeed. "Magazinable" they all are, no doubt, but what one of them can honestly be judged more than that? There is little fire or spontaneity in them: they appear to have been turned out by a capable workman, and that is all. Their sole element of freshness consists in a shifting of scene to more distant portions of that empire whose glories Sir Gilbert, like his great original, Kipling, so loves to celebrate. The Union Jack here sheds its blessing upon the southern seas: these tales have to do with the triumphs in love, war, and administration of imperial Britain at one of the farther bournes to which her energetic sons resort. Though the native is not invariably disposed of in these tales as a nigger in the most invidious sense of the word, he is seen to be really admirable only in the display of a dog-like devotion to his English betters. Even that display is not always what it seems, as is ironically shown in the story of the native police officer who protects a Jew from a howling mob of outraged Moslems, not out of fidelity to English authority, but because the Jew owes him the price of a donkey, and cannot be permitted to slip out of life without paying up. The other note is struck in "An Epic in Yellow," the tale of a faithful Chinaman, whose supreme reward for his devotion to an English master is somewhat quaintly rendered in the form of a Union Jack for a shroud. But in "The High Court of Budgery-Gar" lynch law is frankly invoked as the last resource of Anglo-Saxon against nigger. Most of the tales are of "storiette" brevity; but the title-story attains the proportions of a "novelette." Odd sizes seem the fashion just now. Cumner is the British Governor at "Mandakan," and his son is destined by way of various daring and romantic adventures to become "Dakoon," or supreme ruler, of that tropical realm. He may be commended to admirers of that blond and blue-eyed hero upon whose exploits the sun is never permitted to go down.

The Paternoster Ruby. By C. E. Walk. Chicago: A. C. McClurg & Co.

It is a little disheartening at the end of this detective story to find our suspicions of the ruby confirmed. It really was stolen from an Eastern temple, and the usual sly Orientals—all Orientals are born with detective powers that put Sherlock Holmes to the blush, and a memory that holds a thousand years as yesterday—are on its track. The real protagonists in the contest, however, are two giant wheat speculators of Chicago, one of whom, a lover of rare gems, stole away the other's sweetheart in the old days and has ever since been the victim of the other's relentless vengeance. The detective is this time a central officer—neither a wizard nor an ass, as central officers commonly are in fiction, but a man who blunders and succeeds like ordinary mortals. He falls in love, unfortunately—when will writers learn that the so-called "love interest" is almost necessarily out of place in detective fiction? For the rest the story starts well and maintains its legitimate interest well to the end. The surprise in the dénouement is justified and the game with the reader played fairly—except for the Orientals who, however, are kept in the background.

COMPARATIVE LITERATURE.

Three Philosophical Poets: Lucretius, Dante, and Goethe. By George Santayana. Harvard Studies in Comparative Literature, Vol. I. Cambridge, Mass.: Harvard University.

A few words from Professor Santayana's "Conclusion" will show the ideas for which the three poets stand in his philosophical criticism, and the relative value he ascribes to them:

> Goethe is the poet of life; Lucretius the poet of nature; Dante the poet of salvation. Goethe gives us what is fundamental—the turbid flux of sense, the cry of the heart, the first tentative notions of art and science, which magic or shrewdness might hit upon. Lucretius carries us one step farther. Our wisdom ceases to be impressionistic and casual. It rests on understanding of things, so that what happiness remains to us does not deceive us, and we possess it in dignity and peace. Knowledge of what is possible is the beginning of happiness. Dante, however, carries us much farther than that. He, too, has knowledge of what is possible and impossible. He has collected the precepts of old philosophers and saints, and the more recent examples patent in society around him, and by their help has distinguished the ambitions that may be wisely indulged in this life from those which it is madness to foster—the first being called virtue and piety and the second folly and sin.

There is a stream of subtle reflection in the three chapters in which he discusses the source and meaning of Lucretius's naturalism, of Dante's idealism, and Goethe's romanticism. To one reader at least he is most successful in his treatment of Goethe, both in his appreciation of the wealth of beauty and experience in "Faust" and in his clear recognition of the final lack of "steady purpose or standard" which makes the

poem almost fatuous (the critic himself uses this harsh word) at the end. One suspects that Professor Santayana is perhaps keenest in his analysis of "Faust," because, beneath his classical sense of form, his own philosophy is an effort, not wholly successful, to escape from the romantic illusion. He is least successful in his treatment of Lucretius, seeming, to us at least, to fail in his attempted reconciliation of the poet's apostrophe to Venus with the Epicurean philosophy of atoms, and to fail also, though in less degree, in his interpretation of what Lucretius has meant to mankind and may still mean.

At bottom the comparative failure of the chapters on Lucretius and Dante—comparative only, for they are filled with suggestive comment, particularly that on Dante—is complicated with a lack of central veracity in the critic's own philosophy. Lucretius and Dante believed intensely in their vision of the world as a reality; it was no conscious creation of their imagination, but a revelation and an appeal to the will. This earnestness of belief, this clutch of reality in the imagination, is to Professor Santayana a mode of feeling utterly inconceivable—so we judge from his books. Truth in his philosophy is not something apprehended, but something created by the mind; he is, so to speak, a pragmatist of the imagination as Professor James was a pragmatist of the will. So he observes that mankind is in a state of barbarism until it has "removed the centre of its being, or of its faith, from the will to the imagination"; and that "the true theory [of the world] like the false resides in the imagination." At the end he sums up his criticism thus:

> To play with nature and make it decorative, to play with the overtones of life and make them delightful, is a sort of art. It is the ultimate, the most artistic sort of art, but it will never be practised successfully so long as the other sort of art is in a backward state; for if we do not know our environment, we shall mistake our dreams for a part of it, and so spoil our science by making it fantastic, and our dreams by making them obligatory. The art and the religion of the past, as we see conspicuously in Dante, have fallen into this error. To correct it would be to establish a new religion and a new art, based on moral liberty and on moral courage.

There is in this philosophy a disquieting touch of "make-believe"; we are to know the hard facts of prosaic life, and then we are to weave about them our ideas as in a play and imagine these ideas to be true. This, at least, is the only way in which we can understand Professor Santayana's theory of the imagination. But great literature does not as a matter of fact grow in this fashion. Lucretius and Dante were great, not in spite of their faith, but because they believed that what they saw was in the likeness of a reality in which their conscious imagination had no part. There is, to say the truth, something approaching the naïve in Professor Santayana's notion of the perfect poet (he has never yet existed) of the "new religion" and the "new art," who shall take his dreams very seriously, yet know there is nothing obligatory about them. Mankind is not likely ever to take home to its heart and conscience a poetry built on so shadowy an idealism as this. Curiously enough, the element in "Faust" to which Professor Santayana objects is really just such an empty idealism which Goethe carried over from his immersion in romanticism.

Professor Santayana's taste goes right where his philosophy goes wrong, and we enjoy him most when he is more the literary critic and less the systematic metaphysician. There is nothing, perhaps, in the present volume quite so critically penetrative as the chapter on Browning and Walt Whitman in his "Poetry and Religion," but we could from these three essays string together columns of subtle comment and fine appreciation. We must be content with this example from the essay on Lucretius; it will bear reading more than once:

> Horace, usually so much slighter than Lucretius, is less cursory here. Not only does he strike much oftener the note of friendship, but his whole mind and temper breathe of friendliness and expected agreement. There is, in the very charm and artifice of his lines, a sort of confidential joy in tasting with the kindred few the sweet or pungent savour of human things. To be brief and gently ironical is to assume mutual intelligence; and to assume mutual intelligence is to believe in friendship. In Lucretius, on the other hand, zeal is mightier than sympathy, and scorn mightier than humor. Perhaps it would be asking too much of his uncompromising fervor that he should have unbent now and then and shown us in some detail what those pleasures of life may be which are without care and fear. Yet, if it was impossible for him not to be always serious and austere, he might at least have noted the melancholy of friendship—for friendship, where nature has made minds isolated and bodies mortal, is rich also in melancholy. This again we may find in Horace, where once or twice he lets the "something bitter" bubble up from the heart even of this flower, when he feels a vague need that survives satiety, and yearns perversely for the impossible. Poor Epicureans, when they could not learn, like their master, to be saints!

In the end a word is due to the series which this volume opens. If it can maintain the excellence and character of these essays it may do something to uphold the credit of "comparative literature"—a phrase which, unfortunately, is beginning to gather about it associations with various sophisms and pretensions of education.

Correspondence on Church and Religion of William Ewart Gladstone. Selected and arranged by D. C. Lathbury, In two volumes. New York: The Macmillan Co. $5 net.

Mr. Gladstone had a strong bent for the Church and, but for his father's wishes, would have taken orders. If he had, he would infallibly have been one of the great ecclesiastics of his day. One would not say so confidently that he would have been a great theologian. Yet to theology and church questions he devoted an amount of time, all his life, which seems enormous in view of his other absorbing occupations; and the copious outpourings of these two volumes show what a mass of material Lord Morley had to pass by in writing the life of the statesman. As he explained, he was compelled to leave unwritten "the detailed history of Mr. Gladstone as theologian and churchman." To make good that necessary omission, Mr. Lathbury has selected and grouped letters covering a stretch of sixty years and relating to all the great religious controversies that arose in Gladstone's lifetime. His present editor has supplied a candid and useful introduction to each chapter, tracing the development of Mr. Gladstone's thought, especially as related to the Established Church, and showing where it was but a natural growth and where but apparently inexplicable turnings forced upon him by political stress. A clear line of severe consistency can hardly be drawn between the youthful Gladstone of "The State in its Relation to the Church" and the man who destroyed the Irish Church and came to speak confidently, at the end of his life, of Disestablishment in England as certain to come, though not in his time. But through all the long sweep of discussion and legislation affecting education and religion, this at least comes out in the correspondence, that Gladstone came to every question with remarkable intellectual powers and a personal devoutness that is beyond dispute. Some of the letters to his children are indirect but convincing testimonies to that inbred and unaffected piety which sometimes made his enemies mock, but which enabled his friend, Dean Church, to say that it was a simple fact that the Prime Minister went each day to the business of the nation from his knees.

And it must be said that it was a vital as well as grand conception of the Church which Gladstone cherished. While valuing externals, he always struck for the essentials. Thus Mr. Lathbury remarks: "Where spiritual gains and losses were concerned Mr. Gladstone had no faith in statistics. Lists of new churches, of additional services, of young men's clubs, of mothers' associations, of all the nominally religious machinery which makes so fair a show on paper, left him unmoved by

the side of the fact that the incoming tide was steadily covering fresh ground." And how far he was content from simply having the Church proudly lift her mitred front, as Burke wished her to do, may be inferred from a letter to his father, written in 1847, in which he spoke of the kind of Protestantism with which he had "no sympathy whatever":

It is the Protestantism which grew into fashion during the last century and has not yet quite grown out of it; that hated everything in religion which lived and moved; which lowered and almost paganized doctrine, loosened and destroyed discipline; which neglected learning, coolly tolerated vice, and, as it has been said, was never enthusiastic except against enthusiasm; which heaped up abuses mountain high in the shape of plurality, non-residence, simony, and others more than I can tell, drove millions into dissent, suffered millions more to grow up in virtual heathenism, and made the Church of England—I say it with deliberate sorrow—instead of being the glory, in many respects the shame of Christendom.

His fullest expressions on all these subjects, Gladstone made to his friends, Hope and Manning. Both of them, to his grief, went over to Rome. But of neither did he say or think anything comparable to what he wrote of Newman, at the time of the latter's becoming a Catholic. Indignation almost overbore sorrow in Gladstone's letter to Manning in which he said that Newman stood before the world "a disgraced man." This feeling of resentment wore away with the years. Gladstone came to a more lenient view of Newman's character, and even of the step which carried him to Rome and the Cardinalate; while no tribute to the man on his literary side could be heartier than that which Gladstone paid in 1866, when he wrote to Sir F. Rogers:

I do not know if Newman's style affects others as I find myself affected by it. It is a transporting style. I find myself constantly disposed to cry aloud, and vent myself in that way, as I read. It is like the very highest music, and seems sometimes in beauty to go beyond the human. . . . It calls back to me a line in which, I think (but it is long since I read it), Dante describes his own *religious* ecstasies: "Che fece me da me uscir di mente."

Joan of Arc. By Grace James. New York: E. P. Dutton & Co. $3.50 net.

The case of Joan of Arc enjoys, besides its many other forms of appeal, the special charm resulting from the fact that it can never be settled. No theory explains all the facts, and there are not facts enough thoroughly to ground any theory. Such as they are, the facts are substantially agreed upon by scholars, and the general public has become familiar with them in connection with the recent recognition of Joan by Rome. These facts have the property of bringing out, as it were by chemical reaction, the philosophic system of the mind that comes in contact with them. In recent biographies it can be seen what excellent re-agents they are for the exhibition of the pietistic habit, the patriotic, the positivist, the materialistic, the psychotherapic, the common-sensible, the sentimental. Miss James's book (and Mr. Shandy would have inferred it from her name) gives us the pragmatic. The part of her book that deals with what Professor James used to call the "existential judgment," is clear and sufficient. Even Mr. Lang admits that her statements of fact are generally correct. Hers is probably, therefore, the most satisfactory popular account of Joan in English, for Mr. Lang's spirited narrative is too polemic to be thoroughly intelligible to a reader who does not realize from having read M. Anatole France what is really the matter with his author.

When it comes to the "proposition of value," Miss James sweeps away with a vigorous pragmatic gesture those difficulties which have at the same time charmed and baffled so many students. "Although the theory of medical materialism may be new, true, and interesting, it is of no account in judging the value of Joan of Arc's religious experiences. Discussions as to the health of her mind and body are in this connection utterly beside the mark. If the Maid had been stolid, placid, a sturdy peasant lass, these facts would affect the worthiness of her mission not at all, were it in itself not credible and profitable. And if her mission is proved true, credible, and profitable, what can it matter if she was visionary, emotional, hysterical, or if her father was subject to curious dreams?"

The War in Wexford. By H. F. B. Wheeler and A. M. Broadley. New York: John Lane Co. $4 net.

This is an interesting book. It tells, chiefly in the words of contemporaries, the thrilling story of the fiercest struggles of that bloody rebellion against the English rule in Ireland in the latter part of the eighteenth century, which led on to the Act of Union in 1800-1. The authors have made liberal use of three sources, which have apparently not been at the command of any of the numerous previous historians of the conflict. These are the correspondence of Arthur Annesley, Earl of Mount Norris, the Detail Book of the loyalist body of Camolin Yeomanry, of which he was the moving spirit, and the journal of Mrs. Isabella Brownrigg of Greenmount, County Wexford, covering the period from May 26 to June 21, 1798, when the troops under Sir John Moore relieved Wexford, and the battle of Vinegar Hill was fought. The horrors of this desperate struggle are not surpassed in the annals of modern history, though some of the episodes of the Peninsular and Carlist wars in Spain may be regarded as equalling them; and the government forces were fully as guilty as were the rebels. Wholesale massacres in cold blood of defenceless prisoners by the insurgents were more than counterbalanced by brutal floggings to extort information, and even the occasional application of still more inhuman torture on the part of the loyalists. The practices of covering the heads of prisoners with caps lined with heated pitch, and of cutting cruciform furrows in the hair, filling them with gunpowder, and setting fire to it, were not unknown.

That these events have been recorded in a spirit of bitter partisanship by both sides can be no cause for surprise; and it is greatly to the credit of Messrs. Wheeler and Broadley that whenever they have desisted from quoting the sources, and permitted themselves an original opinion, they have maintained on the whole a strictly judicial attitude. They approve of the policy of men like Abercromby, Cornwallis, and Moore, whose "justice was tempered with mercy," rather than that of the adherents of violent coercion, like Camden and Lake; but, on the other hand, they emphasize the necessity of suppressing the revolt with a strong hand, and are unquestionably correct in asserting that, whatever their earlier mistakes, the English saved Ireland "from herself in the latter days of the eighteenth century, and from the iron fetters with which Jacobin France would most surely have bound her." In that last clause lies a truth which most of the passionate bewailers of Ireland's past wrongs are too apt to forget. We hold no brief for the English administration of that island, but we maintain that the difficulties of it can never be fairly estimated without constantly bearing in mind the fact that Ireland had been a place of refuge for English malcontents and pretenders, and an obvious and usually sympathetic base for an attack by French and Spanish foes since the accession of the House of Tudor. At no time was the closeness of the connection between Irish revolt and hostile continental invasion clearer or more menacing than in the last decade of the eighteenth century.

The Coming Religion. By Charles F. Dole. Boston: Small, Maynard & Co. $1 net.

The Gospel and the Modern Man. By Shailer Mathews. New York: The Macmillan Co. $1.50 net.

The rôle of the prophet is traditionally difficult. To have any value, visions of the future must be based on just appreciation of the past as well as keen analysis of present tendencies. Too often seers merely declaim their enthu-

siasms and set them forth as prophecies, and in their pronouncement of that which is to be the wish is father to the prediction. Dr. Dole's description of the religion of the future is of this sort. His spirit has been moved by a few of our modern doctrines, and forthwith he declares that these are to be the doctrines of the coming generations. He has not inquired as to what beliefs have held their power through the ages, working their way into the consciousness of nations and races, and holding their own through centuries of political and social revolution. Neither has he sought with any diligence for those religious beliefs which to-day are strongest in the great masses and which give clearest evidence of persistence.

Dr. Dole declares that the message of the coming religion will be that the world in which we live is God's world, therefore a good world, all appearances to the contrary notwithstanding; that God is the father of all men, whether they realize it or not; that men are more religious than they suppose, and that no violent struggles for spiritual attainment, such as the great saints of the past have experienced, are really necessary. The old idea of the world as a conflict between good and evil was altogether mistaken, and there is no need of a religion of redemption. Joy is to be the keynote of the new religion, not deliverance from evil.

Unless the experience of the ages goes for naught, this is altogether too light a gospel to hold the allegiance of men's hearts. It does not meet the deeper needs of life or the sadder realities of human experience. The men of the past have not found error an impotent thing and injustice no real power, as Dr. Dole declares them, and there are no present signs that future generations will be more favored. We need not go back to Calvin's Institutes, but we are likely for a long time to come to be faced with the sad realities of evil deeds and smitten consciences with which those serious volumes attempt to deal.

As an advocate of a milder faith, Dr. Dole is not tactful. He stirs opposition when he needs to conciliate, as when he sets down the gospel miracles as acts of magic and defines the atonement as a doctrine that "a God died on a cross to buy entrance to paradise for Christians, and especially the orthodox variety of Christians, while all Buddhists, Mohammedans, and heretics were thrust down into hell." Not thus are the orthodox converted, and, indeed, it may be doubted whether any one will be moved to accept a religion which is "no extraordinary thing."

Professor Mathews is more penetrating in his description of a gospel adapted to modern life. "Our modern life," he says, "needs a call to moral discontent. We are too complacent, too ready to think that we are good because we are prosperous. Much of the appeal made to-day in the more progressive pulpits overlooks the fact that multitudes of people are bad. God is a Father, we are told, and men should come to him because he is loving. That is true; but no religion has ever long gripped humanity that has deceived itself into believing that men are better than they are." Not only does Professor Mathews see clearly the moral needs of the world, but he has also a discerning historical perspective. He estimates fairly the religious values of the past. His essay is an endeavor to go back to the moment when Christianity was first preached as a distinctive message, interpret it accurately by just historical criticism, and translate the message thus derived into the terms and symbols of the present. He does all of this with unusual success, and in a manner to inform and conciliate the pious of the older sort, while asserting for men of progressive spirit a gospel of moral earnestness and of high religious aspiration.

A History of Verona. By A. M. Allen. Edited by Edward Armstrong. The States of Italy Series: General Editors, Edward Armstrong and R. Langton Douglas. New York: G. P. Putnam's Sons. $3.50 net.

Miss Allen is manifestly of the opinion that history is a science and not an art, and that, therefore, the whole duty of the historian consists in the collection, digestion, and ordering of facts. Everything else is mere surplusage. With this view we might have no quarrel. If we are to understand the past, facts are, after all, the only things which can really help us, and it is certainly no part of the business of science to make a popular appeal. We are rather weary of writers on things Italian who impudently thrust their twentieth-century personalities and twentieth-century preconceptions between us and the Middle Ages, and we are prepared to extend a hearty welcome to a work which deals exclusively with facts. Unfortunately, however, the range of Miss Allen's facts is hardly wide enough for the title of her book. "A History of Verona" she calls it, but it is a history of Verona with the Veronesi left out. Apparently, she has never resided in the town, and, although she tells us that she has twice visited it, she would seem to have found but little time for studying the idiosyncrasies of the inhabitants. After reading her book through from end to end we know no more of the specific characteristics of the Veronesi, whether ancient or modern, than we did before we opened it. All her facts are drawn from books and manuscripts; study of codices, not intercourse with the people, has been her means of preparation for the task she has undertaken; and we venture to suggest that in a second edition, the volume should be called "A *Political* History of Verona." It is as such that we propose to review it.

Now, a political history of a mediæval town must be judged exclusively from the point of view of the student. If it does not satisfy his requirements, it is useless. It can have no other *raison d'être*. And here Miss Allen does not fail us. Within its limited field her work is worthy of all praise. Not only has she read virtually everything that has ever been published on Verona, whether in Italian, German, French, or English, but she has also made extensive original researches among the archives of Verona, Venice, and Mantua. She is scrupulously accurate, and so skilfully has she marshalled her facts that her book may even please the general reader, though it certainly was not written for him. In one particular only does she fall below the highest standard, and that is in the matter of references. As a rule, these are all that can be desired, but, now and then, we come across an assertion which we should be glad to have the means of verifying. A case in point will be found on page 15, where she deals, all too briefly, with those *consorterie* or private associations out of which, according to the most recent theory, the Italian Communes are supposed to have developed. A footnote citing her authorities would have been very welcome; also, on page 100, her fugitive allusion to "reprisals" (*rappressaglie*) might well have been supplemented by a reference to the standard work of Professors Del Vecchio and Casanova. In a book of this character authorities ought to be cited not only frequently but at every step.

The last two chapters are devoted to the painting, sculpture, and architecture of Verona. They are entirely correct and unimpeachable, but, like the historical chapters which precede them, they throw no light upon the character of the Veronese people. If we may borrow a phrase of Prof. Langton Douglas's, Miss Allen seems to "regard the House of Life as though it were divided into air-tight and emotion-tight compartments." Her art chapters, for anything they have to do with the rest of the book, might almost as well have been published under a separate cover.

The volume is illustrated with maps and photographs and contains a serviceable bibliography. The index occupies no less than nineteen pages, but it is not altogether satisfactory. The following are a few of the subjects mentioned in the text, but omitted from the index: Agriculture, S. Bernardino, Gambling, Games, Prisoners of War, Reprisals, Roads, Strolling Players. *Corte bandita* also should be included, if only with a cross reference to *curia*, an alternative title with which many are unfamiliar. These, however, are comparatively slight blemishes in a painstaking

and scholarly work which does no discredit to the excellent series to which it belongs.

Notes.

Cassell & Co. have a third edition of John Foster Fraser's "Australia: The Making of a Nation." The volume contains fifty-six illustrations from photographs.

D. Appleton & Co. announce for early publication "Reminiscences of Rosa Bonheur," edited by Theodore Stanton, and "Corporation Finance," by Edward S. Meade.

The Glasgow Scottish History Exhibition will display literature connected with Burns, Allan Ramsay, and Walter Scott.

The *English Review* of November contains the censored act of Laurence Housman's new play, and "Paris Nights" by Arnold Bennett.

A book which discusses the relation of the general historical setting of the Old Testament narratives to Egyptian history will be issued shortly by the Society for the Propagation of Christian Knowledge. Its title is "Egypt and Israel," and the author is Professor Petrie.

Dr. Johannes Strickler, who died recently at Berne, was the author of a "History of Switzerland," and of treatises dealing with special periods of Swiss history.

F. J. Britton is now engaged upon a new edition of his "Old Clocks and Watches and Their Makers," and would be glad to have additions and corrections sent to his home, Silverdale Avenue, Westcliff-on-Sea, Essex, England.

"A Guide to Reading in Social Ethics and Allied Subjects" is the title of a unique bibliography which has been prepared through the coöperation of more than twenty teachers in Harvard University. Each instructor has contributed a list of the more noteworthy books in his special field, and in almost every case has added a brief criticism or analysis. The book will be published by the university early in November.

Prof. John E. McFayden, recently appointed to succeed Prof. George Adam Smith in the chair of Old Testament at the United Free Church College, Glasgow, is engaged upon the Epistles and Revelations, which are to appear in a single volume, and which form a part of the series of Commentaries on the New Testament.

By mistake the title of Mrs. John Martin's new book, published by Baker & Taylor Co., was announced by us as "Parlor Socialists"; the announcement should have read "Is Mankind Advancing?"

The United Company of New York will issue this month "Beautiful Art in Beadwork," a book purporting to give instructions for making purses, dress trimmings, beaded slippers, etc.

"Crow-Step" is the title of a romance by Georgia Fraser, which is promised shortly by Witter & Kintner of New York.

The University of Chicago Press has in its announcements of forthcoming books: Educational: "The Public School," by Ella Flagg Young; "Recent Developments in Agricultural Education," by Benjamin M. Davis; "The Higher Education as a Training for Business," by Harry Pratt Judson. Literary: "Elkanah Settle: His Life and Works," by Frank C. Brown. Philosophical: "Pragmatism and Its Critics," by Addison W. Moore; "Some Phases in the Development of the Subjective Point of View during the Post-Aristotelian Period," by Dagny G. Sunne; "The Psychology of Ritualism," by Frederick G. Henke. Biblical and religious: "Introduction to Religious Education," by Theodore G. Soares; "Christian Ethics," by Gerald B. Smith; "The Psychology of Religion," by George A. Coe; "Ethics of the Old Testament," by Hinckley G. Mitchell; "Child Mind and Child Religion," by Edwin D. Starbuck; "The Finality of the Christian Religion," part ii, by George B. Foster; "The Hebrew Prophets or Patriots and Leaders of Israel," by Georgia L. Chamberlin; "Heroes of Israel" (Teachers' Manual), by Theodore G. Soares. Historical: "The Greek Theatre," by Roy C. Flickinger.

Frances Hodgson Burnett's new story, "The Secret Garden," after appearing serially in the *American Magazine*, will be issued by Frederick A. Stokes Co.

Wessels & Bissell Co. have been appointed agents for the publications of Harvard University. The current publications will be carried in stock in New York.

Among the books soon to come from the press of G. P. Putnam's Sons are "The Great Illusion: A Study of the Relation of Military Power to Economic Advantage," which is an amplified edition of Norman Angell's pamphlet, "Europe's Optical Illusion"; "African and European Addresses," by Theodore Roosevelt; "The Constitution and Law of the Church in the First Two Centuries," by Adolf Harnack; "Primitive Christianity," Vol. III, by Otto Pfleiderer; "The History of Medicine," by David Allyn Gorton; "The Orator's Manual," by George L. Raymond; "The Writer," by George L. Raymond and George P. Wheeler; "The Historic Mohawk," by Mary R. Diefendorf; a handsome edition of Sterne's "Sentimental Journey," with water-color drawings by Edward Hopkins, and "The Clipper Ship Era," by Capt. Arthur H. Clark.

The same house, acting as American representatives of the Cambridge University Press, announces the publication of the following volumes: "The Bacchants of Euripides and Other Essays," by A. W. Verrall; "The Romantic Movement in French Literature" (traced by a series of texts selected and edited by H. F. Stewart and Arthur Tilley); "Lanarkshire" (Cambridge County Geographies), by Frederick Mort; "Nottinghamshire" (Cambridge County Geographies), by H. H. Swinnerton; "The Acts of the Apostles" (the Smaller Cambridge Bible for Schools Series), by H. C. O. Lanchester; "The Gospel According to St. Mark," revised from the edition of C. F. Maclear, in the series the Smaller Cambridge Bible for Schools; "Selections from the Confessions of St. Augustine," newly translated by W. Montgomery, and "The Imperial Civil Service of Rome," by H. Mattingly.

Some members of the bibliographical staff of the *Publishers' Weekly* office have been at work during the past summer on a classified directory of "Private Libraries in the United States." It is planned to arrange the material in three alphabets. The first will be by names of collectors, with addresses and some mention of the collector's specialty; the second will be geographical, by States and cities; the third, topical, showing under each subject the names of all who have similar tastes. The little volume will probably not be ready before the end of the year, so that names of collectors not yet represented may be included, if sent in during the next month. The names of owners of purely professional libraries, those relating to law, medicine, or theology, will not be included, unless the collection is rich in some special subject; for instance, a law library strong in, say, "admiralty law" would be included; a medical library with exhaustive lists on "Tuberculosis," "X-rays," etc.; a theological library with "Liturgics" as a marked feature would find place in the list.

The *National Geographic Magazine* for October opens with some impressions of the Portuguese colony of Mozambique, in East Africa, by Mr. O. W. Barrett of the United States Agricultural Department. He describes it as one of the richest countries in the world in agricultural possibilities, and also one of the least known. He gives a favorable account of the natives, for "the farther away from civilized centres we went the more *respectable*" the natives became. An account of a trip in the interior of Asia Minor, to study the problem of its gradual sterilization in the past twenty centuries, is given by the well-known traveller, Ellsworth Huntington. He shows conclusively that it was not due to the fact that the inhabitants gave up the cultivation of the soil to become nomads, but to the deterioration of the soil itself. To use his words, "it is not the people who have nomadized the land, but the land which has nomadized the people."

Volumes XV to XVIII of Scribner's memorial edition of George Meredith bring us "The Tragic Comedians," "Diana of the Crossways," "One of Our Conquerors," and "Lord Ormont and His Aminta." The first has very appropriately for frontispiece a photogravure of Ferdinand Lasselle, whose adventures with Helene von Racowitza gave Meredith the plot of the novel. "Diana" has for illustrations the portrait of the author at the age of seventy-two, from the etching by Mortimer Menpes, and a photograph of the Crossways Farm House. Meredith, aged sixty-nine, in the photograph taken by Mrs. H. P. Sturgis appears in "One of Our Conquerors."

Bohn's Library, of G. Bell & Sons, still holds up its head as the chief collection of uniform editions, and a new volume is always a little event in the world of letters. One can only regret that the publishers ever abandoned the old quaintly stamped covers for the now characterless style. The latest issue contains Robinson's translation of "The Utopia of Sir Thomas More," with the original Latin text of the first edition (1516), Roper's "Life of More," and a few of More's letters. The editing has had the care of George Sampson. In the case of the "Life" he has twice collated the four MSS. in the British Museum, once for the folio in the Chiswick Library of Noble Writers (1903), and a second time for this reprint. Mr. Sampson's text differs only in matters of detail from Singer's text (1817 and 1822), which has hitherto been the

standard. Singer modernized the spelling, whereas Mr. Sampson preserves the old orthography througbout—a doubtful advantage. Mr. Sampson's notes, at the bottom of the pages, are excellent for their brevity and appositeness. A. Guthkelch contributes an Introduction and Bibliography. Altogether the edition, not omitting the type and paper, is thoroughly satisfactory.

Sixteen heroes appear in M. I. Ebutt's "Hero-Myths and Legends of the Britisb Race" (Crowell). The roll includes Beowulf, the Empress Helena, the Emperor Constantine, Havelok the Dane, Howard the Halt, Roland, Cuchulain, Gameiyn, William of Cloudeslee, Sir Gawayne, King Horn, Robin Hood, and Hereward the Wake. Original sources are followed rather closeiy, and while there is some wavering between archaism and modernity in the style, we find nothing serious to criticise except the choice of blank verse for translation from lilting baliad metres. Since direct quotation is rare, the drawback is slight. We could wish Gawayne had been represented by the adventure with the Black Knight rather than by his troth with the ioatbly Lady. There are wasb drawings by various bands, Byam Shaw being the most notabie contributor. It is an excellent book for boys.

John Tweedy's "History of tbe Republican National Conventions from 1856 to 1908" (published by tbe author, Danbury, Conn.) is a reprint with additions and revision of a series of newspaper articles. Mr. Tweedy does not to any extent go into causes and consequences, nor does he discuss issues or the influences that led to the nomination of this candidate or tbat. Nevertbeless be has compiled a book of considerable usefulness, which, would, however, be greater from the general point of view were it not so crowded with data in regard to Connecticut's participation in the events recorded. The explanation of this feature is that the book was written for Connecticut readers. The writer, himself a native of that State, attended the conventions of 1860, 1868, 1872, 1876, and 1880, and the personal reminiscences and anecdotes which are interspersed through tbe four hundred pages of his history are in many respects its most valuable and interesting parts.

The publication of Henry E. Bliss's new classification of books, an outline of which with sample schedules was printed in the August *Library Journal*, will be looked forward to witb interest, especially if the work proves really to be, as the author claims, a classification for *books*, not for notes and clippings, as in the minutely subdivided schemes of Dewey and Cutter. It is too early as yet, of course, to speak about the comparative value of the order of the sciences in the new classification and in the three older systems of Dewey, Cutter, and the Library of Congress, but we might point out tbat in Mr. Bliss's general synopsis Medicine and Religion and Theology are classed as antbropological sciences, Education as subordinate to Psychology, and that Social Sciences are divided into Sociology, Ethics, Political Science (including Jurisprudence), and Economics, and are followed by Useful and Fine Arts.

In the "Merry Tales and Three Shrovetide Plays by Hans Sachs, now first done into English Verse" (London: David Nutt), William Leighton introduces English and American readers unfamiliar with Germah to one side of his author's activity. Besides the title, a motto from Longfellow confesses that this volume is restricted to Hans Sachs the humorist. One of the best books ever written on the cobbler-poet of Nuremberg, that of Schweitzer, finds that the salient points of his character were *solidité* and *bienveillance*. We could wish that Mr. Leighton's "Forewords" were less perfunctory, and were comprehensive enough to include fuller consideration of Hans Sachs's more serious qualities. But Sachs was a merry old soul withal, and it is pleasant to make his acquaintance as such. Though Mr. Leighton has not succeeded in preserving much of the quaintness of his sixteenth-century original, he has produced a version that is throughout fairly close to the German and is in quite flowing and readable English. His selections do as well as a single volume could do for the author of six thousand poems. Hans Sachs is here represented by two score "Erzählungen" and "Schwänke" and two "Meisterlieder," as well as by three "Fastnachtsspiele." The last were probably the most difficult to render acceptably. They seem wordy when compared with the narratives, in which a certain loquacity is not out of keeping with the tone of humorous moralizing.

The popular but scholarly volumes of H. W. C. Davis, Innes, and Trevelyan, in the seven-volume history of England, of which Prof. Charles Oman is the general editor, are already favorably known. Mr. Oman himself has now added an initial volume on "England before the Norman Conquest" (Putnam). Though he does not cumber his pages with learned apparatus, he shows in every chapter his familiarity with the best monographic material and with the researches of such scholars as Rice Holmes, Haverfield, and Chadwick. As one might expect from his earlier writings, the author is more interested in narrative and military history than in economic and constitutional development. There are, to be sure, chapters on the social and political condition of England in tbe eighth century, but his statement of various tbeories appears perfunctory and lacking in personal convictions. Occasionally he overemphasizes the obvious. But after all this volume must be regarded as one of tbe most satisfactory accounts of Roman and Anglo-Saxon Britain. There are good maps and genealogical tables. Particularly interesting are tbe author's reasons for refusing to join with most other historians who optimistically accept the Battle of Hastings as an act of Providence and regard the Norman Conquest as a blessing for England.

A trenchant and refreshingly outspoken bit of military criticism is printed by the Massachusetts Historical Society in Charles Francis Adams's paper on Washington's neglect to employ cavalry in the Revolution. That the British commanders also failed to use their opportunity in the same line is no excuse for the American, and more than once a well-directed cavalry attack on either side might have had a destructive effect, and by terminating the war have saved some exhausting years of conflict. By rare good fortune the English failed to follow up their successes, and omitted to develop an arm of the service that was admirably adapted for the campaigns in New Jersey and Pennsylvania. They remained inactive when the American army was in their power, and when they had a fair opportunity to annihiiate the already demoralized force which Washington held together with difficulty. From this point of view Washington was as culpable as Howe, and he comes in for some sharp criticism, just as John Adams criticised him at the time for too close an adherence to a Fabian policy. The judgments passed upon his strategy are fully justified by the array of facts which Mr. Adams has gathered, and the form and temper of the paper are excellent.

The spirited "Chronique du régne de Charles IX," by Mérimée, reappears in new and handsome form in the Oxford Higher French Series (Clarendon Press). The editor of this volume is Prof. A. T. Baker of the University of Sbeffield, whose introduction, editing of the text, and notes, are carefully done. One is hereby induced to hope that English publishers will henceforth entrust the editing of French texts to first-class English teachers of French to a greater extent than they have done heretofore. For, without disparaging the good teaching work done by many Frenchmen in Englisb-speaking countries, a glance at their text-annotations usually shows what in itself is *a priori* self-evident, that the French are not the best judges of the difficulties their language offers to foreigners.

The fifth book of Lucretius has a more general appeal to younger students than tbe other books. This has led W. D. Lowe to prepare an edition of this book for lower forms (Clarendon Press). He divides it into two volumes—one, containing lines 783 to the end, is edited for more elementary students than the other (lines 1-782). His theory is that the creation of things in the world might easily precede, as being simpler, the more complicated account of the creation of the world and the formation of the heavenly bodies. In this country Lucretius has always been reserved for the later years in college, on account of the many textual difficulties and the philosophical technicalities of the narrative. But many portions, specially the fifth book, partake so much of the nature of pure poetry that they may be read with profit by unphilosophical students. The brief introductions to the two volumes have exactly the same arrangement, that of the later volume being slightly more elaborate. In both no regard is paid to controversial matters. The text is that of the new Oxford edition, with running English at intervals. Tbe commentary is intended to assist the student rather than to do his work for him. Certain notes are, however, over-scholarly and impractical. Of what value to the student is the bare statement that, for instance, *pennipotens* is a Lucretian coinage, or tbat *animal* (v. 823) is found only here in Lucretius in the singular? The small paragraph in the introduction on peculiarities of Lucretian usage is quite inadequate, and the statements of the various notes are nowhere collected so as to give any idea of the position of Lucretius in the history of the Latin language. For those students for whom the book is intended a vocabulary might well have been added. But even without it, the book is a serviceable one, and it is to be hoped tbat it may help to introduce Lucretius to many students who now quit the study of Latin before they reach him.

The training of backward children is the subject of the book, entitled, "Auxiliary Education," which is translated from the German of Dr. B. Maennel by Emma Sylvester, and published by Doubleday, Page & Co. A sketch of the rise and development of this work as a part of public school effort shows that it began in Germany fifty years ago, and is now a recognized department of the school systems of most cities in that country. Our own efforts toward the training of the exceptional child came a long time afterward, and have been largely influenced by German experience. Characteristic German thoroughness is exhibited in the plans by which the physical, mental, and moral condition of backward children is examined into, the home life investigated, and the history of their parents scrutinized. With equal detail the traits of the pupil admitted to the auxiliary school and their modification as a result of training are recorded and closely studied by successive teachers. The equipment of these special schools or classes, the environment of the child, the daily watchful care of his health, the modified curriculum, and the training of teachers for the work, are all discussed. The State has promptly recognized that the establishment and maintenance of these auxiliary schools is not merely a duty toward poorly endowed children, but that it is a social need. The book closes with a chapter on the training of backward children in this country, both in State institutions and in the public schools.

The Rev. Morton Dexter, formerly editor and proprietor of the *Congregationalist*, died suddenly last Saturday, aged sixty-four. He was much interested in colonial history, on which he wrote two books: "The Story of the Pilgrims" and "The England and Holland of the Pilgrims."

Sir William Agnew, for many years head of the firm of Thomas Agnew & Sons, publishers and art dealers, but more recently chairman of Bradbury, Agnew & Co., publishers of *Punch*, died last Monday at the age of eighty-five. In 1880 he was elected to Parliament, and devoted himself to the Liberal cause. Essays, addresses, and notes of travel which he wrote were circulated privately.

Science.

Science books announced by the University of Chicago Press include: "The Meaning of Social Science," by Albion W. Small, and "The Problem of the Angle-Bisectors," by Richard P. Baker.

Some three years ago we printed a qualified approval of a third edition of the "Personal Hygiene" (W. B. Saunders Co.), which Dr. W. L. Pyle edited, and to which seven other writers also contributed. A fourth edition has now appeared with all the typographical excellence we are accustomed to expect from these publishers. The only obvious change in the book is the addition of a new and suggestive chapter of nearly twenty pages on certain hygienic aspects of "Body-Posture," written by Dr. J. E. Goldthwait, whose keen interest in this topic is well known to his professional brethren. In our former notice we commented especially on the unsatisfactory account of the stomach pump, the inconsistency in the treatment of poisoning by oxalic acid as given on two almost successive pages, and on the glossary. In these matters the text is unchanged.

Modern garden books easily fall into two general classes. In the first we find those which endeavor to give instruction, pure and simple, and are useful handbooks of practical horticulture. The second class comprises works which are profusely illustrated and are filled with pleasant descriptions of cultivated plants. To this latter class belongs Nelte Bianchan's "American Flower Garden" (Doubleday, Page & Co.). The illustrations are well chosen and well executed. A few of the sketches are among the finest we have yet seen, and may fairly be regarded as happy solutions of difficult problems in landscape gardening. The planting lists are judiciously selected and are accompanied by excellent advice as to special treatment. Taken all in all, the work is safe and sound. It has no impracticable suggestions which will sooner or later drive the amateur wild with despair; it simply leads him by easy steps to what ought to be a successful management of our northern horticultural treasures. The treatise can be confidently commended to the attention of all who are fond of picturesque gardening.

Dr. J. F. Rogers in "Life and Health" (Lippincott) seeks to present the hygienic problem from the point of view that the harmonious working of the body is the true basis of health. In doing this he discusses the activities of the body in a decidedly unconventional fashion and with a novel neglect of any systematic description of parts and functions. While this method carries with it a lack of precision and definiteness of advice, it has the advantage of freshness, and will probably awaken the interest of the ignorant reader of the better sort and lead him to wish to take greater care of himself. Despite the rather vague character of the directions concerning the conduct of life, in marked contrast to many books on the subject, this book nowhere seriously misleads the reader and promises to be really helpful.

The little book on "Hygiene and Morality" (Putnam), by Lavinia L. Dock, R.N., is professedly intended as a guide for her sister nurses. It deals ostensibly with the venereal diseases and their prevention and with the problem of prostitution. The introductory account of the diseases in question is brief and in most respects good, although the author here and there flounders in water somewhat too deep for her. In other parts of the book, also the medical reader will find fresh evidence that the professional nurse is far too ready to express opinions on purely medical matters. Later on the book reveals itself as really a plea for the extension of suffrage to women on the ground that only their participation in legislation will bring about a removal of the social evil and thus the elimination of the specific diseases.

Dr. W. T. Brigham, director of the Bishop Museum in Honolulu, and author of "The Volcanoes of Kilauea and Mauna Loa" (Honolulu: Bishop Museum Press), first visited Hawaii in 1864, in company with the late Horace Mann, for the purpose of studying its geology and botany. During the forty-five years which have elapsed since then, he has kept in close touch with the progress of the volcanic outbreaks, and since 1888 has made Honolulu his home. Interest in vulcanology has led him to travel extensively among the cones, active and extinct, of other lands. The present work is chiefly a careful record of what has been published upon the Hawaiian vents. The earliest accounts date from 1789, and have been passed down by oral testimony from native eye-witnesses. The first record of a white man based on observations was made in 1823, and since that time, both from missionaries and from scientific travellers, full descriptions have often appeared. Dr. Brigham has compiled these with care, and, adding to them his own experiences of nearly half a century, has made a valuable history of the two most famous craters of the Hawaiian Islands. Maps, drawings, and paintings are freely reproduced. Of the causes of volcanoes, and of the petrography of the rocks, the author says nothing, restricting himself to descriptions and records which may be the basis of such discussions by subsequent investigators.

In the reconnoitring expedition of 1903 in Central Asia, conducted by Prof. W. M. Davis, Dr. Raphael Pumpelly was led to select the oasis of Anau, 300 miles east of the Caspian Sea, as a promising spot for excavation, and the results of later investigations are now published in two folio volumes under the title "Explorations in Turkestan, Expedition of 1904: Prehistoric civilizations of Anau, origins, growth, and influences of environment" (Carnegie Institution). The various sides of the extensive work were entrusted to assistants, most of them specialists: archæological excavations to H. Schmidt; glazed ware to H. H. Kidder; description of the mounds (Kurgans) to E. Huntington; chemical analysis of metallic implements to F. A. Gooch; physiography of deserts and oases to R. Welles Pumpelly; animal remains, especially the horse, to J. U. Duerst; some skulls to G. Sorgi; some human remains to T. Mollison; wheat and barley to H. C. Schellenberg; stone implements and skeletons to L. Warner. A general discussion of results is given by R. Pumpelly, the director of the expedition. Beginning with a description of undrained Central Asia as anciently a series of great and small landlocked basins containing residuary seas, with a general trend toward aridity, he goes on to describe the successive ancient civilizations that he thinks traceable in Anau—a succession produced by alternation of fertility and aridity. He distinguishes four periods of culture, separated by unknown periods of stagnation, and recognizable by their agricultural implements, their domestic animals, their use of metals (in the order lead, copper, tin, iron), their flint instruments and pottery, and their burial customs, and also defined to some extent by stratigraphic data. From these facts, by comparison with other civilizations, Babylonian, Mycenæan, Ægean, he reaches the conclusion that the beginnings of the settlement of Anau are to be placed in the third millennium, B. C.; he adds that the absolute chronology of the culture epochs of prehistoric Anau stands on a very weak basis, but he expects future investigations to produce better chronological data. Meantime, taking the rate of growth of the mounds to be two feet a century, he concludes that the North mound

(the older) was founded between 8000 and 6800 B. C., and carries back the beginnings of Central Asian civilization to 9000 B. C.—figures about which one will naturally reserve opinion. So, with regard to Dr. Pumpelly's theory that civilization moved from Central Asia westward to the region east of the Tigris (the Sumerians), thence to the Tigris-Euphrates valley, and then into Europe, it must be held that the data now available are not sufficient to warrant a decision of the question. Apart from these large theories, however, Dr. Pumpelly's Introduction (Part I of the work), based on the reports of his colaborers, is full of enlightening and suggestive remarks. His conclusion (p. 67) that "the agricultural stage preceded the nomadic shepherd stage in Asia, and that before domestication of animals, mankind in Central Asia was sharply divided into settled agriculturalists on oases and hunters wandering within a limited range," may excite surprise, and yet something like this state of things was and is found on the American continent. It is to be hoped that these explorations, already fruitful of results, may be continued.

Dr. Frederick Holme Wiggin, formerly president of the New York State Medical Association, honorary member of the Congress of German Surgeons at Berlin, and member of the council of the New York Academy of Sciences, died last week, aged fifty-seven.

David Pearce Penhallow, professor of botany at McGill University, Montreal, died a week ago, at the age of fifty-six. Chief among his writings, which consist largely of pamphlets, is his "Review of Canadian Botany from the First Settlement of New France to the Nineteenth Century."

Arthur Erwin Brown, secretary of the Zoological Society of Philadelphia, and active head of the Zoölogical Gardens, dropped dead there last Saturday, from heart disease. He was widely known in scientific circles as a zoölogist and biologist; was a member and worker of the Academy of Natural Sciences, of which he was curator and vice-president; he was a member of the board of managers of the Wistar Institute of Anatomy and honorary member of the New York Society. He was corresponding member for the Zoölogical Society of London, and wrote zoölogical and biological articles for journals and meetings of societies. At the time of his death he was sixty years of age.

The death is reported of Louis Anthelme Gregori, best known, no doubt, for his unsuccessful attack upon Major Dreyfus, after the funeral ceremonies in honor of Emile Zola. He wrote extensively on military subjects.

Drama.

Richard John Cunliffe is the compiler of "A New Shakespearean Dictionary" (Imported by Scribner) upon which considerable labor and care have evidently been expended. Doubtless it will be welcome to students, as it offers in convenient form much instructive matter collated from different standard authorities—such as Schmidt's Lexicon, the best known concordances and glossaries, various annotated editions, the notes of Dr. H. H. Furness, the New English Dictionary, etc.—together with the fruit of the author's original study and reflection. The book, perhaps, would have greater weight if some of the interpretations were fortified by the specific authority, but, so far as can be judged from a somewhat rapid examination the explanation of obscure or obsolete words and phrases is full and correct. Whether all of it was necessary is another question. In many cases Mr. Cunliffe seems to put a very low estimate upon the ordinary intelligence of the real Shakespearean student. The Elizabethan language is not quite so much of a dead tongue—to persons capable of reading Shakespeare at all—as he appears to suppose. He says that he has "endeavored to exclude all words and senses of words that are still in good literary use," but in this he has been only partly successful. He often discerns a difficulty where none exists and his volume would be none the less useful as a book of ready reference if it were rid of superfluous matter. But conscientiousness, even when excessive, is in its way a virtue.

In his latest Wall Street drama, "The Gamblers," which was produced in Maxine Elliott's Theatre on Monday evening, Charles Klein seems to have had a double object in view: first, an illustration of the desperate and lawless expedients to which the spirit of speculative gambling may lead normally honest men to resort, and, secondly, an attack upon the alleged unscrupulous methods employed by government agents—as in the procuration of State's evidence, for instance—in the prosecution of financial offenders. One of his chief figures, a public prosecutor, is held up to scorn for his indulgence of private enmities and his remorseless employment of the evidence supplied to him by a cowardly traitor. He has not been particularly successful in either instance. His bankers are creatures of the theatre, not of actual life, and most persons, probably, would agree that his prosecutor is sufficiently justified in his action by the evidence in the case. Much that is specious or disingenuous in the play is plainly due to the necessity of creating sympathy for the hero, who, having broken the law, is, by the exigency of the plot, compelled to pay the penalty. It is to the credit of Mr. Klein that he carries his piece to a logical conclusion, and has not been willing to ignore everything for the sake of a happy ending. The most noticeable feature of "The Gamblers" is the excellence of its mechanism. As serious drama, it is not of much account, but it is an uncommonly effective bit of melodrama, in which the action, after the first explanatory scene, is constant and swift, the incidents ingenious, varied, and stirring, and the development reasonable. Mr. Klein is making a steady advance, apparently, in the art of dramatic construction. The performance of his play is entirely creditable to the Authors' Producing Company, of which it is the first enterprise. There are seven prominent personages in the cast, and each one of them is efficiently played. The level excellence of the representation is something uncommon enough nowadays to merit a special word of recognition.

William Gillette, in the past, has been accounted one of the successful play makers of the country, but his reputation in this respect is not likely to be increased by the nondescript piece, called "Electricity," which he has produced in the Lyceum Theatre. Following what is just now a popular lead, he has chosen Socialism, and the immemorial conflict between capital and labor for his themes, but his treatment of them is so shallow, cheap, and insincere, and his illustrations so puerile, that it is not easy to understand his real intent. A young millionaire disguises himself as a workman in order to make love to an heiress who affects to despise the idle rich and utters many childish platitudes concerning them, but all this does not prevent her from accepting her suitor, after discovering his identity. She stipulates, to be sure, that he shall earn his own living hereafter, but the whole course of the play is so tricky and theatrical that nothing in it can be taken seriously.

"The Seventh Daughter" has been decided upon as the name for a new play by Richard Harding Davis, which Liebler & Co. have accepted for immediate production. The title has to do with the leading character, who is a spiritualistic medium. This part will be played by Chrystal Herne.

It appears that Henrietta Crosman is not to persevere much longer with Percy MacKaye's "Anti-Matrimony." She will try a piece called "The Duchess of Suds," on the 21st of November. This sounds like an echo of "Madame Sans Gêne."

When "A Woman's Way" has come to an end at the London Comedy, Arthur Hardy will, by arrangement with Arthur Chudleigh, produce at that theatre an entirely new dramatization by F. Anstey of his own early novel, "Vice Versa." The first stage version of that story was presented at a Gaiety matinée, in April, 1883. When the piece was originally played, Charles Hawtrey appeared as the pompous Mr. Bultitude, while the part of Dick was sustained by Edward Rose, the adapter. These parts will be played in the present version—which is in three acts—by Fred Volpé and Spencer Trevor.

The rehearsals of "The Mellstock Quire," A. H. Evans's version of Thomas Hardy's "Under the Greenwood Tree," are going on at Dorchester, England, where the play will be produced at the Corn Exchange. The carols to be sung at the performance are "Behold! good news to man is come," "O! what unbounded goodness, Lord," and "Behold the Morning Star arise." The carols and tunes have been chosen by Mr. Hardy, and harmonized by a Dorchester musician, Boynton Smith, who is said to have caught the right spirit for these quaint old things. The play will probably be seen in London on or about November 24.

"Grace," the latest play of W. Somerset Maugham, which has just been produced in the Duke of York's Theatre, London, seems to be a piece created for its situations, not at all as an exemplification of life or manners. The heroine is supposed to be a good and charming middle-class young woman, who has made a brilliant match by marrying the squire, and soon becomes heartily sick of the frigid airs and condescension bestowed upon her by members of the exclusive county families who hold that her husband has made a mesalli-

ance. So, being bored—though her husband loves her dearly, and trusts her utterly—she surrenders herself to a lover for whom she cares nothing at all. Soon afterward a poor girl upon the estate, a gamekeeper's daughter, who has been led astray, commits suicide because the squire insists upon her banishment, lest she should come into contact with his flawless wife. All this makes Grace extremely uncomfortable, and she even meditates confession—upon the advice of the village parson—but from this she is dissuaded by a strong-minded woman friend, who says that her most effective penance will be secret remorse, and that the best thing that she can do is to make her husband happy. This she proceeds to do, to the best of her ability, and the good man is exceedingly flattered, gratified, and happy. Just what is the moral, meaning, or significance of all this it would be difficult to say. Evidently the plot is manufactured to provide one or two desired situations. But Mr. Maugham is said to have put some good work into the piece, and Irene Vanbrugh is reported as having been exceedingly effective in the central character.

A Shakespeare Memorial and Theatrical Exhibition is in progress in the Whitechapel Art Gallery, where there are collected portraits of old English actors, supposed representations of Shakespeare, early editions, facsimiles, etc. School children and others are to present some of the plays.

Music.

Standard Biographies. By George P. Upton. Chicago: A. C. McClurg & Co. $1.75.

If Paderewski, who is not only the greatest of living pianists but the leading composer for his instrument, should come across Mr. Upton's latest volume, read the first three lines of the preface: "It has been the purpose of the compiler of this volume to present biographies of the composers whose works are most familiar in the concert room," and then glanced at the table of contents, he would doubtless be equally amazed and amused to find the names of 104 men, but not a word about himself. Yet he has given the world more than any other living master of that commodity—melody—which Mr. Upton so sadly misses in contemporary productions. His surprise would increase if, on further examination, he found included in this "handbook of reference for the concert-room" the names of composers who are known exclusively by their operas, such as Bellini, Donizetti, Leoncavallo, while the one modern Italian who has devoted himself successfully to the composition of chamber and other concert music—Sgambati—is also utterly ignored. The Polish pianist-composer might also wonder at the picture facing the title-page, entitled "Meyerbeer and His Ideals"—Meyerbeer, whose chief ideals were sensationalism and applause, as the author himself virtually admits on p. 305.

Apart from these peculiarities we have noticed nothing in this useful handbook that does not call for cordial praise. The title is perhaps somewhat misleading, inasmuch as the purely biographic features have been condensed into the fewest possible words, most of the space being given to general estimates of the composers in hand and enumeration of those of their works which have survived, a page being given in each case to a bird's-eye view of the most important pieces. Mr. Upton's own estimates are remarkably sane and just, and he has added the opinions of other distinguished critics. Of some of his favorites he writes with real affection, notably of Schubert. Not a few of the composers Mr. Upton has known personally, and this enables him to introduce anecdotes and information at first hand. Concerning Rubinstein's "Ocean Symphony" he says: "Of this great work the writer has it from the composer's own lips that the first movement represents wind and water, the second an evening on the ocean, the third a dance of Tritons and Naiads, and the finale a procession of Neptune and his attendants." Rubinstein subsequently added two more movements, and when asked what they signified, he humorously replied: "Getting on dry land again."

It is interesting to note how the nations fare in this author's choice of the 104 names. Of the composers listed, 37 are German, 17 French, 16 American, by birth or adoption; 9 Russian, 9 Italian, 6 British, and as many Scandinavian, while Bohemia is represented by Smetana and Dvorák, Poland by Chopin, and Hungary by Liszt. For giving Americans so prominent a place Mr. Upton does not apologize; quite the contrary, he explains that some of our own composers are omitted, not because their music is of a low order of merit, but because it is not found in the programmes of the present. His American list includes Buck, Chadwick, Converse, Foote, Foster, Gleason, Hadley, Kelley, Loeffler, MacDowell, Paine, Parker, Root, Shelley, Stock, Van der Stucken. Two of these, Loeffler and Stock, were born abroad, but they have become Americanized. Stock, to whom, it is rumored, has been offered the conductorship of the New York Philharmonic Orchestra after the departure of Gustav Mahler, was brought to this country by Theodore Thomas, who recognized at once his thorough musicianship and soon made him assistant conductor. When Thomas died, some of the directors were for engaging a foreign conductor of international repute. Fortunately, their advice was disregarded, and Stock succeeded to the conductorship of the Chicago Orchestra, the duties of which he has since "exercised with marked ability and increasing success." Mr. Upton might have added that the great pianists, violinists, and singers always look forward to appearing at a concert under Mr. Stock's direction, one of his most enthusiastic admirers being the Polish pianist who is so incomprehensibly slighted in this volume.

Philip Hale announces that an exhaustive catalogue of the programmes of all the concerts given by the Boston Symphony Orchestra outside of Boston, as well as in that city, is now being prepared. The catalogue is so made that any one looking, for instance, at "Beethoven: Symphony No. 1," will see at a glance how often and where this symphony has been played, with the date of performance.

The Kneisel Quartet opens its twenty-sixth season and nineteenth season in New York with one of the largest subscriptions in the history of the Quartet. The regular subscription series of six concerts will be given on Tuesday evenings: November 15, December 13, January 17, February 7, March 14, and April 4. No matinées will be given, as Mr. Kneisel has decided to limit the annual number of appearances of the Quartet. The November tours take the Quartet as far West as Duluth, sixteen concerts being played in that month.

One of the most interesting novelties of the season will be produced by the Adele Margulies Trio at Mendelssohn Hall on the evening of November 17—a trio for piano, violin, and 'cello, by Erich Korngold, the thirteen-year-old composer (he is a son of the eminent Viennese journalist, Dr. Korngold), whose pieces are astonishing the leading European musicians.

What can be done toward creating an interest in music in a town that has been indifferent to its higher manifestations is shown once more in the case of Charlestown, W. Va., a city of 30,000 inhabitants, and a centre of the mining world. A few years ago William S. Mason, a pupil of Brodsky and D'Indy, arranged for some concerts of chamber music by a good quartet. A few soloists, also, were engaged, among them Bispham, Fanning, and Petchnikoff; but most of the music was furnished by the quartet. For the first two years there was a deficit, but for the present season the subscription has doubled. The future looks bright, and ere long, no doubt, the quartet will grow into an orchestra.

Little is known in this country about Italian chamber music. That this music deserves to be better known—very much so, indeed—is the conviction of Giuseppe Aldo Randegger; and, what is more, he intends to demonstrate its artistic merits by having the best of it performed by the Randegger Società per la Musica Italiana at three Mendelssohn Hall concerts, on the evenings of January 11, February 15, and March 21. Mr. Randegger will play the piano parts and his associates will be two prominent players, the violinist Leonardo Brili, and the violoncellist Paul Kefer. Other artists are to be presented in quartets, songs, etc.

Boris Hambourg, brother of the famous pianist, and no less eminent himself as a violoncello player, will make his New York début at Mendelssohn Hall Saturday afternoon. Mr. Hambourg is as popular in

England as May Mukle, and he has been equally successful on the Continent. He is a player of the Fritz Kreisler type, and, like Kreisler, he has unearthed a number of old pieces for his instrument which had been prematurely buried, and which now add special interest to his programmes. He is editing a collection of these seventeenth and eighteenth century pieces, which will soon be published.

Art.

ART EXHIBITIONS IN NEW YORK.

The New York Water Color Club opened the art season last Saturday with an exhibition at the American Fine Arts building, in West Fifty-seventh Street. It cannot be called a propitious opening, for the two galleries abound with poor drawings. One room, and that rather sparsely hung, would have sufficed for those that are worth considering. You do not wonder so much why such things are produced as you marvel that any one should care to exhibit them. It was hoped that the president of the club, H. B. Snell, would show several pictures based upon his recent visit to India. He exhibits only one, A Dak Bungalow, which is not particularly interesting. But his Fishing Boats with brown sails on the pale waters of the Zuyder Zee is one of the gems of the exhibition, for Mr. Snell knows how to paint water, and he can make his boats move, however lazily. Charles Warren Eaton has three pastels of the Italian Lakes, gorgeous in their blues and purples, and a strong contrast in their serenity to the dazzling brightness of Edward Dufner's September Sunshine and Summer Days, with the stiffly drawn figure of a woman seated on the bank of a stream. Two charming works are the Mt. San Jacinto and the Desert Shower by Marion Kavanagh Wachtel. In the former a shadow falls across the foreground, where stand gnarled cypress trees and rocks; beyond, a lovely valley filled with sunshine and dotted with red-roofed cabins, and then the foothills leading up to the mountain with snow still glistening near its summit. In the latter low clouds sweep across the desert and gleams of light pour between the low mesas in the distance.

James Verrier's Summer Sea bears the stamp of Japanese influence by which a beautiful effect has been produced with slight means. The colors used are perfectly pure, principally a deep blue for the rippling sea, while the surf is represented by the white paper untouched by any color. Jane Peterson's sketches of Brittany scenes are clever, but a dozen of them at a time are apt to pall, for they are all very much alike. Jerome Myers exhibits several of his sketches of East Side scenes. E. M. Bicknell has a particularly good sea and rock piece, Foggy Morning. A river scene at closing day, with some exquisite grays in it and a few lights from the houses on the further shore, is by Adele Williams, and Mary C. Trask has chosen a Saturday Night on Bleecker Street as the scene of a drawing full of life and color. Colin Campbell Cooper shows two large paintings of old German houses and the porch of a church at Semur, France, which is a notable piece of architectural painting. Taber Sears's Hamilton Bay, with its gray water and white houses, is good, especially in the perspective of the long string of boats tied to the shore. Elmer Livingston MacRae exhibits several interesting Boston scenes. Marion H. Beckett's Three Fates walking behind each other is a pastel drawing with great beauty of line, reminding one somewhat of Whistler. The Beal prize of $200 for the most meritorious water color in the exhibition has been awarded to Miss Tony Nell for a Study in Black.

It is one of the charms of Frank Partridge's gallery, at No. 741 Fifth Avenue, that the place is not crowded. Each piece of old English furniture has plenty of room about it. Every opportunity is afforded to examine it thoroughly. There are also a few specimens of Chinese porcelain, among them four figures, two of the Ming period. But the figures of Chinese gods do not appear yet to have acquired the vogue in this country that they have abroad. Then there are a few pieces of jade, bowls of exquisite color and form, and the statuette of a god carved in such a wonderful piece of jade that even if you do not care for the figure, you cannot fail to be impressed by the beauty of the stone. And there is a Buddha in white porcelain which is believed to be the largest specimen ever made in that material. For our part, however, we much prefer old furniture to Buddhas, and we therefore turn from that intensely and rather aggravating complacent expression of his to look at a delightful *table à jour* painted by Angelica Kauffman with medallions of nymphs and graces and flowers on a rich green ground. Not the highest possible art, perhaps, but a mighty pretty art. Then we come across a commode of Sheraton's painted on satinwood, in a bolder style than Angelica's, with bouquets of flowers and borders imitating Wedgwood, pale blue porcelain, and with panels on the doors of the rich wood.

A. G. Schulman, a young teacher in the art department of the College of the City of New York, shows much promise and much good work already done in a collection of paintings which is on exhibition at the Haas Art Gallery, No. 648 Madison Avenue. There is great beauty in the glowing atmosphere that the artist gives to several of his scenes on the Connecticut shore. One, of a clump of cedars, with a stretch of pale blue water in the distance, is permeated with the light of a setting sun. There is a painting of an interior of a forest, in which a great oak stands prominent, filled with the same glowing atmosphere. In nearly all his pictures, Mr. Schulman shows that he has paid close and vigilant attention to nature. He has learned the construction of trees, though sometimes, as, for instance, in the painting of the edge of a forest, the foliage is inclined to woollenness, and he has shown that he can use sunlight to produce pleasing and restful sensations. The exhibition, which is well worth a visit, will remain open until November 19.

Walter Scott Perry, director of the School of Fine and Applied Arts, is giving a series of illustrated lectures on Architecture, Sculpture, Decoration, and Painting at the Pratt Institute in Brooklyn. Mr. Perry has already given two of his lectures on Indian art, and will give five more on the same subject, and two on Japanese art. Italian, French, Dutch, Spanish, and English painting will be the subjects of the remaining eight lectures, which will be delivered on Wednesday afternoons from four to five o'clock.

Two handsome portraits of Spanish origin have been recently added to the Brandus Galleries, No. 712 Fifth Avenue. They are three-quarter-length portraits of men representing Sculpture and Music. The figure of the beardless young man posing as Music is particularly striking.

The Mond Collection, an Appreciation. By J. P. Richter, Ph.D. 2 illustrated vols., 4to, with a portfolio of 41 photogravures. London: John Murray. 15 guineas net.

In 1884 Dr. Ludwig Mond commissioned the well-known art historian, Dr. J. P. Richter, to form a collection of old masters. No monetary limitations were imposed, and the sole condition was that the pictures should be of museum rank. After ten years of selection and elimination, the Mond gallery was virtually complete. It formed a congruous gallery of examples of the great Italian schools of the fifteenth and sixteenth centuries, the Sienese school being omitted and preponderance given to North Italian painting. A splendid Peruginesque Raphael was its most famous feature, but it contained also a finished drawing for the Virgin with St. Anne, in the Louvre, by Leonardo da Vinci, three pictures of different periods by Giovanni Bellini, a signed Madonna by Gentile Bellini, a superb Mantegna, fine predellas by Signorelli, two decorative panels by Botticelli, and an admirable late Titian, not to mention such secondary artists as Sodoma, Luini, Crivelli, Montagna, Palma Vecchio, Fra Bartolommeo, Francia, Catena, Antonio Canale, and Guardi. Dr. Mond died while this elaborate catalogue was in the press,

leaving the most important pictures of the collection to the National Gallery.

Dr. Richter has produced a catalogue of a remarkable and interesting sort. Instead of the usual alternation of plates with brief descriptions and records of provenance, each picture is fully interpreted in a kind of essay. Besides the discussion of attribution and of place within the artist's *œuvre*, minutest attention is paid to literary sources and religious symbolism; in short, to all historical facts that bear upon the picture. From his ripe erudition Dr. Mond makes considerable contributions to iconography. We may only specify the clarifying interpretation of Mantegna's The Infant Christ at the Fountain. The volume is so full of information of this sort that one must regret that the index was confined to persons and places. The catalogue is delightful reading, and while it is of a kind that presupposes zeal in the publisher and extraordinary knowledge in the compiler, we think the type will be imitated. By assembling all relevant information about a collection, not merely its enjoyment may be greatly enhanced, but also a substantial contribution made to the history of art. Dr. Richter has worked independently very much along the humanely discursive lines followed by John La Farge and A. F. Jaccaci in their remarkable catalogue of "Noteworthy Paintings in American Private Collections."

Dr. Richter's opportunities for estimating these pictures have been so favorable and continuous that your reviewer records with diffidence one or two dissenting opinions. We think few critics will set Botticelli's St. Zenobius panels, which have been reckoned as among his latest works, before the frescoes in the Sistine Chapel, 1481. Dr. Mond is led to this revolutionary opinion by the bright color of these panels. But we think that a kind of wincing emotionalism and a curious disequilibrium in these interesting compositions could hardly be paralleled in Botticelli's early work. The gay colors may have been dictated by the decorative destination of these *cassone* fronts, and Dr. Richter's comparison with the color of the dated epiphany of 1500 in the National Gallery seems misleading. It is possible that the Zenobius panels with their pendant at Dresden have been set a little too late, but we doubt if Dr. Richter will persuade anybody to date them earlier than 1490. Your reviewer holds by Mr. Horne's view that these panels must be dated after 1500. A Portrait of a Lady, Tuscan School (plate xxxi), which Dr. Richter associates with the beautiful and enigmatical profile in the Poldi Pezzoli Museum, makes a deplorable impression in the reproduction. The portrait has an uncomfortably modern suggestion. The oblique perspective of the shoulders alone is very odd for a profile portralt of the mlddle of the fifteenth century. In the list of Michele Giambono's works an admirable little Pietà in the Metropolitan Museum should have been included.

Dr. Richter's prefatory essay on the course of collecting and connoisseurship in England is very judicious. His disinclination to attribute certain ambiguous classes of pictures is praiseworthy, and his pungent remark that to ascribe pictures to such protean dabblers as Sebastiano Lazzari and Botticini is in the nature of a "game of chance," deserves to be pondered. There is a considerable contribution of new information about minor artists of the Venetian and Veronese schools—most noteworthy, perhaps, is the identification of an allegorical lunette from the Venetian mint as the work of Giuseppe Porta, an able follower of Paolo Veronese.

In general this catalogue deserves almost unqualified praise. It is beautifully made. The two vellum-clad volumes of text, which contain illustrations of the smaller pictures and of pictures cited collaterally, are light in the hand; the folio prints in the portfolio are of most careful execution. The work is not merely necessary to the scholar, but charming reading for the cultured layman. This "appreciation," as Dr. Richter modestly calls his book, makes an ideal complement to the task of assembling the collection. One rarely finds a great scholar in so genially communicative a mood, and with such an opportunity for leisurely self-expression.

"Das Kinderalbum," by Adolpb Menzel, being reproductions of twenty-five gouache and water-color sketches in tbe Royal National Gallery at Berlin, has been handsomely issued by E. A. Seemann of Leipzig and imported by Lemcke & Buechner.

Arts and Decoration, a magazine, the first issue of which appears this month, contains: "A New Idea in American Architecture," "Homes of the Barbizon Painters," "Sergeant Kendall, Painter of Children," "Living American Painters," "Artists Who Have Made Furniture and Decorated Rooms," and "The Gentle Art of Picking Up Antiques."

Until direct color-photography can be applied to engraved plates, we must be satisfied with the three-color reproductions of *Lumière* transparencies. A successful example of it lies before us in the charming volume, "Summer Flowers of the High Alps," by Somerville Hastings (Dutton). The forty engravings are chosen from the fruits of many studies, and are effective as showing the capabilities of this roundabout method. It is doubtlessly widely known that the most successful process of catcbing tbe natural colors of well-lighted objects which are perfectly stationary, is that by which colored granules of starch on a glass plate are so disclosed by openings in an otherwise opaque screen as to give precisely the colors which exist in nature. But in order to multiply this colored photograph, it is neccssary to print three or more "three-color" plates, one over the other. In such cases, everything depends upon the skill of the operator. In the volume which gives the alpine flowers, we have a fair copy of the exact record made by sunlight on the sensitive film. The engravings are accompanied by well-written text.

"A Catalogue of Paintings in the Museum of the Brooklyn Institute," by William H. Goodyear and A. D. Savage, contains about five hundred titles. Owing to lack of gallery space only a half of these pictures are exhibited. In the main tbe collection has grown by gifts, hence irregularly. Of late years, however, modern American pictures have been purchased systematically and judiciously out of the museum's own funds. A large group of water-colors by John Sargent, and a handful of sketches, by Barye, are especially alluring features. In old masters a beginning has been made with a fine *predella*, of six panels, by Taddeo Gaddi, not to mention varied exhibits of seventeenth century date, mostly loans. There are also some good early American paintings by artists, for example, Quidor, not elsewhere to be seen. Except for bibliographies of Sargent and Whistler, this concise catalogue follows the usual model, and in omitting measurements shares a usual defect. In the introduction we read that of tbe 252 pictures now shown only tbree belonged to the museum when it was opened in 1897. The figures speak eloquently for the public spirit of the officers and supporters of this institution.

So many handbooks of pottery and porcelain have appeared of late that each new work ought, seemingly, to contain much that is original, either in subject matter or in treatment, to justify its publication. "Porcelain, Oriental, Continental, and British," by R. L. Hobson, B.A., assistant in the Britisb Museum (Frederick A. Stokes Company), is a comparatively small book of wide compass. Its most obviously valuable feature is that it gives virtually equal emphasis to the porcelain manufactures of China and Japan and those carried on in European countries since Böttger's discovery of kaolin, in 1709. The justness of the author's sense of balance offers a certain excuse for the work, for the tendency among writers on this subject is either to make a mere preface of the Oriental story, or, telling tbat at length, to leave tbe reader with an impression that certain rather inferior Occidental manufactories of hard and soft paste porcelain also ran for a century or so. Mr. Hobson skilfully avoids display of erudition, so that his text is readable and interesting. His insistence on "paste, glaze, and decoration as the safest guides to the acquisition of genuine specimens, marks being regarded as of secondary importance," is in line with the best opinion among collectors. Not only is it true that "controversial points have been either as lightly touched as possible or entirely eschewed," but that the author has obviously tried not to show any personal predilections. He comes nearest to revealing enthusiasm in his exposition of some of the excellences of Japanese porcelains, which, because of the superb qualities of the Satsuma and Kioto earthen wares, have not generally been appreciated at their real worth. He exhibits an evident distaste for the cult of the archaic in

his strictures on "the perverted æstheticism of the Cha-jin," the connoisseurs of the Japanese tea clubs who have "united to honor common clay vessels of the rudest imaginable forms, covered with splashes of thick treacly glaze which look more like accidents of the kiln than purposeful decoration." The sub-title of the book, "Porcelain of All Countries," which is printed on the cover though not on the title page, is a misnomer, for no mention is made of American porcelains, such as those produced in Philadelphia by William Ellis Tucker about 1825 and a little later by several potters. In general, the object "to give in compact and inexpensive form all the facts which the collector really needs, besides as many practical hints as can be compressed in a general work of portable size," has been creditably attained.

The excavations conducted by the Archæological Institute of Vienna, at Ephesus, have had satisfactory results. They have already brought to light the Roman Forum; the theatre with a stone-paved path leading to the sea; the great præstoa; and three arches, one bearing a dedication to Augustus and Agrippa. Many statues and bas-reliefs of the period of Antoninus were found built into a wall of later date and these have been partly transported to Vienna. Among the former is an interesting statue of Celsus Polemianus, who was consul in 92 A. D., and proconsul in 106-107 A. D. It is above life-size, and represents the proconsul wearing armor with representations of a gorgon and griffins, and grasping the hilt of his sword with his left hand. The bas-reliefs seem chiefly to record the victories of Marcus Aurelius over the Parthians. Of great interest is one representing Semele as Artemis, driving a chariot drawn by deer, preceded by Hesperus and approaching Night. The deer are traversing the sea, which is represented as a goddess with waving locks, grasping a helm and leaning upon a sea-monster. On a relief, which is somewhat larger than the others, is depicted the Emperor in a chariot, drawn by three horses, with Victory standing before him and grasping the bridles of the horses. The chariot is preceded—as in the relief on the Arch of Titus—by a figure symbolizing strength or virtue, behind whom rises the Sun, crowned with rays; beneath the horses appears the Goddess of Fortune grasping ears of corn, flowers, and fruit.

John Adams Acton, the English sculptor who died last Monday, was educated at the Royal Academy Schools. There he quickly distinguished himself, carrying off the highest honors for studies from the antique and the life, and winning the travelling scholarship. He was sent to Rome, under the presideney of Sir Charles Eastlake, and became the pupil of Gibson; he remained in Italy for ten years. He was the author of many busts and statues, both of Queen Victoria and King Edward VII. The Wesley memorial in Westminster Abbey came from his studio. He produced also the George Cruikshank monument in St. Paul's Cathedral, and monments in other cathedrals and churches. He made notable statues of Gladstone for Liverpool and Blackburn, and created a well-known effigy of Beaconsfield. Examples of his work are frequent in India, and are to be found both in Canada and the United States.

Finance.

A LANDMARK OF THE TIMES.

When Disraeli, thirty years ago, spoke of "the sweet simplicity of the three per cents," he was talking of British consols, and he was plainly enough making reference to the contented equanimity with which the British investor might leave his money in consols, assured that, when he wanted to take it out again, he could do so on a substantially unchanged basis of valuation. Consols are not 3 per cents now; but what is more to the point, they are certainly not characterized, in the markets of to-day, by sweet simplicity. On the contrary, the movement of their market has of late been such as to baffle and perplex the financial mind. Last week they sold on the London Stock Exchange for 78¾, and that was the lowest price since 1847.

This is a very remarkable incident of the times; not less so, in view of the facts that British consols sold at 113⅞ as lately as 1897, and that even when peace was signed in South Africa in 1902, after a billion dollars had been sunk in war expenditure, they were quoted at 97. The controversy as to the cause of this decline—their interest rate in those two years having been only ¼ of 1 per cent. above to-day's—has pitched alternately on a dozen different explanations. The reasoning has been based on financial exhaustion from the war; the high British income tax (which is deducted from interest payments on consols); the Liberal party's programme of social experiments; the unprecedented borrowings by other governments; the struggle over the House of Lords; high cost of living, which is supposed to make investors want securities with a higher rate than 2½ per cent.; admission of colonial bonds to the field of British savings bank investments, previously monopolized by British government securities; the tendency to stock speculation, tempting capitalists to sell their gilt-edged holdings so as to raise more money for a "flyer"; the world's increased gold production, which of itself is imagined, in some way not usually identified by the reasoner, to hurt creditors and help debtors, and hence to depress bonds while raising stocks—and so on, *ad infinitum*.

This is certainly pretty far away from sweet simplicity. But the concern in the matter, on the part of the financial world at large, arises from the suspicion that, whatever may be the collateral causes of the decline in British consols, the fundamental cause is something which is common to all securities of their class. In other words, the phenomenon is a landmark in financial history.

The fact that the price of consols fell, on Wednesday of last week, to the lowest actual price in sixty-three years, and that the price was 35 points under that of thirteen years ago, suggests still another field of inquiry, in which one may be able to find some instructive coincidences or contrasts. If it is true that consols have not touched last week's low price since 1847, it may then be asked, what brought them so low on the earlier occasion? If they reached a vastly higher valuation in 1897, what was the reason? We shall find, in this historical inquiry, both contrasts and coincidences with the circumstances of to-day, and if they do not solve the problem—they probably will not—they will at least throw light upon it. When consols in 1847 sold at 78¾, having sold at par less than two years before, the financial and political situation was curiously upset. This was not, as in the decade past, because of war. England had then been engaged in no great war since 1815. But in two other respects, 1847 resembled the present time. It followed two years after 1845, when the wild railway promotion and speculation had culminated in panic. It came just one year before the famous popular uprisings of 1848, when half the European governments were shaken, when the King of lower Italy was dethroned, and Louis Philippe fled from France, and the people fought the soldiers in the streets of Berlin, Munich, and Vienna, and the Irish rebels rose, and the Chartists met in the London squares to demand Parliamentary reform.

Now whatever may be said as to actual causes of the decline in consols, then or now, it is certain that, both in 1847 and 1910, the price of 78¾ was touched in a period which followed overdone exploitation, unprecedented issue of new securities in the transportation industry, rash speculation, and financial collapse, and which was characterized by world-wide political unsettlement. In the bursting of a financial boom, 1907 was a very fair parallel to 1845; in ferment of politics throughout the nations, one need only recall, as at least partial present-day coincidences, the Turkish revolution, the struggle over the House of Lords in England, the dethronement of the King of Portugal, the parliamentary ferment in Germany, and the "insurgent movement" in American politics. While conditions in these directions present so curious a resemblance, conditions in the matter of gold production provide no parallel at all; for in 1847 gold had not yet been discovered in California or Australia, and production was not increasing.

But how did they reach the high-level price of their history in 1897? Not because of decreased gold production. The world's gold output of 1897 was 13 per cent. above that of 1896, and greater by nearly 100 per cent. than in 1890. But prices for commodities touched, in 1897,

the lowest average level in half a century. Accumulation of capital had been very rapid, because of low price of materials and low cost of living. Governments were at peace; they had been so since 1871; therefore there were no hulking public loans to build navies, and no 6 per cent. British income tax. Furthermore, the world-wide spirit of speculation had not been stirred up; thrifty people were willing to keep their money in government securities. French government bonds that year sold 10 per cent. higher than to-day; Imperial German 3 per cents were 16 points above this week's quotation.

But within a year after 1897, speculation was spreading rapidly. Cost of existence was mounting; governments had begun to quarrel—England with the Transvaal, the United States with Spain, Japan with Russia. Navies, increasing in size by arithmetical progression, put in their appearance. Issues of new securities at London, which were $785,000,000 in 1897, rose to $825,000,000 in 1900 and $911,000,000 in 1909. Listings of new securities at New York, which were $140,000,000 in 1897 and $440,000,000 in 1900, got up to $1,000,000,000 in 1909. It was along with all this that the 35-point decline in British consols came.

BOOKS OF THE WEEK.

Baldwin, M. Two Schoolgirls of Florence. Dutton. $1.50.

Balet, J. C. Military Japan. Translated from the French hy C. A. Parry. Yokohama: Kelly & Walsh.

Bangs, M. R. Jeanne d'Arc. Boston: Houghton Mifflin. $1.25 net.

THE LITERATURE OF THE SOUTH

By MONTROSE J. MOSES

"This splendid volume of 500 pages is the first complete, vital, honest recapitulation of the achievement of the South in American letters that we have yet had, and, as a work of interpretative criticism, it is one of the sanest, most wholesome, most convincing books that has appeared in this country for some time. Mr. Moses, while confining himself to a small section of our literature, has set a noble example of how literary history should be written and of how literary valuations should be established. . . .

"His book is earnest and spirited, marked by fine judgment, by clear insight, by a wholesomeness of candor and a fairness of verdict which leaves finally a just conception on the mind of the reader. . . .

"To read this book in its completeness is to get a fine idea of the harmony of life and literature in the South, and a more perfect understanding of the men and women who with splendid enthusiasm sought to build up a literature out of their lives and interests, to get an understanding of the handicap which was placed upon them by the fixedness of their lives and the imperviousness of their condition to innovation by the too placid and satisfied intellectual foundations of their environment."—*St. Paul Dispatch.*

8vo. $2.50 net. By mail, $2.70.

THOMAS Y. CROWELL & CO. - - New York

John Brown: A Biography Fifty Years After

By OSWALD GARRISON VILLARD

Thomas Wentworth Higginson

"It may be safely said that there now remain very few of the personal friends of John Brown of Osawatomie who will not be surprised and deeply impressed by Mr. Oswald Garrison Villard's large and mature memoir of him. It is, as the author calls it, 'A Biography Fifty Years After,' and I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

John T. Morse, *Editor of American Statesmen Series.*

"The story has the movement of a Greek tragedy, with its simple beginning, then its creation of the sense of personal nearness, then its vague foreboding of terrible disaster, and finally its grand and fatal close. Perhaps in thus dramatically fashioning his volume Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

Fully illustrated with portraits, and other illustrations.
With copious notes and bibliography. $5.00 *net;* postage 26 cents.

The Oxford Wall Maps

Edited by A. J. HERBERTSON, M.A.

PROFESSOR OF GEOGRAPHY IN THE UNIVERSITY OF OXFORD

DRAWN BY B. V. DARBISHIRE, M.A., TRINITY COLLEGE, OXFORD

THE Oxford Series of Wall Maps has been designed to meet the needs of teachers of geography. Good wall maps are essential for good teaching. An important cause of the improvement in the teaching of geography in recent years has been the introduction of wall maps showing physical features. Physical features, however, are but one of the geographical conditions with which the teacher must deal. Climate and vegetation are equally important, but no good wall maps to illustrate them have hitherto been produced. *The Oxford Wall Maps are the first series to give the teacher a set of maps which will allow him to show to a class physical features, rainfall, and vegetation for the world and for each continent on a reasonably large scale.* They will also supply him with maps of the World, showing structure, showing thermal regions, showing pressure regions, and showing the major natural regions. The maps are not reproductions of existing maps, but have been specially prepared for this series, and a number of them are original maps published for the first time.

Send for full descriptive circular giving list of Maps now ready.

"He is at his uncontroversial best, and than that there is no better."—*Brooklyn Eagle.*

SHAKESPEARE'S ENGLAND

By WILLIAM WINTER

Rewritten, amplified, and superbly illustrated, this book is essentially new. It is destined to be one of the most popular of this year's gift books.

"These volumes about England," wrote Thomas Bailey Aldrich, "are the loveliest things that have been done in this kind."

"Here is England in a drop of honey," wrote George William Curtis.

"Pleasant to take and read anywhere," wrote Oliver Wendell Holmes.

With many illustrations. Large 8vo. $3.00 net; by mail, $3.30

THE STORY OF CHANTECLER

A CRITICAL ANALYSIS OF ROSTAND'S PLAY.

By MARCO F. LIBERMA

Professor of Romance Languages in Cincinnati University.

A brilliant, sympathetic, graphic account of the play, its conception, writing, and first performances, together with a description of the story and a critical analysis of it as a work of dramatic and literary art, as well as a stage performance. It is highly informing about every essential detail, and will prove the best possible preparation for any one intending to either see or read the play itself.

MRS. FITZ

By J. C. SNAITH

12mo, $1.35 net. By mail, $1.47

"In addition to the invariable pleasure of his fine workmanship, Mr. Snaith continues to give us the joy of many surprises. . . . You will be sure of capital entertainment."

—*N. Y. Tribune.*

BRITTANY AND THE BRETONS

By GEORGE WHARTON EDWARDS

Superbly illustrated in color and halftone by the author.

7¼x10½ inches. $6.00 net. By express, $6.40.

This distinguished travel book is designed to be a companion to the author's "Holland of To-day," last autumn's splendid success.

The text is full, authoritative and absorbingly interesting, while Mr. Edwards' many drawings and paintings are distinguished and unique.

"Artistically, cleanly and beautifully written."—*Hartford Courant.*

THE HOUSE OF BONDAGE

By REGINALD WRIGHT KAUFFMAN

$1.35 net. By mail, $1.37.

EDWIN MARKHAM writes:

"A book that disturbs, that flashes light, that will not let you rest. . . . A book that blurs the eyes and stirs the heart with the pity of it. With nobility of manner with a sincerity that touches the subject as with fire, in a purity that burns away all impurity, Mr. Kauffman relates this story."

JOHN D. ROCKEFELLER, Jr., writes, in part:

"I have read 'The House of Bondage' with much interest. The story is inexpressibly sad, but sadder still is the knowledge that it is true to life—true not only in the exceptional case, but in hundreds and doubtless thousands of cases.

"The author has handled a difficult subject with the utmost of delicacy consistent with perfect frankness. While telling his story fearlessly, he does so without sensationalism. I believe that the conditions with which the book deals must be generally known before they will be improved, and that the publicity thus given them will be of great value."

"I WISH I COULD FORGET THIS NOVEL, BUT IT IS NOT POSSIBLE. ITS WAILING CRY IN THE NIGHT RINGS OUT LIKE THE NEVER CEASING SOBBING TOLL OF A GHOSTLY BELL."—*Portland Oregonian.*

"A message for the initiated as well as for the ignorant."—*New York Daily Telegraph.*

"It may help to save many a young and promising life."—*Cincinnati Enquirer.*

"It is safe to say that this novel will be more effective than if it were a portentous sociological treatise. It carries on every page an impress of the truth. . . . A triumph of knowledge and artistic sense."

—*Boston Evening Transcript.*

"It is a book for the thoughtful, not for the careless reader. If it were not for its sincerity, no words could be too strong for voicing its condemnation."—*Brooklyn Eagle.*

COMMON SENSE IN POLITICS

By JOB E. HEDGES

IMPORTANT NEW MACMILLAN BIOGRAPHIES

THE GREAT POLISH ACTRESS

Memories and Impressions of Madame Modjeska
AN AUTOBIOGRAPHY

A book which reflects in high degree the sense of personal charm for which its author was always famous. One can imagine what it would mean to have such a woman relate for him the story of her varied experiences, glancing aside every now and then to tell some entertaining anecdote of this or that well-known personality; and that is practically what this book does. Mme. Modjeska seems to have had the rare ability to reach eminence without enmities.

With sixteen full-page portraits, besides many illus. in the text. 8vo, $4.00 net, by mail $4.20.

AMERICA'S BEST-LOVED SOCIAL WORKER

Twenty Years at Hull House

By JANE ADDAMS, Founder and Head Worker

An illustrated autobiographical record of twenty years of actual experience of living among people who from a distance may seem social problems, but at close range are "just folks." Back of it lies, as the *Chicago Tribune* said of one of her earlier books, "illimitable sympathy, immeasurable pity, a spirit as free as that of St. Francis, yet a stoic's sense of social order and fitness." There is a refreshing absence of any need to allow for emotional or academic limitations.

Fully illustrated. Cloth, 8vo, $2.50 net (subject to change). by mail $2.68. Ready Nov. 16.

TWO GREAT ENGLISH STATESMEN

The Life of Benjamin Disraeli Earl of Beaconsfield
FROM OFFICIAL SOURCES

By W. F. MONYPENNY *Volume I. Just Ready*

More than ever since Lord Morley's "Life of Gladstone" appeared—"the greatest life of a great man ever written"—has there been insistent demand for a life of equal authenticity of his great opponent, Disraeli. Of this work the first volume, now ready, covers his education, early travels, the period in which he wrote "Vivian Grey" and "Contarini Fleming," and of his first entrance into Parliament.

Illustrated with portraits, etc. Cloth. 8vo, $3.00 net, by mail $3.20.

The Letters of William E. Gladstone on Church and Religion

Selected and Arranged by D. C. LATHBURY

Lord Morley, an agnostic, most wisely limited his monumental "Life of Gladstone" by leaving his subject's religious feelings, which so deeply colored his every motive, to be expressed by Mr. Gladstone himself in such a book as this. It is an essential complement to Lord Morley's work, and more, it is fundamentally interpretative of the man himself."

Illustrated with portraits, etc. In two 8vo vols. $5.00 net.

THE COSMOPOLITAN HISTORIAN, EDUCATOR, AND PUBLICIST

Reminiscences of Goldwin Smith

By ARNOLD HAULTAIN

The interest of these reminiscences is intensified by its author's ability to write sympathetically of American affairs as an adopted citizen of the United States, and at the same time to criticise pungently where criticism was just because of the wider vision due to the vantage ground of English birth and training.

Cloth, 8vo. Ready about the 23d of November.

Published by **THE MACMILLAN COMPANY** 64-66 Fifth Ave. N. Y.

PRIMITIVE PSYCHO-THERAPY AND QUACKERY

BY

ROBERT MEANS LAWRENCE, M.D.

AUTHOR OF "THE MAGIC OF THE HORSESHOE," ETC.

A HISTORICAL survey of the so-called "magical remedies" of olden times—such as medical amulets and charms—showing that they are in reality the forerunners of modern psychical medicine. Dr. Lawrence has sought to emphasize the fact that the efficiency of many primitive therapeutic methods, and the success of charlatanry, are to be attributed to mental influence.

THE HOUSE OF CASSELL

H. R. H. ADOLPHUS FREDERICK, DUKE OF MECKLENBURG

In the Heart of Africa

This most important and stirring book, by the foremost sportsman in the Kaiser's dominions, is enjoying an enormous sale abroad. It embodies the result of an expedition into unknown territory in Africa, made by the Duke, accompanied by a host of friends and scientific experts. It ended by crossing the Dark Continent. The volume deals fully with the scientific aspects of exploration, describes the difficulties of the march which were encountered and overcome, and the strange adventures met by the expedition among almost unknown African tribes. It will fascinate lovers of adventure. The illustrations, about 230, were selected from 5,000 photographs. Price, net, $5.00; postpaid, $5.30.

JOHN FOSTER FRASER

Australia: The Making of a Nation

A frank, vivacious and highly informative book on the great Commonwealth, written at the solicitation of prominent Australians. It is a narrative of the people, their progress, their virtues, their failings, their opportunities and their future. A book for Americans who wish to gain an intelligent insight of the Australia of to-day. 64 plates. Price, postpaid, $1.90; net, $1.75.

CLEMENT K. SHORTER

Napoleon In His Own Defence

This important contribution to Napoleona, by one of the foremost biographers of the great Corsican, contains the Emperor's own view of his captivity and his own estimate of his career. These were incorporated in a number of letters from him to Lady Clavering, (published anonymousiy at the time) but now acknowledged to be the work of Napoleon. The work also contains Mr. Shorter's essay on "Napoleon as a Man of Letters," and many valuable notes. With 4 plates. Price, postpaid, $4.30; net, $4.00.

JOSEPH CROUCH

Puritanism and Art

An original and inspiring defence of Puritanism with relation to the fine arts which will amaze those who have believed the charge against Puritanism to be irrefutable. The author justifies the Puritanic attitude towards Art with an urbanity of spirit and catholicity of taste that should commend itself to every open-minded reader. With 14 reproductions of famous paintings.

Price, postpaid, $4.00; net, $3.75.

E. Keble Chatterton's "Steamships and Their Story"

The first really exhaustive story of the development of the steamship—a most fascinating volume of progress, enlivened by contrasts and anecdote, and describing the struggles and triumphs which finally evolved the monster turbine liners of to-day. The Boston *Transcript* reviews it as "this massive, comprehensive and splendid volume, which is as interesting as it is informing." With 153 illustrations and many full-color plates. Price, postpaid, $5.30; net, $5.00.

CAPTAIN FRANK H. SHAW AND ERNST ROBINSON

The Sea and Its Story

Every phase of sea life is dealt with in this handsome, fascinating volume, from the early craft of the Argonauts to the latest in Submarines. It carries the reader through the vistas of history to the present day. Printed throughout on calendered paper, with many full-color plates, and more than 250 half-tone illustrations. Price, postpaid, $3.80; net, $3.50.

S. H. LEEDER

The Desert Gateway

Mr. Leeder, a wide traveller and a charming writer, endeavors here to explain the spell and mystery of the Arab people. By winning a measure of friendly confidence with some of the desert people, the writer secured unusual material. It is a delightful and informing narrative of pageants and prayers, feasts and visits, betrothal and marriage and the position of the women of Islam, and many peculiar customs. With 16 illustrations.

Postpaid, $1.90; net, $1.75.

Illustrated by ARTHUR RACKHAM

The Greek Heroes

Translated by Niebuhr, with additions. With four color plates and numerous other illustrations by ARTHUR RACKHAM. The famous artist-illustrator has caught the Greek spirit in his illustrations for this delightful classic. Price, postpaid, 55c.; net, 50c.

Stories of King Arthur

By A. L. Haydon. With four color plates by ARTHUR RACKHAM. Another beautiful and inexpensive Rackham color book. The subject is wonderfully well suited to the illustrator's art. Price, postpaid, 55c.; net, 50c.

Warwick Deeping's *splendid novel* "The Rust of Rome"

The New York *Times*, Boston *Transcript*, Brooklyn *Eagle*, *The Bookman*, *The Nation* and many other conservative critics have placed Mr. Deeping's new novel among the best fiction of the year. Color frontispiece. Postpaid, $1.32; net, $1.20.

KATHERINE TYNAN

Freda

An appealing, warm-hearted romance of a young orphan, by the author of "Peggy the Daughter" and "Mary Gray." Postpaid, $1.32; net, $1.20.

MRS. CAMPBELL PRAED

Opal Fire

A powerful story of the Australian bush, by the author of "By Their Fruits," pulsating with human passion truly observed and ably recorded. Postpaid, $1.32; net, $1.20.

THE UNIVERSITY OF CAMBRIDGE

(*England*)

ANNOUNCEMENT

HE forthcoming publication of a new edition of the *Encyclopædia Britannica*, being the 11th Edition since the first appearance of this celebrated work in 1768-1771, will be the most important literary event of the present generation. No completely new edition has appeared since the issue of the Ninth, of which the first volume was issued in 1875, and the twenty-fifth in 1889.

The new work, to be published by the University of Cambridge, will embody certain new features as regards its literary contents, editorial plan, and format which it is the purpose of this announcement in the United States and Canada, and of similar ones in all other English-speaking countries, to make public.

The passing of the copyrights into the keeping of an ancient institution devoted to learning will give the *Encyclopædia Britannica*, for the first time in its history, the character of a public enterprise rather than that of a private undertaking on the part of one publisher after another. It is a natural culmination of the modern tendency towards expansion under the impulse of which the name "University" has come to include all men and all studies. The necessary diffusion of knowledge outside the circle of mere students is only another sign of a larger movement—the absorption of knowledge by the masses, and its utilization by them in that ever-increasing struggle for existence in which a high premium has been put on mental equipment and ability.

With the movement—now widely known as University Extension—Cambridge has been closely identified since 1871, when Professor James Stuart urged strongly that Universities were not "local clusters of private establishments," but national institutions, and that they should seek to enlarge the scope of their intellectual influence. In the development of the same idea, the Cambridge University Press, an important department of the University which has itself a history of nearly four hundred years, has in recent times devoted itself to the production of books held by the University to be of permanent value. The addition to its catalogue of the *Encyclopædia Britannica* (11th Edition) is another step with the object of extending the influence of the University beyond academic or local limits. The greatest work of reference, the repository of the widest research, the most useful book known to the Anglo-Saxon peoples, is now issued by an ancient institution of learning whose leadership in the world of science is unquestioned.

Carlyle's famous saying that the true University is a collection of books would have been nearer the whole truth had he said that the true University is a collection of books *issued by a University*, for books bearing the *imprimatur* of a great institution of learning are, from the nature of the case, good books, books worthy of a long life; in a word, books that are indispensable to correct knowledge.

The position of the *Encyclopædia Britannica* among works of reference has for more than a century and a quarter been one of undisputed pre-eminence, its prestige being due primarily to the fact that more than any other work of the kind it has sought to embody in its contents the broadest scholarship and the expert knowledge of specialist investigators in all fields of knowledge. To be invited to contribute to the work was, as the late Algernon C. Swinburne said, "the highest honour that can be bestowed on a mere man of letters."

Founded originally in 1768, and issued in Edinburgh by "A Society of Gentlemen in Scotland," it has been the pattern and the basis upon which all other encyclopædias have been built. Yet its own authority has never been equalled, nor has any other work even been suggested as approaching it in authority. The *Encyclopædia Britannica* has been the one work to which an Englishman or an American could have recourse in the eager pursuit of knowledge amid the multiplied and highly specialized activities of the modern era, confident that in its pages he would find the information he was in search of adequately set forth at the hands of an expert. As evidence of the popularity it has gained during a long and illustrious career, may be cited the fact that of the Ninth Edition alone between 400,000 and 500,000 copies, in one form or another (including mutilated, garbled and pirated American reprints), were sold.

Editorial Expenses of the Eleventh Edition, £163,000 ($815,000).

The remarkable advances made in every field of effort during the last twenty-five years—discoveries which have involved a virtual reconstruction both in the premises and the conclusions upon which a large part of the knowledge of the early eighties was based—have necessitated a new creation from start to finish. *The editorial cost alone*—the sum paid to contributors, editors, and editorial assistants during the last eight years—has been £163,000 ($815,000), more than twice the literary cost (£60,000) of the Ninth Edition. Nearly all articles in the last edition have been superseded by new ones, and thousands of new headings, never before entered in the *Encyclopædia Britannica*, have been introduced. In those cases where a fresh survey, in the opinion of experts, could discover no better basis for an exposition of a subject than the article in the Ninth Edition or its Supplement, it has been carried forward with necessary alterations. Of the 40,000 articles in the new edition, 85 per cent. are entirely new, and 15 per cent. are traceable, with changes slight perhaps in extent, but often important in quality, to the old work. Thus the University of Cambridge feels justified in asserting with perfect confidence that the new *Encyclopædia Britannica* (11th Edition) constitutes the best and most conscientious treatment of universal knowledge the present day can afford.

A Work of International Scholarship.

The scholars and specialists of the whole world have lent enthusiastic co-operation to the making of the new work; not Cambridge alone, but Oxford, London, Edinburgh, Birmingham, Paris, Berlin, Göttingen, Vienna, Kyoto; and in America, Harvard, Yale, Columbia, Johns Hopkins, Chicago, Pennsylvania, Princeton, Toronto—and many more—universities and centres of research everywhere have given their ablest minds to the preparation of a new and comprehensive summary of all that is known in every department of human knowledge in 1910.

In fact, one of the principal new features of the *Encyclopædia Britannica* (11th Edition) is that it is a work of international scholarship. The Editors of the 11th Edition have recognized that in the last twenty-five years there has been a closer communion of scholarly aims between the nations of the world, and a readier acceptance of the achievements of other countries than ever before. In a large sense, the whole civilized world is now one in thought, in intellectual sympathy, and in aspiration. The Editors have therefore approached their task in no merely national spirit, but in the spirit which recognizes that scholarship to-day knows no nationality. For the first time an encyclopædia has been produced as a co-operative effort, by the most competent authorities without regard to country. The 40,000 articles in the work have been written by some 1,500 contributors, representing the highest scholarship and the best practical knowledge of the twentieth century wherever these can be found. In pursuance of this policy, not British scholars alone, but the leading American, French and German authorities were enlisted as contributors.

THE ENCYCLOPÆDIA BRITANNICA

11TH EDITION

THE ENCYCLOPÆDIA BRITANNICA

11TH EDITION

The 1,500 Contributors.

The quality of utility, an attribute of the *Encyclopædia Britannica* the attainment of which has been the inspiring motive of the Editors ever since the inception of the work in 1768, is inseparable from authority. There is but one method of assuring to any work of reference this essential authority—the employment of the services (1) of *men of learning*—the original scholars who formulate great principles or develop important discoveries or master some one subject to which they have devoted special and long-continued investigation. In this class are university professors, scientists, philosophers, divines, historians, economists—independent thinkers who are themselves the source from which all that is known of a subject flows as a stream from its fountain-head; (2) of *men of action*—soldiers, sailors, men of affairs, jurists, administrators, architects, surgeons, artists, inventors, explorers, engineers, sportsmen, manufacturers, financiers—the men who apply their knowledge to constructive results in the every-day pursuit of their profession or vocation; and (3) of *practical experts* who are engaged in the advancement of industrial undertakings for the welfare of mankind. The *Encyclopædia Britannica* (11th Edition), being first and last a repository of all knowledge, it is just as essential to its completeness and authority that it should give practical information about road-making, bridge-building, and ship-building, as that it should contain treatises on astronomy and geology—it should instruct the reader on oil-engines and the boring of oil wells and on the practical side of forestry, on the making of glass or paper, and on carpentry, not less intelligently than it expounds the Copernican theory and the philosophy of Hegel. As a matter of fact, what the general reader most often looks for in his encyclopædia is just this sort of practical information — information which it may be he can turn to immediate profit, but cannot obtain from any other source. On its purely practical side—the massing of exact knowledge covering every kind of activity to which the genius of modern industry has been directed—the new *Encyclopædia Britannica* is a veritable storehouse of the latest information, the Editors having been not less careful in selecting the leading experts to write articles of a utilitarian character than in choosing writers of articles of a purely theoretical sort.

The new ENCYCLOPÆDIA BRITANNICA is a fresh and original survey of human thought, learning and achievement to 1910, written in the light of the latest research and with immediate reference to the needs of the day.

It is a work covering the whole circle of knowledge—theoretical and practical—a work that treats of everything which can possibly interest or concern a civilized people. It has been built upon a new foundation, with thousands of new articles and new methods of treatment. This vast body of information, greater than has ever been contained in such a work, has been compressed into twenty-nine volumes (including an Index volume) of about 960 pages each, with an average of 1,500 words to a page.

The new ENCYCLOPÆDIA BRITANNICA combines comprehensiveness with brevity—in consonance with the demand of the day for exhaustive exposition of major subjects with greater facility of reference in the case of minor ones, which are now dealt with alphabetically under separate headings.

In this respect the gain to the reader will be immense. Many thousands of short articles are included in the new work which would have been merged in the extended treatment of main subjects. These new articles will be found under the most obvious headings, and the reader will be able to refer to them instantly. Especially useful will be the method of dealing with technical terms. Unfamiliar words, especially those of a scientific character, or having to do with the investigations of specialists, are explained after the manner of a dictionary, with a view to the conveyance of information not easily accessible.

The new ENCYCLOPÆDIA BRITANNICA (11th Edition) was written as a complete whole instead of volume by volume as in the past, thus insuring a larger amount of information, avoiding repetitions and over-lapping, and making the first volume not less recent in its information than the last.

The Ninth Edition was issued during fourteen years (1875-89), and the first volume was out of date when the last one was finished. The Editors of the 11th Edition have had the whole of the work under view before a single volume was printed, the article on Architecture being as recent in its information as the one on Zoology. All the volumes, therefore, represent a uniform date (1910), and it has been possible to eliminate repetitions and to provide space for a considerably larger body of matter than ever before. The Editor estimates that the 11th Edition contains twice as much information as the Ninth. The entire twenty-nine volumes will be issued practically at one time—in the beginning of next year.

The List is open for ADVANCE SUBSCRIPTIONS

The new edition is now being printed, and the first copies will soon be ready for delivery. The work, in 28 volumes and Index, will be in two forms:—

(1) On INDIA PAPER (very light and opaque) in Three Styles of Binding—CLOTH, FULL FLEXIBLE SHEEPSKIN, and FULL FLEXIBLE MOROCCO, the volumes to be only ¾-INCH THICK (about 960 pages).

(2) On ordinary book paper, in Three Styles of Binding—CLOTH, HALF MOROCCO and FULL MOROCCO, the volumes to be 2¾ INCHES THICK (about 960 pages).

$4.00 a Volume for Ordinary Paper, Bound in Cloth

This is little more than half the price (30s. or $7.50 a volume) at which the Ninth Edition was sold when first issued, although the number of pages in each volume is larger by 100, the number of articles in the whole work by 23,000, the number of contributors by 400, and the body of information by at least 100 per cent.

The slight additional cost (25 cents) for the India paper volumes is not in proportion to actual market valuations, as it is well known that books printed on India paper are always issued at high prices.

To be Increased to $7.50 a Volume

When, in the opinion of the Cambridge University Press, the purpose of the present offer has been achieved, the price will be increased, and the work will ultimately be sold at the regular price of 30s. or $7.50 a volume (cloth).

Payment after Delivery

No money need accompany advance subscription, nor will any payment fall due until the volumes have been delivered.

Number of Early Sets Available

Before proceeding with the manufacture of a large number of copies, the publishers wish to ascertain approximately the relative demand for the work in its two forms and six styles of binding, and until this information has been secured only a small number of sets will be printed and bound. The first subscription list will, it is evident, account for all the sets now in process of manufacture. Subscribers whose applications are entered on this list will be placed on a basis of preferential treatment, that is, will receive the large concession in price above explained.

Those who prefer the **India paper impression are particularly urged not to delay their applications, as the preparation of the sets in this form is a slow process.**

NOTE.—The new **ENCYCLOPAEDIA BRITANNICA** is offered direct to the public, and no book-agents or canvassers are employed.

APPLICATION FOR THE PROSPECTUS

Full particulars of prices (in advance of publication), of deferred payments, bookcases and bindings, together with a prospectus containing an account of the work, with specimen pages, order form, etc., free on application.

CAMBRIDGE UNIVERSITY PRESS (Encyclopædia Britannica Department),
35 WEST 32D STREET, NEW YORK.

Please send me the prospectus of the new **ENCYCLOPAEDIA BRITANNICA (11th Edition)**.

Name .....

Profession or Business (with address) .....

Na. 1. Residence .....

NOTE.—Those who possess copies of previous editions of the **ENCYCLOPAEDIA BRITANNICA** (now out of date) are requested to advise us of the fact, clearly indicating which edition they possess (giving name of publisher and number of volumes), and, if they wish to purchase the new edition, will be informed how they can dispose of their old editions at a fair valuation.

52 New Volumes Just Added to

EVERYMAN'S LIBRARY

There are now five hundred volumes in *Everyman's Library*. Here is a list of the volumes just added, and below that is some information about *Everyman's Library* which is important for every book-lover to have.

Any book in *Everyman's Library*—whether mentioned here or not, may be had for

70c. net** in Leather Binding* *In Cloth Binding **35c. net

Biography

Scott's "Lives of the Novelists."
Sir Arthur Helps' "Life of Columbus."
"The Life of Warren Hastings," by Captain L. Trotter.

Classical

Homer's "Iliad."
Homer's "Odyssey."
Thucydides' "Peloponnesian War."
Plato's "Theory of Poetry and Inspiration."
A special Socrates volume, by Plato and Xenophon.

Essays and Belles-Lettres

Ruskin's "Time and Tide."
Matthew Arnold's "Study of Celtic Literature."
Hazlitt's "Spirit of the Age" and "Lectures on English Poets."
Burke's "Reflections on the French Revolution; Contingent Essays."
"Utopia and the Dialogue of Comfort Against Tribulations," by Sir Thomas More.

Fiction

Charles Kingsley's "Alton Locke."
Balzac's "Cousin Pons."
Collins' "The Woman in White."
Thackeray's "Newcomes," 2 Volumes Complete.
Fielding's "Joseph Andrews."
George Eliot's "Scenes of Clerical Life."
Tolstoi's "Master and Man," and other tales and parables.

For Young People

Charlotte Yonge's "The Little Duke."
Edgar's "Heroes of England."
Thomas Bulfinch's "The Age of Fable."
Mother Goose's Nursery Rhymes, etc.

History

Gibbon's "Roman Empire," Volumes IV., V. and VI, completing the work.
Froude's "Mary Tudor."
Washington Irving's "Conquest of Granada."
Bede's "Ecclesiastical History."
Chronicles of the Pilgrim Fathers.

Philosophy and Theology

Spinoza's Ethics, etc.
John Stuart Mill's "Utilitarianism, Liberty, Representative Government."
Bishop Berkeley's "Principles of Human Knowledge."
A Kempis' "Imitation of Christ." Spelling modernized.
Stopford A. Brooke's Theology in the English Poets.
"The Little Flowers," "The Mirror of Perfection" and "The Life of St. Francis."

Poetry and Drama

Byron's Complete Poetical and Dramatic Works, 3 Volumes.
Ben Jonson's Plays, 2 Volumes.
Minor Elizabethan Tragedy.
Minor Elizabethan Comedy.
Ibsen's "A Doll's House" and other plays.

Reference

Sir Wm. Smith's "Smaller Classical Dictionary."
Atlas of Historical Geography, Volume I., Europe.

Romance

"Aucassin and Nicolette" and other Mediæval Romances.

Science

Huxley's Select Lectures and Lay Sermons.

Travel and Topography

Lord Dufferin's "Letters from High Latitudes."
Sir Richard Burton's "First Footsteps in East Africa."

The Nation.

NEW YORK, THURSDAY, NOVEMBER 10, 1910.

The Week.

For the first time in nearly two decades the Democratic party finds itself within hailing distance of control of the national government. In the House of Representatives, when the present Congress expires, the Democrats will have a good working majority; and even in the Senate they will probably come so near a majority as to make joint movements with Republican Senators of insurgent proclivities an easy possibility. The campaign just closed was distinguished from all the campaigns that have preceded it since 1896 by the complete absence of the Bryan issue. It is a Democratic sweep in which there was no distinction between Cleveland men and Bryan men, no looking forward to a renewal of the perennial candidacy of the "peerless leader." The party is thus, on the surface at least, in excellent shape for the Presidential contest of 1912. It is in the fortunate position of having a strong place in the political battleground, and yet being exempt from the responsibility of the actual administration of the government; but if it shall rest content with this advantage and rely for success simply on a continuance of public wrath against the Republicans, it will certainly not deserve, and in all probability will not receive, the prize now apparently within its grasp. Above all, it must show that it is in earnest with the great questions of the day, such as the tariff, and is ready to deal with them at once vigorously and intelligently.

The absurd allegation that the only issue in New York State was the menace of an alliance between Wall Street and Tammany Hall is effectually disposed of. For, if there is one thing that stands out above all else it is that Dix owes his election not to a tremendous Tammany vote, for the plurality in the greater city has several times been exceeded, but to the falling off in the Republican vote up the State. Precisely as the independent Democrats left their party in 1906 and 1908 to make possible the election and reëlection of Charles E. Hughes, so independent Republicans all over the State have voted John A. Dix into office. Mr. Dix carried the alleged stronghold of Tammany and Wall Street by 105,081, where Coler's plurality in 1902 was 126,000. Obviously, whether because of the labor issue or for some other reason, Dix disappointed Tammany's hopes in the city and would have been defeated had Stimson polled above the Bronx the Hughes vote of either 1906 or 1908. So far from being menaced by "corrupt" influences in New York city, the real danger to the Stimson-Roosevelt campaign lay all the while in the sinister activities of the "ticker-crowd" among the farmers and the "burglar-vote" in the small towns.

The complete overturn in New Jersey is at once a proof of the discrimination and independence of the voters of that State and a splendid triumph for Woodrow Wilson. He was aided, of course, by the general Democratic drift, but the outstanding fact in connection with his election as Governor is that he, a politically unknown man, should have made his own campaign and, by sheer appeals to intelligence, should have so manifestly won the votes of thousands of Republicans. We have never seen in this country a more striking example of what can be done by a man of great ability debating public questions upon the very highest plane, and throwing himself upon the mind and conscience of the voters. It was no partisan victory that Wilson has won, but one born of the general good sense of citizens who simply could not refuse to avail themselves of the services of a man of such demonstrated capacity and character.

Nothing is so astounding as the news from Massachusetts. That, in a campaign of less than three weeks, after the misbehavior of the Democratic Convention, Gov. Draper could be defeated no one could have imagined. The Governor himself, after the Faneuil Hall riot, was so sure of success that he made several speeches upon the hopeless political incapacity of the Democrats. Well, they have now turned him out of office in the shortest campaign on record, thanks to Mr. Roosevelt's attack on Foss, the great unpopularity of Senator Lodge, and the general dissatisfaction with the Payne-Aldrich tariff. The rebuke to the Republicans is the more marked because the rest of their ticket appears to have been elected, and the Legislature remains theirs. The significance of this cannot be misunderstood; hidebound protection Massachusetts wants no more of the Payne-Aldrich-Cannon kind of tariff revision. As for the independent Democrats, there will be rejoicing among many of them that the defeat of the candidates for the minor offices will be something of a check to the Fitzgerald-Lomasney machine, which is beginning to be as feared in Boston as is Tammany here. Finally, Senator Lodge must still be trembling in his shoes; so many of the Republican legislators have pledged themselves against him.

The decisive victory won by Gov. Harmon in Ohio is matter for hearty congratulation. In a State strongly Republican, he was elected to the Governorship two years ago by a plurality of 19,372, in the face of a Republican plurality of 69,591 in the vote for President. This remarkable tribute of public confidence has now been renewed, after he had been subjected to a two years' trial in the office of Governor, with all the difficulties and perplexities which that entails. Mr. Harmon represents a type of sturdy Democrat which it is most gratifying to see at the front, and it is of good augury for the party in the nation that his credentials as one of the foremost figures in the party have thus been emphatically confirmed. A special reason for taking pleasure in the result, aside from its larger significance, lies in the circumstance that the irresponsible attack made in the closing days of the campaign upon the integrity of his conduct as receiver of the Cincinnati, Hamilton and Dayton Railroad has received the rebuke it deserved. To the credit of the Republican press of the State, not a single newspaper of standing, it is said, gave any editorial support to this reckless charge.

We have no wish to rub salt into any man's wounds, but it is plain, in the cold light of "the morning after," that Mr. Roosevelt's course since his return

in June has been one long series of political blunders. On the supposition, which his closest friends have sedulously fostered, that his heart was fixed on a nomination for the Presidency in 1912, it can only be said that he misread the situation utterly, and acted like a man whose famed political skill had entirely deserted him. Had he gone quietly to Oyster Bay and maintained a dignified silence throughout the campaign, defeat would have come to his party, but a great cry for him as the only compeller of victory would have been heard. He was probably misled by over-zealous friends. They flocked to him at Sagamore Hill and informed him that the country was not only clamorous for his return to power, but was ripe for radicalism. The touring of the country followed; the car-end harangues: the ostentatious ignoring of the President; the mischievous Osawatomie speech. Instantly the reaction set in, big with the threat of revolt, but the more he was protested with and opposed, the more headstrong and violent Mr. Roosevelt showed himself. He could brook no question of his infallibility, and bore himself as one whose word was necessarily a fiat with the people. As a result he stands now as the chief architect of disaster. He has demenstrated the fact that there are thousands of Republicans who will not vote for him or his nominees or his novel doctrines. There has appeared to be a fatal quality in his endorsement, so that nearly every man whom he lauded in different parts of the country has been defeated, while the men that he singled out for vituperation—Dix, Foss, Baldwin, Harmon—have been triumphantly elected.

It is always gratifying to see young Americans displaying the independent spirit that made this nation. It is especially gratifying to see it displayed in the halls of learning. There can be, accordingly, but one opinion upon the fight of the Columbia "men" for the abrogation of the university rule forbidding smoking in any of the lecture rooms or hallways of the buildings on the campus, with the exception of the two dormitories. As they argue, with unanswerable logic, the members of the faculty are able to step into their offices between lectures for a quiet smoke, while the students are discriminated against. Perhaps the agitation will lead to a juster view of the prerogatives of an instructor. But the most interesting, not to say significant, feature of the affair is the reputed origin of the anti-smoking rule. Even before the existence of the rule, there was one place where there was no smoking, and that was Hamilton Hall, the assigned reason being "the wishes of Dean Van Amringe." The university authorities, it is reported without a trace of a smile, "having observed the manner in which the dean's wishes were respected," grew bold, and decided to extend formally to all buildings a condition which prevailed informally at one of them. And so, once more, law received the acknowledgment of unwilling obedience in a matter in which deference had been cheerfully granted to a personality.

All Kentuckians will agree with the assertion of the *Pall Mall Gazette's* correspondent that the best English is spoken in that land of fair women and fast horses. James Russell Lowell used to urge the same for the English of his native Cambridge, which Mr. Howells granted—when Lowell himself was there to speak it. Nowhere is the eagerness of the human race to die for a cause they do not understand more strikingly illustrated than in the domain of language. The inhabitants of the mountains of eastern Kentucky, we are assured, are to-day speaking the language of Shakespeare, *argal*, theirs is the best English. Yet if we could resuscitate a Jacobean, we fear he would meet with instant repudiation at the hands of these very Kentuckians for speaking like an Irishman. By the same reasoning, moreover, the speech of the educated Londoner is the worst English in the world, since it has probably departed furthest from a Shakespearean norm. As a matter of fact, the best English, if by that is meant the best talk, is a fairly uniform commodity in London, in New York, in Sydney, and among the cultivated classes of Kentucky. As for pronunciation, that changes from age to age, from region to region, and the best is to be found among the people one likes—for whatever reason.

Positive assurances come from London that the conference between Liberal and Conservative leaders is to issue in a much broader scheme than was thought of when the committee was first named. Appointed to devise some means of quieting the controversy about the veto of the House of Lords, it has been led on, in the course of meeting after meeting, to consider a comprehensive plan to make over the House of Lords entirely, to grant some form of home rule to Ireland and also to Scotland and Wales, and to give the self-governing colonies representation at Westminster and a voice in the British Government. Such a vast project involves constructive statesmanship of the highest order; and it is naturally felt that no mere report from a conference committee, however able and authoritative, nor any precipitation of the great subject upon Parliament, would meet the needs of the case. Accordingly, there has for some time been a rumor that the recommendation of the conference would be to call a constitutional convention to pass upon the whole matter; and it is now stated that this plan will, in fact, be laid before Parliament as soon as it meets. Analogies from American and recent South African experience are freely cited. There is, however, one marked difference: the Annapolis and the Philadelphia and the Bloemfontein conventions met in order to form "a more perfect union." But the British constitutional convention, if we are to have such a novelty, would consider relaxing and modifying a union which has proved unworkable. For details we must wait till the official statement is made to Parliament, but the very fact of the long-continued and friendly conference of the leaders of opposing parties has already had a marked influence in allaying political bitterness in England, and if the final result be of the nature indicated, we are on the eve of momentous changes.

That the expeditious and business-like conduct of great criminal trials in England does not mean any less regard for the rights of the accused, or for the interests of truth, than is to be found in the long-drawn-out trials customary in this country, will be apparent to any one reading the full report of the last day's proceedings in the Crippen trial, as printed in the London *Times* of October 24. Not only was the summing-up of the evidence by the Lord Chief Justice, who presided at the trial, a masterly presentation of the testimony

in all its important bearings; but the closing argument for the prosecution showed such accuracy and definiteness of aim, such clear and convincing reasoning, such a sticking to the points really bearing on the determination of the truth, as one associates rather with the idea of an address to a body of scientific thinkers than with that of a speech to a jury. Crippen was convicted because the evidence really left no room for reasonable doubt that he had committed the crime; and he was convicted so promptly—he was sentenced to death within five days of the impanelling of the jury—because the whole mechanism of the law was adjusted to the single purpose of getting at the essential truth of the case. The putting in of a mass of factitious matters, erecting artificial difficulties, and calling for the solution of irrelevant problems, so far from conducing to a more perfect working of the machinery, clogs it with dust and all manner of obstacles, and makes its action not only vastly slower, but also far less certain and less accurate.

American politicians are not often called upon to address universities, but in Great Britain the custom still holds. Public men count it an honor to be elected rector of one of the Scottish universities, as Mr. Asquith was a few months ago. His Rectorial address was recently given, and in the course of it he made a special plea for the cultivation of style. Dwelling for a moment upon the possibly unavoidable perils of specialization in modern education, and expressing a regret at the diminishing numbers of "all-round" scholars, the Prime Minister argued that, apart from either genius or special knowledge, there was such a thing as sense for literary form which every literary man ought to feel it a duty to nourish and develop. It is not the higher kinds of writing that Mr. Asquith had in mind; what he referred to was precision, fitness, and harmony in expression. And there was force in his contention that such qualities are not beyond the mastery of ordinary men if they will but take pains. He said:

> A vast deal of the slipshod and prolix stuff which we are compelled to read or to listen to is, of course, born of sheer idleness. When, as so often happens, a man takes an hour to say what might have been as well or better said in twenty minutes, spreads over twenty pages what could easily have been exhausted in ten, the offence in a large majority of cases is not due so much to vanity or to indifference to the feelings of others as to the inability or unwillingness to take pains. And the uncritical world, just as it is apt to mistake noise of utterance for firmness of character, has an almost invincible tendency to think that a writer or orator cannot be eloquent unless he is also diffuse.

The British Premier is a physician who has taken his own medicine. His speeches are seldom long, compared with those of other Parliamentary orators, and are, as a rule, marked by a lucid compactness.

The resignation of the French Cabinet, following directly upon a strong vote of confidence in the Premier by the Chamber, is reasonably explained as due to the desire of M. Briand to organize a united and homogeneous Ministry. This task has already been laid upon him by President Fallières, and Briand has accepted. It certainly seems that this is no time for France to swap horses while crossing a stream. Briand has shown himself a strong man whom the country is ready to support in a crisis; and if he has a positive programme to deal effectively with such a threatening difficulty as lately confronted France in the strike of the employees on the state railways, it is desirable that he should work with colleagues entirely in sympathy with his measures. Two or three members of the Cabinet are known not to have been; and we shall probably see now a reorganization of the Ministry able to remain in office for some time to come. Yet French precedents of recent years are not in favor of Ministerial stability; and if Briand falls after having scored a victory in the Chamber, he will not be the first Premier to have done so.

The beggar vote evidently does not influence the official actions of the Amir of Afghanistan, who has ordered the poor of Jellalabad to clear the "jungle of drought-resisting shrubs" which bear the deceptive name of the Lakhi forest. The order is accompanied by a promise of grants of land in the vicinity for three years, rent-free, and of water from a "projected" canal. The Calcutta *Englishman* is doubtless quite right in its assertion that, "even if there were any intention of constructing a canal," no amount of water would make the barren and rocky soil productive, but we do not suppose that this fact will cause any deep grief among the beggar population. These men, literally wearing the cloak of religion, by day "demand money by threats and at night are daring thieves." However much "real humor" there may be in setting them to work, and whatever the Amir's motives may be, there can be no doubt that one of the best things that could happen, for them no less than for their victims, would be their adoption of an honest livelihood. It would doubtless be involuntary, but that would be nothing against it. It is a question how many representatives of the enlightened nations would work with no spur except that of their own wills.

Politics in Liberia presents certain parallels to politics here. There is an oddly archaic echo, for example, in the statement that but for the anti-third-term spirit, "as well as the President's own declaration against a return to the executive mansion, there would not be the slightest doubt as to his securing, without an opposing voice, the nomination." Passing from President Barclay, the *Liberian Register* remarks that Vice-President Dossen, who was one of the commissioners to this country in 1908, will probably be brought forward. "He has an imposing figure, standing six feet in his boots, impressive and fluent in his speech. And we may say he is not without some of the qualifications that would make a good President." That is surely no undue hero-worship. But the Vice-President has signed his own political death-warrant. "It cannot be said that Mr. Dossen is quite as popular now as he was when on the Supreme Court bench. He seems to forget that bills which he may introduce or favor in the Senate cannot be necessarily accepted as were his decisions delivered from the bench." The Secretary of State declines to permit the use of his name at the Presidential nominating convention in January because of his preference for a post which makes him the adviser of all Presidents. This leaves only the Secretary of the Treasury. But he seems thoroughly fit for the place. "Mr. Howard is popular. His popularity is of the Rooseveltian sort. He is affable, yet positive. Consistency with him is a virtue." That makes it look, at any rate from this distance, very much like Howard.

THE BOLTING REPUBLICANS.

Mayor Gaynor's letter, read at the Dix meeting in New York before the election, referred to the great and happy increase in independent voting looked for in both parties, and spoke of those "intelligent Republicans who are not mere slaves to partisanship." The number of Republicans who did vote for Dix was undoubtedly large. Every test of the returns from up the State and on Long Island, as well as in this city, indicates that a great party revolt is astir. Its extent is without a parallel in the history of the Republican party. In 1884 there was, indeed, a conscience Republican vote that could not be brought to vote for Blaine. In that defection many men of great weight were included, and they displayed a fine moral courage in standing up against a storm of abuse and obloquy; but there was not the avalanche-like slipping away of Republican votes which we have witnessed in New York this year.

Of it, as a whole, it may be said truthfully that it is a wholesome and even inspiring demonstration. We hold this not merely because it accentuates the tendency to independent voting. That of itself is full of promise. Every fresh proof that there is a growing body of citizens who cannot be misled by party names, is an excellent thing not only for the commonwealth but for parties themselves. But in this particular case there is an added element. The motives of the disaffected Republicans were not personal, but patriotic. It seemed to them that the time had come for them to render to their country the very highest service within their power --and that was to record their solemn protest, in the most effective way open to them, against political doctrines which they regard as full of peril and a personality which they consider a menace.

In this sense, the present Republican bolt is of a piece with the long revolt of conscientious Democrats against the domination and perversion of their party by Bryan. Year after year the latter broke old political associations to vote for what they believed to be the highest good of the nation. That their attitude was patriotic in the truest meaning of the word, was all along admitted by Republicans themselves. But the turn of the latter has now come. They used to say, half-jokingly, that the display of public spirit made by the anti-Bryan Democrats was impressive, and that Republicans would emulate it if the occasion ever arose, but that it never could arise since there was no possibility of the Republican party being captured by a demagogue or led away after false lights. Yet the danger thus laughed at has suddenly become vivid; and, to their credit be it said, thousands of intelligent Republicans have met it as they said they would.

Especially addressed to this class of bolting Republicans, a committee of Mr. Stimson's friends issued an appeal in which they asked, among other questions, "If you, regarding Roosevelt as an evil, are against Stimson on that account, in all candor is not your attitude an expression of personal dislike or hatred?" This was, to be sure, a trifle better than to call the bolters crooks, but the suggestion of personal motives was bound to be futile. In the great majority of instances at least, the Republicans in revolt against Roosevelt had no conceivable personal interest in the issue, except as their concerns are wrapped up with those of their fellow-citizens. They might, of course be mistaken in their determination, but they based it upon unselfish and public grounds. They dreaded, and dread, for their party and even more for their country, the effect of what would undoubtedly have been acclaimed as a Roosevelt victory in New York. To those who told them that their fears were imaginary, or, at any rate, premature—that they ought to have waited till 1912 before trying to settle its business—they were ready to reply in the words of Burke that "an early and provident fear is the mother of security."

Such a cleavage as that now going on in the Republican party has its immediate significance, but there is something in it that runs beyond the day and the occasion. This is the gratifying assurance it gives once more that we have secure resources not only against the excesses of party madness, but against the arts and the assaults of self-seeking agitators. When we see that the same sobriety and independence of partisan control which rebuffed Bryan and repulsed Hearst can be counted upon to oppose even Theodore Roosevelt, we certainly are able to face the political uncertainties of the future with a lighter heart.

THE BACKBONE OF SOCIALISM.

An interview with Mr. J. G. Phelps Stokes, recently printed in the New York *Times*, presented in juxtaposition two aspects of the Socialist situation, which, taken separately, are sufficiently familiar to everybody, but which are not so often thought of together. In the first place, in response to his interviewer's questions about the spread of Socialism in this country, he cited a number of striking facts bearing undeniable testimony to the growth of the movement not only as regards the number of its declared adherents, but as regards the penetration of Socialist doctrines, more or less unavowed and indeed more or less unconsciously held, into the magazine and newspaper literature of the day. And in the second place, he gave his own confession of faith—the statement of that doctrine which alone he regards as truly entitled to the name of Socialism, and which is, in a word, the embodiment of the simple and clean-cut dogma usually associated with the name of Karl Marx.

Now, we all know that there has been this great spread of the Socialist tendency, and we all know that the Socialism which is represented in it has a thousand forms, many of them bearing only the faintest resemblance to the "orthodox" Socialism of Marx. What we do not know, and what Mr. Stokes's fervent declaration of faith suggests as a question of keen interest, is the degree in which the original ferment still leavens the whole lump—the relative part which Marxian dogma still plays in the maintenance of the agitation and the determination of its spirit. And, while no clue to the answer to this question is directly furnished by anything in Mr. Stokes's statement, the very nature of it indicates what the true answer in all probability is.

The essence of the doctrine that Mr. Stokes lays down consists in the unqualified denial of the right of owners of capital, as such, to any share in the product of industry; and the ground of this denial is as simple and unqualified as is the denial itself. The people who draw interest and dividends rob the laborers of that portion of the product of their labor which goes to the making of these payments, without themselves having contributed anything toward the creation of that product. What the true Socialist must say to the present owners

of capital, when the time of his power shall arrive, is—according to Mr. Stokes's declaration—just what a rightful owner would be called upon to say to a robber who has too long held, by an alleged prescriptive right, that to which he had no claim in justice or equity: "We will forgive you for the wrongs which you have done to us; we will ask no recompense from you for all the robberies you have inflicted on us; but hereafter we will use the money capital which we ourselves provided, and the buildings and machinery which we ourselves have made, and the tracks which our own hands have laid."

Now, it is plain that this simple doctrine, preached with the ardor of conviction by scores of enthusiastic propagandists, has an immeasurable advantage over any more refined or more qualified form of socialistic teaching. Nothing is easier than to show that it rests upon the most palpable ignoring of an essential factor in the case; and, to the credit of intellectual Socialists be it said, it has been repudiated by what are now called the scientific Socialists of our time. But when it comes to the rank and file of the Socialist body, we may be sure that it is upon this simple gospel, and not upon any more recondite teaching, that they build their faith. And on the other hand, it is because this simple doctrine involves a fatal falsehood that upholders of the existing order are justified in their confidence in the power of that order to withstand the tide of Socialism.

In his elaborate analytical reply to Mr. Stokes's statement, Prof. Irving Fisher uses a happy phrase when he says that while in some specific cases it may be true that confiscation would be justified, this procedure must be based on something other than "the fiction that interest is robbery." To say that the owners of capital have contributed nothing to the creation of the product is equivalent to saying that to set aside for productive purposes a portion of what one has acquired, instead of consuming it all, is to render no service to production. This is so palpably untrue that it would be a waste of words to insist upon the matter. In order to carry on those processes of production which have so enormously increased the total product of man's labor, it was absolutely essential that some persons should refrain from consuming the whole of what fell to their share, and should either themselves use, or permit others to use, the stored-up capital for purposes of future production.

Now, it is a perfectly tenable position that this service might be performed by some collectivist arrangement, and that such arrangement might be preferable to what has actually been done in the past. But so far from this proving that the individualist system of capital has been robbery, it proves almost the exact opposite. It is precisely because the existing system has demonstrated the indispensableness, and the enormous efficacy, of savings in the form of capital, that the collectivists assert the necessity of those savings being controlled and owned by the community as a whole. Not that the owners of capital have done no service, but that the service they have done is of such vital importance that hereafter it must be provided in a better way than in the past, is the true basis of collectivism. But when you get the thing on this basis you come down to the debatable question whether or not a better way can actually and practically be provided. The "fiction that interest is robbery" must then be wholly abandoned; and with that gone, the backbone of Socialism as an emotional crusade is broken.

THE UNIVERSAL RACES CONGRESS.

There is something attractive in the plan for a Universal Races Congress to be held in London next July. Its purpose is "to discuss in the light of modern knowledge and the modern conscience the general relations existing between the peoples of the West and those of the East, between so-called white and so-called colored people"; and, of course, the result hoped for is a friendlier feeling, a heartier coöperation, and a better understanding. What could be more natural, what more desirable, than such a give and take? Somehow or other, the colored men and the whites have got to arrive at a mutual basis of respect and good will, if the world is to develop in peace and without bitter hatreds and possibly even fearful calamities. Nothing to be thought of at present can contribute so much toward this end as a joint meeting at which the different points of view can be stated and the races of the East explain their aspirations and ideals. Without some direct touch, some such frank expression on a basis of mutual friendliness and self-respect, the world at large will be entirely too ready to dismiss the whole subject with a glib "East is East and West is West."

Now even the dominant white races, which have been so sure they are of the Lord's anointed when it comes to showing those they deem their inferiors how to manage their affairs, have begun to feel some qualms of conscience and doubts as to their ability to regulate their conquered distant provinces. These have recently been expressed by no less a pro-consul than Lord Cromer himself. The difficulty seems to be that, while it is easy to rebuild wasted cities, to refinance a country, enlarge its crops, and to introduce modern sanitary and police methods, the beneficiaries decline to become or to remain content. Good government refuses to satisfy them, as is the case in Egypt to-day, and the reason is that it is not *their* government; they would rather be dirtier and more diseased and far less progressive, if only they could do things their own way and develop according to their own ideals. So it is that, whether the colonizers are English, French, Germans, or Americans, the dissatisfaction grows the longer the overlordship continues. Lord Cromer's own experience in Egypt is a perfect case in point.

One reason for this is that the so-called civilized nations approve, in their mental inflexibility, no methods which are not their own. The native of Dagupan must not only live in a clean house; he must wear clothes of American woollen or shoddy, cut in American style. If he refuses, there is no attempt whatever to study his own desires and ask him the whys and wherefores; he is simply set down as a heathen whose mental processes no one can understand. The fact that the races at their points of contact are usually at daggers drawn is still another reason why neutral ground should be chosen for an attempt at better understanding. But it is not only those who are being forcibly uplifted whom the congress will include. Japanese and Chinese, Turks and Haytians, are as well to be represented in the effort to smooth out racial misunderstandings and bickerings. How desirable this is even from the point of view of foreign offices and state departments is obvious if one stops to consider the political conditions in the Far

and Near East. The tremendous awakening in Japan and in India alone has made the chancelleries of Europe shiver. The open door, with its guarantee of a fair start for the business of China, may be an open door to other things than trade. The East is nearing the West; its natives have always known how to die and they are learning now how to die with the white man's rifle in their hands. This fact alone counsels such a congress as is to meet in London in the name of peace and good will. The phrase, "mastery of the Pacific," conceals a struggle, some tell us, that will yet convulse half the globe. Were this true, it would only prove this to be eminently the time for all the peoples of the Pacific to get better acquainted before they are inflamed by irresponsible journalists and needless war scares beyond the hope of friendly appreciation of one another's aims and aspirations.

Essentially, the congress is to be non-political. Questions of a pressing, rasping nature are to be avoided as a matter of course. Critics will doubtless be found to assert that only the outskirts of the problem will be touched. Yet it is by passing through the outskirts first that one comes to the centre of things; and later congresses—we trust there will be a permanent organization and regularly recurring world-conferences—will define their own scope. The all-essential thing is that representatives of the races shall get together, not as inferiors and superiors, but as human souls, to find the best means of dwelling together in peace and harmony and of preventing a split along the color line—something that was unknown in the days of antiquity, before the dawn of Christianity, when what we are pleased to term barbarism, and not civilization, ruled the world. That Americans have a peculiar interest in such a congress is obvious. Nowhere else is the problem of black and white so serious or so pressing; nowhere else is there so much need for sanity and detachment in its discussion. We trust that the executive secretary, Dr. Gustave Spiller of London, who is here to organize American interest in this undertaking, will meet with the hearty support to which the magnificent possibilities of the undertaking so obviously entitle him.

SCHOLARSHIP AND ATHLETICS.

"The student who studies is an anomaly." "Usually our undergraduates live two lives—distinct; one utterly non-academic. The non-academic is for them the real; the scholarly an encroachment." Two such statements as these, the first made recently by the president of Smith College and the second in a book by Professor Gayley of the University of California, might, it should seem, start a scandal. It is as though two prominent clergymen should fling out the charge that church members look down upon any who go to church to worship God. That the trouble with the colleges does amount to mistaken worship is manifestly what Professor Gayley, at least, believes, for his book is called "Idols." If President Burton and Professor Gayley had exploded their bombs a few years back, they might have caused an upheaval. But the college has been under fire so much of late that anything more than the usual din is a matter of indifference; even President Lowell's admission a week ago that scholarship was never held in lower repute by the undergraduate excited no great comment. We are glad to hear, however, that faculties have begun to shoulder the responsibility for the present evils, instead of shifting them with the plea that students of to-day have not the quality or the capacity that was possessed by men of their own day. By a professor at Yale the reverse has just been asserted with some impatience and vehemence. And Professor Gayley says frankly: "The long and short of it is that we educators don't educate. We are fuddled with educational fads; and we fuddle the schools in turn."
